Mr. DENISON. Yes; there are a number of bills that are very important, and we can get them out of the way in that manner.

Mr. GARRETT of Tennessee. Does the gentleman understand that there will be only a limited business on Calendar Wednesday?

Mr. DENISON. Yes.

Mr. SNELL. Will the gentleman put that request off until to-morrow?

Mr. DENISON. Yes; I will if there is objection to it. I will ask the gentleman from Michigan if he thinks the committee will take the entire day?

Mr. MAPES. I understand that the chairman of the committee does not want to start in on business reported to that committee until there are enough bills on the calendar to occupy the two days.

Mr. DYER. I think the request that the gentleman makes ought not to be consented to now on three minutes' notice. Many would not know that the calendar was coming up on Wednesday.

Mr. DENISON. Mr. Speaker, I will withdraw my request.

The SPEAKER. The request of the gentleman from Illinois is withdrawn.

Mr. SCHAFER rose.

The SPEAKER. For what purpose does the gentleman from Wisconsin rise?

THE CONTROL OF FLOODS IN THE MISSISSIPPI IN THE ALLUVIAL VALLEY

Mr. WHITTINGTON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the question of flood control of the Mississippi River.

The SPEAKER. The gentleman from Mississippi asks unanimous consent to extend his remarks on the question of flood control. Is there objection?

Mr. WHITTINGTON. Mr. Speaker, the Mississippi River from its source at Lake Itasca to its mouth is 2,475 miles long. The distance from the headwaters of the Missouri to the mouth of the Mississippi is estimated at 4,200 miles. The Nile and the Amazon, each with a length of about 4,000 miles, are the only other rivers in the world that approach the Mississippi and the Missouri combined.

The Mississippi is the world's greatest and most useful river. It is navigable from the Twin Cities of St. Paul and Minneapolis, the commercial centers of the great West, to its mouth just below the city of New Orleans, the second largest port in the world. It has a navigable channel of 35 feet from the Gulf of Mexico to Baton Rouge, a distance of about 225 miles, and from Baton Rouge to St. Louis the channel is 9 feet deep. The navigable waterway on the Mississippi River and its tributaries is estimated at 15,000 miles. It discharges three times as much water as the St. Lawrence. Fifty-four of its tributaries are navigable by steamboats, and there are hundreds of its tributaries navigable only by small boats.

It is estimated that if the upper Mississippi, the Missouri, the Ohio, the Arkansas, and the Red Rivers were in flood at the same time they would empty into the lower Mississippi about 3,500,000 cubic feet of water per second. The Yazoo, the White, the St. Francis, and other tributaries would add considerable quantities of water. But there has never been a time when all the principal tributaries of the lower Mississippi attained maximum flood stage at the same time. The Ohio River, with an estimated maximum discharge in 1913 of 1,395,000 cubic feet per second at Cairo, contributes more to the floods of the Mississippi River than any other tributary. The flow in the lower Mississippi in past floods has been estimated at from 1,500,000 to 2,300,000 cubic feet per second. The flood of 1927, the greatest on record, is commonly figured at 2,000,000 cubic feet per second, yet some estimates place it as high as 3,250,000 cubic feet per second.

The Mississippi River and its tributaries drain an area of 1,240,000 square miles, comprising 41 per cent of the United States, exclusive of Alaska, and including all or portions of 31 States of the Union, and about 20,000 square miles of Canada, embracing parts of two Provinces. The total area of the United States is 3,026,000 square miles. The drainage basin of the Mississippi is approximately 1,900 miles long and 1,400 miles wide, extending from western New York to western Montana, and reaching 70 miles into Canada from the northern boundary line of Montana.

The Mississippi is the second largest valley in the world, only the Amazon being greater. It is larger in extent than the whole

of Europe, exclusive of Russia, Norway, and Sweden. In its northern stretches the river is picturesque, and substantial power has been developed. At Commerce, Mo., and between the bluffs near the head of the alluvial valley, suitable dam sites have been located and much power may be developed. The potential power in the Mississippi River from Cairo to the Gulf in flood time is estimated at 60,000,000 horsepower, and it is consumed in eroding banks and in carrying its great volume of water down its course.

THE ALLUVIAL VALLEY

The waters of the principal tributaries of the Mississippi converge at Cairo and from Commerce, Mo., to the Gulf of Mexico the river flows through a flood plain of alluvial deposit, known as the alluvial valley, containing approximately 30,000 square miles. This valley was originally an estuary of the Gulf, which extended to the vicinity of Cape Girardeau, the northern limit of the alluvial valley. It has an average width of 45 miles, varying from 20 miles just north of Natchez to 80 miles at Greenville, Miss. It is 1,070 miles by river from Cairo to the Gulf of Mexico.

The normal rainfall in the entire Mississippi Basin is about 30 inches, and it varies from 20 inches in the Missouri Basin to 48 inches in the central valley, which extends along the Mississippi below the mouth of the Missouri, and is drained by numerous small streams. The rainfall in the Ohio Basin, where the rainfall is greater than on any other tributary, is 44 inches annually.

Because of its latitude, rainfall, and elevation, the Mississippi Valley is unequaled by any other on the globe, and is capable of supporting a dense population.

LEVEES

Without protective works the alluvial valley is subject to annual overflow. Like other alluvial streams, the banks are higher than the adjoining and adjacent land. There is a slope of 7 feet for the first mile from the banks to the interior. In flood time these banks overflow and inundate the valley. Before the general inundation nature provided for assisting the main stream in carrying the waters to the Gulf. At the head of the basin there was an outlet near Cape Girardeau, where the flood waters formerly escaped into the St. Francis Basin. At Cypress Creek, about 25 miles below the mouth of the Arkansas River, the waters escaped through the Boeuf and Tensas Rivers, and found their way to the Gulf through the Atchafalaya, the Atchafalaya being connected with the Mississippi River by Old River, and constituting the third natural outlet on the right bank of the Mississippi River in the alluvial valley.

Protection from floods was necessary in the very earliest settlement of the valley. Levees built entirely of earth constituted the protection. LeBlond de la Tour, a French engineer, laid out the city of New Orleans in 1717 and built the first levee to protect the city from overflow. In 1727, ten years after the levee was begun, 5,400 feet had been completed in front of New Orleans. Originally levees were not the products of organization, but the result of individual efforts. In 1735 the original levee that was to extend 18 miles above and below the city of New Orleans had been extended to 30 miles above the city. Each planter built the levee along his own front, and the levees kept pace with the settlements along the river front.

Levees were first built by individuals, then by communities, subsequently by parishes or counties, and later by districts.

In 1812, when Louisiana was admitted to the Union, the levees extended on both sides of the river some distance below New Orleans and above New Orleans to Baton Rouge, and by 1844 the levees were almost continuous from 20 miles below New Orleans to the mouth of the Arkansas River on the right bank and to Baton Rouge on the left bank, and the Yazoo Basin was protected by levees, beginning about this time and built by 1853. The first general levee board was established in the fifties, following the great floods of 1849 and 1850.

The proceeds of swamp and overflow lands were used in the construction of levees, but there was a lack of uniformity and standardization in construction. The greatest floods ever known in the lower valley occurred in 1858 and 1859. The levees proved inadequate and in many cases were washed away. Then followed the Civil War, and throughout the war levee construction was abandoned. None of the levees was high enough or strong enough to withstand unusual floods. They were built but little above the grade of previous unconfined floods. Even in the Yazoo Basin they were much too low and were deficient in width.

On June 28, 1879, the Mississippi River Commission was organized and since 1882 there have been completed on the Mississippi River 1,881 miles of levee line, in addition to numerous levee systems on its tributaries. The levees along the Mississppi River have an average height of 18 feet. They extend from Cape Girardeau to the Gulf. There are also levees between Cape Girardeau and Rock Island. On the left bank, in Tennessee, Kentucky, and in Mississippi south of Vicksburg there are practically no levees.

The flood-control works on the lower Mississippi consisted of a levee system partially protected by bank revetment at the time of the 1927 flood. The levee system was still incomplete, but was being standardized to conform to the grade and section of 1914, which was based upon the 1912 flood confined, the greatest flood up to that time. But the flood of 1927 surpassed all other floods. The levee line between Memphis and Vicksburg in front of the Yazoo Basin was up to the 1914 grade and section almost all along the entire front. The 1914 provisional grade is 55.8 at Greenville and 60.5 at Arkansas City. It is estimated by both the Mississippi River Commission and the Chief of Engineers of the United States Army that if the 1927 flood had been confined by levees the gauge reading at Greenville would have been 62.8 and at Arkansas City 69.

It is also estimated that to confine by levees a probable maximum flood of 2,250,000 cubic second-feet at Cairo, 2,850,000 cubic second-feet at Arkansas City, and 2,650,000 cubic second-feet at Old River, with a freeboard of 5 feet instead of a freeboard of 3 feet, as provided by the 1914 grade and section, would require a levee grade line on the main river of 79.5 at Arkansas City, and 72.8 at Greenville. The new levee grade at Helena would be 71, against an existing grade of 58.5, and at Sunflower Landing would be 72.6 instead of an existing 56. In other words, to confine the maximum probable flood by levees would require an increased levee height of 6.9 feet at Memphis, 10.1 at Mhoon Landing, 10.5 feet at Helena, 16.6 feet at Sunflower Landing, 16.5 feet at the mouth of the White River, 19 feet at Arkansas City, 17 feet at Greenville, 15.4 feet at Lake Providence, and 14 feet at Vicksburg.

The construction of levees has resulted in the raising of water levels in the river. The river gauge at Vicksburg in 1927 was 10 feet higher than it was in 1882. Yet in 1882 the entire Yazoo Basin, as well as practically the entire alluvial valley, was inundated. Building the levees confines the water and thus raises the water plane. There is no disagreement, however, among engineers that the bed of the river has not been raised. On the contrary, levee construction has resulted in a scouring of the river bed, and measurements over a period of 50 years show a lowering rather than a raising of the river bed itself.

Moreover, the construction of levees has resulted in higher water in backwater areas along the mouths of the tributaries, including the Yazoo River. It is safe to assume that levees higher than at present will further enlarge these backwater areas.

Prior to the flood of 1927 the plan was to control floods by levees. It is now apparent that levees must be supplemented. It would be unsafe and impracticable to build them high enough to confine the greatest probable floods. Natural outlets should never have been closed. The processes of nature must be followed. Spillways to supplement the levees must be constructed. Natural outlets must be reopened. The blunder of closing Cypress Creek must be remedied. Levees must be supplemented by diversions.

YAZOO BASIN

In 1858 the levees in the Yazoo Basin were, on the average, about 4 feet high, having been mainly constructed since 1853. In 1882 the levees averaged about 8 feet in height, and they contained about 31,500 cubic yards to the mile. In 1927 the levees were 22 feet high, where they had been brought to standard grade and section, and they contained about 421,000 cubic yards. Wheelbarrows were used in the construction of the earlier levees, to be in turn superseded by drag scrapers, wheel scrapers, dump wagons, and now by drag-line and cableway machines.

The growth of levees in the Yazoo Basin is typical of the growth in the valley. The people of Holland had kept out the sea by dikes, and so the people of the valley determined to keep out the river floods by levees. At first the riparian owners built the levees. It was soon evident that the interior owner should contribute. Then followed legislation.

Washington County, Miss., was created January 29, 1827, and prior to 1836 embraced the present counties of De Soto, Tunica, Bolivar, Humphreys, Sharkey, Sunflower, Coahoma, and Issaquena. The Legislature of Mississippi on March 2, 1833, passed legislation for the construction of dikes or levees along the Washington County front, which embraced the entire Yazoo Basin. De Soto, Tunica, Coahoma, and Bolivar Counties were organized on February 9, 1836, and with their organization the provisions of the levee protection of 1833 were made applicable

to the new counties. Levee construction continued with varying success until December 2, 1858, when the legislature passed an act creating the General Board of Levee Commissioners, composed of the counties of Issaquena, Washington, Bolivar, Sunflower, Coahoma, Tunica, and the Delta portions of the counties of De Soto, Panola, Tallahatchie, and Yazoo. The board functioned but a short time and the destructive floods and the Civil War put an end to the work of the levee board.

During the Civil War what is known as the Yazoo Pass Levee, in the upper Yazoo Basin, was destroyed by the Federal forces in an effort to reach Vicksburg from the rear. In 1858 the levee which closed the Yazoo Pass was an enormous embankment across an old lake. It was 1,152 feet long and 28 feet high, with a base 300 feet in width. The great Hushpuckena Levee was destroyed by floods about the same time.

In 1871 levee district No. 1 was formed in the territory including Coahoma and other adjoining counties, but it proved a failure. In the meantime, in 1867, the old general levee board of 1858 was revived for the purpose of liquidating the indebtedness incurred by the board of 1858. Much land was forfeited for taxes but the indebtedness was finally paid.

The levee district organized in 1871 proved a failure, and more than a million and a half acres were sold for taxes. Nevertheless, after the creation of the Mississippi River Commission, the Yazoo Mississippi Levee Board was organized on February 28, 1884, and it has functioned since that time. This Yazoo Mississippi Levee Board is composed of the counties of Tunica, Coahoma, Quitman, Sunflower, Leflore, and parts of Humphreys, Yazoo, Holmes, and De Soto Counties. The Mississippi levee district, composed of the counties of Bolivar, Washington, Issaquena, Sharkey, and a part of Humphreys County, was organized in 1865 and has functioned since that year.

Mississippi adopted a new constitution in 1890 and the essential provisions of the laws incorporating these two levee boards were made a part of the constitution. The far-sighted members of the constitutional convention realized, however, that as the country developed and the population increased the problem would outgrow the levee districts and the State and would become national, for under section 232 of the Mississippi constitution the commissioners of the levee districts were given power to cede all their rights of way and levees to the management and control of the Government of the United States.

These two districts are known as the upper and lower levee districts. The upper district has a levee line of 98.5 miles, and, on account of caving banks, has lost more than 55 miles of levee. The Government has made no contribution for levees in this district for 23 years, and the district itself, in an effort to protect its own levees, has contributed $2,835,000 for revetment. It is the only district along the river that has contributed to the cost of revetment, which is recognized to be in aid of navigation. The Federal Government has always constructed revetment as a part of the improvement of the Mississippi River for navigation. The levee line is complete in this district.

The upper, or Yazoo, district contains 2,555,386 acres, with 1,186,451 acres in cultivation. It had an assessed valuation of real and personal property in 1927 of $109,870,960, with outstanding bonds for levee construction aggregating $4,444,000. There are real-estate mortgages outstanding in the district of $60,000,000. The district has spent for levees since 1882 up to December 31, 1926, $20,428,390.86.

The Mississippi levee district contains 1,614,066 acres, with 701,346 acres in cultivation. The assessed valuation of real and personal property is $62,937,309. The outstanding levee bonds are $3,025,000. It is estimated that there are mortgages on real estate in this district aggregating $36,011,142.73. The district has spent since 1882 on levees up to December 31, 1926, $21,422,607.25. It has a levee line of 188.1 miles, and because of caving banks 212 miles of levees have gone into the river. Twelve and three-tenths miles of levee remain to be built on the main river in this district.

Under the laws of Mississippi real and personal property is assessed at its actual value. The lands, including the personal property located thereon in the Yazoo Basin, are assessed at an average of $40 an acre for cleared and uncleared land.

There are no natural outlets from the Mississippi River on the front of the Yazoo Basin. The river banks are the highest part of the land. The drainage is to the interior. The fall is about 7 feet in the first mile from the river banks. Humphreys and Abbott in their report of August 5, 1861, called attention to a ridge of the Yazoo Basin that extended from Honey Island to Delta on the Mississippi River, separating the Yazoo and Tallahatchie Rivers from the Sunflower River and forming a strip from 2 to 6 miles in width. This is the highest land in the Delta, and it is thought to be a prolongation of Crowleys Ridge, in Arkansas, which terminates at Helena. The entire basin, however, is subject to overflow, and the southern portion of this ridge was overflowed in 1927. The Yazoo, a tributary of the Mississippi, drains the eastern portion of the Yazoo Basin, and is overflowed by the hill waters of Tennessee and Mississippi almost annually. No tributary suffers more from floods, and at the same time it pays taxes for protection by levees on the Mississippi River. Its backwater area is 1,200 square miles, or 768,000 acres, of which 192,960 acres are cleared and 575,040 acres are swamp and timber. The area is the same size as the backwater area of the Arkansas and White Rivers. The Government has only contributed thus far to levee construction on the south side of the Arkansas, but to no other part of the Arkansas or the White or the Yazoo Rivers.

SWAMP AND OVERFLOW LAND ACTS

It has been asserted that Congress has largely discharged its obligation to the alluvial valley by passing the swamp and overflow land acts approved March 2, 1849, September 28, 1850, and March 12, 1860. It is true that the act of 1849 was passed for the benefit of Louisiana to aid the State in construction of levees and drains; it is also true that the act of 1850 was originally intended to aid the State of Arkansas to construct levees and to drain lands.

However, Members of Congress were vigilant in behalf of their districts and States in those days, as well as now. The swamp and overflow land acts were extended, on September 28, 1850, to all the other States of the Union in which there were swamp and overflow lands. Section 4 of the act of September 28, 1850, reads:

> That the provisions of this act be extended to, and their benefits be conferred upon, each of the other States of the Union in which swamp and overflow lands, known as and designated as aforesaid, may be situated.

The States in the alluvial valley were not the only States to which lands were donated by the United States for drainage and levee purposes. Alabama, Iowa, Michigan, Minnesota, California, and other States received large areas of these lands. The lands in Mississippi were of comparatively small value and were not all located in the Yazoo Basin. Much of the land was located in the basins of other streams in Mississippi. A large percentage of the proceeds from the sale of these lands was used in drainage schemes and for the improvement of interior streams. The Legislature of Mississippi passed an act March 16, 1852, appropriating 60,000 acres of land in Tallahatchie, Holmes, Carroll, Sunflower, and Yazoo Counties for the improvement of the Yazoo and Tallahatchie Rivers up to the mouth of the Coldwater River, and the act provided that the land should not be sold for less than 50 cents an acre.

The proceeds were used in building levees prior to the Civil War. These levees were insufficient. The levees were destroyed by floods and the lands were sold for taxes, which the owners were unable to pay because of frequent inundations.

On December 5, 1927, I received the following letter, addressed to me in response to my request for the areas patented to the various States under the above-mentioned swamp and overflow land acts:

UNITED STATES DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
Washington, December 5, 1927.

Hon. W. M. WHITTINGTON,
House of Representatives.

MY DEAR MR. WHITTINGTON: Referring to your request for the areas patented to States under the provisions of the grant of swamp and overflowed lands made by acts of Congress approved March 2, 1849 (9 Stat. 352), September 28, 1850 (Stat. 519), now sections 2479, 2480, and 2481, Revised Statutes, and March 12, 1860 (12 Stat. 3), now section 2490, Revised Statutes, you are informed that, up to and including to-day, these patented areas by States are as follows:

	Acres
Alabama	418,713.61
Arkansas	7,686,455.37
California	2,188,547.32
Florida	20,211,831.54
Illinois	1,457,559.20
Indiana	1,254,310.73
Iowa	874,112.13
Louisiana	9,405,929.24
Michigan	5,656,064.03
Minnesota	4,677,649.03
Mississippi	3,288,418.50
Missouri	3,346,936.01
Ohio	26,251.95
Oregon	264,212.66
Wisconsin	3,251,830.52

Inclosed herewith please find a copy of the swamp-land circular, which contains copies of the three acts mentioned (see pp. 4, 5, and 9). A carbon copy of this letter is inclosed herewith.

Very respectfully,

THOS. C. HAVELL,
Assistant Commissioner.

PROTECTION, NOT RECLAMATION

It has been urged that flood-control works, including the construction of levees, would result in reclaiming the lands of the alluvial valley. There are 19,000,000 acres of lands originally subject to overflow in the valley, of which it is estimated that 13,000,000 acres are usable lands. Six million acres are dedicated to swamps and can not be cultivated. It is estimated that 7,000,000 acres are cleared. The remainder is cut-over land and backwater area. Practically all of the land that can be cultivated has been cleared. Higher levees, spillways, and diversions will not result in bringing any more land into cultivation. Before the flood of 1927 the Yazoo Basin was regarded as safe from floods. Flood control is not reclamation. Flood-control work will result in protection, not reclamation. It will restore values that have been lost as a result of inundation. The building of levees will not result in a greater revenue capacity in the lands. In the Yazoo, or upper levee district in Mississippi, there has not been a break in the levee for 30 years. The levees must be built higher and stronger to provide against a maximum flood. Lands will not be worth more, however, merely because levees are built higher.

This is a great agricultural area. It is the staple-cotton area of the United States. No more cotton per acre will be produced as a result of flood-control works.

It has been said that lands in the Yazoo Basin have increased ten times in value since the levees have been constructed. Levee construction really began in 1884. But lands have increased in value ten times over in other parts of the country since that date. They have increased in the city of Washington more than ten times in value. The levees undoubtedly contributed to the increase. They were a factor, but they were not responsible absolutely.

The forests were cleared, houses built, highways constructed, drainage systems installed, railways established, artesian wells were sunk, and malaria was eradicated. In other words, increased values followed the processes of civilization and development. Land values in the valley are affected just as they are in other agricultural regions. Prices, weather, labor, and financial conditions are reflected in land values in this region as elsewhere.

Levees are needed only during periods of floods. They are required only when the floods from other parts of the country are poured into the valley. The Yazoo Basin is from 100 to 200 feet above sea level. The floods destroy land values. Flood-control works protect life and property and thus contribute to the stabilization of the values of lands. Floods destroy not only improvements, but they fill drainage canals, injure highways, and drive people to seek homes and employment elsewhere. The loss of labor is one of the greatest damages inflicted by floods.

Flood control is not synonymous with reclamation. It is the very opposite. The lower valley was among the very earliest settlements in the country. It is said that no lands in the Atchafalaya Basin have been cleared for more than 100 years. The Yazoo Basin has already been reclaimed. With an area of more than 4,000,000 acres and with a levee front of 300 miles, it produces annually long staple cotton valued at $70,000,000. The Nation is dependent upon the valley for this type of cotton. When manufactured it is valued at more than $250,000,000. It furnishes employment to the textile mills at home and abroad and plays an import part in the balance of trade. There are outstanding bonds and mortgages in the Yazoo Basin in excess of $100,000,000. Reclamation is an accomplished fact. It has been done at the expense of the people of the Yazoo Basin. They owe to other sections of the country the unpaid costs of these developments.

The area in the valley is agricultural, and there are practically no manufacturing establishments. Our dealings are largely with other sections of the country. Mississippi is an agricultural State. Banking and commerce are carried on with Memphis, New Orleans, and New York. Business in the Yazoo Delta is reflected in other parts of the country.

The Yazoo Basin is not undeveloped. The processes of reclamation have been going on for 100 years. The people are customers in all the markets of the Nation. They have protected themselves to the very limit of their capacity. The growth, development, and progress of other parts of the country have made it impossible for the people of the lower valley to protect longer themselves without the assistance of the Nation. As long as levees were confined to certain sections of the valley the localities paid for their construction. Progress requires sacrifices. The States and local districts are unable to protect themselves against the flood waters of 31 States. The Union was formed because of the inability of the States to perform certain functions. Defense and protection, as well as the promotion of commerce, were contributing factors in the formation of the Government. The Union was formed to do that which the States and localities were unable to do.

I use the Yazoo Basin again as typical of the valley. It is not a waste or a swamp to be reclaimed. It is traversed by 1,600 miles of railways. There are 3,543 miles of electric transmission lines, 5,625 miles of telegraph lines, and 43,210 miles of telephone lines attached to poles that rest on Delta soil. These properties are owned by people of the Nation. There are more than 1,000 miles of electric lines that furnish light to our cities, towns, and villages. There are 2,457 miles of highways, and our people purchase gasoline from every oil field in the country. There are 2,988 miles of drainage canals and the bonds are owned by the investors of the Nation. There are 78 banks and 25 newspapers, 18 cotton compress warehouses, 59 incorporated towns, 23 oil mills, and 196 saw mills and other manufacturing plants in the Yazoo Basin. Protection is asked against floods that can be prevented, and for which the Yazoo Basin is not responsible. This basin is located almost wholly in the congressional district I represent.

It is said that the people located in the alluvial valley knowing that it was subject to overflow in the natural state. So people located in Belgium knowing that it was in the path of the imperial armies of Germany, but the United States gave money, lives, and much treasure that such an invasion might never again happen. Aside from the other considerations, the protection of life and property is both economic and constitutional ground for the adequate flood control of the lower Mississippi Valley.

Reclamation means creating values that do not exist; flood control means protecting values that already obtain.

ALTERNATIVE SUGGESTIONS FOR FLOOD CONTROL

It has been suggested that the levee system has failed. It has not failed; it was merely inadequate. The system when completed would have protected against the highest preceding flood. Highways are constructed and drainage systems installed upon such a basis. But the flood of 1927 has demonstrated that levees only will not suffice. They must be supplemented by other agencies. From two and a half to three millions of people dwell in the valley. They must be protected. The levees protect the lands that were devoted to floods. It is now apparent that the floods will require more lands than those between the levees.

No river has been more carefully surveyed than the Mississippi; there have been more studies on the Mississippi River than on any other stream in the country. The Government has provided for the improvement of the Mississippi River since 1824. An outlet to the Gulf was a potential factor in influencing Thomas Jefferson in the Louisiana Purchase. The Mississippi River was the key to the commerce of the West.

The Mississippi River Commission has had supervision of the Mississippi River for the improvement of its navigation and for the protection of the valley for more than 47 years. Data, surveys, and studies have been accumulated covering all phases of the problem. It is now time for action. The Chief of Engineers of the United States Army and the Mississippi River Commission have made careful studies and surveys in the light of the flood of 1927. Congress now has the reports of both the Chief of Engineers and the Mississippi River Commission covering the solution of the problem. Except as to the matter of local contribution the recommendations of both agree in the essential factors of the fundamental plan. Levees are the foundation and backbone of each plan. Spillways and diversions are a part of both plans.

Before the recommendations were made all alternative suggestions for the solution of the problem were carefully investigated. Repeated investigations have been made covering various methods of flood control. Commissions have been appointed after each record flood. The various methods have been studied in the light of each flood. The engineers of the Government know more about the problems of the Mississippi River than any other engineers of the country. Every worth-while suggestion as to an alternative for levees and diversions has been thoroughly considered.

REFORESTATION

There is a place for reforestation, but it can not be substituted for flood-control works. The greatest flood in the upper Mississippi Valley occurred in the year 1844. The forests had not been cleared at that time. If the original forests did not prevent floods man-made forests can not do better. There is a place for reforestation; it is a part of our conservation policy, but no one contends that the productive farm lands should be converted into forests.

Again, it is inevitable that turning farms to forests will not reduce the run-off. Reforestation is a step in the right direction and will be beneficial in reducing erosion, but it can not be substituted for flood-control works.

DREDGING THE CHANNEL

It is estimated that to reduce flood levels by dredging would require not only excessive but annual dredging to remove deposits of silt. The process would be entirely too expensive. To reduce the maximum stage 8 feet would require the expenditure of $80,000,000 annually. There is a grave doubt whether dredging can be carried on faster than deposits are made.

STRAIGHTENING THE CHANNEL

The Mississippi River, like other alluvial streams, pursues a meandering course. There are pronounced bends in the river. Cut-offs have been suggested as a remedy. They produce reductions in river lengths that are only temporary unless the banks above and below have been revetted. Moreover, there would be an increase in velocity that would mean caving banks. Cut-offs cause excessive bank caving. The method of straightening the channel and of adopting cut-offs to improve the channel is too unsatisfactory to warrant adoption.

CLEARING BETWEEN THE LEVEES

Clearing the banks and islands would cost about $34,000,000. The velocity would be increased. This velocity would scour under or against the levees. Scours that might cause cut-offs, until all the banks have been revetted, are undesirable. Clearing the banks is impracticable.

SIDE CHANNELS

Excavating side channels would be enormously costly. They would collect silt rapidly. Vegetation would clog them and maintenance would be very expensive. Leveeing side channels is much cheaper than excavating channels.

LEVEE SETBACKS

To move the levee line back on one side of the river for 1 mile would on the average increase the discharge capacity 75,000 second-feet, and be equivalent to something over 1 foot reduction in stage. The cost for the whole river would be $610,000,000. This method would be too expensive. It would destroy many towns. The banks of the river are the highest portions of the valley.

There should undoubtedly be setbacks and levee relocations where the width between levees is now restricted. Many bottle necks should be removed. The distance between levees or between the levee and the opposite bluff from Cairo to Baton Rouge ranges from one-half mile to 11 miles. The average width is 4½ miles. Between Baton Rouge and the Gulf the width is much less but is more uniform, being on the average about 4,000 feet.

Lake Itasca is 1,467 feet above mean Gulf level. The fall at low water to St. Paul is 782 feet in a distance of 527 miles. Between Cairo and the mouth of the Red River the low-water slope varies from 0.2 to 0.6 foot per mile, the average slope between the terminal points being 0.35 foot at extreme low water. From the mouth of the Red River to the Gulf, a distance of 309 miles, the average river slope at extreme low water is one-tenth of a foot per mile. The tidal effect obscures the actual slope in this region of the river. Levee setbacks are not practicable.

CONTOUR PLOWING

Legislation to discourage artificial drainage of lands on tributary streams and headwaters and to promote contour plowing with a view to lessening the rate and amount of run-off has been suggested for arresting headwaters at their source. It is believed, however, that the general effect on floods in the lower valley would be insignificant.

RESERVOIRS

Careful studies have been made covering the construction of reservoirs for the control of floods in the lower Mississippi. The studies show that in most cases the benefits for power or local flood control are of greater value than are benefits resulting for flood control on the lower Mississippi. In other words, reservoirs are valuable for local flood control on the headwaters, but they are not practicable for controlling the floods in the alluvial valley. Careful investigations have been made covering the matter of reservoirs; they were made after the flood of 1927, and they have been made after previous floods. The results are the same; reservoirs will not solve the problem in the alluvial valley, but further studies may show that they will solve the problem of the lower tributaries; but levees at and near the mouths of tributaries mean pumping, and pumping may be prohibitive because of costs.

The reservoir board reports that reservoirs are not economically justifiable in connection with a comprehensive plan for flood control in the Mississippi Valley at the present time. Reservoirs that would give a dependable reduction of flood height of 5.7 feet at Cairo, 6.9 at the mouth of the Arkansas, and 5.4 at the mouth of the Red River are estimated to cost $1,296,000,000. Equivalent protection can be given by levees for $250,000,000. The best reservoir project found, in addition to the reservoirs at the mouths of tributaries, for the flood control in the lower valley is a system of 11 reservoirs on the Arkansas and White Rivers, at an estimated cost of $242,000,000, and these reservoirs would have reduced the floods at Arkansas City by about 8 feet. The probability is that even these reservoirs would require the destruction of fertile lands in the valleys of the Arkansas and the White more valuable than the lands they would protect along the Mississippi River. In addition the costs of protection would be very much greater for the construction of reservoirs.

Gen. Edgar Jadwin, Chief of Engineers, estimates that in the flood of 1913, if all the water flowing past Pittsburgh on the Ohio, and all the water flowing past St. Paul on the Mississippi, and all the water flowing past Sioux City on the Missouri, had been held back by reservoirs the flood waters south of Cairo would have been reduced by only 2 per cent. Reservoirs were constructed on the Miami, one of the tributaries of the Ohio, at a cost of $15,000,000; their depreciable effect on the Cairo gauge would not exceed one-fifth of an inch.

Mr. Arthur E. Morgan, eminent engineer, says of reservoirs:

A billion dollars on the headwater streams would scarcely affect the lower Mississippi.

Again:

I believe that the construction of this system (Pittsburgh plan to construct 17 reservoirs above that city) would fail entirely to benefit the Mississippi. Except for rare cases, such as the proposed Boulder Dam on the Colorado River, where vast storage capacity is available in an unsettled country, storage for flood control and for power development are in striking conflict. Flood-control reservoirs need to be kept empty and ready for flood service, while power-development reservoirs need to be kept full to insure steady power. It is usually a great mistake to try to combine them. * * * The excessive rains which cause any single flood seldom extend over more than 20 per cent of the whole drainage area of the Mississippi River. * * * Flood control on the lower Mississippi by means of reservoirs on the headwaters in general is a delusion.

However, the rivers constitute an important part of our natural resources. They belong to the people. The potential water power on many streams is not known. Congress should make provision for careful studies on all streams of the country with a view to ascertaining the potential water power, the capacity for navigation, the necessity for flood control, and the benefit of irrigation. Flood control can not be provided for any stream or tributary until proper surveys have been made. These surveys have not been made on any tributaries of the Mississippi. They are essential before any works can be authorized. The Sixty-ninth Congress, by incorporating House Document No. 308, providing for surveys of the tributaries of the Mississippi River and other streams of the country, in the rivers and harbors act approved January 21, 1927, took a forward step in protecting the natural resources of the Nation.

The Mississippi has been surveyed. Studies have been made for 100 years. Plans have been proposed. There is general agreement as to the method of flood control. Tributaries have not been surveyed. The surveys ordered should be made immediately. Flood control is a national problem. The treatment of the tributaries of the Mississippi can not be expected until Congress has carefully considered the surveys and reports. It is the duty of Congress to see that these surveys are made promptly, so the tributaries and other streams may have the consideration they deserve.

The Reclamation Service has built a number of large irrigation reservoirs in the Missouri drainage basin. Eight of these reservoirs have a storage capacity of 1,813,500 acre-feet and were constructed at a cost of approximately $5,700,000. Investigations have been made, and the Army engineers estimate that the amount held back by these reservoirs in 1927 was equivalent to about one-sixteenth of an inch on the gauge at Cairo. It will be remembered that the flood waters of the upper Missouri do not usually reach the lower Mississippi until June. The floods in the Ohio and other tributaries come earlier. There are six reservoirs in Minnesota maintained on the headwaters of the Mississippi, and they are operated primarily for navigation and to control local floods. They were constructed at a cost of $1,322,700, and it is estimated that the operation of these reservoirs causes a reduction of slightly more than one-fifth of an inch on the gauge at Cairo.

Reservoirs on the headwaters of the tributaries are not economical and practicable for the control of the floods in the lower Mississippi Valley. More than one-third of the Mississippi Basin lies west of the one-hundredth meridian, which passes through the middle of the Dakotas, Nebraska, and Kansas. This part of the basin usually contributes less than 5 per cent of the water of the floods in the Mississippi. By contrast, the Ohio, which is generally the foundation of every great

flood in the Mississippi River, drains 17 per cent of the Mississippi Basin, and usually contributes 50 per cent of its floods. These are the careful estimates of the engineers of the Army.

OUTLETS

Since levees only can not be relied on to solve the problem of flood control, other methods must be adopted. Spillways and outlets have heretofore been opposed because of their effect on the discharge capacity of the river. However, before the levees were built water spilled gradually over the banks in every flood. Water was diverted through the natural outlets at Cape Girardeau and Cypress Creek.

There is no evidence to show that the regimen of the river was injuriously affected. Levees must be supplemented by spillways and diversions. The combination of the two will solve the problem. There is a proper place for reservoirs, for local flood control, power, and irrigation. Reforestation should be encouraged and developed. Soil erosion should be prevented. But, in the meantime, floods in the lower Mississippi Valley should be controlled, and according to the best posted and best informed engineers in the United States the backbone of the control consists of levees, supplemented by spillways and diversion.

TENSAS AND ATCHAFALAYA DIVERSIONS

Cypress Creek, at the head of Bayou Boeuf, was closed in 1921. Before it was closed the Mississippi flood water above a stage of 53 feet on the Arkansas City gauge overflowed through Cypress Creek down the valley of Bayou Boeuf and Bayou Macon and discharged into the Red River, through the Tensas and Ouachita Rivers, and thus a natural diversion was provided. Both the Chief of Engineers and the Mississippi River Commission agree that this diversion must be reopened. It was a monumental error to close Cypress Creek. It was a natural outlet.

It traverses the lowest ground for spilling the waters of the Mississippi River. As a part of any flood-control scheme it should be reopened and just compensation made by the Government to the people who have improvel lands as a result of Cypress Creek being closed. All the engineers in the employment of the Government recommend the Cypress Creek diversion. The chairman and one member of the Mississippi River Commission state that they would like to investigate the matter of reservoirs along the Arkansas and the White. Both join in the recommendation for the Cypress Creek diversion, and the substance of their testimony is that this diversion must be considered a part of any comprehensive flood-control plan.

There is no disagreement about the enlargement of the diversion through the Atchafalaya. All engineers agree that at least 600,000 cubic feet should be diverted through the Cypress Creek outlet and 900,000 cubic feet through Atchafalaya. The Government should bear the expense incident to the diversions. This is the time to make them. Delay means additional costs and further improvements. It is estimated that only about 10 per cent of the Atchafalaya flood way is cultivated. The figures show that approximately 25 per cent of the proposed Tensas flood way is now cultivated. The remainder is swamp, timber, and cut-over lands. Eminent engineers have testified that a diversion can be made through Cape Girardeau, through the natural outlet formerly provided for the overflow waters of the Mississippi into the St. Francis Basin. It is maintained that a diversion here would protect Cairo. It may come. The engineers say that for the present the problem can be solved more economically by an enlarged channel between Cairo and New Madrid or by higher levees. This enlarged channel is really the adoption of the diversion system to supplement the levee system.

NAVIGATION

The Mississippi River is the greatest navigable river, not only in the United States but in the world. For practically the first 40 years of its existence the energies of the Mississippi River Commission were devoted, as directed by Congress, to the improvement of the Mississippi River for navigation. The census of 1889 gives us the first accurate statistics as to navigation on the Mississippi and its tributaries. The river traffic during this period was enormous. Freight and passenger boats were at the high tide of their prosperity. This census gives the total commerce of the Mississippi River and its tributaries in 1889 as 28,000,000 tons. Railway construction had been begun in the early eighties in the lower Mississippi Valley, and for a time the boats very largely disappeared from the river.

There have been improvements in steamboats as there have been in railways. The old side-wheel steamer has been superseded by the boat with the modern Diesel engine and a light draft. The total commerce in 1926 on the Mississippi River and its tributaries was 57,000,000 tons, or more than twice as much as in 1889. The operations of the Inland Waterway Corporation have emphasized the importance of the Mississippi as a navigable stream. It is estimated that this corporation transported 5,000,000 tons on the river in 1920, and the tonnage had increased to 17,500,000 tons annually on June 21, 1927.

Both the Chief of Engineers and the Mississippi River Commission maintain that levees and bank revetment are essential to the improvement of the navigation of the Mississippi. Caving banks occur in the bends of the river and on the concave side of the river. The caving of banks produces a large part of the material that forms the bars to obstruct navigation. The levees confine the waters and promote navigation. Revetment protects both the levees and the caving banks.

The Mississippi River Commission estimates that there are about 500 additional miles of banks that need to be revetted, making about 630 miles of revetment. The Chief of Engineers places the mileage at something less than this figure. The Mississippi River Commission estimates that bank stabilization will cost about $150,000,000. The Chief of Engineers figures $110,000,000. Both agree that no system of flood control or navigation improvement works can be effective or secure without stabilization of river banks. Dredging will be diminished by revetment and levees will be protected.

Caving banks do not occur extensively below the mouth of Old River. They are confined to the concave banks, and generally occur between the mouth of Red River and Cairo. With practical unanimity, all engineers agree that levees and revetment are essential for flood control and navigation. It is important, therefore, that flood-control legislation should make provision for bank revetment as well as for levees, spillways, and diversions.

FLOOD CONTROL ACTS

The first flood control act was passed on March 1, 1917, and authorized an appropriation of $45,000,000 for flood control and river improvement. Prior to that time the appropriations by Congress had been made principally to protect navigation. As shown by the report of the Mississippi River Commission, dated November 28, 1927, printed as committee Document No. 1, Seventieth Congress, first session, the appropriations for the Mississippi River from 1879 to 1916 aggregated $82,965,610.68. The first flood control act was passed just one month before the entrance of the United States into the World War. Congress was compelled to reduce the annual appropriation. The work extended over seven years instead of five. As shown by the report of the Committee on Flood Control, published as Report 1420, Sixty-seventh Congress, fourth session, the commission expended $4,000,000 a year for works other than levees, instead of $3,000,000, so that $28,000,000, instead of $15,000,000, was allotted to work other than flood control. Under the first flood control act, therefore, only $17,000,000, instead of $30,000,000, were devoted to levees.

As shown by the report of the Mississippi River Commission, under the second flood control act, approved March 4, 1923, Congress has appropriated $40,000,000 of the $60,000,000 authorized and the testimony of Col. C. L. Potter, president of the commission, shows that only about $13,000,000 of this amount has been devoted to the construction of levees, the remainder being used for navigation improvement.

As shown by the report of the Mississippi River Commission, dated November 27, 1927, and as shown by the report of the Chief of Engineers, printed as House Document No. 90, Seventieth Congress, first session, the Federal Government expended for levees from 1882 to December 31, 1926, $71,089,993.58. Under the first and second flood control acts the local interests contributed one-third of the costs of levees and provided the rights of way, and during this period their contributions amounted to $15,058,280.20. Levee construction from 1882 to 1927 was largely done by the local interests and during this period, as shown by the report of the Mississippi River Commission and the Chief of Engineers, the local interests expended for levee construction $151,953,175.25. As shown by page 27 of the commission report the Government has expended between 1881 and 1927 $61,000,000 for revetment, and the local interests have contributed over $3,000,000 for revetment. There have, therefore, been spent by both the Government and the local interests for levees and revetment since 1882 approximately $300,000,000, of which amount only $71,000,000 for levee construction has been contributed by the Government, the local interests during the same period having contributed $167,000,000.

Moreover, as shown by the report of the Chief of Engineers on page 13, local interests expended in the construction of levees prior to 1879 over $125,000,000. The second flood control act authorized an appropriation of $60,000,000. At the time of the flood of 1927 $40,000,000 had been appropriated. It was estimated that the levees along the main river, under the second flood control act, would be brought up to the 1914 grade and section. They were incomplete, therefore, at the time of the 1927 flood.

FLOOD OF 1927

A notable flood occurred in 1828, when the lower valley was generally overflowed. There was a great flood in 1844, when the Yazoo Basin was flooded. This flood was the highest ever known above the mouth of the Ohio. There were great floods in 1849, 1850, 1858, and 1862.

The flood of 1882 was the greatest south of Cairo. Two hundred and eighty-four crevasses occurred on the Mississippi River. In 1883 there were 224 crevasses, for the flood of 1882 was followed by two successive and excessive floods in 1883 and 1884. There were also great floods in 1890, 1893, 1897, 1903. The flood of 1912 exceeded all previous records south of Cairo, and prior to 1927 was the greatest flood in the lower valley. There were great floods in 1913, 1916, and 1922.

The rainfall that caused the flood of 1927 was excessive throughout the valley. There had been heavy rains all along the Tennessee and the Cumberland Rivers in the fall of 1926. Heavy rains continued from January until April. The central and lower valley were drowned by rains from the Gulf winds passing north over northwestern Arkansas, southern Missouri, Tennessee, Mississippi, and Louisiana. The rainfall in eastern Oklahoma, western Arkansas, and southern Missouri was unprecedented. It is estimated that the discharge of the Arkansas River at Little Rock was 813,000 cubic feet per second, the highest on record. Meantime, along the headwaters of the main tributaries there was a normal precipitation.

ENORMOUS DAMAGES BY FLOOD OF 1927

The flood of 1927 was the greatest ever recorded in the lower Mississippi Valley. According to the Department of Agriculture about 11,000,000 acres, of which 4,400,000 acres were crop lands, were inundated in the lower Mississippi Valley in the flood of 1927. There is a great misconception as to soil deposits following overflows. Prior to the construction of levees and the clearing of land there was a deposit of silt that enriched the soil. The cane and timber impeded the currents that caused the deposits, but as the country was cleared and the levees were constructed, mere overflows became floods when the levees broke. The currents were increased and there was no cane or timber to slacken these currents. Deposits now obtain only in the timber places or in the lee of ridges or other obstructions. It may be safely said that for every inch of deposit left in the alluvial valley 3 inches of top soil were eroded from other lands. Moreover, the deposits now fill the drainage ditches and canals, where the eddying action of currents causes precipitation. Instead of the soil being enriched the soil is practically destroyed by deposits of sand where crevasses occur. Floods leave no deposits of value.

There were 17 breaks in the main levee of the Mississippi River and 209 on the tributary levees in 1927. The Red Cross estimates loss of life at 245, and the Mississippi River Flood Control Association gives the losses and damages resulting from the flood of 1927 at $236,334,414.06. The Red Cross expended more than $17,000,000 and Army supplies valued at $7,000,000 were furnished. The Red Cross reports that 607,000 people were fed and cared for by this great organization. It is estimated that at least 700,000 people were driven from their homes.

The greatest break that ever occurred on the Mississippi River happened at Mounds Landing on April 21, 1927, at 7.30 o'clock in the morning. The gauge then stood at 60.5 at Arkansas City. The break occurred following a heavy rain and high wind the night before, with a rise of 1.1 for the previous 24 hours. Within two hours after the levee broke the break was a quarter of a mile wide, and by noon it was a half mile wide, and finally it grew to the width of 3,300 feet. It overflowed 316 miles of railway track, and flooded the cities of Greenville, Leland, Hollandale, Belzoni, Silver City, Rolling Fork, and a large number of smaller towns. According to the Bureau of Agricultural Economics, 735,000 acres of crop land were flooded, thousands of people were made homeless, 7,300 mules and horses, 8,920 cattle, and 22,300 hogs, and 260,000 poultry were destroyed in the Yazoo Basin. It is estimated that 550,000 acres of land overflowed in 1927 were planted to cotton in 1926. The floods did not subside until about the middle of August, and for the first time in the history of the Mississippi Valley no crops of any value were produced in the overflow section of the Yazoo Basin. Not more than 10 per cent of the overflow area was planted to cotton in 1927. The break at Mounds Landing was finally closed about December 1, 1927, and crops were impossible because of a June rise in the Mississippi River that caused the receding waters to rise again.

The Mississippi River Flood Control Association estimates the damage in the State of Mississippi at $45,931,294. While the Red Cross gives the aggregate loss of life at 245 in the valley, it is conservatively estimated that there were 200 lives lost in the Yazoo Basin alone. After the overflow, many human skeletons were found.

Numerous deaths were unreported. Negroes constitute the principal labor supply. A farm without labor is a liability. Many refused to return to the farms after the waters receded, and it will be many years before their places are taken. The loss of labor is sometimes overlooked in estimating damage resulting from floods, but it very materially reduces the value of lands in the overflow section. The largest county in the flooded area probably lost one-third of its population.

In addition to the crop lands that were overflowed, it is estimated that about 1,000,000 acres of cut-over and timberlands were inundated in the Yazoo Basin.

It is unfortunate that the water levels in the backwater areas along the lower Yazoo and Sunflower Rivers have steadily increased in recent years. The river gauge at Vicksburg in 1927 reached the unprecedented height of 58.7 feet, as against 48.7 feet in 1882. The lands in the lower Yazoo Basin are taxed for levee purposes. Lands in other backwater areas in the valley are not taxed. In justice to these areas, if flood protection is not given to the backwater areas they should be relieved of further taxes for levee construction.

The Assistant Chief of Engineers of the United States Army reports that the damages from the flood of 1927 are variously estimated from $236,334,000 to $284,118,000. It is certain that they exceed the aggregate of the estimated damages for all previous floods. For the years 1882, 1883, 1893, and 1897 there are no recorded estimates of the flood losses and damages. The territory was not then so densely populated, and there was less land in cultivation. In 1907 the damages were small and no estimates are available. The estimated damages for floods of the following years are: 1903, $40,000,000; 1912, $78,188,000; 1913, $12,213,000; 1916, $5,533,000; 1920, $7,088,000; 1922, $17,088,000.

Secretary of Commerce Hoover, who represented the President of the United States during the 1927 flood in the overflow area observed:

> It is not incompatible with national economy to prevent $10 of economic loss by the expenditure of $1 of Federal money.

Only adequate flood control at the Federal expense can protect the lives and property in the lower Mississippi Valley.

LOCAL CONTRIBUTION

We have already pointed out that the local districts have contributed $167,000,000 since 1882, while the Federal Government has appropriated only $71,000,000 to the construction of levees. The local interests expended, prior to 1882, $125,000,000. The Army engineers estimate that the levees now standing along the Mississippi River have a replacement value of $115,000,000. It is shown by the engineers that $100,000,000 of the $229,000,000 spent for levees since 1882 were lost through caving banks. It is estimated that approximately 1,000,000,000 cubic yards of earth cave into the Mississippi River annually. Every engineer and every well-informed layman on the river agrees that bank stabilization is absolutely necessary to the protection of the levees as well as necessary to stabilization for navigation. All agree that the costs of bank revetment should be borne by the Government.

The flood-control act approved March 1, 1917, required the engineers to give their opinion, in considering all works and projects for flood control, as to what share, if any, should be borne by the United States. Gen. Edgar Jadwin, Chief of Engineers, recommended that 20 per cent be borne by the local interests, and that these interests furnish the rights of way for levees along the main river and rights of way and flowage rights for diversions and spillways. The President concurred in the recommendation of 20 per cent. The hearings develop that neither the President nor General Jadwin now insist upon the figure of 20 per cent. The President and many other friends of flood control believe that the local interests should contribute. They want the principle retained. They are afraid that a precedent of construction of works entirely at Federal expense established for the lower valley might be used for other streams. A careful analysis and a consideration of past expenditures show that under the Jadwin plan the local interests would contribute 49 per cent, while the Government would only contribute 51 per cent. The local interests under the Jadwin plan would be expected to furnish the flowage rights through the Tensas and Atchafalaya Basins, at a cost estimated by the Mississippi River Commission at $91,000,000.

In addition to the 49 per cent, the local interests under the Jadwin plan would furnish rights of way along the main river for levee relocations and enlargements that would cost $1,168,420 in the Yazoo Basin. The local interests would provide, according to the estimate of the Mississippi River Commission,

under the Jadwin plan for flood ways, $104,000,000. When past expenditures are considered, and if the project is constructed under the Jadwin plan, the local interests will have an investment of 67 per cent, as against 33 per cent investment by the Government. These percentages are arrived at as follows:

Local interests, under Jadwin plan (p. 11, par. 41)	$37,440,000
Local expenditures to date	295,000,000
Deficit for flood way	104,000,000
Total expenditures for local interests (67 per cent of the total)	436,440,000
Federal Government, under Jadwin plan (p. 11, par. 41)	147,960,000
Government levee expenses to date	71,000,000
Total expense of the Government (33 per cent of the total expense)	218,960,000

The report of the Mississippi River Flood Control Association shows that there are outstanding levee bonds by the levee districts of the lower Mississippi Valley aggregating $43,805,451.27. These bonds mature over a period of years. The local interests will do well to liquidate these bonds as they mature.

The Mississippi River Commission recommends that the Government bear substantially all the costs for flood-control works. They believe that the principle of local interest should be retained; that the levee districts should furnish the rights of way and furnish one-third the costs of maintenance of the levees.

The commission insists that inasmuch as the Government is to expend millions of dollars in construction of levees it would be unwise to turn these levees over to any other interests for maintenance. They believe that there should be local cooperation. They suggest that the local interests pay one-third the cost of maintenance.

The commission recalls that the local contribution by the flood control act of 1917 was limited to the 1914 standard grade and section. It believes that the local interests should continue to contribute where the levees have not been brought up to the 1914 standard. It believes that the enlargement of the levees in excess of the 1914 standard grade and section and the costs of new levees should be assumed by the United States. The Government should bear the costs of relocating levees. The commission recommends that bank revetment continue to be done at Federal expense. Both the commission and the Chief of Engineers recommend that the title to the levees shall remain in the local districts.

If the recommendation of the commission as to local contributions is adopted, it means that the local interests in the third Mississippi River district, which includes the levees on both sides of the river in front of the Yazoo Basin, would contribute to the building of the levees along the main river approximately $1,649,333 to complete the levees along the main river to 1914 grade. The two districts in the Yazoo Basin would contribute below Brunswick $598,661 and the Mississippi district above Brunswick $266,667.

If the Federal Government will not assume the entire burden, it is believed that the recommendation of the Mississippi River Commission should be adopted. Under either the commission or Jadwin plan the total costs of adequate flood control will aggregate about $500,000,000.

However, the local interests have borne their part. The hearings before the Flood Control Committee have shown conclusively that many districts are unable to contribute further. The proposed legislation should authorize construction by the Government without local contribution in these cases. Formerly, the landowners could afford local contribution.

The levees were low. The territory was sparsely settled. It is now covered with cities, highways, and improved plantations. The demand for flood-control works is in the interest of the whole Nation. Two centuries ago the levees in front of New Orleans were 4 feet high; they were ample to protect the city from overflow. To-day, between the Gulf and the mouth of the Red River the levees are above the roofs of houses. They have proved inadequate to contain the floods that are poured down between them from the north, the east, and the west. In Louisiana not a drop of water enters the Mississippi River from where the Red River enters the Mississippi to the Gulf of Mexico, a distance of 300 miles. All the rainfall in Louisiana, Arkansas, and Mississippi could have been carried safely to the Gulf for a small part of the money these States have spent in levee construction, but the floods from the Rockies, the Alleghenies, and the Great Lakes have swept down periodically, have swollen the current, broken the levees, and carried death and destruction in their wake. The States of the lower valley have already spent more than enough money to protect themselves from floods that originate in their territory. They have done their part and more in defraying the costs of flood protection. Whatever amount the lower-valley districts contribute in the future will be extracted from those who have suffered staggering losses of hundreds of millions of dollars during the year 1927. It is not fair, it is not possible for the States of the lower valley to care not only for their own floods but also the floods of western Pennsylvania, Illinois, Nebraska, New Mexico, and of 27 other States as well. On an average of every five years since 1882 the levees have been broken and the waters from 41 per cent of the area of the Union have ravaged the towns and plantations of Louisiana, Arkansas, and Mississippi.

The leading statesmen and the conspicuous business leaders and organizations of the Nation have said that flood control is a national problem, and that it is an injustice for the States of the lower valley to combat the flood waters of almost half the continent. The heart of the Nation has been stirred and it is the universal sentiment of the country that the flood menace of the lower valley should be ended for once and for all. Every time there has been a flood the Nation has been quick to sympathize, and has responded generously with immediate relief, and Congress, when the waters receded, almost forgot. In the light of the flood of 1927 we must not now forget; for to forget is to neglect, and to neglect is to cause an even greater tragedy than the flood of 1927.

The local benefits are incidental. All public works result in private benefit. Communities benefit by the construction of Army posts, streets, highways, and shipyards. The harbors of New York, Boston, and Philadelphia are maintained at Federal expense.

Loss to the overflow areas is not a conclusive factor. The Mississippi River belongs to the Nation. The commercial life of the country is endangered by floods. Commerce is interrupted and the economic loss falls on all citizens.

It is an injustice to protect the heart of the country by requiring the local interests to bear the greater part of the burden. It is just as wrong as it would be to place the protection of our national boundary lines upon the boundary and coast States. It is just as fallacious as it would be to ask local districts to construct locks and dams in the rivers. Levees protect, but they do not reclaim. The removal of snags promotes navigation, but it does not create commerce. Both afford the opportunity for increase in values. The lands must be cleared; they must be cultivated and improved.

Moreover, local contribution results in divided responsibility. The entire project can not be permitted to lag because of the inability of certain districts to contribute. The break at Knowlton and at Laconia Circle in 1927 resulted from the inability of local districts to pay, and flooded the States of Louisiana and Arkansas. The Federal Government can only have the final word in the construction and maintenance of the levees when it assumes the full cost. The assumption of the entire burden will result in economy in the long run.

EMINENT DOMAIN

The Government has not, but by statute should have the right to eminent domain to acquire rights of way for levees and flowage rights for spillways and diversions. It has the power of eminent domain as a part of the exercise of its inherent sovereignty. The question of necessity for taking is not a judicial question but a legislative one. The right of eminent domain does not rest upon a constitutional enactment, but it is an incident to sovereignty. Some have objected because they believe that the Government will be required to pay excessive costs for flowage rights through the Tensas and Atchafalaya Basins, which will be about 7 to 14 miles in width and will probably require 2,000,000 acres of land. The agency of the Government charged with the execution of the works should be given the right of eminent domain, so that the proper rights may be acquired in the event they are not furnished by the local interests. Moreover, the Government should be protected and provision should be made for the exercise of the right of eminent domain, so that just compensation to owners of property may be fixed by commissioners in the district courts of the United States without the intervention of a jury. The practice of ascertaining just compensation by juries did not obtain in England and America at the time of the adoption of the Constitution, and the Supreme Court of the United States has held that just compensation can be estimated by commissioners of the court without a jury. (Bauman *v.* Ross, 167 U. S. 548; Backus *v.* First Street Union Depot Co., 169 U. S. 557.)

It has been suggested that the consent of the States would have to be obtained before diversion channels could be constructed in aid of navigation and flood control. This is not at all necessary. If the United States has the right to provide for flood control and navigation works it may acquire any property necessary, with or without the concurrent acts of the States in

which the land is situated. (Van Brocklin *v.* Tennessee, 117 U. S. 154.)

Congress can not delegate its legislative function; but having laid down the general rules of action under which a commission or agency may proceed, it may require of the commission the application of such rules to particular situations with a view to making decisions in particular matters within the rules laid down by Congress. (Union Bridge Co. *v.* United States, 204 U. S. 364; Monongahela Bridge Co. *v.* United States, 216 U. S. 177; Hamilton Bridge Co. *v.* United States, 221 U. S. 194; Interstate Commerce Commission *v.* Goodrich Transit Co., 224 U. S. 194.) Congress may appoint an agency to enforce the rules that it lays down and to execute the works for which it provides.

It is unnecessary to cite any authority to support the power of Congress over navigation, for the power is derived from the commerce clause of the Constitution, and has been exercised for so long that it is known and understood by all. (Pennsylvania *v.* Wheeling Bridge Co., 18 How. 421.)

Congress undoubtedly has the power and authority to provide for the construction of levees and other works under the commerce clause of the Constitution in the aid of navigation and under the power to establish post roads and for the common defense. Under Article I, section 8, clause 1, of the Constitution, which provides for the levying of taxes for the common defense and general welfare of the United States, Congress has the power to appropriate money for any purpose which in its judgment is for the general welfare. There is a difference between the constitutional power to appropriate and the constitutional power to regulate and control.

The power to enact flood control legislation involves not only the power to appropriate money, but to establish and construct works without let or hindrance from any person or State. The power to legislate for the control of floods is not given specifically to Congress, but it exists under Article I, section 8, clause 18, of the Constitution under the power of Congress to make

> all laws which shall be necessary and proper for carrying into execution the foregoing powers.

If the end be legitimate, if it be within the scope of the Constitution, all means that are appropriate and plainly adapted to that end, that are not prohibited, are constitutional. (McCulloch *v.* Maryland, 4 Wheat. 316.)

The Supreme Court of the United States upheld the provisions of an act to deport alien anarchists as constitutional, as a part of its sovereignty as well as under the commerce clause. (U. S. *v.* Williams, 194 U. S. 279.)

The court held in the case of the United States *v.* Gettysburg (160 U. S. 168) that the preservation of the battle field of Gettysburg was within the power of Congress. Other cases might be cited, but these are suggested to show the scope and meaning of the words "necessary and proper" as construed by the court of last resort.

The power to do whatever is necessary to guard against the effects of damaging floods which may delay and destroy interstate commerce may be fairly deducted from the power to regulate commerce with foreign nations and among the several States, granted in Article I, section 8, clause 3, of the Constitution, also from the power to establish post roads and post offices, found in the 7th clause of the same section.

The war power is also important, though in times of peace it may not be so clear. We are not confined to any of the expressed powers in ascertaining the source of implied powers. We may resort to any or all of them. The commerce and post roads provisions, however, have a definite application, for under the commerce clause Congress has power to enact all appropriate legislation and to promote its growth and insure its safety. (Houston *v.* U. S., 234 U. S. 342.)

The construction of transcontinental railroads was in aid of commerce, and franchises and grants of land for this purpose were upheld by the Supreme Court. (Pacific Railroad Removal Cases, 115 U. S. 1.) During the World War the entire transportation system of the country was taken over and operated by the Government as a war measure. The transportation act of 1920 recognized the national theory of commerce, and it is an act which has been upheld by the Supreme Court of the United States. (Wisconsin *v.* C., B. & Q. R. R. Co., 257 U. S. 562; Dayton-Goose Creek Railway Co. *v.* U. S., 263 U. S., 456.) The step to a national flood control act from this act is short and easy.

The constitutional powers have kept pace with the new agencies brought into use by the increasing demands of commerce, wealth, and population. Necessity has revealed the power; it may not have created it.

The following conclusions are supported:

First. Flood-control work is a proper function of the Federal Government and Congress is the sole judge of the circumstances under which appropriations may be made.

Second. The power of Congress is not limited to navigation, or to cases that are incident thereto, but may be predicated upon the basis of aid to commerce and the destruction, injury, or impairment of the agencies engaged in commerce.

Third. The commerce clause is not the only constitutional basis for flood control, though perhaps the clearest. The power to establish post roads, to provide for the common defense, to declare war, as well as other powers, all have the effect of showing that flood control is within the scope and purpose of the Constitution.

NEITHER THE GOVERNMENT, STATES, NOR LEVEE DISTRICTS LIABLE FOR DAMAGES

There can be no claim on the part of the States against the Government for the construction of flood-control works. Any claim for damages must be a claim by the individual damaged. The courts of the United States and the State of Mississippi have held that there is no such claim resulting either from the control of the flood waters of the river or from the ineffective efforts to control such flood waters. There is no remedy in tort for such damage. (Keokuk Bridge Co. *v.* U. S., 260 U. S. 125.)

Riparian ownership is subject to the obligation to suffer the consequences of the improvement of navigation in the exercise of Government rights in that regard. Moreover, damages resulting from the prosecution of works on a navigable stream for the public good are not a taking of property but are merely incidental to the exercise of a servitude, to which it is always subject. (Gibson *v.* U. S., 166 U. S. 271; Bedford *v.* U. S., 192 U. S. 233; Jackson *v.* U. S., 230 U. S. 1; Hughes *v.* U. S., 230 U. S. 24.) These last two cases originated in Louisiana and Mississippi; the one involved damages to riparian owners along the bluff on the east side of the Mississippi, and the other damages to owners because of the construction of levees in the alluvial Yazoo Basin. The Supreme Court of the United States held that there was no liability in either case.

The overflows of the Mississippi River justify the construction of levees for the purpose of preventing destruction to the valley of the river, and the owners of land fronting on the river have no right to complain because of the building of levees along the river, causing overflow of their land. (Cubbins *v.* Miss. River Commission, 241 U. S. 351.) There is no liability against the United States for the improvement of a navigable stream in the aid of commerce where no property or land is actually taken. (Sanguinetti *v.* U. S., 264 U. S. 146.) Flood control legislation should provide for the construction of works so that no damages can be asserted against the Government. Levees would never have been built if the districts had been liable for resulting damages to landowners, for the improvements were for the general public benefit.

TWO PLANS

Extensive studies and investigations have been made by the Government to solve the problem of the flood control of the Mississippi River. In 1822 Bernard and Totten, Army engineers, submitted a report after extensive study. Humphreys and Abbott, Army engineers, made an elaborate report in 1861. Studies have been made in the light of previous floods. Congress has appointed many commissions. The Warren commission in 1875, the Burrows committee in 1883, and the Nelson committee in 1898 submitted reports. President Wilson, after the flood of 1913, ordered a full investigation for more efficient methods for flood control.

The Mississippi River Commission had provided for the greatest flood that had occurred prior to 1927. Levees with a 3-foot freeboard and up to what is known as the 1914 grade and section were adopted. When the flood of 1927 was at its height the Chief of Engineers, at the direction of the President, and with the approval of the Secretary of War, requested the Mississippi River Commission to revise its plans to provide a reasonable factor of safety for any probable flood.

Accordingly, on November 28, 1927, the Mississippi River Commission submitted a report, published as Flood Control Committee Document No. 1, Seventieth Congress, first session, and this report is hereafter referred to as the commission report. Maj. Gen. Edgar Jadwin, Chief of Engineers, also submitted a report, herein referred to as the Jadwin report, which was transmitted to Congress on December 8, 1927, and printed as House Document No. 90, Seventieth Congress, first session.

The commission report contains a tentative program at an estimated cost of $407,500,000, intended to protect against a flood equal to that of 1927, and a comprehensive project estimated at $775,000,000, intended to protect against a flood 25 per cent in excess of the 1927 flood.

The Jadwin report contains a project estimated to cost $296,000,000, and it provides for a maximum predicted flood and for future expansion to meet changing conditions.

The Jadwin report suggests a local contribution of 20 per cent, amounting to $36,840,000, while the commission report suggests a local contribution to bring the levees on the tributaries and on the main river to the 1914 grade and section. The contributions on the main river, under the commission plan, from Rock Island to the Gulf, would amount to $6,785,137, and on the tributaries the amount would be $8,662,220. The total cost for levees on the tributaries under the tentative plan would aggregate $53,370,890, while under the comprehensive plan it would aggregate $71,754,570. The principal contributions on the main river to bring the levees to the 1914 grade would be between Cairo and Rock Island. The Jadwin plan contemplates raising the levees to Cape Girardeau, but does not provide for additional work on the levees between Cape Girardeau and Rock Island. The local contributions on the main river in the third Mississippi River district, which includes the entire Yazoo front, and the levees on the Arkansas and Louisiana side, between White River and Warrenton, aggregate $1,649,333. We have already given the contributions for the two Mississippi River districts to the 1914 grade.

The main engineering features of the two plans are substantially the same. Both plans provide for raising, strengthening, and enlarging the levees from Cape Girardeau to Head of Passes. Both plans provide for diversions and spillways. Under the commission plan the local interests will furnish rights of way for levees only on the main river, in addition to contributions to the 1914 grade. Under the Jadwin plan the local interests would furnish rights of way for levees on the main river, flowage rights for diversions and spillways, and rights of way for levees for diversions and spillways, in addition to contributing 20 per cent of the cost thereof. The local interests would also be required to maintain all levees under the Jadwin plan, while under the commission plan they would contribute one-third the cost of maintenance. The great difference in the estimates of costs is as to the flowage rights through Cypress Creek and the Atchafalaya diversions. Both plans provide for revetment; the commission recommends $150,000,000, and the Chief of Engineers recommends $110,000,000. The Jadwin plan makes no provision for the construction of levees along the tributaries. It recommends further studies with a view to flood control, power development, and navigation. Reservoirs on the tributaries may prove valuable for these purposes, and particularly in the control of the floods on the tributaries. The commission plan includes an estimate of $73,000,000 for levees on the tributaries. It is believed that local interests will be unable to contribute for some time to levees to the 1914 grade in the lower tributaries, for pumping will be required.

A fatal objection to the Jadwin plan is that it recommends that the States or districts agree to hold or save the United States free from all damages resulting from the construction of the project. It would be impossible for the States to do this. Moreover, the States as such have never constructed levees; the districts along the river have built the levees. The Yazoo Basin is but one-eighth of the area of Mississippi. Again, levees have been built on the theory that the public interest required that they be constructed without any damage or liability except for rights of way actually taken. The maintenance of this principle is essential to flood control. This feature of the Jadwin plan would make impossible the protection of the lower valley.

It has been suggested that neither plan makes provision for levees or for payment of damages to riparian owners on the east bank of the river. Levees have resulted in raising the flood levels. The areas in Tennessee along the bluffs aggregate approximately 260,000 acres, about 30 per cent of which is in cultivation, and the area in Mississippi from Vicksburg to Fort Adams is about 140,000 acres, of which about 10 per cent is in cultivation. The remaining portions of these areas are swamp and overflow lands. It is well to keep in mind that while the flood heights have been raised, they have also been raised in the same proportion along the lower tributaries of the Yazoo River and of the Arkansas and White Rivers. Each of these areas, as before stated, is approximately 768,000 acres. If the owners along the bluffs are to be compensated, surely the owners along the lower reaches of the tributaries should also be compensated, for more lands and more productive and valuable lands have been inundated in these backwater areas than along the bluffs by the levee system. In addition, large areas lie between the levees and the river with higher water levels, but no damages are allowed in Mississippi. Lands in Mississippi between the levees and the river are merely exempt from levee taxes.

ECONOMIC SURVEY

Extensive hearings have been conducted by the Flood Control Committee of the House and by the Commerce Committee of the Senate. It has been demonstrated beyond question that the local interests are unable to pay 20 per cent of the costs under either plan. The hearings disclosed accurate testimony as to the values, products, and ability of the local interests to pay. The committees of Congress have visited the devastated areas. Studies and surveys have been made on the lower Mississippi before and since the organization of the commission in 1879. The commission has been in close contact with the people. It is the representative of the Government. It is familiar with the ability of the local interests to make further contributions. The studies embrace both the economic and the engineering features. The universal verdict is that the local interests have borne their part.

Evidently the President and the Chief of Engineers recognize that the contribution of 20 per cent is untenable. They now suggest an economic survey. This begs the question. The responsibility is on Congress. No commission to make an economic survey can obtain better and more reliable and adequate facts than the two committees of Congress have acquired. It is for Congress to decide. Too many abdications by Congress in favor of commissions have already been made. Congress has been studying the problem for almost a year. A commission means further delay. Delay is dangerous. It may mean another flood; it may mean vastly more destruction and tragedy.

It is the duty of the committees of Congress to obtain full information. Congress can not straddle the question; it can not dodge. These committees have heard the evidence. They have gone further than the commission appointed to negotiate a settlement of the foreign debts of the Allies to the United States resulting from the World War. Congress determined the ability and capacity of its debtors to pay from the investigations of the Debt Funding Commission. This commission did not go to Europe and make an economic survey to determine the ability of the Allies to pay. Why should a different method be used to determine the capacity of our people, bone of our bone and flesh of our flesh, to pay?

NATIONAL RESPONSIBILITY

The States and local districts are no longer able to protect themselves against the floods of 31 States of the Union. They have staked their all in improving the alluvial valley and in issuing bonds for the construction of levees to provide against the highest waters that might reasonably have heretofore been expected. Levees have only failed because they were inadequate. As long as the country was sparsely settled and developed the local interests neither asked nor expected aid, but now the country has grown and developed. The burdens from overflows have increased. Progress means sacrifice. The great Middle West has been cleared and is being cultivated. Millions of acres in the lower valley have been made productive. The problem has outgrown the local interests, but it can be solved. The engineering is simple but the task is gigantic. It requires money. There must be a central authority; there must be unity of action. The river must be supplemented, the levees must be aided. Another feature of safety must be added to the levees. Spillways and diversions must furnish the additional safeguard. Further study should be made as to reservoirs.

It is impossible for us to have our cake and eat it. Spillways and diversions must be constructed in those districts where the greatest good will result to the greatest number. The interests of the valley outweigh the claims of any one district. Only the National Government can be the final arbiter in the adoption and execution of a plan that will promote the interests not only of the entire lower valley, but of the Nation as well.

The magnitude of the problem, the vast areas involved, differentiate the Mississippi from all other water courses on the continent. The treatment of the lower Mississippi will not be a precedent for future action. The national character of flood control in the lower Mississippi River has been emphasized by the greatest flood in the history of America. It has been so strongly established that it can never again be questioned. The devastation and destruction wrought by the mighty floods in the lower Mississippi Valley are comparable only to war. The destruction and devastation are really worse than war, and the need has been emphasized by the sacrifices in lives and property in the flood of 1927. Too long have the people of the lower valley suffered; too long have they paid for the privilege of being overflowed annually and of being subjected to bankruptcy periodically. The great flood of 1927 must not be repeated. Congress must provide for the adoption of a plan and for the appropriation of funds to solve the problem once and for all. The united view of the country is that the control of the

floods of the lower Mississippi is the responsibility of the National Government.

LIEUT. CHRISTIAN F. SCHILT

Mr. MAAS. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the awarding of a medal of honor to a member of the Marine Corps.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. MAAS. Mr. Speaker, it gives me a great deal of personal pleasure and pride that Lieut. Christian F. Schilt, of the United States Marine Corps, is to receive the Congressional Medal of Honor, the highest military award within the gift of the American Government.

Lieutenant Schilt enlisted as a private in the United States Marine Corps early in the World War and served in the First Marine Aeronautic Company during 1918 in the Azores.

Lieutenant Schilt and I served together as enlisted men throughout most of the war, and I was in very close contact with him and had a splendid opportunity to observe him. He is and always was a very modest, quiet, gentlemanly soldier, but a very capable and fearless one. He is of the type of young American who, but for the exigencies of war which immediately lead him into the military service of his country and which service so attracted him that he chose to remain in it and make it his life work, would to-day be a successful business executive or professional man. It is to such officers that most of the credit must go for keeping up the morale of the service in the postwar days of the popular pastime of making the Army and Navy the object of attack and constant ridicule and unfair criticism.

Uncomplainingly, smilingly, and with good-natured tolerance Lieutenant Schilt has carried on and performed splendid, courageous service in peace as in war.

Whether as private or lieutenant Schilt has always performed his duties with such unusual good grace that he has constantly been an inspiration to those with whom he has served.

Lieutenant Schilt has performed conspicuous service as a marine aviator, receiving special commendation for service rendered the United States Geological Survey in securing air photographs of coast and rivers of San Domingo and Haiti. He also received special commendation for taking third place in the annual machine gun and bombing matches at Langley Field, Va., in 1926.

In 1925 he finished in second place in the Detroit News trophy air race, held at Mitchel Field in conjunction with the Pulitzer race of that year, being just a fraction of a second behind the winner.

Lieutenant Schilt, one of the foremost aviators of the country, is receiving the medal of honor for a most unusual and daring exploit, performed at the risk of his own life beyond all call of duty.

The citation for Lieutenant Schilt, now on duty with the aviation detachment, Second Marine Brigade, in Nicaragua, reads as follows:

For extraordinary heroism in the face of the enemy, distinguished by conspicuous gallantry and intrepidity at the risk of his life above and beyond the call of duty. On January 6, 7, 8, 1928, at Quilali, Nicaragua, during the progress of an insurrection in that country, Lieutenant Schilt, then a member of a marine expedition which had suffered severe losses in killed and wounded, volunteered under almost impossible conditions to evacuate the wounded by air, and transport a relief commanding officer to assume charge of a very serious situation.

Lieutenant Schilt bravely undertook this dangerous and vitally important task, and by taking off a total of ten times in the rough, rolling streets of the partially burned village, under hostile infantry fire on each occasion, succeeded by almost superhuman skill, combined with personal courage of the highest order, in accomplishing his mission, thereby actually saving three lives and bringing supplies and succor to others in desperate need.

CONSENT CALENDAR

Mr. TILSON. Mr. Speaker, I think we should go back to the calendar until 5 o'clock. I think this is a good precedent to follow. Otherwise some Member might complain that he was discriminated against. I hope we may go on.

The SPEAKER. The Clerk will report the next bill.

YELLOWSTONE FOREST RESERVE

The next business on the Consent Calendar was the bill (H. R. 7946) to repeal an act entitled "An act to extend the provisions of the homestead laws to certain lands in the Yellowstone forest reserve," approved March 15, 1906.

The title of the bill was read.

The SPEAKER. Is there objection to the present consideration of the bill?

There was no objection.

The SPEAKER. The Clerk will report the bill.

Be it enacted, etc., That the act entitled "An act to extend the provisions of the homestead laws to certain lands in the Yellowstone forest reserve," approved March 15, 1906, Thirty-fourth United States Statutes at Large, page 62, be, and the same is hereby, repealed: *Provided,* That the passage of this act shall in nowise affect valid existing entries.

With a committee amendment, as follows:

On line 8 strike out the word "entries" and insert in lieu thereof the word "rights."

The SPEAKER. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider the vote whereby the bill was passed was laid on the table.

The SPEAKER. The Clerk will report the next bill.

LAKE OF THE WOODS

The next business on the Consent Calendar was the bill (H. R. 10884) to amend the act entitled "An act to carry into effect the provisions of the convention between the United States and Great Britain to regulate the level of Lake of the Woods concluded on the 24th day of February, 1925," approved May 22, 1926.

The title of the bill was read.

The SPEAKER. Is there objection to the present consideration of the bill?

Mr. BLACK of Texas. Reserving the right to object, Mr. Speaker, I notice that this bill authorizes the Secretary of War to acquire as soon as practicable after the enactment of the act by purchase or condemnation certain lands. The report does not give any information as to what these lands will probably cost and what expenses will be involved by reason of the enactment of this bill. Now can we get some information on that point?

Mr. MAAS. Mr. Speaker, the officials of the War Department estimated that that would cost about $75,000. This present act is simply to amend the act passed in 1926, to give the War Department authority which they feel they have not got at present, but which was intended to be included in the original act.

Mr. BLACK of Texas. May I inquire whether this bill has been submitted to the Director of the Budget and has received his approval?

Mr. MAAS. We have received information that there is no opposition. We submitted the proposition to the War Department and to the State Department, and we presume that with their approval we have at least the approval of the Director of the Budget.

Mr. DYER. Mr. Speaker, will the gentleman yield?

Mr. BLACK of Texas. Yes.

Mr. DYER. I am trying to get the point of view of the gentleman from Texas as to whether or not the Director of the Budget is legislating or whether the Congress of the United States is legislating.

Mr. BLACK of Texas. Oh, no. The Bureau of the Budget is not legislating. We hear that objection made frequently, but so long as we have a Director of the Budget and the Budget system any bill that involves the expenditure of public money ought to be submitted to the Director of the Budget and receive his approval or disapproval.

Then if Congress wants to follow the recommendation, very well; and if it wants to overrule it, also very well. That is a matter always within the control of Congress.

Mr. LUCE. Will the gentleman yield?

Mr. BLACK of Texas. Yes.

Mr. LUCE. I observe that there are on the Consent Calendar to-day 50 measures involving the expenditure of money. Has the gentleman objected to any of the preceding ones upon that ground, and does he intend to object to the 50?

Mr. BLACK of Texas. I will answer the gentleman very frankly. No bill, and I have studied them rather carefully, has passed the House to-day authorizing the expenditure of public moneys but what the report showed that it had been submitted to the Director of the Budget and received his approval. Of course, one individual can not minutely examine all of these bills, but I have undertaken to ascertain that fact from a rather careful study of the bills, and I say that, so far as

I know, no bill has passed the House to-day that has not been submitted to the Director of the Budget.

Mr. LUCE. May I ask the gentleman if this is a new decision on his part, or one that he has followed in the past?

Mr. BLACK of Texas. I have no arbitrary authority in the matter, but I shall certainly exercise my right to object unless a bill involving an appropriation is submitted to the Director of the Budget.

Mr. LUCE. I may inform the gentleman that since I have been chairman of the Committee on the Library I have reported probably 50 or 75 bills without any such approval, and not until two weeks ago was objection ever raised. I wish to inquire whether it is to be the policy of our friend, who so kindly helps us in the matter of watching the bills, to compel every committee of the House to secure approval from the Budget Director for a particular bill involving the appropriation of money?

Mr. BLACK of Texas. I will very frankly answer the gentleman, yes. So far as I am concerned it will be my policy to do that, but not necessarily to follow the recommendation of the Director of the Budget. As long as we have a budget system of government it is but right that these bills should be submitted to the Director of the Budget for his approval or disapproval. After the report on a bill is received from the Director of the Budget, it is then within the discretion of the House to determine whether it will follow the recommendation or overrule it.

Mr. LUCE. I hope my good friend from Texas will be on hand Saturday and listen to the arguments I hope to present on that subject.

Mr. BLACK of Texas. I shall be glad to be here. I am always glad to hear any discussion proceeding from the gentleman from Massachusetts.

Mr. CRAMTON. Since the gentleman from Massachusetts has referred to my suggestion of the other day, let me say that the gentleman from Texas quite well stated what is also my position. On unanimous consent day, when a bill goes through, if at all, with very little discussion, I feel I have the right—although the law does not require it—to avail myself of the opinion of the Budget. The average bill which comes from the committee of which the able gentleman from Massachusetts is chairman, is a bill that is peculiarly related to the work of Congress and over which we have a peculiar control, but when it comes to proposing a donation of $50,000 to an organization entirely apart from Congress, where we had formerly made a donation that was supposed to cover our full contribution, then I am interested to know what the Budget thinks about it and to have the advantage of their investigation which may be more thorough than I could make.

Mr. LUCE. Of course, this is no time or place to carry on this sort of a discussion.

Mr. CRAMTON. But, Mr. Speaker, I think it is time that I carried on my end of it. Since the gentleman from Massachusetts has twice taken occasion to question the propriety of my course, I think it is about time I had something to say about it.

Mr. CHINDBLOM. Mr. Speaker, the hour of 5 o'clock having arrived, I think it is time to demand the regular order.

Mr. BLACK of Texas. Mr. Speaker, I ask unanimous consent that this bill may be passed over without prejudice.

The SPEAKER. The gentleman from Texas asks unanimous consent that this bill may be passed over without prejudice. Is there objection?

There was no objection.

ESTATE OF PETER P. PITCHLYNN

Mr. LEAVITT. Mr. Speaker, I ask unanimous consent that the Committee on Indian Affairs be discharged from the further consideration of S. 1705, for the reason that the Committee on the Judiciary has already considered and reported out a similar bill, H. R. 7824.

The SPEAKER. The gentleman from Montana asks unanimous consent that the Committee on Indian Affairs be discharged from the further consideration of Senate bill 1705, a similar bill having been considered and reported out by the Committee on the Judiciary. Is there objection?

Mr. GARRETT of Tennessee. Mr. Speaker, what is the nature of the bill?

The SPEAKER. The Clerk will report the Senate bill.

The Clerk read the title of the bill, as follows:

An act (S. 1705) authorizing the Court of Claims to render judgment in favor of the administrator of or collector for the estate of Peter P. Pitchlynn, deceased, instead of the heirs of Peter P. Pitchlynn, and for other purposes.

Mr. GARRETT of Tennessee. Mr. Speaker, is that one of those bills where a similar House bill being on the Calendar can be called up?

The SPEAKER. The Chair so understands, although the Chair has not examined the bill.

Mr. GARRETT of Tennessee. Then, as I understand, the request is to discharge the Committee on Indian Affairs from the further consideration of the Senate bill and let it take its place on the Speaker's table.

Mr. CHINDBLOM. Mr. Speaker, a parliamentary inquiry. Is not this a private bill on the Private Calendar?

Mr. HASTINGS. The gentleman is not calling up the bill now?

Mr. LEAVITT. No.

Mr. DYER. Mr. Speaker, if this request is granted, and if there is no objection, I would like to call up the bill, because the Committee on the Judiciary has reported a bill similar to the one which the Senate has passed.

The SPEAKER. The Chair understands the situation to be that the Judiciary Committee, having reported a similar bill, which is on the calendar, the bill from the Senate having been referred to the Committee on Indian Affairs, if the Committee on Indian Affairs is now discharged, that bill will go back to the Speaker's table and the Senate bill can be taken up by unanimous consent, inasmuch as it is a private bill. The Chair understands the desire is simply to take it up by unanimous consent from the Speaker's table to-morrow.

Is there objection to the request of the gentleman from Montana?

There was no objection.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to—

Mr. WAINWRIGHT, indefinitely, on account of death in his family.

Mr. JACOBSTEIN, for one month, on account of illness.

ENROLLED BILLS SIGNED

Mr. CAMPBELL, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills of the following titles, when the Speaker signed the same:

H. R. 81. An act to authorize the coinage of silver 50-cent pieces in commemoration of the one hundred and fiftieth anniversary of the discovery of the Hawaiian Islands by Capt. James Cook, and for the purpose of aiding in establishing a Capt. James Cook memorial collection in the archives of the Territory of Hawaii;

H. R. 248. An act to authorize appropriations to be made for the disposition of remains of military personnel and civilian employees of the Army; and

H. R. 8741. An act authorizing the Dravo Contracting Co., its successors and assigns, to construct, maintain, and operate a bridge across the Mississippi River at or near Chester, Ill.

ADJOURNMENT

Mr. TILSON. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 5 minutes p. m.) the House adjourned until to-morrow, Tuesday, March 6, 1928, at 12 o'clock noon.

COMMITTEE HEARINGS

Mr. TILSON submitted the following tentative list of committee hearings scheduled for Tuesday, March 6, 1928, as reported to the floor leader by clerks of the several committees:

COMMITTEE ON THE CIVIL SERVICE

(10.30 a. m.)

Providing that in all civil-service examinations for appointment to positions under the Federal Government or the District of Columbia honorably discharged soldiers, sailors, and marines shall have five points added, and all such soldiers, sailors, and marines who because of disability are entitled to pension under the pension laws or to compensation under the World War veterans' act, 1924, shall have 10 points added (H. J. Res. 212).

COMMITTEE ON THE MERCHANT MARINE AND FISHERIES

(10 a. m.)

To further develop an American merchant marine, to assure its permanence in the transportation of the foreign trade of the United States (S. 744).

To promote, encourage, and develop an American merchant marine in connection with the agricultural and industrial commerce of the United States, provide for the national defense, the transportation of foreign mails, the establishment of a merchant-marine training school, and for other purposes (H. R. 2).

To amend the merchant marine act, 1920, insure a permanent passenger and cargo service in the North Atlantic, and for other purposes (H. R. 8914).

To create, develop, and maintain a privately owned American merchant marine adequate to serve trade routes essential in

the movement of the industrial and agricultural products of the United States and to meet the requirements of the commerce of the United States; to provide for the transportation of the foreign mails of the United States in vessels of the United States; to provide naval and military auxiliaries; and for other purposes (H. R. 10765).

COMMITTEE ON NAVAL AFFAIRS

(10.30 a. m.)

A hearing to consider private bills on the committee calendar.

SUBCOMMITTEE OF COMMITTEE ON THE POST OFFICE AND POST ROADS

(11 a. m.)

To amend Title II of an act approved February 28, 1925, regulating postal rates (H. R. 9296).

COMMITTEE ON THE PUBLIC LANDS

(10.30 a. m.)

To promote the development, protection, and utilization of grazing resources on public lands, to stabilize the range stock-raising industry (H. R. 7950 and H. R. 9283).

COMMITTEE ON WORLD WAR VETERANS' LEGISLATION

(10 a. m.)

A meeting to consider bills on the committee calendar relating to insurance.

COMMITTEE ON THE JUDICIARY—SUBCOMMITTEE NO. 3

(10 a. m.)

To amend section 6 of title 15, chapter 1, of the Code of Laws of the United States of America relating to the forfeiture of property in transit and owned in violation of section 1 thereof, and as amended providing for the forfeiture of property owned or used in violation of section 1, irrespective of whether same is or is not in transit (H. R. 10877).

COMMITTEE ON APPROPRIATIONS

(10.30 a. m.)

Navy Department appropriation bill.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

396. A letter from the Secretary of the Navy, transmitting draft of a bill proposing to authorize the payment of indemnity in the sum of $1,000 to Mrs. Fanor Flores, and $500 to Pedro Flores, wife and father, respectively, of Fanor Flores, for the death of the latter as a result of being accidentally shot by a United States marine at Matagalpa, Nicaragua, on April 27, 1927; to the Committee on Foreign Affairs.

397. A letter from the chairman of the Federal Trade Commission, transmitting report of the Federal Trade Commission on the cottonseed industry, submitted in pursuance of House resolution 439, Sixty-ninth Congress (H. Doc. No. 193); to the Committee on Interstate and Foreign Commerce and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. SNELL: Committee on Rules. H. Res. 132. A resolution providing for the consideration of S. 2317, an act continuing for one year the powers and authority of the Federal Radio Commission under radio act of 1927; without amendment (Rept. No. 839). Referred to the House Calendar.

Mr. SNELL: Committee on Rules. H. Res. 133. A resolution providing for the consideration of S. J. Res. 47, a joint resolution proposing an amendment to the Constitution of the United States fixing the commencement of the terms of President and Vice President and Members of Congress and fixing the time of the assembling of Congress; without amendment (Rept. No. 840). Referred to the House Calendar.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. HUDSPETH: Committee on Claims. H. R. 5981. A bill for the relief of Clarence Cleghorn; with amendment (Rept. No. 837). Referred to the Committee of the Whole House.

Mr. SCHAFER: Committee on Claims. H. R. 11014. A bill for the relief of Don C. Fees; without amendment (Rept. No. 838). Referred to the Committee of the Whole House.

CHANGE OF REFERENCE

Under clause 2 of Rule XXII, the Committee on Pensions was discharged from the consideration of the bill (H. R. 11630) granting a pension to Malissa E. Crouse, and the same was referred to the Committee on Invalid Pensions.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of Rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. HUDSON: A bill (H. R. 11755) to establish a border patrol for the more efficient enforcement of laws applicable to the international and maritime borders of the United States; to the Committee on the Judiciary.

By Mr. McSWAIN: A bill (H. R. 11756) to increase the efficiency of the Military Establishment, and for other purposes; to the Committee on Military Affairs.

By Mr. O'CONNOR of Louisiana: A bill (H. R. 11757) authorizing the Secretary of Commerce to sell at private sale a portion of the Point aux Herbe Lighthouse Reservation; to the Committee on Interstate and Foreign Commerce.

Also, a bill (H. R. 11758) authorizing the Secretary of War to grant a right of way for a levee through the Chalmette National Cemetery; to the Committee on Military Affairs.

By Mr. O'CONNELL: A bill (H. R. 11759) to amend section 202, paragraph 10, of the World War veterans' act to include honorably discharged men of the Regular Army, Navy, and Marine Corps; to the Committee on World War Veterans' Legislation.

By Mr. MAAS: A bill (H. R. 11760) authorizing the Telegraph Hill-Goat Island Bridge Corporation, its successors and assigns, to construct, maintain, and operate a bridge across San Francisco Bay, in the State of California, from a point in the county and city of San Francisco known as Telegraph Hill to a point in San Francisco Bay known as Goat Island (Buena-Yerba), thence eastward to a point at or near the Key Route Fill in Alameda County, Calif.; to the Committee on Interstate and Foreign Commerce.

By Mr. BOX: A bill (H. R. 11761) authorizing Charles R. Moore, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Sabine River from a point in Sabine County, Tex., to a point in Sabine Parish, La., at or near Pendeltons Ferry; to the Committee on Interstate and Foreign Commerce.

By Mr. WAINWRIGHT: A bill (H. R. 11762) to authorize an appropriation to complete construction at Fort Wadsworth, N. Y.; to the Committee on Military Affairs.

By Mr. EVANS of Montana: Joint resolution (H. J. Res. 226) authorizing an appropriation for the erection of a monument to Leif Erickson; to the Committee on the Library.

By Mr. HOWARD of Nebraska: Joint resolution (H. J. Res. 227) prohibiting any ex-Members of the United States Senate or of the House of Representatives from engaging in the practice of lobbying, for money or other emolument, before any committee of either House of the Congress, or upon the floor of either House, or in any part of the Capitol, or in the Senate Office Building, or in the House Office Building, within the term of two years following the date when any such person shall have served as a Member of the Senate or the House of Representatives of the United States, and providing penalties for violation of this act; to the Committee on the Judiciary.

By Mr. BUTLER: Resolution (H. Res. 131) providing for the consideration of H. R. 11526, a bill to authorize the construction of certain naval vessels, and for other purposes; to the Committee on Rules.

MEMORIALS

Under clause 3 of Rule XXII, memorials were presented and referred as follows:

Memorial of the Senate of Porto Rico, requesting the Congress of the United States to amend, reenact, and add certain sections to the organic act of Porto Rico, approved August 18, 1925, and for other purposes, so that Porto Rico may choose its own governor by popular election and obtain complete self-government; to the Committee on Insular Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. DEMPSEY: A bill (H. R. 11763) granting a pension to Elizabeth Shelp; to the Committee on Invalid Pensions.

By Mr. EVANS of California: A bill (H. R. 11764) conferring jurisdiction upon the Court of Claims of the United States or district courts of the United States to hear, adjudicate, and enter judgment on the claim of Roy A. Knabenshue against the United States, for the use or manufacture of an invention of Roy A. Knabenshue, covered by letters patent, No. 858875, issued by the Patent Office of the United States, under date of July 2, 1907; to the Committee on War Claims.

By Mr. GREENWOOD: A bill (H. R. 11765) granting an increase of pension to Cad W. Savage; to the Committee on Pensions.

By Mr. HALL of Indiana: A bill (H. R. 11766) granting a pension to William Albin Crow; to the Committee on Invalid Pensions.

By Mr. HARDY: A bill (H. R. 11767) granting an increase of pension to Margaret J. Humbert; to the Committee on Invalid Pensions.

By Mr. HAWLEY: A bill (H. R. 11768) granting a pension to Francis J. Bailey; to the Committee on Pensions.

By Mr. JACOBSTEIN: A bill (H. R. 11769) granting an increase of pension to Ella B. Craft; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11770) granting an increase of pension to Libbie Jump; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11771) granting an increase of pension to Hannah Geibig; to the Committee on Invalid Pensions.

By Mr. LEAVITT: A bill (H. R. 11772) for the relief of Charles Smith; to the Committee on Military Affairs.

By Mr. LEHLBACH: A bill (H. R. 11773) for the relief of Margaret A. Twyman; to the Committee on Claims.

By Mr. LINTHICUM: A bill (H. R. 11774) for the relief of Barzilla William Bramble, master and managing owner of the ram schooner *Cora Peake;* to the Committee on the Judiciary.

By Mr. MAJOR of Illinois: A bill (H. R. 11775) for compensation in behalf of John M. Flynn; to the Committee on Claims.

By Mr. MONAST: A bill (H. R. 11776) granting a pension to Mary A. Dibble; to the Committee on Pensions.

By Mr. NEWTON: A bill (H. R. 11777) granting a pension to Ella D. Wilkinson; to the Committee on Invalid Pensions.

By Mr. PORTER: A bill (H. R. 11778) for the relief of the Eagle Transport Co. (Ltd.) and the West of England Steamship Owners' Protection and Indemnity Association (Ltd.); to the Committee on Foreign Affairs.

By Mr. REECE: A bill (H. R. 11779) granting an increase of pension to Ira W. Blevins; to the Committee on Pensions.

Also, a bill (H. R. 11780) granting a pension to Martilla Murrell; to the Committee on Invalid Pensions.

By Mr. STALKER: A bill (H. R. 11781) granting an increase of pension to Marietta McMillan; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11782) granting an increase of pension to Mary J. Orr; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11783) granting an increase of pension to Simeon B. Card; to the Committee on Pensions.

Also, a bill (H. R. 11784) granting an increase of pension to Mary A. Tibbetts; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11785) granting an increase of pension to Orin O. Pound; to the Committee on Pensions.

Also, a bill (H. R. 11786) granting an increase of pension to Eunice Hurlburt; to the Committee on Invalid Pensions.

By Mr. SWEET: A bill (H. R. 11787) granting an increase of pension to Martha L. Doner; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11788) granting a pension to Josephine Sheridan; to the Committee on Invalid Pensions.

By Mr. SWICK: A bill (H. R. 11789) granting an increase of pension to Mary Beeler; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11790) granting an increase of pension to Mary J. Conkle; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11791) granting an increase of pension to Mary Lawhead; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11792) granting an increase of pension to Elizabeth Kirker; to the Committee on Invalid Pensions.

By Mr. VINSON of Kentucky: A bill (H. R. 11793) to correct the military record of Thomas H. Frost; to the Committee on Military Affairs.

By Mr. WELLER: A bill (H. R. 11794) granting an increase of pension to Emma Cortright; to the Committee on Invalid Pensions.

By Mr. WILLIAMS of Missouri: A bill (H. R. 11795), granting a pension to Rachel J. Paullus; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

4895. By Mr. BROWNE: Petition of citizens of Waushara County, Wis., protesting against House bill 78, and all other compulsory Sunday observance legislation; to the Committee on the District of Columbia.

4896. By Mr. BUCKBEE: Petition of Celia T. McAlister and 121 other citizens of Rockford, Ill., protesting against the passage of the Lankford compulsory Sunday observance bill (H. R. 78); to the Committee on the District of Columbia.

4897. By Mr. BURTNESS: Petition of board of directors of the North Dakota Wheat Growers Association, representing 23,000 farmers in North Dakota and Montana, relative to activities of Radio Commission and desiring certain definite changes in their practice; to the Committee on the Merchant Marine and Fisheries.

4898. Also, petition of 90 residents of Englevale, N. Dak., urging support of the Reece bill for aid of rural post roads; to the Committee on Roads.

4899. By Mr. CARLEY: Petition of N. A. Nielsen, 600 Eighty-eighth Street, Brooklyn, N. Y., protesting against House bill 9588; to the Committee on the Judiciary.

4900. By Mr. COLE of Iowa: Petition of E. I. Thompson, of Cedar Rapids, Iowa, and 103 other signers, residents of Cedar Rapids, Iowa, protesting against House bill 78, the compulsory Sunday observance bill, or any other national religious legislation which may be pending; to the Committee on the District of Columbia.

4901. By Mr. CRAIL: Petition of Valley Mortgage & Finance Co., of Glendale, Calif., against Senate bill 1752 to discontinue the printing of return notices on stamped envelopes; to the Committee on the Post Office and Post Roads.

4902. Also, petition of George M. Krove and 83 citizens of Tujunga, Calif., urging action on the Tyson-Fitzgerald bill for the relief of the disabled emergency Army officers of the World War; to the Committee on World War Veterans' Legislation.

4903. By Mr. CURRY: Petition of citizens of the third California district, protesting against the enactment of House bill 78; to the Committee on the District of Columbia.

4904. By Mr. DOWELL: Petition of residents of Marion County, Iowa, against the Lankford bill; to the Committee on the District of Columbia.

4905. Also, petition of residents of Marion County, Iowa, against the Lankford bill; to the Committee on the District of Columbia.

4906. By Mr. EVANS of California: Petition signed by W. H. Richardson and 82 others, for the relief of the disabled emergency Army officers of the World War; to the Committee on World War Veterans' Legislation.

4907. By Mr. FRENCH: Petition of 24 citizens of Canyon County, Idaho, protesting against enactment of House bill 78, or any compulsory Sunday observance; to the Committee on the District of Columbia.

4908. Also, petition of 55 citizens of Washington County, Idaho, protesting against enactment of House bill 78, or any compulsory Sunday observance legislation; to the Committee on the District of Columbia.

4909. By Mr. GALLIVAN: Petition of Boston Central Labor Union, Harry P. Grages, secretary and business agent, 987 Washington Street, Boston, Mass., urging early and favorable consideration of House bill 10359, the purpose of which is to establish a 44-hour week in the various establishments of the Government; to the Committee on the Civil Service.

4910. By Mr. GARBER: Resolution of Dixie Post, No. 64, Veterans of Foreign Wars of the United States, of National Sanatorium, Tenn., in support of House bill 9138; to the Committee on Pensions.

4911. Also, letter of Employing Printers Association of Oklahoma City, Okla., by Victor E. Harlow, chairman, protesting the enactment of Senate bill 1482 and House bill 7759; to the Committee on the Judiciary.

4912. Also, letter of Builders' Exchange of Oklahoma (Inc.), of Oklahoma City, Okla., by P. W. Tibbs, president, protesting the enactment of Senate bill 1482 and House bill 7759; to the Committee on the Judiciary.

4913. Also, letter of Minnesota Interim Tax Commission, of St. Paul, Minn., by George H. Sullivan, chairman, in regard to State taxation of national banks, Goodwin bill (H. R. 8727); to the Committee on Banking and Currency.

4914. Also, letter of Dean E. Foster, petroleum engineer, Wright Building, Tulsa, Okla., in support of the Newton water resources bill (H. R. 8111); to the Committee on Interstate and Foreign Commerce.

4915. Also, letter of Clara G. Smoot, Red Rock, Okla., in support of Stalker bill (H. R. 9588); to the Committee on the Judiciary.

4916. By Mr. HUDSPETH: Petition of citizens of Tom Green County, Tex., in opposition to Sunday observance bill; to the Committee on the District of Columbia.

4917. By Mrs. KAHN: Petition signed by Mrs. W. S. Leake and other citizens of San Francisco, urging favorable action on House bills 47 and 6518; to the Committee on the Civil Service.

4918. By Mr. KETCHAM: Petition of D. Lam and 18 other residents of South Haven, Mich., urging favorable action upon House bill 78; to the Committee on the District of Columbia.

4919. Also, petition of 14 residents of Allegan County, Mich., protesting against House bill 78, or any other bill providing for compulsory Sunday observance; to the Committee on the District of Columbia.

4920. Also, petition of Mrs. Lyle Watson and 15 other residents of Dowagiac, Mich., protesting against the passage of House bill 78, or any other bill providing for compulsory Sunday observance; to the Committee on the District of Columbia.

4921. Also, petition of E. M. Phillips and 150 other residents of Benton Harbor, Mich., protesting against the enactment of House bill 78, or any other bill providing for compulsory Sunday observance; to the Committee on the District of Columbia.

4922. Also, petition of J. F. Babcock and 84 other residents of Mendon, Mich., protesting against the enactment of House bill 78, or any other bill providing for compulsory Sunday observance; to the Committee on the District of Columbia.

4923. By Mr. LANKFORD: Petition of Mrs. D. Watson Winn and others, against Bolshevik propaganda; to the Committee on the Judiciary.

4924. By Mr. LEA: Petition of Mrs. Ray Lockmon and 375 other residents of Sonoma County, Calif.; C. E. Rogers and 54 other residents of Sutter County, Calif.; and Mrs. C. F. Hawkins and 37 other residents of Orland, Calif., protesting against House bill 78, or other compulsory Sunday observance legislation; to the Committee on the District of Columbia.

4925. By Mr. LINDSAY: Petition of American Association of Masters, Mates, and Pilots, Long Island Harbor, Branch No. 22, registering, in a set of resolutions, a vigorous protest against the passage of House bill 11137; to the Committee on the Merchant Marine and Fisheries.

4926. Also, petition of Radio Retailing Publishing Co., appealing to Congress to enact legislation before March 15 prolonging the life of the Radio Commission, unhampered by unnecessary restrictions; to the Committee on the Merchant Marine and Fisheries.

4927. Also, petition of Brooklyn Chapter, Officers Reserve Association of the United States, approving Thomas amendment restoring deductions from appropriations for corps, as recommended by the House, and approving action of American Legion in connection with appropriation for Navy; to the Committee on Appropriations.

4928. By Mr. LINDSAY: Petition of Travelers' Legislative Committee, National Council of Traveling Salesmen's Associations, praying for a repeal of the war-time Pullman surcharge on the grounds that it is not necessary for carriers' roads not entitled to the surcharge and that they do not need the surcharge; to the Committee on Ways and Means.

4929. By Mr. MEAD: Petition of Property Owners Protective Association, of Kenmore, N. Y., regarding the national origin provision of the immigration law; to the Committee on Immigration and Naturalization.

4930. By Mr. MOONEY: Petition of sundry citizens of Cleveland, Ohio, protesting Sunday observance bill (H. R. 78); to the Committee on the District of Columbia.

4931. By Mr. MORROW: Petition of Albuquerque Game Protective Association, R. G. Sutherland, secretary (New Mexico), indorsing public shooting ground and game refuge bill; to the Committee on Agriculture.

4932. By Mr. O'CONNELL: Petition of Brooklyn Chapter, Reserve Officers Association of the United States, favoring the Thomas amendment to the Senate bill restoring the deductions from the appropriation as recommended by the House of Representatives; to the Committeee on Naval Affairs.

4933. Also, petition of William Best, Kansas City, Mo., an appeal in behalf of those Federal employees who were retired in 1920; to the Committee on the Civil Service.

4934. Also, petition of the National Council, Traveling Salesmen's Association of New York, favoring the passage of Senate bill 668, for the repeal of the war-time Pullman surcharge; to the Committee on Interstate and Foreign Commerce.

4935. By Mr. OLDFIELD: Petition of C. F. Greer et al., Maynard, Ark., favoring legislation establishing a moritorium for the payment of drainage bonds; to the Committee on Agriculture.

4936. By Mr. PALMER: Memorial of Rev. W. L. Gallenkamp, pastor Zion Lutheran Church, Frackville, Pa., protesting against legislation which would interfere with stamped envelopes with return cards; to the Committee on the Post Office and Post Roads.

4937. By Mr. SELVIG: Petition of L. Langhus and 45 farmers of Shelly, Minn., and vicinity, protesting against any measure leading to militarism and war; to the Committee on Foreign Affairs.

4938. By Mr. SHALLENBERGER: Petition of citizens of Nebraska against House bill 78; to the Committee on the District of Columbia.

4939. By Mr. SINNOTT: Petition of 49 citizens of La Grande, Oreg., and vicinity, protesting against the enactment of House bill 78, the Lankford bill, or similar compulsory Sunday observance legislation; to the Committee on the District of Columbia.

4940. Also, petition of numerous citizens of Hermiston, Umatilla County, Oreg., protesting against House bill 78, or any similar compulsory Sunday observance legislation; to the Committee on the District of Columbia.

4941. By Mr. STALKER: Petition of George R. Downing, of Watkins Glen, N. Y., and other Civil War veterans of that vicinity, urging the enactment of legislation for additional pension for Civil War veterans and their widows; to the Committee on Invalid Pensions.

4942. Also, petition of Mrs. Leon Howard, of Owego, N. Y., and sundry citizens of that vicinity, protesting against House bill 78, or any compulsory Sunday observance legislation; to the Committee on the District of Columbia.

4943. By Mr. STEELE: Petition of 42 citizens of Atlanta, Fulton County, Ga., protesting against the passage of legislation enforcing compulsory Sunday observance (H. R. 78); to the Committee on the District of Columbia.

4944. Also, petition of 36 citizens of De Kalb and Fulton Counties, Ga., protesting against the passage of legislation enforcing compulsory Sunday observance (H. R. 78); to the Committee on the District of Columbia.

4945. Also, petition of three citizens of Atlanta, Ga., protesting against the passage of legislation enforcing compulsory Sunday observance (H. R. 78); to the Committee on the District of Columbia.

4946. By Mr. SWING: Petition of residents of Ramona, Calif., protesting against compulsory Sunday observance laws; to the Committee on the District of Columbia.

4947. Also, petition of citizens of Orange County, Calif., protesting against compulsory Sunday observance laws; to the Committee on the District of Columbia.

4948. Also, petition of residents of Escondido, Calif., protesting against compulsory Sunday observance laws; to the Committee on the District of Columbia.

4949. By Mr. TAYLOR of Colorado: Petition from citizens of Olathe, Colo., protesting against House bill 78, or any other legislation for the compulsory Sunday observance; to the Committee on the District of Columbia.

4950. By Mr. WELSH of Pennsylvania: Petition of residents of sixth Pennsylvania district, in support of House bill 6518, providing for minimum rate of pay for Government employees, and House bill 492, providing for the abolition of the Personnel Classification Board and transfer of its functions to Civil Service Commission and extension of classification to field service; to the Committee on the Civil Service.

4951. By Mr. WELCH of California: Petition submitted by the United States Employees' Association of California, San Francisco, Calif., favoring the passage of the Welch bill (H. R. 6518) to increase the salaries of Federal employees; to the Committee on the Civil Service.

4952. Also, petition submitted by the Federal Custodian Service Association, San Francisco, Calif., favoring the passage of the Welch bill (H. R. 6518) to increase the salaries of Federal employees; to the Committee on the Civil Service.

SENATE

TUESDAY, *March 6, 1928*

The Chaplain, Rev. ZeBarney T. Phillips, D. D., offered the following prayer:

O Lord most high, who art our life, our strength, and our joy, our ever-present helper and defender, look with loving mercy upon our country, for if Thou be with us none can be against us. Guide us this day unto a better knowledge of Thy will, and send down upon us, for our present need, the dew of Thy heavenly grace. May Thy servants, who have been called to administer the affairs of this Nation, daily make choice of spiritual integrity amid the corruption that is in the world through the lust of power or repute, that being unafraid in contending for the right, and reverent at the threshold of achievement, they may show forth the spirit of Him who gave Himself for the world, Jesus Christ, Thy Son, our Lord. Amen.

The Chief Clerk proceeded to read the Journal of the proceedings of yesterday, when, on request of Mr. CURTIS and by unanimous consent, the further reading was dispensed with and the Journal was approved.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the House had passed without amendment the following bills and joint resolution of the Senate:

S. 1455. An act to grant extensions of time under coal permits;

S. 1705. An act authorizing the Court of Claims to render judgment in favor of the administrator of or collector for the estate of Peter P. Pitchlynn, deceased, instead of the heirs of Peter P. Pitchlynn, and for other purposes;

S. 1946. An act relative to the pay of certain retired warrant officers and enlisted men and warrant officers and enlisted men of the reserve forces of the Army, Navy, Marine Corps, and the Coast Guard, fixed under the terms of the Panama Canal act, as amended;

S. 2342. An act providing for a per capita payment of $25 to each enrolled member of the Chippewa Tribe of Minnesota from the funds standing to their credit in the Treasury of the United States;

S. 2483. An act to revive and reenact the act entitled "An act granting the consent of Congress to the State of Illinois and the State of Iowa, or either of them, to construct a bridge across the Mississippi River, connecting the county of Carroll, Ill., and the county of Jackson, Iowa," approved May 26, 1924;

S. 2545. An act to authorize the sale of certain lands near Garden City, Kans.;

S. 2698. An act granting the consent of Congress to the State of Vermont to construct, maintain, and operate a free highway bridge across an arm of Lake Memphremagog at or near Newport, Vt.;

S. 2801. An act granting the consent of Congress to the New Martinsville & Ohio River Bridge Co. (Inc.), to construct, maintain, and operate a bridge across the Ohio River, at or near New Martinsville, W. Va.; and

S. J. Res. 66. Joint resolution authorizing an additional appropriation to be used for the memorial building provided for by a joint resolution entitled "Joint resolution in relation to a monument to commemorate the services and sacrifices of the women of the United States of America, its insular possessions, and the District of Columbia in the World War," approved June 7, 1924.

The message also announced that the House had agreed to the amendments of the Senate to the bill of the House (H. R. 9202) to authorize construction at the United States Military Academy, West Point, N. Y.

The message further announced that the House had agreed to the amendments of the Senate to the House amendment to the bill (S. 700) authorizing the Secretary of the Interior to execute an agreement with the Middle Rio Grande conservancy district providing for conservation, irrigation, drainage, and flood control for the Pueblo Indian lands in the Rio Grande Valley, N. Mex., and for other purposes, with an additional amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had passed the following bills of the Senate, severally with amendments, in which it requested the concurrence of the Senate:

S. 771. An act providing for the gift of the U. S. S. *Dispatch* to the State of Florida;

S. 1498. An act to extend the time for the construction of a bridge across the Chesapeake Bay and to fix the location of said bridge; and

S. 2902. An act granting the consent of Congress to the States of Wisconsin and Michigan to construct, maintain, and operate a free highway bridge across the Menominee River at or near Marinette, Wis.

The message further announced that the House had passed the following bills and joint resolution, in which it requested the concurrence of the Senate:

H. R. 21. An act to provide for date of precedence of certain officers of the Staff Corps of the Navy;

H. R. 437. An act authorizing the Maysville Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Maysville, Ky.;

H. R. 465. An act to authorize the city of Oklahoma City, Okla., to sell certain public squares situated therein;

H. R. 472. An act authorizing Dwight P. Robinson & Co. (Inc.), its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Maysville, Ky.;

H. R. 5806. An act to authorize the purchase of real estate by the War Department;

H. R. 5817. An act to provide for the paving of the Government road extending from St. Elmo, Tenn., to Rossville, Ga.;

H. R. 6993. An act authorizing the Secretary of the Interior to sell and patent certain lands in Louisiana and Mississippi;

H. R. 7198. An act authorizing Henry Thane, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Mississippi River;

H. R. 7927. An act granting the consent of Congress to the Louisiana Highway Commission of the State of Louisiana to construct, maintain, and operate a free highway bridge across the Atchafalaya River at or near Melville, La.;

H. R. 7932. An act to authorize appropriations for construction at military posts, and for other purposes;

H. R. 7944. An act to authorize appropriations for construction at military posts, and for other purposes;

H. R. 7946. An act to repeal an act entitled "An act to extend the provisions of the homestead laws to certain lands in the Yellowstone forest reserve," approved March 15, 1906;

H. R. 8326. An act to authorize the construction of a dormitory at Riverside Indian School at Anadarko, Okla.;

H. R. 8337. An act to amend the air mail act of February 2, 1925, as amended by the act of June 3, 1926;

H. R. 8542. An act to provide for the construction of a hospital at the Fort Bidwell Indian School, California;

H. R. 8543. An act to provide for the construction of a school building at the Fort Bidwell Indian School, California;

H. R. 8724. An act granting certain lands to the city of Mendon, Utah, to protect the watershed of the water-supply system of said city;

H. R. 8733. An act granting certain lands to the city of Bountiful, Utah, to protect the watershed of the water-supply system of said city;

H. R. 8734. An act granting certain lands to the city of Centerville, Utah, to protect the watershed of the water-supply system of said city;

H. R. 8897. An act to revive and reenact the act entitled "An act granting the consent of Congress to the city of Chicago to construct a bridge across the Calumet River at or near One hundred and thirtieth street in the city of Chicago, county of Cook, State of Illinois," approved March 21, 1924;

H. R. 9350. An act granting the consent of Congress to Frank E. Merrill, carrying on business under the name and style of Frank E. Merrill & Co.'s Algonquin Shores Realty Trust, to construct, maintain, and operate a footbridge across the Fox River;

H. R. 9361. An act granting the consent of Congress to the city of St. Charles, State of Illinois, to widen, maintain, and operate a bridge across the Fox River within the city of St. Charles, State of Illinois;

H. R. 9365. An act to legalize a bridge across the St. Francis River at or near Marked Tree, in the county of Poinsett, Ark.;

H. R. 9663. An act authorizing Hermann Simmons, jr., his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across Tampa Bay from Pinellas Point, Pinellas County, to Piney Point, Manatee County, Fla.;

H. R. 9761. An act to extend the time for completing the construction of a bridge across the Monongahela River at or near Pittsburgh, Pa.;

H. R. 9773. An act granting the consent of Congress to the Manufacturers' Electric Terminal Railway, its successors and assigns, to construct, maintain, and operate a bridge across the Missouri River, at or near the mouth of the Big Blue River, in Jackson County, Mo.;

H. R. 9829. An act to extend the provisions of the act of Congress approved March 20, 1922, entitled "An act to consolidate national forest lands";

H. R. 9831. An act authorizing J. E. Turner, his heirs, legal representatives, or assigns, to construct, maintain, and operate a bridge across the Ocmulgee River at or near Fitzgerald, Ga.;

H. R. 9946. An act to extend the times for commencing and completing the construction of a bridge across the Wabash River at or near Mount Carmel, Ill.;

H. R. 9958. An act to authorize the disposal of public land classified as temporarily or permanently unproductive on Federal irrigation projects;

H. R. 9964. An act authorizing E. L. Higdon, of Baldwin County, Ala., his heirs, legal representatives and assigns, to construct, maintain, and operate a bridge across Perdido Bay at or near Bear Point, Baldwin County, Ala.;

H. R. 10025. An act to extend the time for completing the construction of a bridge across the Monongahela River at or near Cliff Street, McKeesport, Pa.;

H. R. 10143. An act granting the consent of Congress to the Louisiana Highway Commission to construct, maintain, and

operate a free highway bridge across the Sabine River at or near Merryville, La., on the Merryville-Newton highway;

H. R. 10144. An act authorizing the B & P Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Rio Grande River at or near Zapata, Tex.;

H. R. 10373. An act authorizing the Plattsmouth Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Missouri River at or near Plattsmouth, Nebr.;

H. R. 10424. An act authorizing John C. Mullen, T. L. Davies, John H. Hutchings, and Virgil Falloon, all of Falls City, Nebr., their heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Missouri River at or near Rulo, Nebr.;

H. R. 10566. An act granting the consent of Congress to the city of Peoria, Peoria County, Ill., to construct, maintain, and operate a free highway bridge across the Illinois River at or near Peoria, Ill.;

H. R. 10658. An act authorizing the Interstate Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Missouri River at or near Decatur, Nebr.;

H. R. 10707. An act authorizing the Point Marion Community Club, of Point Marion, Pa., its successors and assigns, to construct, maintain, and operate a bridge across the Monongahela River at or near Point Marion, Pa.;

H. R. 10756. An act authorizing the State of Indiana to construct, maintain, and operate a toll bridge across the Miami River between Lawrenceburg, Dearborn County, Ind., and a point in Hamilton County, Ohio, near Columbia Park, Hamilton County, Ohio;

H. R. 10806. An act authorizing the city of Atchison, Kans., and the county of Buchanan, Mo., or either of them, to construct, maintain, and operate a toll bridge across the Missouri River at or near Atchison, Kans.;

H. R. 11134. An act to authorize appropriations for construction at military posts, and for other purposes; and

H. J. Res. 175. Joint resolution to change the name of the Ancon Hospital in the Panama Canal Zone to the Gorgas Hospital.

ENROLLED BILLS SIGNED

The message also announced that the Speaker had affixed his signature to the following enrolled bills, and they were thereupon signed by the Vice President:

H. R. 81. An act to authorize the coinage of silver 50-cent pieces in commemoration of the one hundred and fiftieth anniversary of the discovery of the Hawaiian Islands by Capt. James Cook, and for the purpose of aiding in establishing a Capt. James Cook memorial collection in the archives of the Territory of Hawaii;

H. R. 248. An act to authorize appropriations to be made for the disposition of remains of military personnel and civilian employees of the Army; and

H. R. 8741. An act authorizing the Dravo Contracting Co., its successors and assigns, to construct, maintain, and operate a bridge across the Mississippi River at or near Chester, Ill.

CALL OF THE ROLL

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Ashurst	Ferris	La Follette	Shipstead
Barkley	Fess	McKellar	Shortridge
Bayard	Fletcher	McMaster	Simmons
Black	Frazier	McNary	Smith
Blaine	George	Mayfield	Smoot
Blease	Gerry	Metcalf	Steck
Borah	Glass	Neely	Steiwer
Bratton	Gooding	Norbeck	Stephens
Brookhart	Gould	Norris	Swanson
Broussard	Greene	Nye	Thomas
Bruce	Hale	Oddie	Tydings
Capper	Harris	Overman	Tyson
Caraway	Harrison	Phipps	Wagner
Copeland	Hawes	Pine	Walsh, Mass.
Couzens	Hayden	Pittman	Walsh, Mont.
Curtis	Heflin	Ransdell	Warren
Cutting	Howell	Reed, Pa.	Waterman
Dale	Johnson	Robinson, Ark.	Watson
Deneen	Jones	Robinson, Ind.	Willis
Dill	Kendrick	Sackett	
Edge	Keyes	Schall	
Edwards	King	Sheppard	

The VICE PRESIDENT. Eighty-five Senators having answered to their names, a quorum is present.

MENOMINEE RIVER BRIDGE

The VICE PRESIDENT laid before the Senate the amendments of the House of Representatives to the bill (S. 2902) granting the consent of Congress to the States of Wisconsin and Michigan to construct, maintain, and operate a free highway bridge across the Menominee River at or near Marinette, Wis., which were, on page 1, line 3, to strike out "the consent of Congress is hereby granted to" and insert in lieu thereof "in order to facilitate interstate commerce, improve the Postal Service, and provide for military and other purposes"; on page 1, line 4, after the word "Michigan," to insert "be and are hereby authorized"; and to amend the title so as to read: "An act authorizing the States of Wisconsin and Michigan to construct, maintain, and operate a free highway bridge across the Menominee River at or near Marinette, Wis."

Mr. BLAINE. I move that the Senate concur in the amendments of the House.

The motion was agreed to.

AGRICULTURAL RELIEF

Mr. JONES. Mr. President, I ask that there be printed in the RECORD a letter from a constituent of mine with reference to farm cooperatives, together with a brief statement from the Washington Farmer relative thereto, and a short speech made by former Senator Calder, of New York, on the same subject.

The VICE PRESIDENT. Without objection, it is so ordered.

The matter referred to is as follows:

BREMERTON, WASH., *February 28, 1928.*

Hon. WESLEY L. JONES,
United States Senate, Washington, D. C.

DEAR SENATOR JONES: Inclosed article from Washington Farmer explains itself. In Seattle yesterday, I discussed it with Mr. Brislawn, secretary State Bankers' Association; Mr. Soots, manager State Chamber of Commerce, and others. By the time this reaches you, the American Bankers' Association will probably have publicly repudiated the whole movement—certainly our State bankers will do so. The State chamber will take the farmer side of the fight. They expect to amend the name to "State Chamber of Agriculture and Commerce," and are asking each county to provide an agricultural council to furnish a point of contact with State body. The county commissioners have appointed me chairman for Kitsap County. In that capacity, I request the publication as a Senate document, the speech of Senator Calder on the Capper-Volstead bill, in CONGRESSIONAL RECORD, of February 7, 1922, page 2521. It is the best vindication of the farmers I have ever seen or heard. If this idiotic attempt to destroy the cooperative should be carried on, it will produce political and financial chaos, shaking the faith of thousands who have heretofore stood loyal to American institutions. You and I know that the majority of the bankers and business men will be against this criminal attempt to rob the farmers of their last means of protection; but public sentiment did not save Chicago when Mrs. O'Leary's cow kicked over the lantern. The speech covers only one page of the RECORD. Its publication as a Senate document at this time will be the best insurance of peace. The Senate can render no more valuable service at this time than to reaffirm their approval of the Capper-Volstead Act by granting this request. * * *

Sincerely yours,

H. B. CREEL, *Star Route, Box 103.*

[From the Washington Farmer, February 23, 1928]

ORGANIZE TO ROOT OUT FARM COOPERATIVES—SEMISECRET CONVENTION IN CHICAGO LAUNCHES "FEDERATED AGRICULTURAL TRADES OF AMERICA" FOR ITS ONSLAUGHT AGAINST FARMER MARKETING ASSOCIATIONS

Farm cooperative organizations are waking up to the destructive purpose of a semisecret convention held in Chicago November 30 last, named the "Agricultural Trades Conference."

"A gigantic federation" to fight farmers' cooperative movements and oppose legislation favoring producers has been launched by members of the agricultural trades, according to the Dairymen's League News, organ of the Dairymen's League Cooperative Association (Inc.), of New York.

A comprehensive report of the "trades conference" in Chicago was made and is now being circulated by Charles W. Holman, secretary of the National Cooperative Milk Producers' Federation.

TO FIGHT COOPERATIVES

Charles F. Droste, president of the New York Mercantile Exchange, one of the speakers at the Agricultural Trades Conference in Chicago, declared that the present middleman system can not be replaced by a subsidized system of cooperation and announced that the big job of the "agricultural trades of America" would be "to save the farmer from himself." He then pledged the support of the executive committee of the New York Mercantile Exchange in the avowed purpose of forming a huge organization to fight the growing cooperative movement.

Charles Patterson, of Chicago, thought that the cooperative movement was growing among the farmers "because you men do not have the 'guts' to fight it."

Mr. Peck, of Omaha, president of the Terminal Grain Marketing Association, representing all of the big terminal elevators from Buffalo west, said that grain men thought the present marketing system to-day is as nearly perfect as it could be, despite bothersome legislation from Washington.

PROTECT "RIGHTS OF BUSINESS"

Everett C. Brown, president of the Chicago Live Stock Exchange, said that there was a strong sentiment in the District of Columbia for doing away with livestock exchanges, boards of trade, and associations of commerce. He wondered if business men would ever wake up. "They can help keep the radicals from picking the pockets of the Government," said he. "I want this organization to be prepared to protect the rights of business and to fight."

A speaker from New York State said that an idea is prevalent that cooperative marketing is a benefit. "Is it not important," he said, "that we inject an idea into the public mind that that is fallacious? Let us start a counterpropaganda. Unless this is done, Government agencies will go right on increasing their hold and power."

Charles Quinn, of Toledo, Ohio, secretary of the Grain Dealers' National Association, stated that the members of his organization were pioneers in fighting the cooperative movement. He was pleased to see so many middlemen industries now aroused to their danger. He traced the growth of Government assistance to cooperation as beginning in 1914, when there was an appropriation of $25,000 for an office of markets in the Department of Agriculture. This office, he said has to-day become a great bureau with an annual appropriation of over $5,000,000. He objected to the constant "wet nursing" of the cooperative system. He did not think it would ever succeed.

Mr. Kloch, of the Seattle Dairy and Produce Exchange, explained that his organization had important dairy cooperatives as members, and he could take no official stand.

Among the resolutions adopted were these:

"The agricultural trades of America represent several billion dollars of invested capital, and represent the activities of more than a million American citizens and are intimately connected with the best interests and future success of the American farmer, due to social, business, advisory, and financial relations; also by reason of the investments we have made and our personal activities and ambitions.

AGAINST MARKETING ACT

"We are opposed to the cooperative marketing act, known as the Capper-Volstead Act, passed in 1922. We believe this law, authorizing the producer associations to deal in nonmember production, and therefore to become traders and, withal, to have immunity under our trust laws, shows class favoritism and therefore is unconstitutional.

"We are opposed to the work being done by our Department of Agriculture through the Bureau of Cooperative Marketing, the Bureau of Agricultural Economics, the many county agents throughout the United States, and other Federal and State agencies, so far as it seeks to destroy existing marketing agencies and established enterprises in the agricultural trades, and to substitute therefor farmer associations."

WHY CONVENTION CALLED

The call for the Chicago convention was sent out by W. F. Jensen, chairman of a special committee of the American Association of Creamery Butter Manufacturers, and contains the following paragraphs:

"It is unfortunate that any part of business should become mixed up in politics, but that is the situation confronting us now. We can not underestimate the formidable forces back of the cooperative marketing of agricultural products, which forces have become a menace to invested capital and the established way of handling farm products.

"This situation calls for careful but thorough political handling and a nation-wide educational campaign for acquainting the public with the facts. The present situation is costing industry millions annually, whereas a million properly expended now will reform a much misunderstood condition."

Among the organizations which the chairman announced were officially represented at the meeting were delegates from the fruit, vegetable, dairy, and produce exchanges of New York City, Chicago, Boston, Philadelphia, Baltimore, St. Louis, Los Angeles, Seattle, Long Beach (Calif.), and representatives of the following organizations:

The Grain Dealers' National Association.
The Millers' National Federation.
The Terminal Elevator Grain Merchants' Association.
The livestock exchanges of Chicago, Omaha, St. Louis, Kansas City, and Sioux City.
The United States Sugar Manufacturers' Association.
The American Bankers' Association.
The Illinois Manufacturers' Association.
The Soft Wheat Millers' Association.
The association representing cold-storage companies.
The American Association of Warehouses.
The National Wholesale Grocers' Association.
The National Organization of Canners.
The National Implement Dealers' Association.
The National Fur Buyers' Association.
The American Association of Creamery Butter Manufacturers.
The National Egg and Poultry Association.

COOPERATIVE GROWTH ALARMS

On opening the meeting, W. F. Jensen stated that it was the first attempt of the middlemen to get together in a big way to protect their interests against the cooperative movement, and that it was a business proposition to see to it that no special favors were granted the cooperatives by the Government. Mr. Jensen emphasized the fact that whereas in the past the issue between cooperatives and middlemen had been confined to localities, the fight between them must now be waged on a national scale, since many cooperatives have grown to a large size and the movement has spread over the country.

After a lively discussion, points from which are given above, it was resolved "that a permanent nonprofit-making organization be formed, to be known as the Federated Agricultural Traders of America, and that the chair be authorized to appoint, at its discretion, a committee of 15 within two weeks' time to apply for the necessary charter, prepare a constitution and by-laws, set up a schedule of dues, solicit members, and do such other things as may be necessary to perfect a permanent organization."

COMMITTEE APPOINTED

A few days later W. F. Jensen announced the following list of persons as the committee to organize and incorporate the Federated Agricultural Traders of America: Everett C. Brown, Chicago Live Stock Exchange; Fred G. Horner, grain; Charles Droste, New York Mercantile Exchange; Lester Perrin, Chicago Board of Trade; H. T. Rector, butter; L. Edward Davis, Chicago Mercantile Exchange; L. B. Kilbourne, Chicago Egg and Poultry; Herbert S. Johnson, Armour & Co.; F. H. Kullman, milk; Paul Fishback, food brokers; Ralph C. Stokell, warehousemen and elevators; Robert Wood, cotton; Alton E. Briggs, Boston Fruit and Produce Exchange; W. E. Suits, feed manufacturers; W. H. Stroud, millers; S. M. Ross, ice cream; A. L. Ward, cotton products.

SPEECH OF FORMER SENATOR CALDER

Mr. President, in the pending bill there is no suggestion that the farmers of this country be given any special privileges. On the contrary, Congress is merely asked to clarify the position of cooperative farm organizations which may operate business institutions or business plants in relation to the Sherman antitrust law. I do not understand the Capper-Volstead bill to allow agriculture any exemptions. It merely states just what cooperative farm organizations may do.

The uncertainty of the legal status of farm organizations which conduct business in a collective way has had a paralyzing effect on the efforts of men and associations who are brought together so that they may more economically and efficiently administer their affairs. In some sections of the country, I am informed, officers and members of such organizations have been arrested, indicted, and even thrown into prison. United States attorneys and other officials have so construed the Sherman antitrust law as to make it cover the operations of nonstock, nonprofit farm associations.

These associations have provided a means through which the farmers may come into more direct contact with their urban customers. They have aimed to eliminate many of the costly intermediary agencies of distribution by themselves doing the work of such agencies. These efforts through organization to more economically distribute their products have in many cases aroused the suspicion of officers who are always on the lookout for offenders against the antitrust laws of the Nation.

Such vigilance, while commendable, has had an embarrassing effect on perfectly honest men who have never been able to get their legal bearings when making agreements with their fellow citizens engaged in the same occupation regarding the sale of their products. Able lawyers have contended that the provisions of the antitrust law should never be invoked against farm organizations which deal only in the things which their members produce. But there is no general agreement on this subject among men associated with the Department of Justice, hence it is very necessary to enact some measure which will clearly show just what farm organizations can do and continue to live within the law.

Personally I am convinced that the authors of the Sherman antitrust law and the Clayton Act never contemplated the application of the provisions of these measures to men engaged in the collective sale and distribution of products which they themselves bring to maturity. Such application seems to me to be altogether too strained an interpretation of what was in the mind of Congress when these bills were assented to.

The Sherman and Clayton Acts forbid combinations in restraint of trade, but they rather encourage associations designed to foster trade. Farmers are asking for this cooperative law so that they may be able to do a larger and safer business founded upon scientific trade principles. They are not asking to be released from liability for acts of commercial or industrial oppression. They are only asking that by affirmative action Congress recognize the principle of collective bargaining.

Farmers have the natural and inherent right to approach their customers through agencies of their own creation. This right should be clearly and positively recognized by Congress. If the Sherman and Clayton Acts had been generally interpreted as their authors intended they should be, there would be no necessity for the enactment of the bill which we are now considering. The right of the farmers to collectively market their products would generally have been conceded.

If I could find in this bill any privilege to agriculture which is withheld from any other element in our citizenship, I would not be among

its supporters. It has been said by statesmen and publicists that the bill constitutes class legislation, that it confers favors at the expense of the urban population, and that it permits agriculture to do those things which are forbidden to other interests. I confess I am unable to so interpret the bill. To my mind it merely removes from the shoulders of the farmers burdens and restrictions which are not imposed upon ordinary commerce and industry.

The farmer is a business man. It is most commendable and only natural that he would desire to use modern methods in the conduct of his enterprise. It is not fair that he should be denied the use of these methods. Cooperation is not "combination." While there is a pretty general demand that big business be forced to yield to necessary regulation, no modern thinker will seriously propose that the business which serves all the people shall be crippled or its ability to function impaired. It is only through cooperation that the highest service to the public can be assured. This fact is recognized by agriculture just as it is recognized by industry, finance, and commerce.

Agriculture is the biggest of all business. Industrially it is a Titan. It is bigger than all the railways, the steel mills, and the coal mines in the United States combined. In the year 1919 the total value of farm products reached the staggering sum of $25,000,000,000, enough to pay America's share of the cost of the war. But this vast business was done largely by men who were unorganized, who were compelled to take whatever they could get for their products, who had no voice in naming the reward they should receive for the service they had performed. If they met and suggested that they should at least obtain cost of production, they were in peril of arrest, indictment, and imprisonment.

Other business concerns were able to get the ear of the public because they were intensely and intelligently organized. They were able to control to some extent at least the markets in which they sold their wares. But agriculture, though spread over the whole country, stretching from the extreme north to the extreme south and from the extreme east to the extreme west, was helpless. It must take what was given it, and we all know that in the past two years it has been impossible for the farmers to collect a sum which even approximates the cost of production.

Why, then, should they not be legally permitted to organize for business purposes? To establish a producers' trust appears to be entirely impossible. There is no danger that the farmers will ever be able or even attempt to corner the food supplies of the Nation. But they ought to be permitted through organization to have some say about how their products shall be distributed, in what markets they will be sold, and how much they will receive for them.

So far agriculture has been a wounded and almost helpless giant, depending entirely for the sale of its products upon agencies which it had no hand in creating. The time has come, however, when it appears to be the full purpose of the farmers to take some hand in directing the selling end of their business. They know that this can not be brought about through individual action. They know that if they are to give any real or effective attention to the sales department it must be through intelligent organization.

Collectively the farmers of the United States, according to the latest census report, own about $80,000,000,000 worth of property. This property has failed to pay anything like substantial dividends; at all events, during the past two years. Scores of thousands of good citizens have left rural America to take their places beside their brethren in the congested centers of population. They have found farm life unattractive and unprofitable. They have become tired of producing at a loss and have finally exchanged broad acres and country air for a hard present and a doubtful future in the cities.

If by cooperative effort these conditions can be ameliorated and farm life made more attractive, Congress ought to enact the necessary permissive legislation. In a country like ours there ought always to be a thriving, wholesome, progressive, and contented agriculture. It is not a wholesome sign of national progress to witness the constantly moving and ever-enlarging procession of ruralists toward the centers of urban life. Every effort should be made to arrest the progress of this procession.

It is obvious that a contented and prosperous agriculture means a more wholesome and more prosperous urban population. An abandoned farm is an eyesore. It is evidence of local decay, threatening the national fiber, and if permitted to continue imperiling the national health. Let us keep our boys on the farm.

But it is useless to urge this if agriculture is to continue to be conducted at a loss. I am for this bill because I believe it will give the farmers an opportunity to so organize and so adjust their business as to make the business of farming more profitable. We who live in the cities should be the last to discourage enlightened and cooperative effort among those who provide us with our food, our clothing, and largely our shelter.

Mr. President, I speak with some interest on this subject, because I live in the greatest city of the Nation, and I am confident that the people whom I represent in that city are perfectly willing that the farmers shall organize in such a way as to bring to them not only fair prices for the things they produce, but in the end will tend largely to decrease the prices of the things the people in the cities have to buy which the farmers produce.

THE FRENCH DEBT

Mr. WATSON. Mr. President, I want to ask the Senator from Utah [Mr. SMOOT], he being an honored and useful member of the United States Debt Commission, what steps, if any, are being taken to settle the debt which France owes the United States?

Mr. SMOOT. Mr. President, I understand that there is objection to my making remarks on the subject at this time, so I shall wait for another occasion.

Mr. WATSON. Do I understand that some Senator objected to the Senator from Utah answering a question?

Mr. SMOOT. The Senator from Nebraska [Mr. NORRIS] objects, and so I shall speak at some other time.

Mr. NORRIS. Mr. President, I wish to state my objection now for the benefit of the Senate. I do not know why the Senator from Utah [Mr. SMOOT] should take exception to the little remark that I made, which probably nobody else but him heard. I said, "I object to the question on the ground that it is incompetent and immaterial and not the best evidence." If the Chair wishes to overrule the objection, of course I shall not take an appeal.

Mr. WATSON. I think we ourselves can overrule that objection, because if the Senator from Utah [Mr. SMOOT] is not competent to discuss that question, who is?

Mr. NORRIS. I have not said the Senator from Utah was not competent; there is no question about the competency of the witness that the Senator from Indiana has on the stand; but he is lawyer enough to know that one does not have to object to the competency of a witness when he makes an objection to the testimony that is attempted to be obtained from the witness by the question. I am objecting to the question.

Mr. WATSON. Do I understand that the Senator's objection lies to the fact that no effort ever will be made to collect the debt from France?

Mr. NORRIS. Not necessarily, Mr. President. I think my objection is perfectly plain on its face. Whether it is good or whether it is not good is an entirely different question; but I do not understand why the Senator from Indiana [Mr. WATSON], while the Senate is engaged in its peaceful pursuits here, trying to save the country, should bring up a question which under present conditions, I think, is incompetent, immaterial, and is not the best evidence.

Mr. WATSON. Of course, I do not know what the Senator from Nebraska means by "best evidence." I am going on the theory that if the Senator from Utah [Mr. SMOOT] can not furnish the "best evidence," nobody can, because he is a member of the Debt Commission and has been a member from the beginning; he has attended all of its deliberations, he is familiar with all the facts and acts, and if he can not furnish testimony, I again ask who can?

Nor do I think it is entirely irrelevant to ask as to whether or not we are going to do anything to press the collection of that debt. We literally pressed other nations into a settlement, and it seems to be unfair to those other nations if we intend by indefinite action really to cancel the debt of France. So I think it is entirely proper for a United States Senator to ask the question I have of a member of the Debt Commission or of other United States Senators.

Mr. NORRIS. But the Senator from Indiana must know that the question is not now before the Senate.

Mr. WATSON. Oh, it is not before the Senate, but——

Mr. NORRIS. The Senator must know, if he wants to be technical, that his question is out of order under the rules of the Senate.

Mr. WATSON. I am perfectly aware of that.

Mr. NORRIS. Very well; then the Senator admits my objection.

Mr. WATSON. If the Senator had made that objection, I would have acceded to it.

Mr. NORRIS. That is the objection I have made.

Mr. WATSON. But I do believe that there ought to be some sort of understanding had with reference to the matter. Of course, in the morning hour here we constantly bring up, as the Senator from Nebraska very well knows, matters which are not proper at the time, but no one objects. If the Senator from Nebraska objects, however, of course I am through.

Mr. HARRISON. Mr. President, I wish to ask the Senator from Indiana a question before he takes his seat.

Mr. WATSON. But objection has been made, and I can not answer.

Mr. HARRISON. I was going to make another suggestion. It may be that the Debt Commission is too busy refunding the debt of Greece by loaning the Greeks more money, and has not time to take up the question of the French debt settlement.

Mr. CURTIS. Mr. President, I hope we shall have the regular order. We had speeches yesterday morning on a resolution to which there was no objection, and I hope that this morning we shall have two hours on the calendar.

The VICE PRESIDENT. Petitions and memorials are now in order.

PETITIONS AND MEMORIALS

Mr. DILL presented a petition of sundry citizens of Tacoma, Wash., praying for the passage of legislation granting increased pensions to Civil War veterans and their widows, which was referred to the Committee on Pensions.

Mr. WARREN presented a resolution adopted by the annual meeting of the Wyoming Engineering Society at Casper, Wyo., favoring the passage of legislation to provide for an inventory of the water resources of the United States, which was referred to the Committee on Commerce.

He also presented a resolution adopted by Lodge Engelbreckt, No. 193, Vasa Order of America, of Cheyenne, Wyo., protesting against the execution of the national-origins quota provision of the existing immigration law, which was referred to the Committee on Immigration.

Mr. WILLIS presented a petition of sundry citizens of Cleveland, Ohio, praying for the adoption of an equal distribution clause in pending radio legislation, which was referred to the Committee on Interstate Commerce.

Mr. CURTIS presented petitions of sundry citizens of Horton and Topeka, in the State of Kansas, praying for the passage of legislation granting increased pensions to Civil War veterans and their widows, which were referred to the Committee on Pensions.

He also presented a resolution adopted by the Great Council of Kansas, Improved Order of Red Men, at Wichita, Kans., favoring the passage of legislation for the computation of time in periods of 13 months of 28 days per annum, except one month in each period of four years which shall have 29 days, which was referred to the Committee on the Judiciary.

He also presented a resolution adopted by the Great Council of Kansas, Improved Order of Red Men, at Hutchinson, Kans., favoring the adoption by Congress of flood-control measures, which was ordered to lie on the table.

FLOOD CONTROL

Mr. TYSON. I present a telegram from the mayor and other citizens of Monroe, La., and vicinity, relative to flood control, which I ask may lie on the table and be printed in the RECORD.

There being no objection, the telegram was ordered to lie on the table and to be printed in the RECORD, as follows:

MONROE, LA., *March 5, 1928.*

HON. LAWRENCE D. TYSON,
United States Senate, Washington, D. C.:

Impossible comprehend the indifference and heartlessness of exponents of Boeuf River flood way feature of Jadwin plan incorporated in Jones bill, which proposes certain privation, desolation, and death to fertile, prosperous valley wherein dwell 70,000 of your fellow citizens as per actual census recently taken. Jadwin plan contemplates raising all levees except at Cypress Creek vicinity, which 35-mile section he terms a fuse plug, and thus making certain that this particular levee is to break. Jadwin plan diverts 900,000 cubic feet per second through this valley, or twice 1927 flow, from breaks on Arkansas River. Our people rescued last year only with greatest sacrifice and heroism. With twice the flow of water proposed impossible to evacuate valley without serious loss of life, which will shake Nation to its depths.

Jones bill does not contemplate buying property or flowage rights nor restoring drainage in this flood way, and while thus endangering the lives of these 70,000 people and threatening destruction of their property the Jones bill makes unlawful any community taking steps to protect themselves. With memory of desolation and extreme danger to life accompanying last flood, we appeal to you to give further consideration to this inhuman proposal which would make fertile, prosperous section of State a valley of death and desolation.

ARNOLD BERNSTEIN,
Mayor of Monroe.
C. C. BELL,
Mayor, City of West Monroe.
THEO. F. TERZIA,
President Ouachita Parish Police Jury.
M. C. REDWOOD,
Member Louisiana State Senate.
H. H. RUSSELL,
City Attorney, City of Monroe.
DAN BREARD,
Commissioner of Finance, City of Monroe.
R. O. MORRISON,
Parish Engineer, Parish of Ouachita.

REPORTS OF COMMITTEES

Mr. BAYARD, from the Committee on Claims, to which was referred the bill (S. 2764) for the relief of Nelle McConnell, reported it with amendments and submitted a report (No. 479) thereon.

Mr. BLACK, from the Committee on Claims, to which was referred the bill (S. 379) for the relief of William R. Boyce & Son, reported it without amendment and submitted a report (No. 480) thereon.

Mr. STEIWER, from the Committee on Claims, to which was referred the bill (S. 1108) for the relief of Una May Arnold, reported it without amendment and submitted a report (No. 481) thereon.

Mr. McNARY, from the Commmittee on Agriculture and Forestry, to which was referred the bill (S. 2864) to establish the standard of weights and measures for the following wheat-mill, rye-mill, and corn-mill products, namely, flours, semolina, hominy, grits, and meals, and all commercial feeding stuffs, and for other purposes, reported it without amendment and submitted a report (No. 482) thereon.

He also, from the same committee, to which was referred the joint resolution (S. J. Res. 63) to amend sections 1 and 2 of the act of March 3, 1891, reported it with amendments and submitted a report (No. 483) thereon.

Mr. NYE, from the Committee on Claims, to which was referred the bill (S. 1970) for the relief of Karim Joseph Mery, reported it without amendment and submitted a report (No. 484) thereon.

Mr. HOWELL, from the Committee on Claims, to which were referred the following bills, reported them severally without amendment and submitted reports thereon:

A bill (H. R. 926) for the relief of Jennie Roll (Rept. No. 487);

A bill (H. R. 3673) for the relief of Maj. F. Ellis Reed (Rept. No. 488);

A bill (H. R. 7110) for the relief of Frances L. Dickinson (Rept. No. 489);

A bill (H. R. 8093) for the relief of John Rooks (Rept. No. 490); and

A bill (H. R. 8887) for the relief of Victorina Mesa, of Cavite, Philippine Islands (Rept. No. 491).

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and read as follows:

By Mr. WALSH of Montana:

A bill (S. 3512) to authorize the taxation of certain interests in lands within reclamation projects; to the Committee on Public Lands and Surveys.

By Mr. BAYARD:

A bill (S. 3513) granting an increase of pension to Lousia Shott (with accompanying papers); to the Committee on Pensions.

By Mr. ROBINSON of Indiana:

A bill (S. 3514) granting a pension to Anna Washburn;

A bill (S. 3515) granting an increase of pension to Eliza Killom; and

A bill (S. 3516) granting an increase of pension to Mary A. Hackelman; to the Committee on Pensions.

A bill (S. 3517) for the relief of Henry Snow; to the Committee on Military Affairs.

By Mr. SHIPSTEAD:

A bill (S. 3518) granting an increase of pension to John F. Mossberg (with accompanying papers); to the Committee on Pensions.

By Mr. DILL:

A bill (S. 3519) granting a pension to John L. Collins; to the Committee on Pensions.

By Mr. NORBECK:

A bill (S. 3520) granting an increase of pension to Sibal E. Richardson; to the Committee on Pensions.

By Mr. METCALF:

A bill (S. 3521) granting an increase of pension to Mary L. Williams (with accompanying papers); to the Committee on Pensions.

By Mr. CURTIS:

A bill (S. 3522) granting a pension to Laura B. Ehrenfeld (with accompanying papers);

A bill (S. 3523) granting an increase of pension to Amanda Alexander (with accompanying papers); and

A bill (S. 3524) granting an increase of pension to Alice E. Neil (with accompanying papers); to the Committee on Pensions.

A bill (S. 3525) for the relief of A. M. Thomas (with accompanying papers); to the Committee on Claims.

By Mr. CAPPER:

A bill (S. 3526) for the relief of William J. McCarthy (with accompanying papers); to the Committee on Finance.

By Mr. COPELAND:

A bill (S. 3527) granting a pension to Lowell A. Chamberlin; to the Committee on Pensions.

By Mr. WALSH of Massachusetts:

A bill (S. 3528) granting pensions to certain disabled children of veterans of the Civil War and the war with Spain; to the Committee on Pensions.

By Mr. NEELY:

A bill (S. 3529) to fix the term of office of commissioners of the Interstate Commerce Commission, and for other purposes; to the Committee on Interstate Commerce.

A bill (S. 3530) granting a pension to Harriet Stewart; to the Committee on Pensions.

By Mr. REED of Pennsylvania:

A bill (S. 3531) to authorize construction at the United States Military Academy, West Point, N. Y.; and

A bill (S. 3532) to authorize an appropriation for the purchase of land at Selfridge Field, Mich.; to the Committee on Military Affairs.

By Mr. WILLIS:

A bill (S. 3533) granting an increase of pension to Susanna Fetzer (with accompanying papers); to the Committee on Pensions.

By Mr. COUZENS:

A bill (S. 3534) granting a pension to Joseph H. Peterson; and

A bill (S. 3535) granting an increase of pension to Jennie E. Buckley; to the Committee on Pensions.

By Mr. BROOKHART:

A joint resolution (S. J. Res. 109) to authorize the Secretary of Agriculture to accept a gift of certain lands in Clayton County, Iowa, for the purposes of the upper Mississippi River wild life and fish refuge act; to the Committee on Agriculture and Forestry.

AMENDMENTS TO AGRICULTURAL APPROPRIATION BILL

Mr. CURTIS submitted amendments intended to be proposed by him to House bill 11577, the Agricultural Department appropriation bill, which were referred to the Committee on Appropriations and ordered to be printed, as follows:

On page 57, line 1, strike out the figures "$715,000" and insert the figures "$765,000."

On page 57, line 6, strike out the period, insert a colon, and add the following:

"*Provided further,* That $50,000 of the above amount, of which $10,000 shall be immediately available, may be used to enable the Secretary of Agriculture to complete an experiment in the grading and marking of meats under standards fixed by the Department of Agriculture."

AMENDMENTS TO FLOOD CONTROL BILL

Mr. HAWES. Mr. President, I desire to submit sundry amendments to Senate bill 3434, being the Mississippi River flood control bill, and I ask that they may lie on the table, be printed, and printed in the RECORD.

At this time I wish also to give notice that, if it shall be agreeable to the Senate, at the conclusion of the morning hour on Friday I should like to address the Senate on the question of flood control.

The amendments intended to be proposed by Mr. HAWES to Senate bill 3434, the flood control bill, were ordered to lie on the table, to be printed, and to be printed in the RECORD, as follows:

On page 1 insert the words "Cape Girardeau, Mo." in lieu of the word "Cairo" in the caption of the bill.

On page 1, line 3, insert the words "except as hereinafter provided" after the word "that."

On page 1, line 5, insert the words "Cape Girardeau, Mo." in lieu of the words "The mouth of the Ohio River."

On page 2, line 3, insert the words "Said report shall be changed so as to provide that all spillways shall be controlled spillways, instead of fuse-plug spillways," after the word "engineers."

On page 2, line 5, insert the following: "two experienced civilian engineers and one civilian of recognized, experienced executive ability" in lieu of the words "a civilian engineer."

On page 2, line 10, strike out the following: "details of the."

On page 2, line 11, insert the word "That" in lieu of the word "Those."

On page 2, line 24, strike out all of section 2 and insert in lieu thereof the following:

"SEC. 2. (a) That for the protection of life, property, and navigation from floods and overflows from the Mississippi River and its tributaries, to provide against interruptions to interstate commerce, facilitate the continuous passage of the United States mails and to provide for the general public welfare, it is hereby declared to be the sense of Congress that the Federal Government shall assume entire direction of the subject of flood control upon and along the Mississippi River and its tributaries from the Head of the Passes at its mouth to Cape Girardeau.

"(b) And in compliance with the universally stated opinion that flood control is a national problem, and in view of the fact that there was a loss from floods in this area of $40,000,000 in 1903, of $78,000,000 in 1912, of $12,000,000 in 1913, of $5,500,000 in 1916, of $17,000,000 in 1922, and of between $236,000,000 and $284,000,000 in 1927, total of $400,000,000; and because this section of the alluvial valley of the Mississippi River contributed $292,000,000 to the building of levees and works of flood control and prevention while the Federal Government has spent but $71,000,000 for the same purposes; and because of the gigantic scale of the project involving control of flood waters from a drainage area largely outside of the States immediately affected, this area being 41 per cent of the territory of the United States; and for the reason that uniform State or local contributions can not be directed by the National Government, and for the reason that, as flood control of the Mississippi River and its tributaries must be treated as one project the failure of one State or local district to contribute would jeopardize or destroy the unity of plan as provided herein, or its execution, it is hereby provided that the Federal Government, to make effective the provisions of this act, shall assume the entire cost of flood-control works from the Head of the Passes to Cape Girardeau and shall not require local contributions for the purpose of carrying out the provisions of this act, except for maintenance as hereinafter provided for.

On page 3, line 24, strike out the letter "(a)".

On page 4, line 1, strike out clause "(b)" down to the word "*Provided,*" in line 9.

On page 4, line 10, strike out the word "further."

On page 4, lines 11 and 12, strike out the words "but the United States shall acquire, as provided below, rights of way necessary therefor."

On page 5, line 1, insert the following paragraph as paragraph 1 of section 5, the present section 5 of the bill to be paragraph 2 thereof:

"SEC. 5. Just compensation shall be paid by the United States for all property used, taken, damaged, or destroyed in carrying out the flood-control plan provided for herein, including all expenditures by persons, corporations, and public service corporations made necessary to adjust or conform their property, or to relocate same because of the spillways, flood ways, or diversion channels herein provided."

On page 5, line 4, insert the words "including flood ways" after the word "project."

On page 5, line 20, insert the words "without cost" after the word "over."

CHANGE OF REFERENCE

On motion of Mr. REED of Pennsylvania, the Committee on Military Affairs was discharged from the further consideration of the bill (H. R. 4920) authorizing the Secretary of War to award a Nicaraguan campaign badge to Capt. James P. Williams, in recognition of his services to the United States in the Nicaraguan campaign of 1912 and 1913, and it was referred to the Committee on Naval Affairs.

UNVEILING EXERCISES AT STONE MOUNTAIN, GA.

Mr. HARRIS. I submit a concurrent resolution, which I ask may lie on the table.

The concurrent resolution (S. Con. Res. 12) was read and ordered to lie on the table, as follows:

Resolved by the Senate (the House of Representatives concurring), That there is hereby created a committee of Congress consisting of 5 Senators to be appointed by the President of the Senate and 10 Members of the House of Representatives to be appointed by the Speaker of the House to attend, as representing the Congress of the United States, the exercises at Atlanta, Ga., April 9, 1928, incident to the unveiling of a portion of the Stone Mountain monument by the Stone Mountain Confederate Monumental Association.

PRESIDENTIAL APPROVAL

A message from the President of the United States, by Mr. Latta, one of his secretaries, announced that on March 5, 1928, the President approved and signed the joint resolution (S. J. Res. 88) authorizing the erection on public grounds in the District of Columbia of a stone monument as a memorial to Samuel Gompers.

PUEBLO INDIAN LANDS

Mr. BRATTON. Mr. President, I think the Chair has on his desk a communication from the House of Representatives, which I ask may be laid before the Senate.

The VICE PRESIDENT laid before the Senate the action of the House of Representatives agreeing to the amendments of the Senate to the House amendment to the bill (S. 700) entitled "An act authorizing the Secretary of the Interior to execute an agreement with the Middle Rio Grande conservancy district providing for conservation, irrigation, drainage, and flood control for the Pueblo Indian lands in the Rio Grande Valley, N. Mex., and for other purposes," with an amendment as follows:

On page 3 of the House engrossed amendment, line 18, strike out all after the word "Interior" down to and including the word "ownership" in line 24, and insert: "*Provided*, That such reimbursement shall be made only from the proceeds of leases of the newly reclaimed pueblo lands whether leased by Indians or others; Indians, however, to be given the preference in the making of such leases, and the proceeds of such leases to be applied, first, to the reimbursement of the cost of the works apportioned to said irrigated area of approximately 8,346 acres: *Provided further*, That as to not to exceed 4,000 acres of such newly reclaimed lands if cultivated by Indians no rentals shall be charged the Indians: *Provided further*, That there is hereby created against the newly reclaimed lands a first lien for the amount of the cost of the works apportioned to such newly reclaimed lands, which lien shall not be enforced during the period that the title to such lands remains in the pueblo or individual Indian ownership."

Mr. BRATTON. I move that the Senate concur in the House amendment.

The motion was agreed to.

U. S. S. "DISPATCH"

The VICE PRESIDENT laid before the Senate the amendments of the House of Representatives to the bill (S. 771) providing for the gift of the U. S. S. *Dispatch* to the State of Florida, which were, on page 1, line 4, to strike out the word "loan" and insert "convey by gift"; on page 1, line 9, to strike out "or the return"; on page 1, to strike out all after the word "vessel," in line 9, down to and including the word "State," in line 13; and to amend the title so as to read: "An act providing for the gift of the U. S. S. *Dispatch* to the State of Florida."

Mr. HALE. I move that the Senate concur in the amendments of the House of Representatives.

The motion was agreed to.

BRIDGE ACROSS THE CHESAPEAKE BAY

The VICE PRESIDENT laid before the Senate the amendments of the House of Representatives to the bill (S. 1498) to extend the time for the construction of a bridge across the Chesapeake Bay, and to fix the location of said bridge.

Mr. TYDINGS. I move that the Senate disagree to the amendments of the House, request a conference with the House on the disagreeing votes of the two Houses thereon, and that the Chair appoint the conferees on the part of the Senate. I think the House amendments were made through a misapprehension and the conferees will quickly straighten out the matter.

The motion was agreed to; and the Vice President appointed Mr. JONES, Mr. MCNARY, and Mr. FLETCHER conferees on the part of the Senate.

HOUSE BILLS AND JOINT RESOLUTION REFERRED

The following bills and joint resolution were severally read twice by their titles and referred as indicated below:

H. R. 21. An act to provide for date of precedence of certain officers of the staff corps of the Navy; to the Committee on Naval Affairs.

H. R. 8337. An act to amend the air mail act of February 2, 1925, as amended by the act of June 3, 1926; to the Committee on Post Offices and Post Roads.

H. R. 9958. An act to authorize the disposal of public land classified as temporarily or permanently unproductive on Federal irrigation projects; to the Committee on Irrigation and Reclamation.

H. R. 8326. An act to authorize the construction of a dormitory at Riverside Indian School at Anadarko, Okla.;

H. R. 8542. An act to provide for the construction of a hospital at the Fort Bidwell Indian School, California; and

H. R. 8543. An act to provide for the construction of a school building at the Fort Bidwell Indian School, California; to the Committee on Indian Affairs.

H. R. 465. An act to authorize the city of Oklahoma City, Okla., to sell certain public squares situated therein;

H. R. 6993. An act authorizing the Secretary of the Interior to sell and patent certain lands in Louisiana and Mississippi;

H. R. 7946. An act to repeal an act entitled "An act to extend the provisions of the homestead laws to certain lands in the Yellowstone Forest Reserve," approved March 15, 1906;

H. R. 8724. An act granting certain lands to the city of Mendon, Utah, to protect the watershed of the water-supply system of said city;

H. R. 8733. An act granting certain lands to the city of Bountiful, Utah, to protect the watershed of the water-supply system of said city;

H. R. 8734. An act granting certain lands to the city of Centerville, Utah, to protect the watershed of the water-supply system of said city; and

H. R. 9829. An act to extend the provisions of the act of Congress approved March 20, 1922, entitled "An act to consolidate national forest lands"; to the Committee on Public Lands and Surveys.

H. R. 5806. An act to authorize the purchase of real estate by the War Department;

H. R. 5817. An act to provide for the paving of the Government road extending from St. Elmo, Tenn., to Rossville, Ga.;

H. R. 7932. An act to authorize appropriations for construction at military posts, and for other purposes;

H. R. 7944. An act to authorize appropriations for construction at military posts, and for other purposes; and

H. R. 11134. An act to authorize appropriations for construction at military posts, and for other purposes; to the Committee on Military Affairs.

H. R. 7198. An act authorizing Henry Thane, his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Mississippi River at or near Arkansas City, Ark.;

H. R. 7927. An act granting the consent of Congress to the Louisiana Highway Commission of the State of Louisiana to construct, maintain, and operate a free highway bridge across the Atchafalaya River at or near Melville, La.;

H. R. 8897. An act to revive and reenact the act entitled "An act granting the consent of Congress to the city of Chicago to construct a bridge across the Calumet River at or near One hundred and thirtieth Street, in the city of Chicago, county of Cook, State of Illinois," approved March 21, 1924;

H. R. 9350. An act granting the consent of Congress to Frank E. Merrill, carrying on business under the name and style of Frank E. Merrill & Co.'s Algonquin Shores Realty Trust, to construct, maintain, and operate a footbridge across the Fox River;

H. R. 9361. An act granting the consent of Congress to the city of St. Charles, State of Illinois, to widen, maintain, and operate a bridge across the Fox River within the city of St. Charles, State of Illinois;

H. R. 9365. An act to legalize a bridge across the St. Francis River at or near Marked Tree, in the county of Poinsett, Ark.;

H. R. 9663. An act authorizing Hermann Simmons, jr., his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across Tampa Bay from Pinellas Point, Pinellas County, to Piney Point, Manatee County, Fla.;

H. R. 9761. An act to extend the time for completing the construction of a bridge across the Monongahela River at or near Pittsburgh, Pa.;

H. R. 9773. An act granting the consent of Congress to the Manufacturers' Electric Terminal Railway, its successors and assigns, to construct, maintain, and operate a bridge across the Missouri River, at or near the mouth of the Big Blue River, in Jackson County, Mo.;

H. R. 9831. An act authorizing J. E. Turner, his heirs, legal representatives, or assigns, to construct, maintain, and operate a bridge across the Ocmulgee River at or near Fitzgerald, Ga.;

H. R. 9946. An act to extend the times for commencing and completing the construction of a bridge across the Wabash River at or near Mount Carmel, Ill.;

H. R. 9964. An act authorizing E. L. Higdon, of Baldwin County, Ala., his heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across Perdido Bay at or near Bear Point, Baldwin County, Ala.;

H. R. 10025. An act to extend the time for completing the construction of a bridge across the Monongahela River at or near Cliff Street, McKeesport, Pa.;

H. R. 10143. An act granting the consent of Congress to the Louisiana Highway Commission to construct, maintain, and operate a free highway bridge across the Sabine River at or near Merryville, La., on the Merryville-Newton highway;

H. R. 10144. An act authorizing the B & P Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Rio Grande River at or near Zapata, Tex.;

H. R. 10373. An act authorizing the Plattsmouth Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Missouri River at or near Plattsmouth, Nebr.;

H. R. 10424. An act authorizing John C. Mullen, T. L. Davies, John H. Hutchings, and Virgil Falloon, all of Falls City, Nebr., their heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Missouri River at or near Rulo, Nebr.;

H. R. 10566. An act granting the consent of Congress to the city of Peoria, Peoria County, Ill., to construct, maintain, and operate a free highway bridge across the Illinois River at or near Peoria, Ill.;

H. R. 10658. An act authorizing the Interstate Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Missouri River at or near Decatur, Nebr.;

H. R. 10707. An act authorizing the Point Marion Community Club, of Point Marion, Pa., its successors and assigns, to construct, maintain, and operate a bridge across the Monongahela River at or near Point Marion, Pa.;

H. R. 10756. An act authorizing the State of Indiana to construct, maintain, and operate a toll bridge across the Miami River between Lawrenceburg, Dearborn County, Ind., and a point in Hamilton County, Ohio, near Columbia Park, Hamilton County, Ohio; and

H. R. 10806. An act authorizing the city of Atchison, Kans., and the county of Buchanan, Mo., or either of them, to construct, maintain, and operate a toll bridge across the Missouri River at or near Atchison, Kans.; to the Committee on Commerce.

H. J. Res. 175. Joint resolution to change the name of the Ancon Hospital in the Panama Canal Zone to the Gorgas Hospital; to the Committee on Interoceanic Canals.

THE CALENDAR

The VICE PRESIDENT. Morning business is closed. The calender under Rule VIII is in order.

VAN DORN IRON WORKS CO.

The bill (S. 624) for the relief of the Van Dorn Iron Works Co. was announced as first in order.

Mr. WILLIS. Mr. President, I am very anxious to have the Senate act on this bill, but the Senator from Washington [Mr. JONES] desires to be present when the bill is considered. I think, therefore, as a matter of fairness, I ought to ask that the bill be temporarily passed over, with the understanding that we may return to it when the Senator from Washington shall be in the Chamber.

The VICE PRESIDENT. The bill will be passed over temporarily.

ESTATE OF GEORGE B. SPEARIN, DECEASED

The bill (S. 1678) for the relief of the estate of George B. Spearin, deceased, was considered as in Committee of the Whole. It directs the Secretary of the Treasury to pay to the estate of George B. Spearin, deceased, $5,616.29 as payment in full for all loss sustained by said Spearin by reason of failure, until April 11, 1917, of his attorney to file with the Treasury Department, in compliance with the provisions of the act of September 30, 1890 (26 Stat. L. 537), transcript of judgment of the Court of Claims in the case of Spearin against the United States.

Mr. EDGE. Mr. President, the bill was held over at the request of the Senator from New Mexico [Mr. BRATTON]. He has since investigated it and has assured me that he has no objection to the passage of the bill. I regret that the Senator from New Mexico is not at the moment in the Chamber, although he was here a short while ago.

Mr. KING. Mr. President, I should be glad if the Senator would make an explanation of the bill.

Mr. EDGE. I will be glad to make an explanation. A similar bill passed the Senate during the last Congress. It provides for the payment of back interest arising out of a judgment which the plaintiff, Spearin, since deceased, obtained in a case which he successfully prosecuted before the United States Court of Claims and which judgment was afterwards affirmed by the Supreme Court. Because of the illness of the attorney of record, living in Washington, an illness of such a character that he became insane, he failed to file within the proper time the papers necessary to secure the payment of the $5,616.29 interest. The doctor's certificate as to the attorney's insanity was presented to the Committee on Claims, and that committee unanimously recommended the passage of the bill. The Senator from New Mexico, as I have stated, merely asked that it be held up until he personally could investigate the case. He has done so, and has assured me he has no objection to its passage. I see the Senator from New Mexico is now in the Chamber.

Mr. BRATTON. Mr. President, the statement of the Senator from New Jersey is correct. I have examined the bill and satisfied myself that it is a meritorious one. The objection which I registered on a previous occasion is withdrawn.

Mr. EDGE. I thank the Senator.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

VAN DORN IRON WORKS CO.

Mr. WILLIS. Mr. President, I note the Senator from Washington is now in his place in the Senate. I ask unanimous consent to return to Calendar No. 18, being Senate bill 624, in which the Senator from Washington was interested.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (S. 624) for the relief of the Van Dorn Iron Works Co., which was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to the Van Dorn Iron Works Co., out of any money in the Treasury not otherwise appropriated, the sum of $3,052.50 for package boxes manufactured by the Van Dorn Iron Works Co. as subcontractors and furnished to the Post Office Department by the contractors, the Columbia Supply Co., of New York, under its contract covering the period from March, 1901, to March, 1905.

Mr. WILLIS. Mr. President, when this bill was reached on a previous occasion the Senator from Washington [Mr. JONES] sought some information which I was unable at that time to give him. The question that he asked was a perfectly proper one. Since that time I have undertaken to secure the information desired, and I now have it.

The very proper question which the Senator propounded was this: Has the amount set forth in the bill been paid to the original contractor or anybody else? That was a very proper question; and, after considerable effort, I have secured the detailed information from the department. I have before me a letter under date of February 28 from the Acting Postmaster General. I will read the pointed paragraph and will place the entire letter in the RECORD, if I may. The letter is addressed to me. The Acting Postmaster General says:

You will note the statement of the Comptroller General that "the records of the General Accounting Office fail to disclose payment of the $3,052.50 to which the bill refers, or any part thereof, to either the Van Dorn Iron Works Co. or the Columbia Supply Co. or other contractor or subcontractor.

I am informed by the Bureau of the Budget that this advice is not in conflict with the financial program of the Budget.

That statement is quoted from the letter of the First Assistant Postmaster General. I have also here a copy of the original letter from the Comptroller General himself, Mr. McCarl, to the Postmaster General, which I will place in the RECORD if I may have permission. Does that furnish the information which the Senator from Washington sought?

Mr. JONES. It probably furnishes the information, but does not clear up the difficulty as I see it. Suppose that we pay this subcontractor this money, what is there to prevent the contractor, who had a direct contract with the Government, from coming in and insisting upon the Government paying him under his contract?

Mr. WILLIS. I think I can answer that question to the satisfaction of the Senator. In the first place, the whole matter is barred by the statute of limitation; that is the first direct answer to the question; and, in the second place, the Columbia Supply Co. had its case tried—I have here a letter from the attorney representing the United States at that time—and the case was decided against it because the Columbia Supply Co. had engaged in a fraudulent contract with an officer of the Government, whom I shall not name but who subsequently himself was tried and convicted and served a sentence in the penitentiary for having participated in a fraudulent contract.

The Columbia Supply Co., of course, is absolutely barred; and these people, the Van Dorn Iron Works Co., as this letter states, were innocent manufacturers. They furnished these boxes to the Government, and the Government is this day using them, and the company has never received a penny.

Mr. JONES. But they furnished these boxes without any contract with the Government.

Mr. WILLIS. The Van Dorn Iron Works Co. furnished the boxes in perfect good faith, as the Government says, perfectly innocently, to the Columbia Supply Co.; but the reason why the Columbia Supply Co. could not collect, and did not collect, was because of this fraudulent connivance between the Columbia Supply Co. and this officer of the Government. This officer of the Government, as I say, was subsequently convicted, and was sentenced to the penitentiary, and I think he is now in the penitentiary. The contract with the Columbia Supply Co., of course, was set aside as unenforcible and fraudulent, so they have not collected and can not collect, and for the further reason that they are barred by the statute of limitations.

The facts, therefore, are these: Here is this company, an innocent manufacturer that furnished this material to the Federal Government which the Federal Government is this day using. The question is, Shall it pay for it?

Mr. ROBINSON of Arkansas. What was the character of the fraud of which the Columbia Supply Co. was guilty?

Mr. WILLIS. I can not answer that in detail, Mr. President. That is a proper question. It was nothing whatever relating to the boxes.

Mr. ROBINSON of Arkansas. The boxes were accepted and used?

Mr. WILLIS. Oh, absolutely. The boxes were accepted. There is no complaint about them; but there was some sort of fraudulent understanding between this Government official and the Columbia Supply Co.

Mr. ROBINSON of Arkansas. Is the fact that the boxes were not paid for due to the lack of privity of contract between those furnishing them and the Government?

Mr. WILLIS. Exactly so. The contract was between the Government and the Columbia Supply Co. The Columbia Supply Co. was the one that was guilty of connivance with this Government official, who was subsequently sent to the penitentiary. The Van Dorn Iron Works Co., a perfectly innocent manufacturer, sold the boxes to the Columbia Supply Co., which in turn turned them over to the Federal Government. The Federal Government is using them yet, and the Van Dorn Iron Works Co. has never received a penny for the boxes.

Mr. JONES. Did the Government ever pay the Columbia Supply Co.?

Mr. WILLIS. It did not, because of the reasons I have stated. The supply company could not maintain its suit because the contract was set aside on the ground of fraud, connivance with this official, who subsequently was sent to the penitentiary for fraudulent conduct.

Mr. JONES. As a matter of fact, was the contract with the supply company set aside?

Mr. WILLIS. It was. They sued for the money, and the contract was set aside. I have here a letter from the United States attorney who tried the case.

Mr. ROBINSON of Arkansas. Who sued for the money?

Mr. WILLIS. The Columbia Supply Co. sued for the money, and the contract was set aside because of the fraud that was discovered; so they did not collect and never can collect, because their claim is barred by the statute of limitations.

Mr. ROBINSON of Arkansas. And there was no privity of contract between those who actually furnished the boxes and the Government?

Mr. WILLIS. There was no privity of contract between those who furnished the boxes and the Government. The Senator apprehends it correctly.

Mr. JONES. Does the department recommend this?

Mr. WILLIS. Absolutely.

Mr. JONES. The Senator says "absolutely." I have a case where there was not any fraud, where the Government got the benefit of all the work of the subcontractor, and yet the department recommends against it on the ground that there was no privity of contract between the Government and the subcontractor.

Mr. WILLIS. The difference between the Senator's case and the instant case undoubtedly is that in this case, as I have explained to the Senator, the contract with the original contractor was set aside on the ground of fraud, and the contract anyhow is now barred by the statute of limitations; so the original contractor could not collect, and never has collected, and never will.

Mr. JONES. I hope the Senator does not attach any importance to the statute of limitations in this matter, because very frequently we pass bills here avoiding the statute of limitations in connection with claims against the Government.

Mr. WILLIS. In view of the statements that have been made, and the information that has been placed in the RECORD that this contract was set aside on the ground of fraud, and the Government official who participated in the fraud was sent to the penitentiary, the Senator does not think that any future Senate will pass a bill to pay this company that was guilty of the fraud, especially if we shall pass this bill paying the company that actually furnished the material?

Mr. JONES. I will not vouch for what the Senate in the future may do or may not do in any particular matter.

Mr. NORRIS. Mr. President, may I ask the Senator from Ohio a question?

Mr. WILLIS. Certainly.

Mr. NORRIS. Would not this be possible if we establish a precedent: It may be—I do not know what the contract was—that the entire contract which the Senator says was set aside on the ground of fraud consisted of various things purchased from various subcontractors. If we set aside the contract on the ground of fraud, and then pay everybody for all of the material that was used in it, have not those who are trying to sustain the fraudulent contract attained their end?

Mr. WILLIS. No, Mr. President; I think not. I fear the Senator does not discriminate here. It was the Columbia Supply Co. that entered into the original contract and that was guilty of connivance with the Government official. The Van Dorn Iron Works Co., an entirely innocent manufacturer, sold these boxes to the Columbia Supply Co. in good faith, and they were furnished by the Columbia Supply Co. to the Government, and the Government is using them at this very hour.

Mr. ROBINSON of Arkansas. I see from the report of the Acting Postmaster General that a similar claim, a claim apparently in the same status as this, has already been allowed by the Congress.

Mr. WILLIS. That is correct. That is set forth in the committee report.

Mr. JONES. When was that done?

Mr. WILLIS. That is stated in a letter to the chairman of the House Committee on Claims, which the Senator has before him, under date of August 15, 1919; and the case to which the Senator from Arkansas is referring was the act of June 30, 1906.

Mr. JONES. Nineteen hundred and six?

Mr. WILLIS. Yes, sir.

Mr. JONES. What period of time did this transaction between the supply company and the Government take?

Mr. WILLIS. This is a similar case. It is not this case.

Mr. JONES. Oh, this is another case?

Mr. WILLIS. The Senator from Arkansas was calling attention to the fact that the Congress had acted in a similar case; not this case.

Mr. JONES. Has the Senator the original contract between the Columbia Supply Co. and the department?

Mr. WILLIS. I have not; no. Whatever the outcome of this discussion may be, I ask permission to place in the RECORD this letter from the Acting Postmaster General, recommending the legislation, and stating, as I read, that this company has never been paid, nor has any other company been paid, and also stating that the proposed payment is not in conflict with the financial program of the President; also, the letter from the Acting Postmaster General, Mr. Glover; likewise, the letter from the comptroller.

Mr. ROBINSON of Arkansas. Mr. President, it would be interesting and helpful if the Senator could state the basis for the judgment of fraud against the Columbia Co.

Mr. WILLIS. I wish I had that information, but I do not have it. I contented myself with the information that the contract was set aside on the ground of fraud. It appears that this official who was subsequently sent to the penitentiary was in connivance with the Columbia Supply Co., and when the Government discovered it, of course, action was had, and the man was tried and convicted.

Mr. JONES. I think the department ought to furnish to the Senate some more facts with reference to what was done on the Columbia Supply Co. contract.

Mr. WILLIS. I have tried to state that to the Senator—nothing at all. That contract was set aside on the ground of fraud.

Mr. JONES. I should like some of the papers and the judgment in connection with setting it aside.

Mr. WILLIS. That is, the reasons why it was set aside?

Mr. JONES. Yes.

Mr. WILLIS. Of course, I do not have the papers, but I suppose they could be secured. It seems to me the important fact is, though, that it was set aside on the ground of fraud. There is no suggestion in any quarter that the relationship of the Van Dorn Iron Works Co. to the matter is in any way tainted with fraud.

Mr. JONES. Personally, I should like to see how far this contract went, what various items it covers; and I should think the department could soon furnish that to the Senate.

Mr. WILLIS. I have been trying to get the information that was desired, and I thought I had just the information the Senator wanted. Here is the definite statement that he inquired about before, that the Government has never paid anybody for these boxes, and it is now using them, and the Postmaster General thinks it ought to pay for them. What is it that the Senator wants?

Mr. JONES. I did not have as much information before as I have now, I will say to the Senator.

Mr. WILLIS. No; nor I.

Mr. JONES. What led me to object in the first instance was that I saw that this was a bill to pay a subcontractor, and I have a bill before a committee to pay a subcontractor for work that he did for the Government and of which the Government has the benefit, and the department recommended to the committee that it not have consideration because there was no

contractual relation between the Government and the subcontractor. The subcontractor had to look entirely to his principal. That is what struck me with reference to this case and that is what led me to ask to have the matter go over. I am constrained to wish for some evidence of the character of the proceedings that the Government instituted and what the judgment was as against these contractors.

Mr. WILLIS. Would it help the Senator if I should read him the statement of the Government attorney who tried the case? I have it here.

Mr. JONES. No. From what the Senator says, that simply states a sort of conclusion. It does not give us any details.

Mr. WILLIS. Let me read the Senator a paragraph and perhaps it will give him the information he wants.

Mr. JONES. All right.

Mr. WILLIS. This is signed by the Government attorney who tried the case, Mr. Whiteley, then representing the Department of Justice. He says:

I contended that the contract was void because of fraud and the claim was dismissed by the court upon that ground—

That is, the claim of the Columbia Supply Co.

In dismissing the case the court held that it was possible for the plaintiff company to recover in the pending suit upon a quantum valebat because the Government accepted the boxes, retained possession, and used them, and no payment at all had been made. It further held that the plaintiff company had submitted no proof upon which to enter a judgment upon a quantum valebat—

In other words, they sued, as the Senator says, under the contract and not under quantum valebat—

the claim having been made for the full contract price, which included fraudulent profits to the contractor and an interest to a Government official. This decision was rendered December 2, 1918. At that time the statute of limitations had run against any claim and no new petition could be filed seeking compensation upon quantum valebat. At the time of the rendition of said judgment by the Court of Claims the statute of limitations had also run, as I understand, against any claim the subcontractor, the Van Dorn Iron Works Co., could make against the Columbia Supply Co., therefore any relief that is to be granted the subcontractor will have to come from Congress.

That is from Mr. Whiteley, the attorney representing the Department of Justice.

Mr. SHORTRIDGE. Mr. President, a parliamentary inquiry. How much time can be devoted to one of these bills?

Mr. JONES. He said there that these contractors might come in on a quantum valebat, but that was shut out because of the statute of limitations; and yet here, notwithstanding the statute of limitations has run, we propose to pay this subcontractor. I rather look to see the contractor come in by and by on his quantum valebat and ask Congress to make good.

I think we had better have the judgment in the case; and I am going to ask that it may go over until the Senator from Ohio has the judgment.

Mr. WILLIS. I ask unanimous consent to have printed in the RECORD these letters to which I have referred.

The VICE PRESIDENT. Without objection, it is so ordered.

The letters are as follows:

OFFICE OF THE POSTMASTER GENERAL,
Washington, D. C., February 28, 1928.

Hon. FRANK B. WILLIS,
United States Senate.

MY DEAR SENATOR WILLIS: I have the honor to supplement my letter to you of the 2d instant relating to S. 624, being a bill for the relief of the Van Dorn Iron Works Co., by the inclosed correspondence between this department and the Comptroller General.

You will note the statement of the Comptroller General that "the records of the General Accounting Office fails to disclose the payment of the $3,052.50 to which the bill refers, or any part thereof, to either the Van Dorn Iron Works Co. or the Columbia Supply Co., or other contractor or subcontractor.

I am informed by the Bureau of the Budget that this advice is not in conflict with the financial program of the President.

Very truly yours,

JOHN H. BARTLETT,
Acting Postmaster General.

FEBRUARY 8, 1928.

GENERAL ACCOUNTING OFFICE,
Post Office Department Division:

I transmit herewith a letter from Hon. FRANK B. WILLIS, United States Senate, inclosing a copy of S. 624, being a bill for the relief of the Van Dorn Iron Works Co., and requesting to be advised as to whether the amount proposed to be paid to the Van Dorn Iron Works Co. has previously been paid by the Government to any other contractor or subcontractor.

In order that I may comply with the request of the Senator, I would appreciate it if you would, with the return of the inclosures, furnish me as soon as practicable such information as your records contain respecting this matter.

W. IRVING GLOVER,
Acting Postmaster General.

COMPTROLLER GENERAL OF THE UNITED STATES,
Washington, February 20, 1928.

The honorable POSTMASTER GENERAL,

MY DEAR MR. POSTMASTER GENERAL: There has been received your letter of February 8, 1928, inclosing S. 624, Seventieth Congress, first session, entitled "A bill for the relief of the Van Dorn Iron Works Co.," and providing—

"That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to the Van Dorn Iron Works Co., out of any money in the Treasury not otherwise appropriated, the sum of $3,052.50 for package boxes manufactured by the Van Dorn Iron Works Co. as subcontractors and furnished to the Post Office Department by the contractors, the Columbia Supply Co., of New York, under its contract covering the period from March, 1901, to March, 1905."

You request advice whether the amount of $3,052.50, which the bill proposes to pay to the Van Dorn Iron Works Co., has previously been paid by the Government to any contractor or subcontractor, in order that you may comply with a request from the Hon. FRANK B. WILLIS for such information.

In reply you are advised that a search of the records of the General Accounting Office fails to disclose the payment of the $3,052.50 to which the bill refers, or any part thereof, to either the Van Dorn Iron Works Co. or the Columbia Supply Co., or other contractor or subcontractor.

In connection with the contract in question your attention is invited to a decision of the Court of Claims in the matter of this contract in the case of the Columbia Supply Co. v. United States (54 Ct. Cls. 10), where the court held this contract transaction fraudulent, and stated (p. 22) that—

"The fraud practiced had its inception in the amendment made to the contract of 1893 and extended without interruption through the contracts of 1897 and 1901. Payments of money were made to Machen up to as late as September, 1901, and were only then discontinued because of the apparent unwillingness of Machen to continue in his fraudulent conduct with the company."

And found (p. 13) that—

"These boxes were accepted by the department, but the bills therefor were not approved or warrant issued in payment thereof because of an investigation that had been instituted of irregularities in the purchase of supplies for said department,"

and to the further fact that said A. W. Machen, general superintendent, served a term in the penitentiary at Moundsville, W. Va., as a result of certain Postal Service irregularities.

Sincerely yours,

J. R. MCCARL,
Comptroller General of the United States.

FEDERAL TRADE COMMISSION,
Washington, February 27, 1928.

Senator FRANK B. WILLIS,
United States Senate, Washington, D. C.

Re S. 624, Seventieth Congress, first session.

MY DEAR SENATOR: Referring to my call upon you on Saturday, last, made at the request of Mr. E. C. Robinson of this city, representative of the Van Dorn Iron Works Co. of Cleveland, Ohio, and to your suggestion that I write you with reference to the legal status of the claim of the Columbia Supply Co. for payment for certain package boxes for the use of the Postal Service.

As I informed you Saturday, I represented the Department of Justice in the proceeding brought by the Columbia Supply Co. against the United States in the Court of Claims upon the contract of that company to furnish the Post Office Department with certain package boxes. I contended that the contract was void because of fraud and the claim was dismissed by the court upon that ground. In dismissing the case the court held that it was possible for the plaintiff company to recover in the pending suit upon a quantum valebat because the Government accepted the boxes, retained possession, and used them, and no payment at all had been made. It further held that the plaintiff company had submitted no proof upon which to enter a judgment upon a quantum valebat, the claim having been made for the full contract price which included fraudulent profits to the contractor and an interest to a Government official. This decision was rendered December 2, 1918. At that time the statute of limitations had run against any claim and no new petition could be filed seeking compensation upon quantum valebat. At the time of the rendition of said judgment by the Court of Claims the statute of limitations had also run, as I understand, against any claim the subcontractor, the Van Dorn Iron Works Co., could make against the Columbia Supply Co.; therefore, any relief that is to be granted the subcontractor will have to come from Congress.

So far as the record discloses or I have any information, the Van Dorn Iron Works was not connected in any way with the fraud practiced upon the Government nor did it have any knowledge of the same. Of course, I have no interest whatsoever in the matter except to present facts with which I am more or less familiar, and if there is any further information that you require and that I can furnish I would be very glad to do so.

Very truly yours,

RICHARD P. WHITELEY.

The VICE PRESIDENT. The bill will be passed over.

BILLS PASSED OVER

The bill (S. 1182) to provide for the naming of certain highways through State and Federal cooperation, and for other purposes, was announced as next in order.

Mr. BLAINE. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

The bill (S. 511) to reimburse Horace A. Choumard, chaplain in Twenty-third Infantry, for loss of certain personal property was announced as next in order.

Mr. SMOOT. Let that go over.

The VICE PRESIDENT. The bill will be passed over.

AGRICULTURAL EXTENSION WORK

The bill (S. 1285) to provide for the further development of agricultural extension work between the agricultural colleges in the several States receiving the benefits of the act entitled "An act donating public lands to the several States and Territories which may provide colleges for the benefit of agriculture and the mechanic arts," approved July 2, 1862, and all acts supplementary thereto, and the United States Department of Agriculture, was announced as next in order.

Mr. KING. Mr. President, some amendments have been suggested with respect to this bill. The bill as it was offered in the House, and as recommended by the Budget, I am for very heartily. There are several amendments which have been suggested by a number of persons and several Senators. A conference has been held with the able Senator from Kansas [Mr. CAPPER], and I think an agreement will be reached by the next time the calendar is called. I shall be glad to join with him then in having the measure passed.

Mr. CAPPER. Mr. President, I think the Senator from Utah will agree with me that I have not been disposed to crowd the bill through. It has been on the calendar for many weeks, and I do hope that he will give me an opportunity at the next call of the calendar to get consideration of the bill when it is reached.

The VICE PRESIDENT. The bill goes over, under objection.

BILLS PASSED OVER

The bill (S. 2277) relating to giving false information regarding the commission of crime in the District of Columbia was announced as next in order.

The PRESIDING OFFICER (Mr. FESS in the chair). The pending amendment is that offered by the Senator from South Carolina [Mr. BLEASE].

Mr. BLEASE. Mr. President, I am willing that the bill shall go over, if there is no objection.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2447) for the relief of the stockholders of the First National Bank of Newton, Mass., was announced as next in order.

Mr. BRATTON. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1476) for the relief of Porter Bros. & Biffle and certain other citizens was announced as next in order.

Mr. THOMAS. I ask that the bill be passed over temporarily.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2524) for the relief of Josephine Doxey was announced as next in order.

Mr. KING. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

PRACTICE AND PROCEDURE IN FEDERAL COURTS

The bill (S. 1094) to amend the practice and procedure in Federal courts, and for other purposes, was announced as next in order.

Mr. BAYARD. Let that go over.

The PRESIDING OFFICER. Under objection, the bill will be passed over.

LOUISE A. WOOD

The bill (S. 61) granting an increase of pension to Louise A. Wood was announced as next in order.

Mr. SMOOT. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

RELIEF OF CERTAIN NAVAL RESERVE OFFICERS

The bill (S. 150) for the relief of former officers of the United States Naval Reserve Force and the United States Marine Corps Reserve who were released from active duty and disenrolled at places other than their homes or places of enrollment was announced as next in order.

Mr. KING. Mr. President, I would like to ask the Senator from California to explain the bill, to state what evil, if any, it seeks to correct, and what the expense to the Government will be.

Mr. SHORTRIDGE. Mr. President, I have a letter from the Secretary of the Navy which answers the question. These officers when discharged from the Government service were discharged at places other than where they were enrolled, and under a ruling they were not entitled to transportation to their respective homes.

Inquiry was made of the Secretary of the Navy in respect of the matter, and I take the liberty of reading his reply, addressed to the chairman of the committee, as follows:

DEPARTMENT OF THE NAVY,
OFFICE OF THE SECRETARY,
Washington, February 28, 1928.

The CHAIRMAN, COMMITTEE ON NAVAL AFFAIRS,
United States Senate, Washington, D. C.

MY DEAR MR. CHAIRMAN: Replying to the committee's letter of February 15, 1928, with further reference to the bill S. 150, "for the relief of former officers of the United States Naval Reserve Force who were erroneously released f. m active duty, etc.," and requesting an approximate estimate as to the number of men involved, together with the cost, if the proposed legislation is enacted, I have the honor to inform you as follows:

In the past seven years only three officers affected by bill S. 150 have requested reimbursement for the travel covered by the terms of the bill. It is, therefore, estimated that there will be a maximum of not more than 50 cases, with a maximum estimated cost to the Government of $4,000.

Sincerely yours,

CURTIS D. WILBUR,
Secretary of the Navy.

It is a simple matter. If these officers had been discharged and relieved from further duty at the places of enrollment, or of their entry into the public service, all would have been well, but, as stated, they were discharged at places other than the places of enrollment, and under the ruling of the Comptroller General were not entitled to transportation.

Mr. KING. Mr. President, will the Senator permit an inquiry?

Mr. SHORTRIDGE. Certainly.

Mr. KING. The reason why I asked the Senator to explain the bill grows out of the fact that an officer was discharged at his own request in Honolulu in 1918 or 1919, I do not recall the year. He anticipated going into business there. The Government would have been willing to pay his expenses home to the mainland, but, as stated, desiring to engage in business in Honolulu, the officer asked to be discharged at that point. Three or four years afterwards, when he concluded that he would come back to the United States, his business in Honolulu not being such as he had anticipated, he desired to be paid the expenses the Government would have been out in returning him to the United States at the time he severed his relations with the Navy. I was wondering whether this bill would cover cases of that kind, because I am told there are a large number of them. If it would, I should be opposed to the bill.

Mr. TYDINGS. Mr. President, will the Senator from California yield?

Mr. SHORTRIDGE. I yield.

Mr. TYDINGS. That question came up, and if the Senator from California is not familiar with the situation, I may say that the bill does not apply to any man who asked to be relieved at a different station from that where he was supposed to be relieved. If a man asked to be discharged in London, it would not apply.

Mr. SHORTRIDGE. The chairman of the committee was about to make the statement that it would not apply to or cover a case of that kind.

The PRESIDING OFFICER. Is there objection to the consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which was read as amended, as follows:

Be it enacted, etc., That the General Accounting Office is hereby authorized to pay mileage at the rate of 8 cents per mile, computed by the shortest usually traveled route, for travel actually performed within

one year from date and place of release from active duty or disenrollment to their homes or places of enrollment, to such former officers of the United States Naval Reserve Force or United States Marine Corps Reserve who have been released from active service or disenrolled under honorable conditions and not at his own request at places other than their homes or places of enrollment, upon the presentation by such former officers of satisfactory evidence showing that they actually performed such travel to their homes or places of enrollment: *Provided*, That the provisions of this act shall be applicable only to former officers of the United States Naval Reserve Force or United States Marine Corps Reserve who were actually released from active duty or disenrolled under honorable conditions prior to July 1, 1922.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read: "A bill for the relief of former officers of the United States Naval Reserve Force and the United States Marine Corps Reserve who were released from active duty and disenrolled at places other than their homes or places of enrollment."

JOSEPHINE DOXEY

Mr. EDGE. Mr. President, I was called to the telephone a few moments ago, and Calendar No. 92, Senate bill 2524, for the relief of Josephine Doxey, a bill introduced by me, was passed over. I ask unanimous consent that we may return to that measure.

The PRESIDING OFFICER. Is there objection?

Mr. SMOOT. Mr. President, from reading the report, I would be opposed to the bill anyhow.

Mr. EDGE. Mr. President, I understand we are operating under the five-minute rule, and I would like to make a brief explanation; and if the Senator from Utah shall then continue to object, of course, I can not help it.

Mr. SMOOT. I have no objection to the Senator making his statement.

Mr. EDGE. I really think this bill is a very meritorious one. It passed the Senate last year at the end of the session, too late to be acted upon in the House. It provides for payment under the workman's compensation act of the meager sum of $50 a month to a woman who had been, up to the time for her injury, in the service of the Government for many years. She was injured in the course of the performance of her duty in one of the departments of the Government, in the Treasury Department. Her claim was denied, it is true, by the Workmen's Compensation Commission of the Treasury Department.

Under date of January 21, 1926, McKenzie Moss, then Assistant Secretary of the Treasury, wrote as follows:

> The department has always felt that there was merit in Mrs. Doxey's case, and it is hoped that the commission will reopen the same.

The Assistant Secretary would not have said that unless he had made an investigation which warranted the statement.

Mrs. Doxey is a woman who is absolutely unable to do a stroke of work, I am informed. She fell on the floor of a cafeteria in the department in which she was employed, a cafeteria maintained there for the employees of the department, who used it in order that they might spend only the short time necessary to get their meals at that place. Mrs. Doxey fell and injured her hip, and I am informed that she is absolutely unable to enter into any employment at all.

It does seem to me that we should allow the small sum of $50 a month, $12.50 a week, to an old lady who has given years and years of service to the Government, at the small salary we know very well is paid for such services. It would not establish a precedent, as the case does not differ from many we have considered favorably time after time. At the last session of Congress I remember that the calendar contained a number of measures where so much a month was allowed to some one who had been injured, who had been turned down under the technical rules of the compensation commission. I believe this old lady failed to file the necessary notice and to be examined by the physician of the compensation commission. She was unaware of the requirements for six or seven weeks, as I recall from the report, when she was advised by some one and of course acted. There are a great many of those little technicalities involved in such cases. I think the Government is well able to pay $50 a month in this case.

The PRESIDING OFFICER. Is there objection to the consideration of the bill?

Mr. KING. I object.

The PRESIDING OFFICER. The bill will go over.

Mr. SMOOT. Mr. President, I want to say that this cafeteria was not operated by the Government. It was operated there by private parties, for the convenience of the employees, just the same as many other cafeterias are being operated today. If there is any liability, it is on the part of the people who were running the cafeteria, and not on the part of the Government of the United States.

Mr. EDGE. Then why, may I ask the Senator, would the Assistant Secretary of the Treasury say very frankly, over his signature, that he believed that there was merit in this case?

Mr. SMOOT. Mr. Bassett, the commissioner, says there is not any. While they sympathize with her, they hold that there is no claim on the part of the Government.

Mr. EDGE. I suppose if the Government of the United States is so poor that it can not pay $50 a month to an employee because of some technicality, some technical objection, that her friends or someone else can make up for the failure of the Government. But considering that the Government spends millions of dollars on experiments and every other type of activity, as far as I am concerned I think it could well afford to pay $50 in this case.

PROTECTION OF MIGRATORY BIRDS

The bill (S. 1271) to more effectively meet the obligations of the United States under the migratory bird treaty with Great Britain by lessening the dangers threatening migratory game birds from drainage and other causes, by the acquisition of areas of land and of water to furnish in perpetuity reservations for the adequate protection of such birds; and by providing funds for the establishment of such areas, their maintenance and improvement, and for other purposes, was announced as next in order.

Mr. DILL. Let the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

RELIEF OF THE CITY OF NEW YORK

The bill (S. 459) for the relief of the city of New York, was announced as next in order.

Mr. COPELAND. Mr. President, may I ask the Senator from Utah if he is prepared to give his opinion on this bill?

Mr. SMOOT. I have just received a letter from the department this morning, and I ask that the bill may go over to-day until I can give it study. I see the department has sent me a mass of correspondence, and, therefore, I have made the request.

Mr. COPELAND. Then I ask that the bill go over without prejudice.

The PRESIDING OFFICER. The bill will be passed over.

RETIREMENT OF NATIONAL ARMY OFFICERS

The bill (S. 777) making eligible for retirement, under certain conditions, officers and former officers of the Army of the United States, other than officers of the Regular Army, who incurred physical disability in line of duty while in the service of the United States during the World War, was announced as next in order.

Mr. KING. Mr. President, that bill is one of the special orders, and it will take some little time to discuss it. Of course, it will be reached within a few days under the special order, so I think it would be better not to displace it as a special order.

The PRESIDING OFFICER. The bill will go over.

DAVID M'D. SHEARER

The bill (S. 2720) for the relief of David McD. Shearer was announced as next in order.

Mr. KING. I would like to have an explanation of the bill.

Mr. SMOOT. I object to its consideration.

The PRESIDING OFFICER. The bill will be passed over.

SINKING OF SUBMARINE "S-4"

The resolution (S. Res. 109) creating a committee of the Senate to investigate the sinking of the submarine *S-4* was announced as next in order.

Mr. SMOOT. Let that go over. The Senator from Florida [Mr. TRAMMELL] is not in the Chamber.

PENSIONS AND INCREASE OF PENSIONS

The bill (S. 1939) granting pensions and increase of pensions to widows and former widows of certain soldiers, sailors, and marines of the Civil War, and for other purposes, was announced as next in order.

Mr. KING. Mr. President, that will take some little discussion, and I ask that it be passed over for the present.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2900) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War, and certain widows and dependent relatives of such soldiers and sailors, was announced as next in order.

Mr. KING. Mr. President, there are a number of amendments to be offered to the bill, some of which I think will be accepted, and when that is done the bill will be very promptly passed. I ask, therefore, that it be temporarily passed over.

The PRESIDING OFFICER. The bill will be passed over.

REGISTRATION OF ARCHITECTS IN DISTRICT OF COLUMBIA

The bill (S. 2660) to amend an act entitled "An act to provide for the examination and registration of architects and to regulate the practice of architecture in the District of Columbia," approved December 13, 1924, and for other purposes, was considered as in Committee of the Whole. The bill had been reported from the Committee on the District of Columbia with an amendment, on page 9, line 12, after the word "counsel," to strike out:

Any person who shall make any willfully false oath or affirmation in any matter or proceeding required or permitted by this act shall be deemed guilty of perjury and liable to the punishment therefor provided by the Code of Law for the District of Columbia.

So as to make the bill read:

Be it enacted, etc., That sections 14, 16, 19, 22, 24, 25, 26, 27, 28, 29, and 30 of the act entitled "An act to provide for the examination and registration of architects and to regulate the practice of architecture in the District of Columbia," approved December 13, 1924 (43 Stat. L. 714–718), be amended so that the same shall read as follows:

"SEC. 14. That, except as otherwise provided in this act, any person wishing to practice architecture in the District of Columbia under the title of architect shall, before being entitled to be or be known as an architect, secure from such board a certificate of qualifications to practice under the title of architect, as provided in this act.

"SEC. 16. That no person who was engaged in the practice of architecture in the District of Columbia on December 13, 1924, shall use or assume any title indicating that he or she is an architect, or any words, letters, or figures to indicate that the person using them is an architect, unless he or she shall have qualified and obtained a certificate of registration as an architect, or unless he or she shall, within six months after the passage of this act, file with said board an affidavit establishing to the satisfaction of said board the fact that he or she was in practice as an architect in said District on and prior to December 13, 1924. Nothing herein contained shall be construed to prevent any person who was engaged in the practice of architecture in said District on and prior to December 13, 1924, from applying to said board at any time for examination under this act. No firm shall be entitled to the style or designation 'architect' or 'registered architect' unless and until every member thereof shall be entitled to such designation. A corporation whose principal business, as shown by its character, is the practice of architecture, may apply for and obtain a certificate of registration, provided all its executive officers and directors are registered architects. The same exemptions shall apply to partnerships and corporations as apply to individuals under this act."

"SEC. 19. That any properly qualified person who shall have been actually engaged in the practice of architecture in the District of Columbia on December 13, 1924, may be granted a certificate of registration without examination on condition that the applicant shall submit satisfactory evidence to the said board that he is qualified to practice architecture and by payment to the board of the fee required for certificate of registration as prescribed in section 23 of this act: *Provided*, That nothing in this act shall prevent any person who was actually engaged in the practice of architecture under the title of architect prior to December 13, 1924, from continuing the practice of said profession without a certificate of registration and without the use in any form of the title 'registered architect' upon filing the affidavit required by section 16 of this act."

"SEC. 22. That an architect who has lawfully practiced architecture for a period of more than 10 years outside of the District of Columbia shall, except as otherwise provided in subdivision (b) of section 21, be required to take only a practical examination, the nature of which shall be prescribed by the board of examiners and registrars of architects."

"SEC. 24. That all examination papers and other evidences of qualification submitted by each applicant shall be filed with the board of examiners and registrars of architects, and said board shall keep a record of its proceedings relating to the issuance, refusal, renewal, suspension, and revocation of certificates of registration.

"The record shall also contain the name, known place of business and residence, and the date and number of the certificate of registration of every registered architect entitled to practice his profession in the District of Columbia."

"SEC. 25. That every registered architect in the District of Columbia shall annually, during the month of May, renew his certificate of registration and pay the renewal fee required by section 23 of this act. Any such architect who fails to pay the said renewal fee shall cease to be a registered architect, subject to restoration upon paying the fee therefor prescribed in accordance with section 23 of this act.

"A person who fails to renew his certificate of registration during the month of May in each year may not thereafter renew his certificate except upon payment of the fee required by section 23 of this act for the restoration of an expired certificate of registration.

"Every renewal certificate shall expire on the 30th day of April following the issuance."

"SEC. 26. Exemptions: That the following shall be exempted from the requirements of this act: (1) Any person practicing or desiring to practice architecture in the District of Columbia who shall have made application to the board for registration as an architect and who shall have paid the fee provided for in section 23 of this act, such exemption to continue only until the board shall have denied such application; (2) any officer or employee of the United States or the District of Columbia practicing architecture in that capacity alone.

"SEC. 27. Revocation of certificate: That the board of examiners and registrars of architects may revoke any certificate after 30 days' notice with grant of hearings to the holder thereof if proof satisfactory to the board be presented in the following cases:

"(a) In case it is shown that the certificate was obtained through fraud or misrepresentation.

"(b) In case the holder of the certificate has been found guilty by said board or by a court of justice of any fraud or deceit in his professional practice or has been convicted of a felony by a court of justice.

"(c) In case the holder of the certificate has been found guilty by said board of gross incompetency or of recklessness in the planning or construction of buildings.

"(d) In case a corporation holding a certificate of registration shall have as one of its executive officers or directors a person not a registered architect.

"SEC. 28. That the proceedings for the annulment of registration (that is, the revocation of a certificate) shall be begun by filing written charges against the accused with the board of examiners and registrars of architects by the board itself or by any complainant. A copy of the charges together with a notice of the time and place of hearing shall be served on the accused at least 30 calendar days in advance of such hearing, which shall be postponed if necessary to give the requisite notice. Where personal service can not be made within the District of Columbia, service may be made by publication or personal service in accordance with such rules as the board may adopt, following generally and in principle the provisions of sections 105 as amended, 106, and 108 of the Code of Laws of the District of Columbia. At the hearing the accused shall have the right to be represented by counsel, introduce evidence, and examine and cross-examine witnesses. The secretary of the board is hereby empowered to administer oaths. The board shall make a written report of its findings, which report, with a transcript of the entire record of the proceedings, shall be filed with the Commissioners of the District of Columbia, and, if the board's finding shall be adverse to the accused, his or her certificate of registration shall stand revoked and annulled, at the expiration of 30 days from the filing of such report, unless within said period of 30 days a writ of error shall be issued as hereinafter provided, in which event said certificate shall stand suspended until the final determination of the court of appeals upon such writ of error. If an exception is taken to any ruling of the board on matter of law, the exception shall be reduced to writing and stated in the bill of exceptions with so much of the evidence as may be material to the question or questions raised, and such bill of exceptions shall be settled by the board and signed by the secretary within such time as the rules of the board may prescribe. Any party aggrieved by the decision of the said board may seek a review thereof in the Court of Appeals of the District of Columbia by petition under oath setting forth concisely, but clearly and distinctly, the nature of the proceeding before said board, the trial and determination thereof, and the particular ruling upon matter of law to which exception has been taken, said petition to be presented to any justice of the court of appeals within 30 days after the filing of the report of said board with the commissioners, with such notice to the board as may be required by the rules of the court of appeals. If the justices shall be of the opinion that the action of the board ought to be reviewed, a writ of error shall be issued from the court of appeals, within such time as may be prescribed by that court, a transcript of the record in the case sought to be reviewed, and the court of appeals shall review said record and affirm, reverse, or modify the judgment in accordance with law."

Section 29 of the said act of December 13, 1924, is repealed. A new section, to be numbered section 29, is hereby enacted, as follows: "The said board shall have power to require the attendance of persons and the production of books and papers and to require such persons to testify in any and all matters within its jurisdiction. The chairman and the secretary of the board shall have power to issue subpœnas, and upon the failure of any person to attend as a witness when duly subpœnaed or to produce documents when duly directed by said board, the board shall have power to refer the said matter to any justice of the Supreme Court of the District of Columbia, who may order the attendance of such witness or the production of such books and papers or require the said witness to testify, as the case may be; and upon the failure of the witness to attend, to testify, or to produce such books or papers, as the case may be, such witness may be punished for contempt of court as for failure to obey a subpœna issued or to testify in a case pending before said court."

"SEC. 30. That any person who shall use the title 'architect' or 'registered architect' or any other words, letter, or figures indicating or intending to imply that the person using the same is an architect or a registered architect, without having complied with the provisions of this act, shall be deemed guilty of a misdemeanor, and upon conviction shall be punished by a fine not exceeding $200 or by imprisonment for not more than one year, or both, prosecution therefor to be made in the name of the District of Columbia by the corporation counsel."

SEC. 2. That nothing contained in this act shall be construed to affect the force and validity of any act of the board of examiners and registrars of architects performed prior to its passage. The act of December 13, 1924, and this act may be cited and known as the architects' registration act.

The amendment was agreed to.

The *bill* was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

BILLS PASSED OVER

The bill (S. 781) requiring separate accommodations for white and colored passengers on street cars in the District of Columbia was announced as next in order.

Mr. JONES. The bill was reported adversely.

Mr. BLEASE. Mr. President, I will just ask for a yea-and-nay vote on the bill, without discussion.

The PRESIDENT pro tempore. Is the demand for the yeas and nays seconded? [After a pause.] The demand is not sufficiently seconded, and the bill goes over.

The bill (S. 132) to authorize the President to appoint LeRoy K. Pemberton a first lieutenant, Officers' Reserve Corps, United States Army, was announced as next in order.

Mr. KING. That is an adverse report. At the request of the Senator from California [Mr. SHORTRIDGE] I ask that the bill may go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2053) to establish a military record for Daniel K. Tafe was announced as next in order.

Mr. KING. That is also an adverse report. At the request of the senior Senator from California [Mr. SHORTRIDGE] I ask that the bill may be passed over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1736) for the relief of Charles Caudwell was announced as next in order.

Mr. SMOOT. Let the bill go over.

The PRESIDING OFFICER. The bill goes over.

The bill (S. 141) for the relief of Felix Medler was announced as next in order.

Mr. KING. The Senator from California [Mr. SHORTRIDGE] asked me to request that the bill be passed over.

The PRESIDING OFFICER. The bill goes over.

JAMES NEAL

The bill (H. R. 7553) for the relief of James Neal was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That in the administration of any laws conferring rights, privileges, and benefits upon honorably discharged soldiers James Neal, alias James Spencer, who was a private of Company G, Thirty-fifth Regiment New Jersey Volunteer Infantry, shall hereafter be held and considered to have been discharged honorably from the military service of the United States as a member of said company and regiment on the 29th day of June, 1865: *Provided,* That no back pay, pension, or bounty shall be held to have accrued prior to the passage of this act.

Mr. JONES. Mr. President, may we have a brief explanation of the bill?

Mr. COPELAND. Mr. President, a similar bill passed the House last year, and this bill has passed the House this year. The report is very illuminating, I am sure. This soldier, while in Washington, was paid and told by his colonel that he, with others could go home, as the war was over; and he went home. He is a very old man, now 86 years of age, totally deaf. It has seemed to those of us who know the circumstances that it is a meritorious case. It is recommended by the committee, and I hope the bill will pass.

Mr. JONES. Mr. President, I want to suggest to the Senator from New York that I find quite an important statement in the report, which should go into the RECORD. In his affidavit he states he served with his company until June 29, 1865, and "while at Washington, D. C., he was paid and told by his colonel that he, with others, could go home, as the war was over. With that advice and permission of the colonel he came back to his home."

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

BILLS PASSED OVER

The bill (S. 2787) providing for the appointment of governors of the non-Christian Provinces in the Philippine Islands by the Governor General without the consent of the Philippine Senate was announced as next in order.

Mr. WILLIS. Mr. President, there are several Senators who have told me they desire to be present when this bill is taken up. This bill and Calendar No. 396, the bill (S. 2292) providing for the employment of certain civilian assistants in the office of the Governor General of the Philippine Islands, and fixing salaries of certain officials, relate to the same general theme, and they are of such importance that I really think it is not possible to discuss them at any time in the morning hour. I shall make an effort to secure a day for their consideration at a very early date, but I think they ought not to be considered at this time for the reason I have given. I ask, therefore, that Calendar Nos. 226 and 396, to which I have referred, be passed over.

The PRESIDING OFFICER. Both bills will be passed over.

The joint resolution (S. J. Res. 46) providing for the completion of Dam No. 2 and the steam plant at nitrate plant No. 2 in the vicinity of Muscle Shoals for the manufacture and distribution of fertilizer, and for other purposes, was announced as next in order.

The PRESIDING OFFICER. This being the unfinished business, it will be passed over.

The bill (H. R. 3315) for the relief of Charles A. Black, alias Angus Black, was announced as next in order.

Mr. KING. Let the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 757) to extend the benefits of certain acts of Congress to the Territory of Hawaii was announced as next in order.

Mr. ROBINSON of Arkansas. I think there should be an explanation of the bill.

Mr. SMOOT. Let the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

WALTER W. JOHNSTON

The bill (S. 2711) for the relief of Walter W. Johnston was announced as next in order.

Mr. ROBINSON of Arkansas. Mr. President, the amount stated in the bill is quite large. I think we should have some explanation of it.

Mr. SMOOT. Let the bill go over.

Mr. FLETCHER. Mr. President, may I ask the Senator from Utah to permit me to make a brief statement before he insists upon his objection?

Mr. SMOOT. Very well.

Mr. FLETCHER. In the absence of my colleague the junior Senator from Florida [Mr. TRAMMELL], I would call attention to the provisions of the bill. It is favorably reported by the committee and carries $15,000 in settlement of a claim by the man Johnston. The report says:

From the evidence presented, the committee is satisfied that there was an agreement entered into between Johnston and McGowan, the district supervisor; that this agreement was ratified by Sharlow, the successor of McGowan; that Johnston performed very valuable service; and that the Government profited very greatly from his work and the use of his invention.

From an affidavit appearing in the report I read as follows. The man making the affidavit says:

I was present at Jacksonville, Fla., on or about the 17th day of May, 1918, when an agreement was entered into by and between Walter W. Johnston and W. McGowan, supervisor of the fourth district of the United States Emergency Fleet Corporation of the United States Shipping Board, for the use of a launching device to be used at Jacksonville, Fla.

Under the agreement the United States Shipping Board was to pay to Walter W. Johnston the sum of $50,000 for the use of this device, if it proved satisfactory. I was at the time employed as plant engineer at the Merrill-Stevens shipyard, at Jacksonville, Fla., and will state that it was in the office occupied by me that the arrangements were made, and that I was present when that agreement was made.

I witnessed the launchings of the steamship *Red Cloud* on May 30, 1918, and the steamship *Apalachee* on July 4, 1918, when this device was used under the supervision of Walter W. Johnston, and from the launchings that I witnessed the device was perfect in its construction and quick in its action, and it was proved the device saved the Shipping Board several thousands of dollars on each launching.

It seems that Johnston did have an agreement with the Shipping Board, through his representative there, that if they used the device of his and it proved satisfactory, he was to have $50,000. They did test it at the time and they did use it, and they never paid Johnston anything. The committee reduced the

amount from $50,000 to $15,000. I think a similar bill passed the Senate once before. The amount has now been reduced to $15,000.

Mr. HEFLIN. And is reported favorably by the committee?

Mr. FLETCHER. Yes; for $15,000.

Mr. ROBINSON of Arkansas. Why did the committee reduce the amount? It would seem the claimant would be entitled to the full amount of his contract.

Mr. FLETCHER. That is what he thought.

Mr. ROBINSON of Arkansas. But the committee arbitrarily reduced the amount?

Mr. FLETCHER. Yes; apparently they did.

Mr. ROBINSON of Arkansas. There is no objection to the consideration of the bill under that statement. I think the question is whether the committee have allowed him enough. If he had a contract for $50,000 and they have allowed him only $15,000, they have not treated him with great consideration.

Mr. SMOOT. I think there ought to be something shown on the other side of the question. There ought to be something said as to why the contract was not carried out. I ask that the bill may go over for the day.

Mr. FLETCHER. The Senator will realize that in the shipbuilding operations there came a time when everything stopped. We were building wooden ships down there and we stopped building and launching them. I suppose that is one reason why there was never anything done by the department about it.

The PRESIDING OFFICER. Under objection, the bill goes over.

VAN DORN IRON WORKS CO.

Mr. WILLIS. Mr. President, a few moments ago we had rather extended discussion of Calendar No. 18, the bill (S. 624) for the relief of the Van Dorn Iron Works Co. It is my understanding now that the Senator from Washington [Mr. JONES] is willing to withdraw his objection. I therefore ask unanimous consent to return to Calendar No. 18.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, and it was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to the Van Dorn Iron Works Co., out of any money in the Treasury not otherwise appropriated, the sum of $3,052.50 for package boxes manufactured by the Van Dorn Iron Works Co. as subcontractors and furnished to the Post Office Department by the contractors, the Columbia Supply Co., of New York, under its contract covering the period from March, 1901, to March, 1905.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

ESTATES OF JOHN FRAZER ET AL.

The bill (S. 2855) for the relief of the estates of John Frazer, deceased, Zephaniah Kingsley, deceased, John Bunch, deceased, Jehu Underwood, deceased, and Stephen Vansandt, deceased, was announced as next in order.

Mr. KING. Mr. President, the bill needs some explanation. It is hoary with age—over 100 years old.

Mr. FLETCHER. It is an old matter. The bill simply gives jurisdiction to the Court of Claims, disregarding the running of the statute of limitations, to hear and determine the merits of the case. There is a long report on the subject. A similar bill passed the Senate in the Sixth-eighth and Sixty-ninth Congresses. It has been favorably acted on in that way from time to time, but somehow or other it never seems to pass both Houses in the same Congress.

Mr. ROBINSON of Arkansas. I see that as early as 1880 the President sent a message to Congress recommending action on the claim.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, and it was read, as follows:

Be it enacted, etc., That jurisdiction be, and hereby is, given to the United States Court of Claims (notwithstanding any bar arising from the statute of limitations or otherwise, and notwithstanding any decisions, rulings, or orders heretofore rendered or made by executive officers of the United States) of the claims of the estates of said John Frazer, deceased; Zephaniah Kingsley, deceased; John Bunch, deceased; Jehu Underwood, deceased; and Stephen Vansandt, deceased, known as the east Florida claims, for unpaid balances due on awards made by the Superior Court of the Territory of Florida at St. Augustine, under the treaty of 1819 between the United States and Spain with respect to property of said decedents taken or destroyed by the military forces of the United States; and said court is hereby directed to make findings of fact and enter judgment in relation to each of said claims: *Provided*, That from the judgments of said court on said claims either party shall have the right to appeal to the Supreme Court of the United States.

SEC. 2. That in adjudicating said claims said Court of Claims shall consider all findings of fact and all other evidences relative to the same, respectively, which is on file of the records of the United States or the State of Florida.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

JOINT RESOLUTION AND BILLS PASSED OVER

The joint resolution (S. J. Res. 1) proposing an amendment to the Constitution of the United States prohibiting war was announced as next in order.

SEVERAL SENATORS. Over.

The PRESIDING OFFICER. The joint resolution will be passed over.

The bill (S. 1628) relating to the office of Public Buildings and Public Parks of the National Capital was announced as next in order.

Mr. SMOOT. Let the bill go over. I would like to have a copy of the bill placed in my folder before it is called again for consideration.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 133) for the relief of Kenneth B. Turner was announced as next in order.

Mr. KING. The Senator from California [Mr. SHORTRIDGE] requested me, if the bill was reached, to ask that it go over.

The PRESIDING OFFICER. The bill will be passed over.

INDIAN OCCUPANCY OF RAILROAD LANDS

The bill (S. 2154) to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913, was announced as next in order.

The PRESIDING OFFICER. The Chair lays before the Senate a similar bill received from the House of Representatives to-day.

The bill (H. R. 8293) to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913, was read twice by its title.

Mr. ROBINSON of Arkansas. I think someone should discuss the bill and give the Senate an explanation of its provisions and purposes. I ask that it be passed over temporarily in the absence of Senators who are interested in it.

The PRESIDING OFFICER. The bill will be passed over.

JUDICIAL DISTRICTS IN OKLAHOMA

The bill (H. R. 7011) to detach Okfuskee County from the northern judicial district of the State of Oklahoma and attach the same to the eastern judicial district of the said State was announced as next in order.

Mr. JONES. Mr. President, I do not know anything about the merits of the bill. I think we should have a statement from the Senator from Oklahoma [Mr. THOMAS] with reference to it.

Mr. THOMAS. Mr. President, the bill provides, as its title indicates, for detaching Okfuskee County in Oklahoma from the northern judicial district and attaching it to the eastern judicial district. This is suggested for the reason that there are better transportation facilities from Okfuskee County to the court towns in the eastern than in the northern district. The railroad facilities are claimed to be better to Muskogee than to Tulsa and because of these reasons citizens of Okfuskee County prefer to have their business transacted at Muskogee. The Attorney General recommends the transfer of this county from the northern to the eastern district.

Mr. JONES. May I ask the Senator if his colleague is favorable to the legislation?

Mr. THOMAS. I can not answer for my colleague, the senior Senator from Oklahoma [Mr. PINE], but I understand that he has no serious objection to it.

The PRESIDING OFFICER. Is there objection?

Mr. JONES. Mr. President, I think I had better ask that the bill go over. I do not know anything about the merits of the charges contained in the letter I have received. I did not know that the bill was coming up this morning, so that I have not the letters with me.

The PRESIDING OFFICER. Being objected to, the bill goes over.

INDIAN OCCUPANCY OF RAILROAD LANDS

Mr. FRAZIER. Mr. President, I ask unanimous consent that the Senate return to Order of Business 271, being the bill (S. 2154) to amend an act entitled "An act for the relief of Indians

occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913.

House bill 8293, which is identical with the Senate bill, has been passed and is now at the desk. I move to substitute that bill for the Senate bill, and if that shall be done, I will move that the Senate bill be indefinitely postponed.

Mr. ROBINSON of Arkansas. Will the Senator explain the bill?

Mr. FRAZIER. It simply proposes to give title to certain lands included in railroad property to some Indians who have lived on it for years. The bill is approved by the department and, indeed, is a departmental bill.

The bill (H. R. 8293) to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913, was considered as in Committee of the Whole and was read, as follows:

Be it enacted, etc., That all of the provisions of an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913, and amended by the act of April 11, 1916, and the act of June 30, 1919, be, and the same are hereby, extended to March 4, 1931: *Provided*, That the provisions of this act shall apply only in cases where it is shown that the lands were actually occupied in good faith by Indians prior to March 4, 1913, and the applicants are otherwise entitled to receive such tracts, in allotment under existing law but for the grant to the railroad company.

Mr. KING. I ask the Senator from North Dakota if he means literally what he said, that these Indians are living upon railroad land and have done so for a number of years, and that now Congress proposes to give them the land?

Mr. FRAZIER. It is proposed that Congress shall give them title to the land.

Mr. KING. That is, if the land belongs to the railroad company, how may we take it from the railroad company?

Mr. FRAZIER. It is proposed to give other lands to the railroad company, as I understand, to take the place of the lands to which the Indians are to be given title.

Mr. KING. Is the railroad company willing to make the exchange?

Mr. FRAZIER. They have so stated.

Mr. PITTMAN. I will ask the Senator from North Dakota if it is not an enabling act? In other words, the railroad company has no authority to dispose of any of its right-of-way land.

Mr. FRAZIER. These were lands, as I understand, which were granted to the railroad company as right of way.

Mr. PITTMAN. That is, it is simply an authorization for a trade?

Mr. FRAZIER. The lands are embraced in a railroad right of way.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The PRESIDING OFFICER. Without objection, Senate bill 2154 will be indefinitely postponed.

A. N. ROSS

The bill (S. 2424) for the relief of A. N. Ross was announced as next in order.

Mr. KING. That bill having been adversely reported, I move that it be indefinitely postponed.

The motion was agreed to.

EXEMPTION OF SHORT-LINE ROADS FROM RECAPTURE CLAUSE

The bill (S. 656) to amend section 15a of the interstate commerce act, as amended, was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That paragraph (5) of section 15a of the interstate commerce act, as amended, be, and the same is hereby, amended to read as follows:

"(5) Inasmuch as it is impossible (without regulation and control in the interest of the commerce of the United States considered as a whole) to establish uniform rates upon competitive traffic which will adequately sustain all the carriers which are engaged in such traffic and which are indispensable to the communities to which they render the service of transportation, without enabling some of such carriers to receive a net railway-operating income substantially and unreasonably in excess of a fair return upon the value of their railway property held for and used in the service of transportation, it is hereby declared that any carrier which receives such an income so in excess of a fair return shall hold such part of the excess, as hereinafter prescribed, as trustee for, and shall pay it to, the United States: *Provided, however*, That from and after February 28, 1920, the provisions of this section requiring any common carrier by railroad that received for any year a net railway-operating income in excess of a fair return upon the value of railway property held for and used by it in the service of transportation, to hold one-half of the excess as prescribed in said section, as trustee for and to pay it to the United States, shall not apply to common carriers by railroad subject to the provisions of this act (a) whose main track and branch lines do not exceed 200 miles in length and whose annual gross railway-operating revenue for any year, computed on the average of the three successive and immediately preceding calendar years, beginning with 1920, as reported to the Interstate Commerce Commission as required by law, does not exceed $10,000 per mile per annum of operated main track and branches; or (b) whose main track and branches do not exceed 100 miles in length and whose annual gross railway-operating revenue for any year, computed on the average of the three successive and immediately preceding calendar years, beginning with 1920, as reported to the Interstate Commerce Commission as required by law, does not exceed $15,000 per mile per annum of operated main track and branches, and in addition thereto and to the extent to be determined by the commission, as hereinafter provided, to railroads whose main track and branches do not exceed 200 miles which are deemed hereunder to have a probable limited-service life: *And provided further*, That none of such railroads to be thus relieved from the payment to the commission, in whole or in part, of such excess earnings, are owned and/or operated as a part of or by a general system of common-carrier railroad transportation owning or operating a line or lines of railroad exceeding 200 miles in length.

"In determining whether any such common carrier by railroad shall be entitled, on account of having a probable limited-service life, to exemption from the payment to the commission in any year of the whole or any portion of its net railway-operating income as defined in this section in excess of a fair return upon the value of railway property held for and used by it in the service of transportation, the commission shall give due consideration, among other things, as to whether or not the major portion of such carrier's total railway-operating revenue is derived from the transportation of products from mineral deposits, and/or stands of timber, and/or petroleum products from oil fields, and/or other natural resources, or from the transportation of any other products that will result in a limited-service life for such carrier, or from the transportation of products from industries which derive the major portion of their raw materials from such mineral deposits, stands of timber, oil fields, or other natural resources, it being hereby declared to be the policy of Congress that such carriers shall be entitled to set aside, out of their gross operating revenue at the end of each year, as a depletion account to be credited to such account and used by them for any lawful purpose, such percentage of their total railway-operating revenue as the commission may determine to be just and equitable under circumstances as applied to each individual carrier on account of such probable limited-service life, in a proceeding to be hereinafter provided for.

"Any common carrier by railroad, subject to the provisions of this act, which is exempted from the provisions of paragraph (5) of section 15a of the interstate commerce act as herein and hereby amended and/or that has been relieved by or under the provisions hereof from paying to the commission in whole or in part its net railway-operating income in excess of a fair return upon the value of its railway property held for and used by it in the service of transportation and that has heretofore paid or is obligated at the time this act takes effect to pay any such excess earnings to the commission, may apply to the commission for an order directing the return to such carrier of such excess earnings heretofore paid to the commission and the commission shall return such excess payment to such carrier and/or by order relieve it from such existing obligations then unpaid.

"Any common carrier by railroad having a main and branch line track length of less than 200 miles and an annual gross railway-operating revenue for the average of any three successive and immediately preceding calendar years in excess of $10,000 per mile of operated main and branch track, and that is required to pay to the commission any excess earnings, as herein defined, but believes that on account of having a probable limited-service life that it is entitled to set aside a percentage of its gross railway-operating revenue as a depletion account, as herein provided for, may apply to the commission for an order permitting it to create such depletion account and to set aside therein, as hereinbefore provided, a percentage of its gross railway-operating revenue; and the commission may, in its discretion, grant such application and issue such order to said carrier, specifying therein what percentage of such gross railway-operating revenue said carrier may be permitted to set aside in each year on account of its probable limited-service life.

"The commission may, from time to time, for good cause shown or on its own motion, make such orders supplemental to any order made hereunder as it may deem necessary or appropriate."

Mr. PITTMAN. Mr. President, this bill has been unanimously reported by the Interstate Commerce Committee of the Senate, as in the last Congress a similar bill was likewise unanimously reported by that committee. The purpose of the bill is to relieve from the recapture clause of the interstate commerce act any railroad under 200 miles in length which has not earned an average gross income of $10,000 a mile, based on a three years' calculation. The reason for adopting $10,000 a mile is because, with only two or three exceptions, no railroad

has ever been able to make any income on such low gross receipts. It applies to short-line railroads, as the report shows, because, as a rule the little short-line railroads have only one class of traffic. They go into a lumber community or into a farming community or into a mining community. For four or five years, perhaps, they will have a deficit and will not even be able to pay the interest on their bonds. Then possibly there will be two years in which they will pay over 6 per cent. When they do that the Government comes in and under the recapture clause takes half of their excess income away from them, with the result that it has meant bankruptcy for a number of short-line railroads and will mean bankruptcy for a great many others if the practice shall be continued. That is about the situation.

The PRESIDING OFFICER. The bill is before the Senate as in Committee of the Whole and is open to amendment.

Mr. METCALF. Mr. President, I offer the amendment which I send to the desk. I propose the amendment in order to take care of railroads 5 miles or less in length. It will only affect two or three roads which run to mines or to factories. When the business is bad they do not make any money, or they may suffer such calamities as having bridges washed away. I hope the amendment may be adopted.

The PRESIDING OFFICER. The amendment proposed by the Senator from Rhode Island will be stated.

The CHIEF CLERK. On page 3, line 6, after the word "branches," it is proposed to strike out the comma and to insert a semicolon and the following words:

or (c) whose main track and branches do not exceed 5 miles in length, and whose annual gross railway-operating revenue for any year, computed on the average of three succeeding and immediately preceding calendar years beginning with 1920, as reported to the Interstate Commerce Commission as required by law, does not exceed $100,000.

Mr. PITTMAN. How much would that amount to in gross earnings per mile?

Mr. METCALF. I do not know exactly what the figure would be per mile; but only two or three roads would be affected, and the whole recapture would be somewhere in the neighborhood of $20,000.

Mr. SACKETT. Mr. President, I think the amendment proposed by the Senator from Rhode Island covers the ground properly, and I do not think its adoption would interfere with the bill at all.

Mr. PITTMAN. I am willing to have the matter go to conference.

The PRESIDING OFFICER. Without objection, the amendment proposed by the Senator from Rhode Island is agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

OHIO RIVER BRIDGE AT ABERDEEN, OHIO

The bill (S. 1170) granting the consent of Congress to the Maysville Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River was announced as next in order.

Mr. SACKETT. Mr. President, I ask that House bill 437, which passed the House of Representatives on yesterday and has come over to the Senate, be substituted for the bill the title of which has just been stated.

The PRESIDING OFFICER laid before the Senate the bill (H. R. 437) authorizing the Maysville Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Maysville, Ky., which was read the first time by its title and the second time at length, as follows:

Be it enacted, etc., That in order to facilitate interstate commerce, improve the Postal Service, and provide for military and other purposes, the Maysville Bridge Co., its successors and assigns, be and is hereby, authorized to construct, maintain, and operate a bridge and approaches thereto across the Ohio River, at a point suitable to the interests of navigation, at or near Maysville, Ky., and Aberdeen, Ohio, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906, and subject to the conditions and limitations contained in this act.

SEC. 2. The Maysville Bridge Co., its successors and assigns, is authorized to construct, maintain, and operate such bridge and the necessary approaches thereto as a railroad bridge for the passage of railway trains or street cars, or both, or as a highway bridge for the passage of pedestrians, animals, and vehicles, adapted to travel on public highways, or as a combined railroad and highway bridge for all such purposes; and there is hereby conferred upon Maysville Bridge Co., its successors and assigns, all such rights and powers to enter upon lands and to acquire, condemn, occupy, possess, and use real estate and other property needed for the location, construction, operation, and maintenance of such bridge and its approaches as are possessed by railroad corporations for railroad purposes or by bridge corporations for bridge purposes in the State in which such real estate or other property is situated, upon making just compensation therefor, to be ascertained and paid according to the laws of such State, and the proceedings therefor shall be the same as in the condemnation or expropriation of property for public purposes in such State.

SEC. 3. After the completion of such bridge, as determined by the Secretary of War, if the same is constructed as a highway bridge only, either the State of Kentucky, the State of Ohio, any public agency or political subdivision of either of such States, within or adjoining which any part of such bridge is located, or any two or more of them jointly, may at any time acquire and take over all right, title, and interest in such bridge and its approaches, and any interest in real property necessary therefor, by purchase or by condemnation or expropriation, in accordance with the laws of either of such States governing the acquisition of private property for public purposes by condemnation or expropriation. If at any time after the expiration of 20 years after the completion of such bridge the same is acquired by condemnation or expropriation, the amount of damages or compensation to be allowed shall not include good will, going value, or prospective revenues or profits, but shall be limited to the sum of (1) the actual cost of constructing such bridge and its approaches, less a reasonable deduction for actual depreciation in value, (2) the actual cost of acquiring such interests in real property, (3) actual financing and promotion costs, not to exceed 10 per cent of the sum of the cost of constructing the bridge and its approaches and acquiring such interest in real property, and (4) actual expenditures for necessary improvements.

SEC. 4. If such bridge shall at any time be taken over or acquired by the States or public agencies or political subdivisions thereof, or by either of them, as provided in section 3 of this act, and if tolls are thereafter charged for the use thereof, the rates of toll shall be so adjusted as to provide a fund sufficient to pay for the reasonable cost of maintaining, repairing, and operating the bridge and its approaches under economical management, and to provide a sinking fund sufficient to amortize the amount paid therefor, including reasonable interest and financing cost, as soon as possible under reasonable charges, but within a period of not to exceed 20 years from the date of acquiring the same. After a sinking fund sufficient for such amortization shall have been so provided, such bridge shall thereafter be maintained and operated free of tolls, or the rates of toll shall thereafter be so adjusted as to provide a fund of not to exceed the amount necessary for the proper maintenance, repair, and operation of the bridge and its approaches under economical management. An accurate record of the amount paid for acquiring the bridge and its approaches, the actual expenditures for maintaining, repairing, and operating the same, and of the daily tolls collected shall be kept and shall be available for the information of all persons interested.

SEC. 5. If such bridge is constructed as a combined railroad bridge for the passage of railway trains or street cars, and a highway bridge for the passage of pedestrians, animals, and vehicles, then the right of purchase and condemnation conferred by this act shall apply to a right of way thereover for the passage without cost of persons, animals, and vehicles adapted to travel on public highways; and if the right of purchase or condemnation shall be exercised as to such right of way over the bridge, then the measure of damages or compensation to be allowed or paid for such right of way shall be a sum equal to the difference between the actual fair cash value of such bridge determined in accordance with the provisions of section 3 of this act, and what its actual fair cash value so determined would have been if such bridge had been constructed as a railroad bridge only. If the right of purchase or condemnation conferred by this act shall be exercised as to the right of way over such bridge, then that part of the bridge which shall be purchased or condemned and shall be thereafter actually used for the passage of pedestrians, animals, or vehicles, shall be maintained, operated, and kept in repair by the purchaser thereof.

SEC. 6. The Maysville Bridge Co., its successors and assigns, shall within 90 days after the completion of such bridge file with the Secretary of War, and the highway departments of the States of Kentucky and Ohio, a sworn itemized statement showing the actual original cost of constructing the bridge and its approaches, the actual cost of acquiring any interest in real property necessary therefor, and the actual financing and promotion costs. The Secretary of War may, and upon request of the highway department of either of such States shall, at any time within three years after the completion of such bridge, investigate such costs and determine the accuracy and the reasonableness of the costs alleged in the statement of costs so filed, and shall make a finding of the actual and reasonable costs of constructing, financing, and promoting such bridge; for the purpose of such investigation the said Maysville Bridge Co., its successors and assigns, shall make available all of its records in connection with the construction, financing, and promotion thereof. The findings of the Secretary of War as to the reasonable costs of the construction, financ-

ing, and promotion of the bridge shall be conclusive for the purposes mentioned in section 3 of this act, subject only to review in a court of equity for fraud or gross mistake.

SEC. 7. The right to sell, assign, transfer, and mortgage all the rights, powers, and privileges conferred by this act is hereby granted to the Maysville Bridge Co., its successors and assigns, and any corporation to which or any person to whom such rights, powers, and privileges may be sold, assigned, or transferred, or who shall acquire the same by mortgage foreclosure or otherwise, is hereby authorized and empowered to exercise the same as fully as though conferred herein directly upon such corporation or person.

SEC. 8. The right to alter, amend, or repeal this act is hereby expressly reserved.

Mr. JONES. May I ask the Senator from Kentucky if the House bill is identical with the Senate bill?

Mr. SACKETT. I have not read the House bill since it came over, but there have been no objections to it. The Senate bill was recommended by the Senate committee, and the two bills are practically the same, I think. Senate bill 1170 was introduced by the Senator from Ohio [Mr. FESS] who is now in the chair. I have no reason to think that the bills are not identical, and, as I have said, no objection has been raised.

Mr. JONES. Of course, if the bills are the same it is all right, if they follow the regular form.

Mr. SACKETT. They do follow the regular form. The next bill on the calendar also follows the regular form.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Connecticut that the House bill be substituted for the Senate bill and that the House bill be considered?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 437) authorizing Maysville Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Maysville, Ky.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The PRESIDING OFFICER. Without objection, Senate bill 1170 will be indefinitely postponed.

OHIO RIVER BRIDGE AT MAYSVILLE, KY.

The bill (S. 761) granting the consent of Congress to Dwight P. Robinson & Co. (Inc.), its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River was announced as next in order.

Mr. SACKETT. I ask that House bill 472 of similar title be substituted for the Senate bill.

The PRESIDING OFFICER laid before the Senate the bill (H. R. 472) authorizing Dwight P. Robinson & Co. (Inc.), its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Maysville, Ky., which was read the first time by its title and the second time at length, as follows:

Be it enacted, etc., That in order to facilitate interstate commerce, improve the Postal Service, and provide for military and other purposes, Dwight P. Robinson & Co. (Inc.), its successors and assigns, be, and is hereby, authorized to construct, maintain, and operate a bridge and approaches thereto across the Ohio River, at a point suitable to the interests of navigation at or near Maysville, Ky., and Aberdeen, Ohio, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906, and subject to the conditions and limitations contained in this act.

SEC. 2. There is hereby conferred upon Dwight P. Robinson & Co. (Inc.), its successors and assigns, all such rights and powers to enter upon lands and to acquire, condemn, occupy, possess, and use real estate and other property needed for the location, construction, operation, and maintenance of such bridge and its approaches as are possessed by railroad corporations for railroad purposes or by bridge corporations for bridge purposes in the State in which such real estate or other property is situated, upon making just compensation therefor, to be ascertained and paid according to the laws of such State, and the proceedings therefor shall be the same as in the condemnation or expropriation of property for public purposes in such State.

SEC. 3. The said Dwight P. Robinson & Co. (Inc.), its successors and assigns, is hereby authorized to fix and charge tolls for transit over such bridge, and the rates of tolls so fixed shall be the legal rates until changed by the Secretary of War under the authority contained in the act of March 23, 1906.

SEC. 4. After the completion of such bridge, as determined by the Secretary of War, either the State of Kentucky, the State of Ohio, any public agency or political subdivision of either of such States within or adjoining which any part of the bridge is located, or any two or more of them jointly, may at any time acquire and take over all right, title, and interest in such bridge and its approaches, and any interest in real property necessary therefor, by purchase or by condemnation or expropriation, in accordance with the laws of either of such States governing the acquisition of private property for public purposes by condemnation or expropriation. If at any time after the expiration of 20 years after the completion of such bridge the same is acquired by condemnation or expropriation, the amount of damages or compensation to be allowed shall not include good will, going value, or prospective revenues or profits, but shall be limited to the sum of (1) the actual cost of constructing such bridge and its approaches, less a reasonable deduction for actual depreciation in value, (2) the actual cost of acquiring such interests in real property, (3) actual financing and promotion costs, not to exceed 10 per cent of the sum of the cost of constructing the bridge and its approaches and acquiring such interest in real property, and (4) actual expenditures for necessary improvements.

SEC. 5. If such bridge shall be taken over or acquired by the States or public agencies or political subdivisions thereof, or by either of them, as provided in section 4 of this act, and if tolls are thereafter charged for the use thereof, the rates of tolls shall be so adjusted as to provide a fund sufficient to pay for the reasonable cost of maintaining, repairing, and operating the bridge and its approaches under economical management, and to provide a sinking fund sufficient to amortize the amount paid therefor as soon as possible under reasonable charges, but within a period of not to exceed 20 years from the date of acquiring the same. After a sinking fund sufficient to pay the cost of acquiring the bridge and its approaches shall have been so provided, such bridge shall thereafter be maintained and operated free of tolls, or the rates of tolls shall thereafter be so adjusted as to provide a fund of not to exceed the amount necessary for the proper maintenance, repair, and operation of the bridge and its approaches under economical management. An accurate record of the amount paid for acquiring the bridge and its approaches, the actual expenditures for maintaining, repairing, and operating the same and of the daily tolls collected, shall be kept and shall be available for the information of all persons interested.

SEC. 6. The Dwight P. Robinson & Co. (Inc.), its successors and assigns, shall within 90 days after the completion of such bridge file with the Secretary of War, and with the highway departments of the States of Kentucky and Ohio, a sworn itemized statement showing the actual original cost of constructing the bridge and its approaches, the actual cost of acquiring any interest in real property necessary therefor, and the actual financing and promotion costs. The Secretary of War may, and upon request of the highway department of either of such States shall, at any time within three years after the completion of such bridge, investigate such costs and determine the accuracy and the reasonableness of the costs alleged in the statement of costs so filed, and shall make a finding of the actual and reasonable costs of constructing, financing, and promoting such bridge; for the purpose of such investigation the said Dwight P. Robinson & Co. (Inc.), its successors and assigns, shall make available all records in connection with the construction, financing, and promotion thereof. The findings of the Secretary of War as to the reasonable costs of the construction, financing, and promotion of the bridge shall be conclusive for the purposes mentioned in section 4 of this act, subject only to the review in a court of equity for fraud or gross mistake.

SEC. 7. The right to sell, assign, transfer, and mortgage all the rights, powers, and privileges conferred by this act, is hereby granted to Dwight P. Robinson & Co. (Inc.), its successors and assigns, and any corporation to which or any person to whom such rights, powers, and privileges may be sold, assigned, or transferred, or who shall acquire the same by mortgage foreclosure or otherwise, is hereby authorized and empowered to exercise the same as fully as though conferred herein upon such corporation or person.

SEC. 8. The right to alter, amend, or repeal this act is hereby expressly reserved.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Kentucky to substitute House bill 472 for Senate bill 761 and to consider the House bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider House bill 472.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

The PRESIDING OFFICER. Without objection, Senate bill 761 will be indefinitely postponed.

RIGHTS OF WAY THROUGH PUEBLO INDIAN LANDS, NEW MEXICO

The bill (S. 1941) to provide for the acquisition of rights of way through the lands of the Pueblo Indians of New Mexico was announced as next in order.

Mr. BAYARD. At the request of the senior Senator from New Mexico [Mr. BRATTON], I ask that the bill go over.

Mr. LA FOLLETTE. Does the Senator from Delaware desire an explanation of the bill, or does he insist upon it going over?

Mr. BAYARD. My objection to the bill was entered at the request of the senior Senator from New Mexico [Mr. BRATTON], who can not be present and who asked me to make the request that the bill go over for the day.

Mr. LA FOLLETTE. If the Senator desires an explanation of the bill I can give such explanation.

Mr. BAYARD. I merely desire that the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

STANDARDS FOR HAMPERS, ETC.

The bill (S. 2148) to fix standards for hampers, round-stave baskets, and splint baskets for fruits and vegetables, and for other purposes, was announced as next in order.

Mr. BAYARD. Mr. President, I have two amendments which I should like to offer to the bill.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. KING. Mr. President, I should like to hear an explanation of the bill. I confess that it seems to me rather revolutionary that the Federal Government should make it a crime for a person to ship his own products in any sort of receptacle that he may determine to be proper.

Mr. McNARY. Mr. President, somewhat at length and quite willingly a week ago I explained the purposes of the bill. It simply meets a situation which it is necessary to meet in order to prevent deception and fraud in the shipment of vegetables in interstate commerce. At some future day I shall be glad to discuss it at length for the benefit of the Senator from Utah, but to-day I am going to ask that it go over for this reason——

Mr. KING. I was not going to ask that it go over.

Mr. McNARY. I am going to make that request. The Senator from Delaware [Mr. BAYARD] has suggested amendments which I am inclined to accept. However, being a departmental bill, I think the amendments should have the sanction or disapproval of the department. The Senator from New Jersey [Mr. EDGE] has some communications regarding the measure which I think he wants further to familiarize himself with.

Mr. EDGE. Is the Senator referring to the bill which he and I discussed this morning?

Mr. McNARY. Yes.

Mr. EDGE. I would appreciate it if the Senator would let it go over. I have written only this morning, following our conversation, for additional information.

Mr. McNARY. In courtesy to the Senator from New Jersey and in view of the amendments offered, I am going to ask that the bill go over for the present.

The PRESIDING OFFICER. The bill will be passed over.

CROP INSURANCE

The bill (S. 2149), authorizing and directing the Secretary of Agriculture to investigate all phases of crop insurance, was announced as next in order.

Mr. McNARY. Mr. President, this is a very important measure, which can not be thoroughly discussed under the five-minute rule. I am preparing some data to present to the Senate in connection with the bill, and I ask that it go over without prejudice.

The PRESIDING OFFICER. The bill will be passed over without prejudice.

GAME SANCTUARIES IN NATIONAL FORESTS

The Senate, as in Committee of the Whole, proceeded to consider the bill (S. 2456) to establish game sanctuaries in the national forests.

The PRESIDING OFFICER. The bill was considered on February 24, and the amendment reported by the committee was agreed to.

Mr. ROBINSON of Arkansas. Mr. President, when this bill was reached on a former call of the calendar the Senator from Wisconsin [Mr. BLAINE] expressed the desire to have the bill broadened in its last paragraph so as expressly to include predatory birds. I have no objection to such an amendment if the Senator from Wisconsin thinks the word "animals" would not be sufficiently broad after striking out all following the word "animals." After discussing the matter with the Senator from Wisconsin, I myself propose an amendment, in line 7, after the word "animals," to strike out all down to the end of the bill.

The PRESIDING OFFICER. The amendment will be stated.

The CHIEF CLERK. On page 3, section 3, line 7, after the word "animals," it is proposed to strike out "such as wolves, coyotes, foxes, pumas, and other species destructive to livestock or wild life or agriculture within the limits of said game sanctuaries or refuges," so as to make the section read:

SEC. 3. That the Secretary of Agriculture shall execute the provisions of this act, and he is hereby authorized to make all needful rules and regulations for the administration of such game sanctuaries or refuges in accordance with the purpose of this act, including regulations not in contravention of State laws for hunting, capturing, or killing predatory animals.

Mr. McNARY. Mr. President, I do not know that I shall insist upon any objection. I think, however, the thought that was in the mind of the Senator from Wisconsin [Mr. BLAINE] is covered by the language of the annual agricultural appropriation bill under the title "Predatory animals," under the subhead of "Biological Survey," where $800,000 annually is appropriated to study the habits of predatory animals, also including the bird family.

Mr. ROBINSON of Arkansas. Mr. President, will the Senator yield to me?

Mr. McNARY. Yes.

Mr. ROBINSON of Arkansas. The provision we are now dealing with does not authorize any appropriation. It merely reserves the right—

to make needful rules and regulations for the administration of such game sanctuaries, * * * including regulations not in contravention of State laws for hunting, capturing, or killing predatory animals.

If the amendment is agreed to, I do not think it will conflict with the provision of the bill to which the Senator has referred. The point in my mind, to which I direct the attention of the Senator from Wisconsin, is whether he desires the words "and birds" inserted after "animals," after striking out the express designation of certain animals, my thought being that birds are also animals.

Mr. BLAINE. Mr. President——

The PRESIDING OFFICER. Does the Senator yield to the Senator from Wisconsin?

Mr. ROBINSON of Arkansas. Certainly.

Mr. BLAINE. I think, in regulatory acts of this character, birds do not come within the definition of "animals," and my thought is that the Secretary of Agriculture ought to have the right to initiate rules and regulations for the taking of predatory animals and birds, so that there will be no question about it.

If the Senator from Arkansas has no objection, I would suggest the addition of the words "and birds" after "animals."

Mr. ROBINSON of Arkansas. I have no objection to that.

Mr. McNARY. I think that amendment is quite proper, in view of the treatment of this subject matter in the annual appropriation bill for the Department of Agriculture.

The PRESIDING OFFICER. Without objection, the amendment as modified will be agreed to.

Mr. ROBINSON of Arkansas. No, Mr. President; I am striking out the predatory animals specially mentioned in the bill and ending the bill with the words "or killing predatory animals and birds."

Mr. SMOOT. "Birds and animals."

Mr. ROBINSON of Arkansas. I have no objection to saying "birds and animals." I can not see, for the life of me, the difference between saying "birds and animals" and saying "animals and birds." If the Senator from Utah can make that difference important, I shall gladly accept his suggestion.

Mr. SMOOT. Let me tell the Senator what I had in mind. I did not catch his last amendment; but what I had in mind was this:

The amendment as offered was to read:

or killing predatory animals and birds, such as wolves—

And so forth.

Mr. ROBINSON of Arkansas. No, indeed. I have stated three times, Mr. President, that I moved to strike out all language after the word "animals," and I believe that amendment has already been agreed to. The words "predatory animals" and "predatory birds" are pretty well defined.

Mr. SMOOT. Certainly; but not "such as wolves." That is all right.

Mr. ROBINSON of Arkansas. That has been stricken out of the bill on my own motion.

Mr. SMOOT. If that has been stricken out, I have nothing further to say.

Mr. ROBINSON of Arkansas. Now I move to insert, after the word "animals," the words "and birds."

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

HORTICULTURAL, ETC., WORK IN SOUTHERN GREAT PLAINS AREA

The bill (S. 2832) providing for horticultural experiment and demonstration work in the southern Great Plains area was considered as in Committee of the Whole.

The bill had been reported from the Committee on Agriculture and Forestry with amendments.

The first amendment was, in section 1, page 1, line 10, after the word "at," to strike out "one" and insert "or within reasonable proximity to one or more," so as to make the section read:

That the Secretary of Agriculture is hereby authorized and directed to cause such shade, ornamental, fruit, and shelter belt trees, shrubs, and vines as are adapted to the conditions and needs of the southern Great Plains area, comprised of those parts of the States of Colorado, Nebraska, Kansas, Texas, Oklahoma, and New Mexico lying west of the ninety-eighth meridian and east of the 5,000-foot contour line, to be propagated at or within reasonable proximity to one or more of the existing field stations of the Department of Agriculture in such area, and seedlings and cuttings and seeds of such trees, shrubs, and vines to be distributed free of charge under such regulations as he may prescribe for experimental and demonstration purposes within such area.

The amendment was agreed to.

The next amendment was, in section 2, page 2, line 9, after the words "sum of," to strike out "$50,000" and insert "$35,000," so as to make the section read:

SEC. 2. That for carrying out the purposes of this act, including purchase of land and erection of buildings, there is hereby authorized to be appropriated the sum of $35,000, out of any money in the Treasury not otherwise appropriated, to be expended under the supervision of the Secretary of Agriculture.

Mr. KING. Mr. President, let that bill go over. I have an amendment I desire to offer to it.

The PRESIDING OFFICER. The bill will be passed over.

ACCEPTANCE OF DECORATIONS, ETC., BY OFFICERS OF NAVY AND MARINE CORPS

The bill (H. R. 5898) to authorize certain officers of the United States Navy and Marine Corps to accept such decorations, orders, and medals as have been tendered them by foreign governments in appreciation of services rendered was announced as next in order.

Mr. BLEASE. Mr. President, I wish to offer an amendment to that bill, but I want to get some information from the Secretary of War first; and I will ask that it go over, not because I personally object to it but for the reason stated.

The PRESIDING OFFICER. The bill will be passed over.

Mr. REED of Pennsylvania. Mr. President, the Secretary of War has sent us the list which is embodied in my amendment, so that we have heard from him, and he is satisfied that the amendment should go in and the bill should pass. I should have told the Senator about that.

Mr. BLEASE. The only thing is that I want to put in, along with these officers, some American boys who have been ruled out because of an act of Congress which limits the time within which their cases should be considered and decided. I think they should have the same opportunity, at least, as the officers. I want the Secretary of War to give me a list of them and their names, so that I can offer an amendment to this bill enabling American boys who were cited to receive honors, along with the others, from their own Government or from any foreign government.

At present they are barred out by their own Government by an act of Congress limiting the time. Just a little amendment to this bill will give these American boys an opportunity to receive their dues from their own Government along with these officers.

This is a House bill, and a short delay will not affect the ultimate passage of the bill, because we can take it up and pass it at any time in just a minute.

This is not an objection. It is merely an effort to do justice to these American boys who have also been cited.

Mr. REED of Pennsylvania. Mr. President, will the Senator yield for a question?

Mr. BLEASE. Yes, sir.

Mr. REED of Pennsylvania. Would the Senator be willing to withhold his objection long enough to have the pending amendment adopted, and then let the bill go over?

Mr. BLEASE. That would not hurt anything.

The Senate, as in Committee of the Whole, resumed the consideration of the bill.

The PRESIDING OFFICER. The amendment offered by the Senator from Pennsylvania has been heretofore read.

The amendment was agreed to.

The CHIEF CLERK. Also, the Senator from Pennsylvania offers the following amendment:

On page 1, line 3, after the word "United States," insert "Army."

The amendment was agreed to.

Mr. REED of Pennsylvania. There is also an amendment in the title.

Mr. JONES. Mr. President, I desire to ask a question about this bill. We had a bill something like this up the other day, and we were assured that it covered all of these matters.

Mr. REED of Pennsylvania. Yes, Mr. President; this is the bill.

Mr. JONES. Oh, we did not pass that bill the other day?

Mr. REED of Pennsylvania. No; we did not pass it.

The PRESIDING OFFICER. The bill will be passed over.

BEAR RIVER MIGRATORY-BIRD REFUGE

The bill (S. 3194) to establish the Bear River migratory-bird refuge was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That the Secretary of Agriculture is hereby authorized to construct at Bear River Bay and vicinity, Utah, such dikes, ditches, spillways, buildings, and improvements as may be necessary, in his judgment, for the establishment of a suitable refuge and feeding and breeding grounds for migratory wild fowl; also to acquire by purchase, gift, or lease water rights and privately owned lands, including the improvements thereon, deemed necessary by him for the purpose, or, in lieu of purchase, to compensate any owner for any damage sustained by reason of the submergence of his lands.

SEC. 2. Such lands, when acquired in accordance with the provisions of this act, together with such lands of the United States as may be designated for the purpose by proclamations or Executive orders of the President, shall constitute the Bear River migratory-bird refuge and shall be maintained (a) as a refuge and breeding place for migratory birds included in the terms of the convention between the United States and Great Britain for the protection of migratory birds, concluded August 16, 1916, and (b) to such extent as the Secretary of Agriculture may by regulations prescribe, as a refuge and breeding place for other wild birds, game and fur-bearing animals, and (c) to such extent as the Secretary of Commerce may by regulations prescribe as a refuge and breeding place for fish and other aquatic-animal life.

SEC. 3. No such area shall be acquired by the Secretary of Agriculture unless or until the Legislature of the State of Utah has consented to the acquisition of lands by the United States for use as a refuge for migratory wild fowl, and shall have provided for the use as a refuge for migratory wild fowl by the United States of any lands owned or controlled by the State in Bear River Bay, Utah, and vicinity, which the Secretary of Agriculture may deem necessary for such purposes, and which the Secretary of Agriculture is hereby authorized to accept on behalf of the United States; and, except in the case of a lease, no payment shall be made by the United States for any such area until title thereto is satisfactory to the Attorney General.

SEC. 4. The existence of a right-of-way easement or other reservation or exception in respect of such area shall not be a bar to its acquisition (1) if the Secretary of Agriculture determines that any such reservation or exception will in no manner interfere with the use of the area for the purposes of this act, or (2) if in the deed or other conveyance it is stipulated that any reservation or exception in respect of such area, in favor of the person from whom the United States receives title, shall be subject to regulations prescribed under authority of this act.

SEC. 5. No person shall, except in accordance with regulations prescribed by the Secretary of Agriculture in respect of wild birds, game animals, or fur-bearing animals, or by the Secretary of Commerce in respect of fish and other aquatic-animal life—

(a) Enter, use, or occupy the refuge for any purpose; or

(b) Disturb, injure, kill, or remove, or attempt to disturb, injure, kill, or remove any wild bird, game animal, fur-bearing animal, fish, or other aquatic-animal life on the refuge; or

(c) Remove from the refuge, or cut, burn, injure or destroy thereon any timber, grass, or other natural growth, or the nest or egg of any wild bird; or

(d) Injure or destroy any dike, ditch, dam, spillway, improvement, notice, sign board, fence, building, or other property of the United States thereon.

SEC. 6. Commercial fishing may be conducted in the waters of this refuge under regulation by the Secretary of Commerce.

SEC. 7. (a) Any employee of the Department of Agriculture authorized by the Secretary of Agriculture to enforce the provisions of this act, and any employee of the Department of Commerce so authorized by the Secretary of Commerce (1) shall have power, without warrant, to arrest any person committing in the presence of such employee a violation of this act or of any regulation made pursuant thereto, and to take such person immediately for examination or trial before an officer or court of competent jurisdiction, (2) shall have power to execute any warrant or other process issued by an officer or court of competent jurisdiction to enforce the provisions of this act or regulations made pursuant thereto, and (3) shall have authority, with a search warrant issued by an officer or court of competent jurisdiction to make a search in accordance with the terms of such warrant. Any judge of a court established under the laws of the United States, or any United States commissioner may, within his respective jurisdiction, upon proper oath or affirmation showing probable cause, issue warrants in all such cases.

(b) All birds, animals, fish, or parts thereof captured, injured, or killed, and all timber, grass, and other natural growths, and nests and eggs of birds removed, and all implements or paraphernalia, including guns, traps, fishing equipment, and boats used or attempted to be used contrary to the provisions of this act or any regulation made pursuant thereto, shall, when found by such employee or by any marshal or deputy marshal, be summarily seized by him and placed in the custody of such persons as the Secretary of Agriculture and the Secretary of Commerce may jointly by regulation prescribe.

(c) A report of the seizure shall be made to the United States attorney for the judicial district in which the seizure is made, for forfeiture either (1) upon conviction of the offender under section 10, or (2) by proceedings by libel in rem. Such libel proceedings shall conform as near as may be to civil suits in admiralty, except that either party may demand trial by jury upon any issue of fact when the value in controversy exceeds $20. In case of a jury trial the verdict of the jury shall have the same effect as the finding of the court upon the facts. Libel proceedings shall be at the suit and in the name of the United States. If such forfeiture proceedings are not instituted within a reasonable time, the United States attorney shall give notice thereof, and the custodian shall thereupon release the article seized.

SEC. 8. The Secretary of Agriculture and the Secretary of Commerce are authorized to make such expenditures for construction equipment, maintenance, repairs, and improvements, including necessary investigations, and expenditures for personal services and office expenses at the seat of government and elsewhere, and to employ such means as may be necessary to execute the functions imposed upon them by this act and as may be provided for by Congress from time to time.

SEC. 9. There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, to be available until expended, the sum of $350,000, or so much thereof as may be necessary to effectuate the provisions of this act.

SEC. 10. Any person who shall violate or fail to comply with any provision of, or any regulation made pursuant to, this act shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined not more than $500 or be imprisoned not more than six months, or both.

SEC. 11. As used in this act, the term "person" includes an individual, partnership, association, or corporation.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILL PASSED OVER

The bill (S. 2327) to amend the act entitled "An act to provide that the United States shall aid the States in the construction of rural post roads, and for other purposes," approved July 11, 1916, as amended and supplemented, and for other purposes, was announced as next in order.

Mr. KING. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

COMPENSATION OF REGISTERS OF LOCAL LAND OFFICES

The bill (S. 766) to fix the compensation of registers of local land offices, and for other purposes, was considered as in Committee of the Whole.

The bill had been reported from the Committee on Public Lands and Surveys with an amendment, on page 1, line 8, after the words "per annum," to insert "*Provided*, That the salary of the register of the Juneau land district, Alaska, shall be $3,600 per annum," so as to make the bill read:

Be it enacted, etc., That from and after the beginning of the next fiscal year the compensation of registers of local land offices shall be a salary of $1,000 per annum each and all fees and commissions now allowed by law to such registers, but the salary, fees, and commissions of such registers shall not exceed $3,600 each per annum: *Provided*, That the salary of the register of the Juneau land district, Alaska, shall be $3,600 per annum.

The amendment was agreed to.

Mr. KING. Mr. President, let the bill go over.

Mr. PHIPPS. Mr. President, will the Senator withhold his objection for a moment?

Mr. KING. Yes.

Mr. PHIPPS. The purpose of this bill is to allow registers to have fair compensation for their services. We have combined the offices of register and receiver in all cases, and have combined the land offices themselves, so that in Colorado, for instance, we now have 2 offices where previously we had 8 or 10. The work naturally is more heavy than heretofore; the register has more filings to pass upon; he has more people to see, and more clerks to handle. The minimum salary rate is fixed at $1,000, but if the fees of the office justify it that compensation is raised by a percentage until it reaches a maximum of $3,600 a year. The office must earn it, or it will not be paid. That, of course, is only a percentage of the fees, not the total fees received. It seems to us that it is a fair provision. It only puts those Government officials in the position they should occupy, and enables us to get men who are properly qualified to handle the important affairs of the office of register.

The PRESIDING OFFICER. Is there objection to the consideration of the bill? The Chair hears none. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

INTERSTATE COMMERCE IN COTTONSEED OIL

The bill (S. 1414) for the prevention and removal of obstructions and burdens upon interstate commerce in cottonseed oil by regulating transactions on future exchanges, and for other purposes, was announced as next in order.

Mr. COPELAND. Mr. President, reserving the right to object, the other day when this bill was up I called attention to the fact that certain persons in my city have objected to the passage of the bill; and I have received a long letter in regard to it from the president of the New York Produce Exchange. Since all of these bills are considered under the five-minute rule, and this is such a long letter, I ask that it be printed at this point with my remarks, in order that the objections to the bill may be understood. Then I shall ask that the bill go over. I have had a very pleasant talk with the Senator from Texas [Mr. MAYFIELD], and I hope the next time the matter comes up it may be disposed of on its merits.

The PRESIDING OFFICER. Without objection, the letter will be printed in the RECORD.

The letter is as follows:

NEW YORK PRODUCE EXCHANGE,
New York, March 2, 1928.

Hon. ROYAL S. COPELAND,
United States Senate, Washington, D. C.

DEAR SIR: With reference to Senate bill 1414, a bill for the prevention and removal of obstructions and burdens upon interstate commerce in cottonseed oil by regulating transactions on future exchanges, first allow me to inform you that there are just two exchanges for trading in cottonseed-oil futures. One, the New York Produce Exchange, where cottonseed oil has been traded in over a period of some 30 years, and the other, the New Orleans Cotton Exchange, where arrangements were made some two years ago to trade in cottonseed-oil futures.

The New York market has, with the exception of an insignificantly small minority, the hearty support of the entire cottonseed-oil industry, and has made its rules and regulations in conformity with the Interstate Cottonseed Crushers' Association, an association of the people who are engaged in the cottonseed-oil industry in this country, and in some instances in foreign countries, an association to promote the best interests of all the people engaged in the cottonseed-oil industry with equity and justice to all.

While no specific reference to either the New York or New Orleans cottonseed-oil markets is made in the bill, a comparison of both markets was made during the hearing on the original bill S. 4208 before the Committee on Agriculture and Forestry during May, 1926, so, of necessity, I must make the same comparison in placing the facts before you.

Of the New Orleans market very little is known, as the New Orleans Exchange does not allow official broadcasting of the amount of contracts traded in. The Senate record of the testimony before the Committee on Agriculture and Forestry in May, 1926, shows, however, that the few proponents of this bill admitted that the trading in cottonseed-oil futures on the New Orleans Exchange is extremely limited. One thing is certain, however; the New Orleans future market does not conform to the rules and regulations of the Interstate Cottonseed Crushers' Association, the governing body of the entire industry. The New Orleans market has established two grades of oil not recognized under the rules of the interstate association nor the industry generally.

The present bill is instigated by Mr. Woodall, of Hillsboro, Tex., through Senator MAYFIELD, and the only other support is from Mr. T. S. Kenan, of Atlanta, Ga., and a few others, who are desirous of having a future market at New Orleans, and who in their desire to have such a market are giving their support to this bill, thinking that by so doing they will bring about regulations of the New York Produce Exchange market that will drive the trade away from New York and bring it to New Orleans. It seems very plain that this insignificant minority not only have very little chance of accomplishing such a thing, with New Orleans so irregular in its methods, but if the bill should go through and the New York market be changed to conform to New Orleans, then the New York market will fade into insignificance along with New Orleans, and finally there will be no future market, no

protection for the industry, and in turn the farmer will not get full price for his cottonseed, as the miller must of necessity, in a case of this kind, buy his seed at a low figure with no future market to protect him.

Cottonseed oil is a manufactured product, not agricultural such as cotton, wheat, corn. The first stage of manufacture is crude cottonseed oil crushed from cottonseed. The second stage of manufacture is refined cottonseed oil, such as is traded in on the futures exchange. From then on the refined oil is further manufactured into various finished edible products to be passed on to the consuming public. The refined cottonseed oil as traded in on the New York Produce Exchange is a manufactured product in the second stage of manufacture. Governmental regulations of cottonseed oil, a manufactured product, derived from cottonseed, would be equivalent to an attempt at governmental regulation of flour and bread, which are articles manufactured from wheat, but, in any event, why should a manufactured product such as refined cottonseed oil be regulated by the Department of Agriculture? Why does not the bill come up before the Committee on Commerce? It seems to be a very irregular proceeding, and under the circumstances is it proper for the bill to come up before Congress? Should not the bill be recalled and referred to the proper committee for further hearing?

To familiarize you in as brief a way as possible with the facts in the case, allow me to inform you of some of the most important parts of the congressional record of the hearings before the Committee on Agriculture and Forestry in May, 1926:

Trading in cottonseed-oil futures on the New York Produce Exchange started about 30 years ago in a small way, until trading averaged some 3,360,000 barrels per year for the six years prior to the World War. For the past eight years since the war trading on the New York Produce Exchange averaged some 4,462,000 barrels per year. During the year 1927, which is after the hearing of the first bill (S. 4208) to regulate trading in cottonseed-oil futures, the trading on the New York Produce Exchange reached a total of 5,184,122 barrels. The two months of this year are record breakers, amounting to 1,288,700 barrels, and if the pace is maintained this year may see trading totaling between 7,000,000 and 8,000,000 barrels. This is positive manifestation that the New York Produce Exchange cottonseed-oil market is satisfactory and needs no change.

In May, 1924, the Interstate Cottonseed Crushers' Association appointed a committee headed by Mr. Woodall, of Hillsboro, Tex., to confer with a committee of the New York Produce Exchange to investigate trading conditions on the New York Produce Exchange in cottonseed oil and make recommendations for improvements, if possible, with a view to increasing trading in cottonseed-oil futures. The committees met and investigated the matter fully but could make no recommendations that would improve matters. After this meeting the New York Produce Exchange itself made further investigation. A committee was appointed and some 1,200 letters were sent to members of the industry throughout the country asking for suggestions with a view to increasing trading in cottonseed-oil futures. Of about 900 replies received, 75 per cent favored no change, 10 per cent thought some changes in trading regulations might be advantageous but did not know what to suggest, and the remaining 15 per cent made various suggestions which upon investigation proved impracticable. Having, therefore, thoroughly investigated possible changes in the New York Produce Exchange trading regulations and with the vast majority in favor of present rules and regulations, there was nothing to do but continue trading as per existing rules.

The wisdom of the vast majority has been proven by the leaps and bounds by which trading has increased since this agitation was started, whereas the New Orleans market is still a very limited affair. The New Orleans contract is only 30,000 pounds, whereas the New York Produce Exchange contract is equal to 40,000 pounds, and yet, on February 6, last, some 93,000 barrels of futures contracts were traded in on the New York Produce Exchange for that one day. In the congressional record it was estimated by a New Orleans proponent of the bill that an equivalent of only about 75,000 barrels were traded in on the New Orleans Exchange in one entire year. Does a market that is manifestly in such a healthy condition as the New York Produce Exchange cottonseed-oil market need changing and regulating? To the contrary, the market that is narrow and stagnant, such as the New Orleans market, is manifestly in need of change and regulation, and this we understand is not the purpose of the present bill. It is my understanding that the trading in the New Orleans cottonseed-oil market is so limited that there are many times when the bid and asked prices for options are fixed by a committee, which, to say the least, is not an indication of a free and open market.

About a year after the investigation into the advisability of making some changes in the New York Produce Exchange cottonseed-oil market facilities were arranged on the New Orleans Cotton Exchange for trading in cottonseed-oil futures. Arrangements were made for the delivery of three different grades of oil on contracts. Two of these grades were not and still are not officially recognized and made part of the Interstate Cottonseed Crushers' Association, the governing body of the entire industry. Besides this, loose delivery was arranged for and the contract quantity made 30,000 pounds, or just one-half the amount that it would take to fill an empty tank car. This is a further departure from the customs of the trade and the regulations of the Interstate Cottonseed Crushers' Association. The New Orleans market will always be limited in scope because of the undesirable restrictions not in conformity with the requirements of the cottonseed-oil industry and it had not been inaugurated but a few months when the unmistakable signs of its failure became apparent to its few adherents, and then along came Mr. Woodall again with a new idea that the New York Produce Exchange market was getting along too well, and perhaps if legislation could be effected to give the Government power to regulate trading in futures, then the New York Produce Exchange market would perhaps be changed to conform to the New Orleans market. This idea is admitted by Senator MAYFIELD in the congressional record of the hearings before the Committee on Agriculture and Forestry, bill S. 4208, May 18, 26, and 27, 1926, page 65. With the New Orleans market and the New York Produce Exchange alike, Mr. Woodall probably concluded New Orleans would at least get a larger share of the business.

The bill came up for hearing and the testimony was a constant comparison of the New York Produce Exchange and New Orleans cottonseed-oil markets. The proponents of the bill tried to show that the grade of oil traded in and the barreled delivery on the New York Produce Exchange were not satisfactory to the trade and that the New Orleans three-grade delivery and also half-tank loose delivery were what the trade wanted.

The New York Produce Exchange committee proved conclusively that the grade of oil traded in on the New York Produce Exchange was the most equitable to both buyer and seller, a grade that could be produced all year round, regardless of whether the crop of cotton seed from which it was manufactured was poor in quality or good in quality. They further proved that the New Orleans grades, because of the requirements for bleachable properties, could not at all times be available due to the properties of the seed from which these grades would have to be manufactured.

The New York Produce Exchange cottonseed-oil market, like any futures market, is essentially a hedging market which enables those marketing the product to avoid undue speculative risks. But necessary rules and regulations exist so that deliveries can be made and deliveries are made from time to time, and it has been found through experience that delivery in barrels is the best suited to meet the requirements of the majority engaged in the industry. The New York Produce Exchange committee submitted overwhelming proof that the barreled delivery was most used in the distribution throughout this and other countries of refined cottonseed oil in its various forms of manufacture. Many connected with the industry have no track facilities for taking loose delivery in tank cars. Storage space for barreled oil can be found in any city, but storage facilities for loose delivery is very limited. Oil stored loose would require tank cars to move the oil in and out of storage, and tank cars would have to be filled to capacity each time a movement of oil took place. Not so in case of barreled delivery. Any part of a barreled delivery could be moved at any time out of store by truck or lighter or railroad car, so that the barreled delivery was most equitable to all. If the time comes when loose delivery becomes most equitable for the entire industry, then the New York Produce Exchange will, of necessity, have to change its contract, and the New York Produce Exchange, in that event, would be the first to advocate the change.

The bill S. 4208 was never reported out of committee during the 1926 session of Congress. Senator NORRIS was chairman of the committee at that time, but since then changes have taken place, Senator MCNARY having been named chairman. The bill was again presented in December, 1927, under the number S. 1414. When the New York Produce Exchange became aware that this bill S. 1414 was presented, the produce exchange committee wrote to Senator NORRIS, the former chairman of the Committee on Agriculture and Forestry, at two different times requesting a hearing. The committee did not know that Senator NORRIS was no longer the chairman. However, the secretary of Senator NORRIS advised that our letters had been referred to Senator MCNARY, the new chairman, for his disposition, but in spite of that the New York Produce Exchange committee received no reply and was not given a hearing and the bill was reported out of the committee to the Senate.

The New York Produce Exchange and the cottonseed oil industry are not in favor of the bill for the following reasons:

First The bill is said to be for the purpose of regulating cottonseed-oil future exchanges, but it is in fact for the purpose of changing the New York Produce Exchange cottonseed oil market to conform with the New Orleans cottonseed-oil market. Senator MAYFIELD so stated in the congressional record of the hearings of May, 1926.

Second. The New York Produce Exchange cottonseed-oil market is subservient to the desires of the majority of those engaged in the industry, and its rules in respect to quality and delivery are identical with the rules and regulations of the Interstate Cottonseed Crushers' Association, the governing body of the industry, with headquarters at Dallas, Tex., and consequently needs no outside regulations.

Third. The industry having a governing organization, known as the Interstate Cottonseed Crushers' Association, which is truly representative of the entire industry and functioning in all respects, it is merely placing additional burdens and expense on the country to have unnecessary governmental regulation.

Fourth. The bill has not been properly presented, as cottonseed oil is a manufactured product and should consequently be under the control, if at all, of the Department of Commerce and not the Department of Agriculture.

The New Orleans cottonseed oil futures market was an attempt on the part of a very small disgruntled minority to have a market to conform with their ideas of what the industry should have, although the vast majority had already signified their approval of the New York Produce Exchange market. The New Orleans market has been open for over two years and yet it is not patronized except in a very limited way, and it certainly seems plausible that if the New Orleans market met the requirements of the trade the trade would go there. Realizing their failure, they have brought about this bill, and the real object of the bill, although it is not so stated in this bill, is to bring about a change in the New York Produce Exchange market to conform with the New Orleans cottonseed oil market, which is not wanted by the industry at large.

At your convenience, either in Washington or in New York City, the committee of the New York Produce Exchange would be very pleased to meet with you and discuss the matter further.

Yours respectfully,

WILLIAM BEATTY, *President.*

The PRESIDING OFFICER. The bill will be passed over.

BILL PASSED OVER

The bill (S. 1728) placing service postmasters in the classified service was announced as next in order.

Mr. BLEASE. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

DOUBLE PENSION FOR DISABILITY FROM AVIATION DUTY

The bill (S. 3198) to amend the act of March 3, 1915, granting double pension for disability from aviation duty, Navy or Marine Corps, by inserting the word "Army," so as to read "Army, Navy, and Marine Corps," was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That the act of March 3, 1915, granting double pension for disability from aviation duty, Navy or Marine Corps, be amended by inserting the word "Army," so as to read: "In all cases where an officer or enlisted man of the Army, Navy, or Marine Corps dies, or where an enlisted man of the Army, Navy, or Marine Corps is disabled, by reason of any injury received or disease contracted in line of duty, the result of an aviation accident received while employed in actual flying in or in handling aircraft, the amount of pension allowed shall be double that authorized to be paid should death or the disability have occurred by reason of an injury received or disease contracted in line of duty not the result of an aviation accident."

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILLS PASSED OVER

The bill (S. 1131) to encourage and promote the production of livestock in connection with irrigated lands in the State of Wyoming was announced as next in order.

Mr. KENDRICK. Mr. President, I am very anxious to have the Senate consider this bill; but several Senators have asked me to delay action on it until they can decide whether or not they want the provisions of the bill to apply to their States, so I ask that it go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1940) to divest goods, wares, and merchandise manufactured, produced, or mined by convicts or prisoners of their interstate character in certain cases was announced as next in order.

Mr. BLEASE. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1462) for the adoption of the Columbia Basin reclamation project, and for other purposes, was announced as next in order.

Mr. SMOOT. Let that go over.

Mr. JONES. Mr. President, can the Senator give me any idea as to how long a time he thinks he might take on this bill? I should like to move to take up the bill.

Mr. SMOOT. I can not say the length of time.

Mr. JONES. Does the Senator think it would be 15 or 20 minutes?

Mr. SMOOT. No; it could not be disposed of in that time.

Mr. KING. Fifteen or 20 hours?

Mr. SMOOT. It certainly can not be disposed of in five minutes.

Mr. JONES. As there is only a quarter of an hour now before 2 o'clock, the end of the morning hour, I shall not vote to take up the bill notwithstanding the objection to-day.

The bill (S. 1266) to create in the Bureau of Labor Statistics of the Department of Labor a division of safety was announced as next in order.

Mr. PHIPPS. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 3023) to revise the boundary of a portion of the Hawaii National Park, on the island of Hawaii, in the Territory of Hawaii, was announced as next in order.

Mr. LA FOLLETTE. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (H. R. 445) authorizing the Secretary of the Interior to enter into a cooperative agreement or agreements with the State of Montana and private owners of lands within the State of Montana for grazing and range development, and for other purposes, was announced as next in order.

Mr. KING. I should like an explanation of that measure. I want to know what effect it would have.

Mr. SMOOT. Let it go over.

The PRESIDING OFFICER. The bill will be passed over.

ISOLATED TRACTS OF PUBLIC LAND

The bill (H. R. 6684) to amend section 2455 of the Revised Statutes of the United States, as amended, relating to isolated tracts of public land was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

BILLS PASSED OVER

The bill (S. 1956) for the relief of Levi R. Whitted was announced as next in order.

Mr. SMOOT. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2292) providing for the employment of certain civilian assistants in the office of the Governor General of the Philippine Islands, and fixing salaries of certain officials, was announced as next in order.

Mr. WILLIS. Under an arrangement already made that bill has gone over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 2387) to authorize appropriations for contingencies of the Army was announced as next in order, and was read.

Mr. KING. Mr. President, that is a very important measure, giving this authority to spend without any limitation. I would regard it as very unwise unless there was some very good reason for departing from what seems to me to be a rational and a safe policy.

Mr. REED of Pennsylvania. Mr. President, I suggest that we let the bill go over until we can get some further information about it.

The PRESIDING OFFICER. The bill will be passed over.

SALE OF LAND TO PENNSYLVANIA RAILROAD CO.

The bill (H. R. 5476) to authorize the Secretary of War to sell to the Pennsylvania Railroad Co. a tract of land situate in the city of Philadelphia and State of Pennsylvania was considered as in Committee of the Whole.

Mr. REED of Pennsylvania. Mr. President, when this bill was last up the Senator from Washington [Mr. JONES] asked that it go over in order to enable us to find out what the attitude of the Shipping Board was toward it, he thinking that it might interfere with their use of that terminal. I am advised by General Dalton, of the Shipping Board, that it will not in the least interfere with their use of the Philadelphia terminal, and they have no objection whatever to the passage of the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

AMENDMENT OF NATIONAL DEFENSE ACT

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 1823) to amend section 2 of the act approved June 6, 1924 (43 Stat. L. 470), entitled "An act to amend in certain particulars the national defense act of June 3, 1916, as amended, and for other purposes," and it was read as amended, as follows:

Be it enacted, etc., That section 2 of the act approved June 6, 1924 (43 Stat. L. 470), be, and the same is hereby, amended by adding at the end thereof the following:

"Except in the detail of officers as members of the General Staff Corps, the President is further authorized, when in his judgment the interests of the service demand such action, to except any officer of any corps, department, arm, or branch of the Army of the United States from the provisions of section 4c of the national defense act, as

amended, relating to duty with troops of one or more of the combatant arms: *Provided*, That not more than 5 per cent of the total commissioned strength of the Army shall be so excepted at any one time: *And provided further*, That nothing in this act shall be so construed as to repeal or modify the act of June 6, 1924, as set forth in section 2, page 470, part 1, volume 43, Public Laws of the United States, Sixty-eighth Congress."

Mr. LA FOLLETTE. Mr. President, will not the Senator from Pennsylvania explain this bill?

Mr. REED of Pennsylvania. Yes, Mr. President. It is a bill to amend the Manchu law without at the same time interfering with the original intention of the Manchu law, to wit, that no General Staff officers shall be permitted to serve for a long period without going back to troops. The committee is firmly of the belief that that policy is wise, that General Staff officers ought to be required to serve with troops periodically, once every four years, as the present law requires. But this is to allow some specialists, like radio experimenters, the graves registration officer in Europe, and some chemists in laboratories, to continue their special work without going back to troops. That is the whole effect of the bill.

Mr. KING. Mr. President, may I suggest to the Senator that the Senator from Tennessee [Mr. MCKELLAR] challenged attention to this bill when it was up before and expressed a great deal of dubiety, as I recall, as to wisdom of it. He thought it would be the entering wedge to break down the requirement now that officers shall spend a certain part of their time with troops, and he was afraid it would be taken advantage of by men who get into these positions in and about Washington, or in favored places, and that then would remain there indefinitely and finally lose touch entirely with the Army, with the technique of the Army, and with the military activities of the Army.

Mr. REED of Pennsylvania. With that thought we are in full sympathy. The staff officers here in Washington ought to go back to troops, and I think neither the department nor the committee would ever recommend or report out any such legislation as would destroy that rule.

Mr. HAYDEN. What is the total commissioned strength of the Army?

Mr. REED of Pennsylvania. Twelve thousand officers.

Mr. HAYDEN. This would apply to 600?

Mr. REED of Pennsylvania. It would apply to a maximum of 600. It would not affect many officers of the line. It would principally affect the specialists, like officers in the Chemical Warfare Service, in the Signal Corps, and specialists like that. There are very few enlisted men in those branches, and a very large proportion of officers.

Mr. LA FOLLETTE. Mr. President, did the committee consider endeavoring to frame language which would be more specific instead of leaving it in such general terms as it appears to be in from a hasty reading of the bill?

Mr. REED of Pennsylvania. We left in the exception on page 1, line 6, so as not to apply to the General Staff Corps. We insisted on that. Then, as an amendment, we put in the 5 per cent limitation.

Mr. LA FOLLETTE. I ask whether it would not be possible to frame language that would specifically cover the class of officers the Senator believes should be relieved from service with the troops rather than leaving it in general terms and dependent upon the discretion of the department to carry out what I understand to be the sentiment of the committee from the Senator's statement.

Mr. REED of Pennsylvania. I doubt whether it would be possible to put in in specific terms the variety of particular scientific officers whom this would reach.

The PRESIDING OFFICER. This bill was considered on March 2, and certain amendments were made. The question now is, Shall the bill be reported to the Senate?

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

BILLS PASSED OVER

The bill (S. 1830) to authorize the Secretary of War to withhold pay or allowances of any person in the military service to cover indebtedness due the United States or its military agencies or instrumentalities was announced as next in order.

Mr. REED of Pennsylvania. I ask that the bill go over. An amendment has been suggested by the Senator from Washington, I think, with propriety.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1831) to authorize the Secretary of War and the Secretary of the Navy to class as secret certain material, apparatus, or equipment for military and naval use, and for other purposes, was announced as next in order.

Mr. LA FOLLETTE. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 1838) to amend section 110 of the national defense act by repealing and striking therefrom certain provisions prescribing additional qualifications for National Guard State staff officers, and for other purposes, was announced as next in order.

Mr. REED of Pennsylvania. I ask that that go over, on request of the Senator from Wisconsin [Mr. BLAINE].

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 3092) to enable the George Washington Bicentennial Commission to carry out and give effect to certain approved plans was announced as next in order.

Mr. DILL. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

NATIONAL ARCHIVES

The bill (S. 1169) to create an establishment to be known as the national archives was announced as next in order.

Mr. SMOOT. I ask that that bill be referred back to the Committee on Library for further consideration.

The PRESIDING OFFICER. Without objection, this bill will be taken from the calendar and recommitted to the Committee on the Library.

AMENDMENT OF JUDICIAL CODE

The bill (H. R. 8725) to amend section 224 of the Judicial Code was announced as next in order.

Mr. BRATTON. Mr. President, I should like to have an explanation of that measure. Let it go over.

The PRESIDING OFFICER. The bill will be passed over.

OLIVER C. SELL

The bill (S. 2966) for the relief of Oliver C. Sell was considered as in Committee of the Whole.

The bill had been reported from the Committee on Military Affairs with an amendment, on page 1, line 5, to strike out the word "Snell" and to insert the word "Sell," so as to make the bill read:

Be it enacted, etc., That the administration of any laws conferring rights, privileges, or benefits, upon honorably discharged soldiers, Oliver C. Sell, recruiting officer, and in Company B, First Regiment Ohio Volunteer Infantry, shall hereafter be held and considered to have been enrolled in the military service of the United States on July 24, 1898, instead of August 1, 1898, as shown on the official records of the War Department.

Mr. KING. Mr. President, will not the Senator give an explanation of that measure?

Mr. ROBINSON of Indiana. Mr. President, Oliver C. Sell, as is shown by the affidavits, was in a temporary detail, and went to work with a recruiting officer on July 24, 1898, instead of August 1. He continued in his service there until August 1, and then went on the pay roll, and continued in the service until October 25.

If his service is dated from August 1 to October 25, he does not get credit for 90 days. If he is given credit from the time he actually began service, July 24, until October 25, he gets credit for 91 days, which is the amount of service he should be given credit for. All the bill undertakes to do is to give this soldier credit for his actual service.

Mr. SMOOT. Mr. President, how did it happen that he served that length of time without any notice being taken of it in the records?

Mr. ROBINSON of Indiana. It was only one week.

Mr. SMOOT. That one week was what has made this legislation necessary.

Mr. BROOKHART. Mr. President, I think I can explain that to the Senator.

The PRESIDING OFFICER. Does the Senator from Indiana yield to the Senator from Iowa?

Mr. ROBINSON of Indiana. I yield to the Senator.

Mr. BROOKHART. This man reported and was enlisted by a recruiting officer on the 24th of July, I believe it was; he was assigned to duty and went into service. That was at a station away from the regimental headquarters. Then, seven days later, after performing seven days of duty, he returned to regimental headquarters, and his enlistment papers were dated as of that date. There was an error in the date; the papers should have been dated back to the 24th of July. The colonel of the regiment and all the other officers connected with it corroborate that statement, and so I think there is no doubt about the truth of the statement.

Mr. ROBINSON of Indiana. There is also in the report an affidavit of the recruiting officer as to the truth of that statement.

Mr. SMOOT. If the statement outlines the facts, then of course the man is entitled to the relief.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

UNLAWFUL RESTRAINTS AND MONOPOLIES

The bill (H. R. 6491) to amend section 8 of the act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914, as amended, was announced as next in order.

Mr. EDGE. Mr. President, this bill was passed over at the last call of the calendar at the request of the Senator from Wisconsin [Mr. LA FOLLETTE]. I understand that he has withdrawn his objection.

I may say just a brief word. The bill simply changes the language of existing law in connection with the power of the Federal Reserve Board in allowing duplicate director. It changes the existing law, which now reads, "Provided such banks were not in substantial competition," so as to read, "Provided in their judgment it is not incompatible with the public interest."

It is a mere matter of a change in phraseology to make it possible for the board to act with judgment.

The PRESIDING OFFICER. Is there objection to the consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

RULES IN COMMON-LAW ACTIONS

The bill (S. 759) to give the Supreme Court of the United States authority to make and publish rules in common-law actions was announced as next in order.

The PRESIDING OFFICER. That bill has been reported adversely.

Mr. BRATTON. I ask that it go over without prejudice.

The PRESIDING OFFICER. The bill will be passed over.

JOINT RESOLUTION PASSED OVER

The joint resolution (S. J. Res. 59) authorizing the President to ascertain, adjust, and pay certain claims of grain elevators and grain firms to cover insurance and interest on wheat during the years 1919 and 1920, as per a certain contract authorized by the President, was announced as next in order.

Mr. SMOOT. Let that go over.

The PRESIDING OFFICER. The joint resolution will be passed over.

LIEUT. ROBERT STANLEY ROBERTSON, JR.

The bill (S. 1377) for the relief of Lieut. Robert Stanley Robertson, jr., United States Navy, was announced as next in order.

Mr. SMOOT. I would like to have an explanation of the bill.

Mr. SWANSON. Mr. President, the officer named in this bill has been on active service for eight or nine years, and I expect he will be continued on active service, as he is very valuable to the Navy. During the war he went abroad as a lieutenant commander. We passed a law under which the temporary rank of lieutenant commander expired on a certain date. This officer was reduced to the rank he had held, and has been in the service here in the department ever since.

It does not seem to me to be just, when a man has actually served as a lieutenant commander, not to allow him to be retired with the rank of lieutenant commander. It will increase his pay $1,100. The department did not recommend it, because they never recommend any special bill. It is left to Congress to determine whether a bill shall be passed specially or not in such a case.

Mr. SMOOT. I shall object to the consideration of the bill.

Mr. HALE. Mr. President, this is the only officer on the retired list now on active duty who does not have the rank he held during the war. It is an individual case, and I hope the Senator will not object.

Mr. SMOOT. Mr. President, this would only be a precedent established. We do not know where it would end.

Mr. HALE. I have explained that this is the only case of the kind.

Mr. SMOOT. But I object to the personal case.

The PRESIDING OFFICER. The bill goes over, under objection.

CHARLES R. SIES

The bill (S. 151) for the relief of Charles R. Sies was announced as next in order.

Mr. KING. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

LIEUT. HENRY C. WEBER

The bill (S. 2442) for the relief of Lieut. Henry C. Weber, Medical Corps, United States Navy, was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That the President be, and he is hereby, authorized to place Lieut. Henry C. Weber, Medical Corps, United States Navy, in the position on the list of lieutenant commanders in the Medical Corps of the United States Navy which he would have held had he been commissioned in the said Medical Corps of the United States Navy as of December 10, 1918: *Provided*, That the said Lieutenant Weber, Medical Corps, shall first establish, in accordance with existing provisions of law, his physical, mental, moral, and professional qualifications to perform the duties of a lieutenant commander in the Medical Corps of the United States Navy: *Provided further*, That no back pay or allowances shall accrue by reason of the passage of this act.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILLS PASSED OVER

The bill (S. 2733) to amend the military record of Joseph Cunningham was announced as next in order.

Mr. KING. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 3434) for the control of floods on the Mississippi River from the Head of Passes to Cairo, and for other purposes, was announced as next in order.

Mr. SMOOT. Let that go over.

The PRESIDING OFFICER. The bill will be passed over.

AGRICULTURAL INSURANCE

The resolution (S. Res. 51) requesting the Secretary of Agriculture to report to the Senate at the beginning of the second regular session of the Seventieth Congress his views as to whether the insurance of the farmer by the Federal Government against droughts, floods, and storms would be consistent with sound governmental and economic policy was announced as next in order.

Mr. KING. I ask that that go over.

Mr. BRUCE. Mr. President, I hope the Senator will not object to that. It simply asks for a report from the Secretary of Agriculture on this important subject. It does not carry any appropriation.

Mr. KING. I would as soon have the judgment of some insurance man, or the Senator from Maryland, and I do not say that by way of disparaging the Secretary of Agriculture, who is a very able man, and whose friendship I have the honor to have. It is not the function of the Federal Government to make investigations and report upon these questions as to the advisability of insurance. We might ask the advice of the Treasury Department as to the advisability of life insurance or accident insurance.

Mr. BRUCE. The Secretary of Agriculture is more conversant than any ordinary individual would be, of course, with the conditions called for.

The PRESIDING OFFICER. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, Senate Joint Resolution 46.

Mr. CURTIS. Mr. President, I ask unanimous consent that the unfinished business be temporarily laid aside and that we complete the consideration of unobjected bills on the calendar. It will take only about 10 minutes.

Mr. ROBINSON of Arkansas. Mr. President, I have no objection to that request. A number of Senators on this side of the Chamber have asked me to concur in it.

The PRESIDING OFFICER. Without objection, the call of the calendar for unobjected cases will be continued. The Senator from Utah [Mr. KING] has asked that Senate Resolution 51 go over.

Mr. McNARY. Mr. President, I would like very much, in the interest of this important subject matter, if the objection of the Senator from Utah might be removed. The resolution simply asks the Secretary of Agriculture to collect data and statistics in his office and report to the Congress concerning his judgment with reference to the practicability of crop insurance. It has nothing to do with the making of rates or premiums. It simply gives Congress the benefit of data and information which is badly needed and upon the basis of which we might determine future legislation and whether we should

enter that field. It is a question whether we should supply that data to mutual companies and other insurances companies for their information. I think no one would suggest that I have any desire to project the Government into this field, but there are certain data, and those data should be had for the benefit of Congress to enlighten us and enable us to determine whether we should attempt to invade that field for the purpose of legislation. I think, in the interest of that great industry, it would be very profitable if the Senator would withhold his objection.

Mr. KING. I have no objection to the Department of Agriculture submitting, for the benefit of any other department of the Government or of the Congress, any data that it has.

Mr. McNARY. That is all the resolution requires.

Mr. KING. But I fancied that there was some connection between the resolution and a bill pending, the object of which is to have the Government of the United States go into the insurance business.

Mr. McNARY. Oh, no. I must not allow that statement to pass without explanation. The bill pending is one which I myself have introduced after several years of investigation. It does not at all conceive that the Government shall ever go into that business at all. Its whole purpose is to assemble data now in the files of the Department of Agriculture, to make new investigations of county-aid work, home demonstrations, and to make further investigation in the field, other research, a further study of some of the extension work done by agricultural colleges, and after that data shall have been secured that it shall be supplied to those interested in crop insurance. There is no intimation in it, and, indeed, anyone reading the bill will see clearly that in nowise is the Government ever going to engage in that activity.

Mr. KING. I am very glad to receive the assurance of my able friend, and with his very illuminating and very persuasive statement I withdraw my objection to the consideration of the resolution offered by the Senator from Maryland.

Mr. McNARY. I feel complimented.

There being no objection, the Senate proceeded to consider the resolution, which had been reported from the Committee on Agriculture with amendments, on page 1, line 5, after the word "floods," to strike out the word "and," and in the same line, after the word "storms," to insert the words "and other hazards beyond his control," so as to make the resolution read:

Resolved, That the Secretary of Agriculture is hereby requested to report to the Senate at the beginning of the second regular session of the Seventieth Congress his views as to whether the insurance of the farmer by the Federal Government against droughts, floods, storms, and other hazards beyond his control would be consistent with sound governmental and economic policy; and if so, under what conditions such insurance should be issued.

The amendments were agreed to.

The resolution as amended was agreed to.

REREFERENCE OF BILL

Mr. LA FOLLETTE. Mr. President, I have conferred with the senior Senator from New Mexico [Mr. BRATTON] in regard to Calendar No. 308, the bill (S. 1941) to provide for the acquisition of rights of way through the lands of the Pueblo Indians of New Mexico, and in conformity with the understanding which I reached with that Senator, I request that the bill be rereferred to the Committee on Indian Affairs.

The PRESIDING OFFICER. Without objection, the bill will be recommitted to the Committee on Indian Affairs.

AIR CORPS SITE, WRIGHT FIELD, DAYTON, OHIO

The bill (H. R. 7008) to authorize appropriations for the completion of the transfer of the experimental and testing plant of the Air Corps to a permanent site at Wright Field, Dayton, Ohio, and for other purposes, was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That there is hereby authorized to be appropriated not to exceed $900,000 to be expended for the completion of the transfer of the experimental and testing plant of the Air Corps to a permanent site at Wright Field, Dayton, Ohio, and the construction and installation thereon of the technical buildings and utilities and appurtenances as may be necessary.

Mr. KING. Mr. President, I would like to have an explanation of the bill. I have received many complaints, first, in regard to the exchange or rather the sale of the field which the Government owns and upon which we have spent large sums of money, running into the millions. Some letters suggest that there is a real-estate speculation involved and that it is to the disadvantage of the Government. Others insist that it is not an appropriate place for the establishment of a field for experimental purposes, but that it ought to be nearer the coast, nearer Bolling Field, or some of the navy yards. I shall be very glad to have an explanation.

Mr. REED of Pennsylvania. Mr. President, at Dayton we had, during the war time, established a field on land which was rented in part from the General Motors Co. and in part from other owners. That lease has expired. The field is much too small, because it extends only north and south. Its greatest dimension is north and south and the prevailing winds are east and west. In acreage it is also much too small. For that reason the citizens of Dayton felt, and the Air Corps feel also, that it is desirable to have a larger field where they could have a take-off in both directions. The citizens of Dayton raised a fund and bought this tract of land now called Wright Field. It did not cost the Government of the United States anything.

On that field we have spent, up to the present year, $1,800,000, and the Army appropriation bill, as it passed both House and Senate this year, carried a further item of $300,000 to carry on the work. The original estimate was $3,000,000 to complete the construction at the new field. Of that amount $2,100,000, as I said, has either been spent or is authorized to be spent in the coming year. The Air Corps came to our committee and asked that we increase the amount of $900,000 by about $250,000, but the committee told them that there had been no cost in construction since the original estimate was made and that they must stay within the original $3,000,000. After further study of their figures they said they believe they can do it. The $900,000 would not be appropriated this year, but it is simply an authorization for next year's appropriation, and will enable them to complete the boiler house, which is now a temporary shack and considerable of a fire risk, and to complete the storehouses in which much valuable material is stored and which is always in danger of fire. For that reason the committee thought it well to give them the amount of the original estimate, which we refused to increase.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

BILL PASSED OVER

The bill (S. 1731) to provide for the more complete development of vocational education in the several States was announced as next in order.

Mr. KING. Let the bill go over. I have several amendments suggested by persons communicating with me, and I am not ready to offer them now. I did not expect that the bill would be reached to-day.

Mr. McNARY. Very well. I do not want to hasten the Senator unduly, but perhaps within a week he can have his amendments ready?

Mr. KING. I shall have them ready within two or three days.

Mr. McNARY. It is a very important measure, and the Senator from Georgia [Mr. GEORGE] is anxious to have it disposed of.

Mr. KING. I shall call the attention of the Senator to the amendments when I have them ready.

The PRESIDING OFFICER. Under objection, the bill goes over.

ALABAMA, ARKANSAS, AND OHIO BRIDGE BILLS

The following bridge bills were severally considered as in Committee of the Whole, reported to the Senate without amendments, ordered to a third reading, read the third time, and passed:

H. R. 9484. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River at or near Aliceville on the Gainesville-Aliceville road in Pickens County, Ala.;

H. R. 8899. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River at or near Epes, Ala.;

H. R. 8900. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River near Gainesville on the Gainesville-Eutaw road between Sumter and Green Counties, Ala.;

H. R. 8926. An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across Red River at or near Garland, Ark.;

H. R. 9019. An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across the Ouachita River at or near Calion, Ark.;

H. R. 9063. An act to extend the times for commencing and completing the construction of a bridge across the Chattahoochee River at or near Alaga, Ala.;

H. R. 9204. An act granting the consent of Congress to the Arkansas Highway Commission to construct, maintain, and operate a free highway bridge across the Current River at or near Success, Ark.; and

H. R. 9339. An act granting the consent of Congress to the Board of County Commissioners of Trumbull County, Ohio, to construct, maintain, and operate a free highway bridge across the Mahoning River at or near Warren, Trumbull County, Ohio.

RED RIVER BRIDGE, ARKANSAS

Mr. CARAWAY. Mr. President, Calendar No. 473, the bill (H. R. 8926) granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across Red River at or near Garland, Ark., was passed a few moments ago. The Senate recently passed a bill containing authorization for the construction of the bridge, which differs very materially from the House bill to which I have referred. There is to be a conference between representatives of the highway department and members of the House committee with reference to it. I ask, therefore, unanimous consent that the votes by which the bill was ordered to a third reading and passed may be reconsidered, that the bill may be restored to the calendar, and that it may go over.

The PRESIDING OFFICER. Without objection, it is so ordered. House bill 8926 is restored to the calendar and is passed over for future consideration.

LIEUT. CHARLES THOMAS WOOTEN

The bill (S. 1955) for the relief of Lieut. Charles Thomas Wooten, United States Navy, was considered as in Committee of the Whole. The bill had been reported from the Committee on Naval Affairs with an amendment, in line 5, to strike out "$718.25" and insert in lieu thereof "$518.25," so as to make the bill read:

Be it enacted, etc., That the Comptroller General of the United States is hereby authorized to settle the claim of Lieut. Charles Thomas Wooten, United States Navy, in the sum of $518,25 for medical, hospital, and other expenses incident to an emergency operation upon the said Lieutenant Wooten on May 23, 1924.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

AMENDMENT OF SECTION 1440, REVISED STATUTES

The bill (S. 2410) to amend section 1440 of the Revised Statutes of the United States was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That section 1440 of the Revised Statutes of the United States be amended by adding at the end thereof the following new sentence: "*Provided, however*, That the foregoing provision shall not apply to any officer of the Navy on the retired list."

Mr. ROBINSON of Arkansas. Mr. President, what is the effect of the provision?

Mr. REED of Pennsylvania. It is a matter really desired by the State Department. Section 1440 of the Revised Statutes provided that if any officer of the Navy accepted an appointment in the Diplomatic Service he should automatically be taken from the Navy list and be considered as having been discharged. It was not thought at that time by anybody who had to do with the matter that it would apply to retired officers. In fact, it was customary on occasion, when they could find suitable retired officers, to appoint them in the Diplomatic Service, and I could give a number of illustrations of distinguished diplomats who are on the retired list. However, the Comptroller General has ruled that the statute applies to the retired list as well and that no retired officer can be appointed to such places. The bill would simply correct that condition and allow a retired officer to be available, as is any other citizen. It does not apply to many officers. Very few of them are suited for the work.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

MOUNT VERNON-ARLINGTON MEMORIAL BRIDGE HIGHWAY

The bill (S. 1369) to authorize and direct the survey, construction, and maintenance of a memorial highway to connect Mount Vernon, in the State of Virginia, with the Arlington Memorial Bridge, across the Potomac River at Washington, was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That the United States Commission for the Celebration of the Two Hundredth Anniversary of the Birth of George Washington (hereinafter referred to as the commission), created by Public Resolution No. 38, approved December 2, 1924, be, and the same is hereby, authorized and directed to take such steps as may be necessary to construct a suitable memorial highway to connect Mount Vernon, the home and burial place of George Washington, in the State of Virginia, with the south end of the Arlington Memorial Bridge, now being constructed across the Potomac River at the city of Washington, D. C., acting through and by utilizing the services of the United States Department of Agriculture.

SEC. 2. That the Secretary of Agriculture is hereby authorized and directed to cooperate with said commission in carrying out the provisions of this act. He shall cause to be made such surveys as may be deemed necessary of the route, or routes, between the points named in section 1 hereof. The said commission shall determine the route on which said highway shall be constructed. The Secretary of Agriculture shall cause to be prepared such plans, specifications, and estimates for the construction of said highway as may be necessary, which shall include provision for the planting of shade trees and shrubbery and for such other landscape treatment, parking, and ornamental structures as he may prescribe, such plans and specifications to be subject to approval by the commission. He shall advertise for bids and enter into contracts for and supervise the work of constructing said highway.

SEC. 3. That the highway authorized to be constructed under the provisions of this act shall have a right of way of such minimum width as the commission shall determine, and shall be constructed only of such durable type of surfacing as will adequately meet the present and probable future traffic needs and conditions thereon. The Secretary of Agriculture is hereby authorized to occupy such lands belonging to the United States or to the District of Columbia as may be necessary for the location, construction, and maintenance of the highway authorized herein.

SEC. 4. That the Secretary of Agriculture is hereby authorized to acquire such lands as may be necessary for the proper location, construction, and maintenance of said highway, including parking, by purchase, condemnation, gift, grant, dedication, devise, or otherwise, from any source whatsoever. The Secretary of Agriculture may accept funds from any State, county, or political subdivision of a State, or from any individual or association, for the purpose of aiding in carrying out the provisions of this act. Such lands as may be acquired by purchase or condemnation may be paid for from funds authorized to be appropriated under this act, or from funds that may be donated for the purpose of aiding in carrying out the provisions hereof. Whenever it becomes necessary to acquire by condemnation proceedings any lands in the State of Virginia for the purpose of carrying out the provisions of this act, such proceedings shall conform to the laws of said State now in force in reference to Federal condemnation proceedings. No payment shall be made for any such lands until the title thereto in the United States shall be satisfactory to the Attorney General of the United States.

SEC. 5. That after the construction of said highway, the Secretary of Agriculture shall cause the same to be properly maintained, and shall pay the cost thereof from funds to be appropriated annually for that purpose, which appropriations are hereby authorized to be made. The Secretary of Agriculture shall have control over the vehicular and pedestrian movement on and over the highway constructed hereunder and may issue rules and regulations to govern such traffic and all uses of said highway, including limitations on the size, kind, weight, and speed of vehicles: *Provided*, That nothing herein shall be so construed as to conflict or interfere with the concurrent jurisdiction of the State of Virginia reserved by the laws of said State now in force over property acquired therein by the United States, or with chapter 494 of the acts of the General Assembly of Virginia, approved March 25, 1926, authorizing cooperation on the part of the State and interested subdivisions thereof in the construction of the highway herein provided for.

SEC. 6. That for the purpose of carrying out the provisions of this act, there is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, the following sums, or so much thereof as may be necessary, to be available until expended: The sum of $500,000 for the fiscal year ending June 30, 1928; the sum of $2,000,000 for the fiscal year ending June 30, 1929; the sum of $1,000,000 for the fiscal year ending June 30, 1930; the sum of $1,000,000 for the fiscal year ending June 30, 1931.

SEC. 7. That out of the appropriations made under this act, or acts amendatory thereof or supplemental thereto, the Secretary of Agriculture is authorized to employ such assistants, engineers, clerks, and other persons, in the city of Washington and elsewhere, to pay the salaries of like persons regularly employed by the Government whose services may be utilized hereunder, and to incur such travel and other expenses as he may deem necessary for carrying out the purpose of this act.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

BILL PASSED OVER

The bill (S. 2859) for the relief of Francis J. Young was announced as next in order.

Mr. KING. Mr. President, may I inquire of the Senator from Kansas if it is the rule to allow one year's salary to the heirs

of a decedent who has served in the Diplomatic or Consular Service?

Mr. CURTIS. That I could not say.

Mr. KING. My recollection is it should be only six months' salary.

Mr. CURTIS. There is a rule of the Senate providing that where an employee served for only a limited time the heirs shall receive the equivalent of six months' salary.

Mr. KING. I ask that the bill may go over.

The PRESIDING OFFICER. The bill will be passed over.

JAMES W. KINGON

The bill (H. R. 6579) for the relief of James W. Kingon was considered as in Committee of the Whole, and was read, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to James W. Kingon, out of any money in the Treasury not otherwise appropriated, the sum of $170 in *full settlement* of all pay, bounty, and allowances due him for services in Company H, Forty-second Regiment Illinois Volunteer Infantry.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

BENJAMIN S. M'HENRY

The bill (H. R. 4702) to remove the charge of desertion from the record of Benjamin S. McHenry was announced as next in order.

Mr. KING. Mr. President, I have not had an opportunity to examine the report. May we have an explanation of the bill?

Mr. REED of Pennsylvania. May I explain that?

Mr. KING. Yes.

Mr. REED of Pennsylvania. This boy was an orphan, 15 years of age. He enlisted in 1863. A three-year enlistment was not then possible. He was told by the enlistment officer that a three-year enlistment law was in process of passage and that it would apply to him. He went into the service under a five-year enlistment. The three-year enlistment law was passed immediately after that, and he was told by his company officer that he was within the three-year class. He served on through the remainder of the war and until 1867. His three years had then expired and the war was over, but he was then notified that what had been told him was erroneous, and that he would have to stay for the full five years. He was transferred to another command, and that caused this misunderstanding. His original commander had stated that he would apply for his discharge, but the new commander to whom he was transferred did not know about that and refused to do it. The young man went home; he had not yet reached his majority; in fact, he had not reached the age of 20. The committee thought, as he had served creditably during hostilities, it was fair to consider him an honorably discharged veteran.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which had been reported from the Committee on Military Affairs with an amendment in the nature of a substitute, on page 1, beginning in line 2, to strike out: "That the Secretary of War be, and he is hereby, authorized and directed to remove the charge of desertion now standing against Benjamin S. McHenry, late of Company K, Third Regiment United States Cavalry, and to grant and issue to said Benjamin S. McHenry an honorable discharge from said service and restore his proper name of Benjamin S. McHenry in lieu of the name under which he was erroneously enlisted, Henry Benjamin: *Provided*, That no back pay, bounty, or pension shall be held to have accrued prior to the passage of this act," and in lieu thereof to insert:

That in the administration of any laws conferring rights, privileges, and benefits upon honorably discharged soldiers, Benjamin S. McHenry, alias Henry Benjamin, late of Company K, Third Regiment United States Cavalry, shall hereafter be held and considered to have been discharged honorably from the military service of the United States as a private of that organization on the 17th day of May, 1867: *Provided*, That no bounty, back pay, pension, or allowances shall be held to have accrued prior to the passage of this act.

The amendment was agreed to.

The bill was reported to the Senate as amended and the amendment was concurred in.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

The title was amended so as to read: "A bill for the relief of Benjamin S. McHenry, alias Henry Benjamin."

CHARLIE M'DONALD

The Senate, as in Committee of the Whole, proceeded to consider the bill (S. 2788) for the relief of Charlie McDonald. It directs that the Postmaster General be authorized to credit the accounts of Charlie McDonald, former postmaster at Lovington, N. Mex., in the sum of $242.05, due the United States on account of the loss of postal funds resulting from the failure of the National Bank of Lovington, Lovington, N. Mex., and provides that the said Charlie McDonald shall assign to the United States any and all claims he may have to dividends arising from the liquidation of said bank.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

ONA HARRINGTON

The Senate, as in Committee of the Whole, proceeded to consider the bill (S. 2126) to provide for compensation for Ona Harrington for injuries received in an airplane accident. It proposes to pay to Ona Harrington, of Minonk, Ill., $667.40 as compensation for injuries received in an airplane accident in or near Kempton, Ill., on July 10, 1919.

The bill was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

JACOB THOMAS

The Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 2809) for the relief of the heirs of Jacob Thomas. It proposes to pay to the heirs of Jacob Thomas, formerly an employee of the Rock Island Arsenal, in the State of Illinois, in full settlement against the Government, $497.28 for the death of said Jacob Thomas, resulting from injuries received while in the performance of duty on the 1st day of November, 1901.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

SECURITY NATIONAL BANK, OF LAWTON, OKLA.

The bill (S. 50) for the relief of the Security National Bank, of Lawton, Okla., was announced as next in order.

Mr. THOMAS. Mr. President, I ask that this bill remain on the calendar at the present time.

The PRESIDING OFFICER. The bill will be passed over without prejudice.

WILLIAM VOLKERT

The bill (S. 1642) for the relief of William Volkert was announced as next in order.

The PRESIDING OFFICER. The bill being adversely reported, without objection, is indefinitely postponed.

R. DEPUE

The bill (S. 2419) for the relief of R. Depue was announced as next in order.

The PRESIDING OFFICER. This bill being adversely reported, without objection, will be indefinitely postponed.

BROOKSVILLE PLANT INTRODUCTION GARDEN

Mr. McNARY. Mr. President, some time ago I reported Senate Joint Resolution 20, and it was placed on the calendar. Subsequently it was relegated to the calendar under Rule IX. I now ask unanimous consent to take the joint resolution from Rule IX, to place it on the calendar under Rule VIII, and to substitute for it Senate Joint Resolution 95, which I now report favorably and without amendment from the Committee on Agriculture and Forestry.

The PRESIDING OFFICER. Is there objection?

Mr. KING. May I inquire of the Senator from Oregon if he wishes to have the joint resolution considered?

Mr. McNARY. Yes. I may state to the Senator, if he will bear with me for a moment, that this joint resolution proposes to authorize the Secretary of Agriculture to dispose of some property at Hernando, Fla., at one time used for experimental purposes. It is not, however, any longer desired by the Department of Agriculture to use the property for the purposes for which it was acquired.

Mr. KING. Is the measure unanimously reported?

Mr. McNARY. Yes.

Mr. KING. I have no objection to the Senator's request.

Mr. McNARY. But the report which was made on the joint resolution that I introduced was objected to by the Senator from Florida [Mr. FLETCHER]. He then submitted another joint resolution which has been reported on favorably by the Department of Agriculture, and I am asking to have it substituted for the one which I previously reported from the Committee on Agriculture.

Mr. FLETCHER. On page 19 of the calendar it appears that I had the original Senate Joint Resolution 20, placed under Rule IX, in order that it might not be called on the calendar from time to time pending the report on Senate Joint Resolution 95. Now, Joint Resolution 95, which I introduced, has been

reported back by the committee, and I desire to have it substituted for Senate Joint Resolution 20, being Order of Business 39, now under Rule IX, and to have it considered at this time.

Mr. McNARY. That is the request that I have made, which is now pending.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Oregon? The Chair hears none.

The Senate, as in Committee of the Whole, proceeded to consider the joint resolution (S. J. Res. 95) authorizing the Secretary of Agriculture to dispose of real property, located in Hernando County, Fla., known as the Brooksville Plant Introduction Garden, no longer required for plant-introduction purposes, which was read, as follows:

Resolved, etc., That the Secretary of Agriculture be, and he is hereby, authorized to sell, or cause to be sold at private sale, to the Hernando Tobacco Co., a corporation existing under the laws of the State of Florida, for the consideration of $2, being the amount originally paid by the Government to the said Hernando Tobacco Co. for the lands hereinafter mentioned, all that tract or parcel of land situate in Hernando County, Fla., ordinarily referred to as the Brooksville Plant Introduction Garden, and more particularly described as follows: The south half southwest quarter southwest quarter of section 30, township 22 south, range 20 east, containing 20 acres, more or less; and the entire portion of the north half southwest quarter southwest quarter of section 30, township 22 south, range 20, which lies south of and adjacent to the county road running through said section and township, consisting of 15 acres, more or less, in the county of Hernando, State of Florida; together with the buildings and improvements thereon, which said tract or parcel of land with the buildings and improvements aforesaid, is no longer needed for plant-introduction purposes, and to execute and deliver in the name of the United States and in its behalf any and all the contracts, conveyances, or other instruments necessary to effectuate and complete such sale.

SEC. 2. That the net proceeds from the sale of the aforesaid property be deposited in the Treasury of the United States.

Mr. McNARY. I desire at this point to have printed in the RECORD a letter from the Department of Agriculture favorable to the passage of the joint resolution.

The PRESIDING OFFICER. Without objection, it is so ordered.

The letter is as follows:

DEPARTMENT OF AGRICULTURE,
Washington, March 5, 1928.

Hon. CHARLES L. McNARY,
United States Senate.

DEAR SENATOR: I have your letter of February 22, submitting a copy of Senate Joint Resolution 95 for consideration and report.

Under date of December 18, 1926, I submitted to you for consideration by your committee a proposed joint resolution authorizing this department to dispose of the land in question, which consists of 35 acres located in Hernando County, Fla., formerly used as a plant-introduction garden by the Bureau of Plant Industry, this department, but no longer required for plant-introduction purposes. For your information, I inclose a copy of that letter.

I would like to call your particular attention to the second paragraph of the letter referred to above, which reads as follows:

"In 1911 the Hernando Tobacco Co., a corporation of the State of Florida, deeded to the Department of Agriculture, for a consideration of $1, 35 acres of land located in Hernando County, Fla., near the city of Brooksville. In consideration of the transfer of this land to the department, the tobacco company received from the authorities of Hernando County the sum of $394. The primary purpose of the department in acquiring this land was to provide a suitable place for growing, testing, propagating, and distributing oriental bamboos in connection with crop development in this country. From time to time, other lines of work were inaugurated and carried through at the Brooksville garden, which was found well adapted to experimental work in such new crops for the South as dasheen, tropical yams, chayotes, arrowroot, edible cannas, and various other crop plants. For several years, investigations in connection with the southern problems affecting the production and storing of corn were conducted at Brooksville; also extensive studies of nematodes and the study and testing of upland rice and other crops."

You will note from the foregoing that while the land was deeded to the Department of Agriculture by the Hernando Tobacco Co. for consideration of $1, the Hernando Tobacco Co. in return received from the authorities of Hernando County the sum of $394 in consideration of so doing. Under date of July 8, 1924, the board of trustees, of Hernando County, passed a resolution waiving their interests in this land, and requesting its return to the Hernando Tobacco Co. A copy of this resolution is inclosed.

In response to the department's letter of December 18, 1926, there was introduced by you in the Sixty-ninth Congress S. J. Res. 137, to carry out our recommendation. This legislation was not enacted by the last Congress. On December 9, 1927, you introduced an identical resolution, S. J. Res. 20, which was reported out favorably by the Committee on Agriculture and Forestry on January 9 last. In so far as this department is concerned, however, there is no objection to the passage of S. J. Res. 95, introduced by Senator FLETCHER. The department, having no further need for the land in question, desires authority to dispose of it. Any disposal deemed desirable by the Congress is acceptable to the department.

Very sincerely,

R. W. DUNLAP, *Acting Secretary.*

DECEMBER 18, 1926.

Hon. GILBERT N. HAUGEN,
Chairman Committee on Agriculture,
House of Representatives.

DEAR MR. HAUGEN: There is inclosed for the consideration of your committee the draft of a proposed joint resolution authorizing this department to dispose of 35 acres of land located in Hernando County, Fla., together with certain buildings and improvements thereon, known as the Brooksville Plant Introduction Garden, which property is no longer required for plant-introduction purposes.

In 1911 the Hernando Tobacco Co., a corporation of the State of Florida, deeded to the Department of Agriculture, for a consideration of $1, 35 acres of land located in Hernando County, Fla., near the city of Brooksville. In consideration of the transfer of this land to the department the tobacco company received from the authorities of Hernando County the sum of $394. The primary purpose of the department in acquiring this land was to provide a suitable place for growing, testing, propagating, and distributing oriental bamboos in connection with crop development in this country. From time to time other lines of work were inaugurated and carried through at the Brooksville garden, which was found well adapted to experimental work in such new crops for the South as dasheen, tropical yams, chayotes, arrowroot, edible cannas, and various other crop plants. For several years investigations in connection with the southern problems affecting the production and storing of corn were conducted at Brooksville, also extensive studies of nematodes, and the study and testing of upland rice and other crops.

Active work at the garden was continued until 1923. At that time, owing to the completion of some of the more important nematode projects, the fact that the experimental work in vegetable crops, such as dasheens, yams, and chayotes, had been carried as far as conditions at the station would permit, and the further fact that the limit had been reached in handling the bamboos on account of soil conditions and the presence of certain pests which were detrimental to their proper development, it was decided to close the station. The valuable collections of plants that were capable of being moved, including representatives of all the more important types of bamboos suitable for propagation and distribution, were transferred to other points and the station was placed in charge of a caretaker.

During its occupancy of the Brooksville station the department erected there a cottage, barn, storage house, and a small laboratory building. The cottage is a frame structure, was built in 1912, and is in fair condition. It is probably worth about $2,500 at the present time, although it cost the department considerably less than that sum. The barn, storage house, and laboratory are relatively inexpensive, and have been dismantled as far as practicable. These improvements, of course, add to the value of the property, but the buildings can not be advantageously removed for use elsewhere.

The availability of the Brooksville garden for other Government purposes was brought to the attention of the Federal Real Estate Board in the spring of 1925 and again in the fall of that year, but no request was received from any Government agency for the use of this property. Accordingly, on December 28, 1925, the surveyor general of real estate gave his clearance on the proposal to dispose of the land, which opens the way to the department to secure the necessary authority from Congress for such disposal.

It is difficult to estimate the value of real estate in Florida, but according to our best information the property should sell at somewhere from $6,000 to $8,500, probably in the neighborhood of $7,000. If this authority is granted by Congress, it is our plan to advertise the property for sale in the usual way and sell to the highest bidder, the net proceeds from the sale to be deposited as miscellaneous receipts in the Treasury of the United States.

Sincerely yours,

——— ———, *Acting Secretary.*

Whereas it is reported that it is the purpose of the United States Department of Agriculture to abandon the plant introduction station which has been maintained for a number of years near the city of Brooksville in Hernando County, Fla., and to discontinue at that place the propagation and distribution of introduced foreign plants, for which purpose the land on which the said station is situated was originally given by the Hernando Tobacco Co., of Brooksville, Fla.; and

Whereas it is adjudged by the board of commissioners of Hernando County, Fla., that the said county has received substantial benefits, in consequence of the establishment and operation of the said plant intro-

duction station, full return for the small appropriation made and paid to the said Hernando Tobacco Co. by the said county: Therefore be it

Resolved, That the said Hernando County does hereby surrender any claim whatsoever to equity in the said property in consequence of which the said donation of money was made, and does hereby respectfully request that the land on which the said plant introduction station is situated, together with such property thereon as is not further required by the United States Department of Agriculture, be reconveyed to the said Hernando Tobacco Co. On motion duly made and carried, the foregoing resolution was adopted.

STATE OF FLORIDA,
County of Hernando:

I, H. C. Mickler, clerk circuit court of the State and county aforesaid, do hereby certify that this is a true and correct copy of the county commissioners' minute book No. 5, of the public records of Hernando County, Fla.

Witness my hand and official seal this 8th day of July, A. D. 1924.

H. C. MICKLER,
Clerk Circuit Court.

Mr. FLETCHER. Mr. President, I understand that the joint resolution as reported from the committee has been substituted for the one to which I have referred?

The PRESIDING OFFICER. That has been done.

The joint resolution was reported to the Senate without amendment, ordered to be engrossed for a third reading, read the third time, and passed.

On motion of Mr. MCNARY, the joint resolution (S. J. Res. 20) authorizing the Secretary of Agriculture to dispose of real property, located in Hernando County, Fla., known as the Brooksville Plant Introduction Garden, no longer required for plant introduction purposes, was indefinitely postponed.

CUMBERLAND RIVER BRIDGE, TENNESSEE

Mr. DALE. Out of order, from the Committee on Commerce, I ask permission to report two bridge bills, to which I call the attention of the senior Senator from Tennessee [Mr. MCKELLAR].

The PRESIDING OFFICER. Without objection, permission is granted to the Senator from Vermont to report the bills.

Mr. DALE. First, from the Committee on Commerce, I report back favorably, with an amendment, the bill (H. R. 9199) granting the consent of Congress to the Highway Department of the State of Tennessee to construct, maintain, and operate a bridge across the Cumberland River on the Dover-Clarksville road in Stewart County, Tenn., and I submit a report (No. 486) thereon.

Mr. MCKELLAR. Mr. President, I ask unanimous consent for the immediate consideration of the bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The amendment was, on page 2, section 2, line 10, before the word "approaches," to strike out "cost of the bridge and its" and insert "cost of the bonds authorized under the laws of the State of Tennessee for the construction of this and other bridges and their," so as to make the section read:

SEC. 2. If tolls are charged for the use of such bridge, the rates of toll shall be so adjusted as to provide a fund sufficient to pay the reasonable cost of maintaining, repairing, and operating the bridge and its approaches under economical management, and to provide a sinking fund sufficient to amortize the cost of the bonds authorized under the laws of the State of Tennessee for the construction of this and other bridges and their approaches, including reasonable interest and financing cost, as soon as possible under reasonable charges, but within a period of not to exceed 25 years from the completion thereof. After a sinking fund sufficient for such amortization shall have been so provided, such bridge shall thereafter be maintained and operated free of tolls, or the rates of toll shall thereafter be so adjusted as to provide a fund of not to exceed the amount necessary for the proper maintenance, repair, and operation of the bridge and its approaches under economical management. An accurate record of the costs of the bridge and its approaches, the expenditures for maintaining, repairing, and operating the same, and of the daily tolls collected, shall be kept and shall be available for the information of all persons interested.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

The title was amended so as to read: "An act granting the consent of Congress to the Highway Department of the State of Tennessee to construct, maintain, and operate a bridge across the Cumberland River, on the Dover-Clarksville road, in Stewart County, Tenn."

TENNESSEE RIVER BRIDGE, TENNESSEE

Mr. DALE. From the Committee on Commerce I report back favorably with an amendment the bill (H. R. 9198) granting the consent of Congress to the Highway Department of the State of Tennessee to construct, maintain, and operate a bridge across the Tennessee River, on the Paris-Dover road, in Henry and Stewart Counties, Tenn., and I submit a report (No. 485) thereon.

Mr. MCKELLAR. I ask unanimous consent for the immediate consideration of the bill which was just reported by the Senator from Vermont.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

The amendment was, on page 2, section 2, line 10, before the word "approaches," to strike out "cost of the bridge and its" and insert "cost of the bonds authorized under the laws of the State of Tennessee for the construction of this and other bridges and their," so as to make the section read:

SEC. 2. If tolls are charged for the use of such bridge, the rates of toll shall be so adjusted as to provide a fund sufficient to pay the reasonable cost of maintaining, repairing, and operating the bridge and its approaches, under economical management, and to provide a sinking fund sufficient to amortize the bonds authorized under the laws of the State of Tennessee for the construction of this and other bridges and their approaches, including reasonable interest and financing cost, as soon as possible under reasonable charges, but within a period of not to exceed 25 years from the completion thereof. After a sinking fund sufficient for such amortization shall have been so provided, such bridge shall thereafter be maintained and operated free of tolls, or the rates of toll shall thereafter be so adjusted as to provide a fund of not to exceed the amount necessary for the proper maintenance, repair, and operation of the bridge and its approaches under economical management. An accurate record of the costs of the bridge and its approaches, the expenditures for maintaining, repairing, and operating the same, and of the daily tolls collected, shall be kept and shall be available for the information of all persons interested.

Mr. KING. I should like to ask whether that bill is in the usual form?

Mr. DALE. Yes, Mr. President; these bills are all in the regular form.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendment was concurred in.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

BILLS RECOMMITTED

Mr. REED of Pennsylvania. I ask unanimous consent that Order of Business No. 420, being the bill (S. 2387) to authorize appropriations for contingencies of the Army, and Order of Business No. 437, being the bill (S. 1830) to authorize the Secretary of War to withhold pay or allowances of any person in the military service to cover indebtedness due a State or its military agencies or instrumentalities be recommitted to the Committee on Military Affairs.

The PRESIDING OFFICER. Without objection, it is so ordered.

CALL OF THE ROLL

Mr. CURTIS. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Ashurst	Ferris	La Follette	Shipstead
Barkley	Fess	McKellar	Shortridge
Bayard	Fletcher	McMaster	Simmons
Black	Frazier	McNary	Smith
Blaine	George	Mayfield	Smoot
Blease	Gerry	Metcalf	Steck
Borah	Glass	Neely	Steiwer
Bratton	Gooding	Norbeck	Stephens
Brookhart	Gould	Norris	Swanson
Broussard	Greene	Nye	Thomas
Bruce	Hale	Oddie	Tydings
Capper	Harris	Overman	Tyson
Caraway	Harrison	Phipps	Wagner
Copeland	Hawes	Pine	Walsh, Mass.
Couzens	Hayden	Pittman	Walsh, Mont.
Curtis	Heflin	Ransdell	Warren
Cutting	Howell	Reed, Pa.	Waterman
Dale	Johnson	Robinson, Ark.	Watson
Deneen	Jones	Robinson, Ind.	Wheeler
Dill	Kendrick	Sackett	Willis
Edge	Keyes	Schall	
Edwards	King	Sheppard	

The PRESIDING OFFICER. Eighty-six Senators having answered to their names, a quorum is present.

MUSCLE SHOALS

The Senate, as in Committee of the Whole, resumed the consideration of the joint resolution (S. J. Res. 46) providing for the completion of Dam No. 2 and the steam plant at nitrate plant No. 2 in the vicinity of Muscle Shoals for the manufacture and distribution of fertilizer, and for other purposes.

Mr. McNARY. Mr. President, I am just in receipt of a report from the Secretary of Agriculture on the pending joint resolution, being Senate Joint Resolution 46, introduced by the Senator from Nebraska [Mr. NORRIS] and reported from the Committee on Agriculture and Forestry. I should like to have the report read at this time by the clerk.

The PRESIDING OFFICER. Without objection, the report will be read.

The legislative clerk read as follows:

DEPARTMENT OF AGRICULTURE,
Washington, March 3, 1928.

Hon. CHARLES L. MCNARY,
Chairman Committee on Agriculture and Forestry,
United States Senate.

DEAR SENATOR: Please refer to your letter of December 17, with its inclosed copy of Senate Joint Resolution 46, which you forwarded to me for consideration and report.

This resolution has been read with interest. It is noted that the Secretary of War is authorized and directed to complete and operate the power facilities and to sell the current generated and deposit the net income in a special fund in the Treasury, and that the Secretary of Agriculture is authorized and directed to carry out a fertilizer program for the benefit of agriculture, using the fund, as appropriated by Congress, in accordance with instructions contained in the resolution.

I am in favor of those provisions of the resolution which provide that the power and fertilizer phases of the Muscle Shoals project shall be handled separately and that the income from the power be dedicated to agriculture and used to introduce improved fertilizers and better fertilizer practice. I am convinced that this is sound policy and should be adhered to. Under the authorization granted the Secretary of Agriculture, this department will be able to use the income from the power facilities in a way to give agriculture the maximum benefit. The provisions of the resolution covering the fertilizer program have the flexibility which is necessary if efficient work is to be done in this field, where changes come so rapidly.

The advisability of directing at this time the completion of the machinery installation at Dam No. 2 and the steam plant at nitrate plant No. 2 is questioned. Decision on this point would, of course, largely depend on the policy adopted in disposing of the power problem. Since it is the policy of the administration to dispose of the property, if possible, it may be pointed out that authorization is lacking in the bill to allow lease of the hydroelectric facilities and lease or sale, in whole or in part, of the nitrate plants, including the steam units, which alternatives the administrative agency finally intrusted with the property should have.

Sincerely,

W. M. JARDINE, *Secretary.*

(Submitted to the Bureau of the Budget, pursuant to Circular No. 49 of that bureau, and returned to the Department of Agriculture under date of March 2, 1928, with the advice that the foregoing report is not in conflict with the financial program of the President.)

Mr. BLACK. Mr. President, in order that I may again make clear my position with reference to the pending joint resolution, I will state that the interest of the people of Alabama in the operation of Muscle Shoals is a fertilizer interest. They care nothing for the power. So far as they are concerned, this is not a power fight.

I listened with a great deal of interest to the closing remarks of the Senator from Nebraska [Mr. NORRIS], who drew a wonderful picture of the possibilities of universal electrification of farm life; but the Senator from Nebraska has not had the experience which Senators from the South have had in States where the farmers are ground down by an immense fertilizer bill. I am not opposing the Senator's viewpoint, so far as his disposition of the power is concerned, provided a sufficient amount has been utilized for the manufacture of fertilizer.

I wish to state that I hoped that the Senators from Louisiana and Mississippi would be here in order that I might say to them that so far as Alabama is concerned the statement that she has been seeking to gobble up this power is unfounded in theory or in fact. If we could get the operation of that plant to its full capacity in the manufacture of fertilizer, even though I think a law to that effect would be legally indefensible, I would be willing, in order to get the fertilizer, to let the few people of certain States that are clamoring for that power, and who are throwing in the objection that "we will not get our part of the power," have the distribution of the remainder of the power, according to their position.

The point I want to bring out is that we are not interested in Muscle Shoals as a power proposition.

I notice, on the map of the fertilizer used in the United States, that Alabama alone appears to consume more fertilizer than all the States west of Missouri, with California excluded.

I have not added up the figures, but I believe even with California that Alabama alone buys more fertilizer than all the States west of Missouri. Therefore Alabama is pleading with the representatives from other States who are more fortunate than we; and I hope that before the fight is over we will be joined by every other southern representative. Putting aside immaterial issues, we are pleading with the representatives of the other States not to try to impose upon Alabama a power rate as contradistinguished from a fertilizer rate. We want fertilizer distributed to the farmers of this Nation. The farmers are not clamoring for power—they want fertilizer.

If you should go to the farmers of Alabama to-day and say, "We want to reduce the rate charged for the power that you receive on the farms," you would help them just as much, comparatively speaking, as though you told them that you would lower the price of evening clothes and silk hats and walking sticks and Lincoln automobiles. They are interested not in cheap power but in cheap fertilizer; and that is the entire basis of my remarks.

Mr. COPELAND. Mr. President, will the Senator yield?

Mr. BLACK. Yes, sir.

Mr. COPELAND. I notice that in my State of New York, according to this map, in 1920 the farmers paid $15,000,000 for fertilizer, as against $7,000,000 in 1910. I observe in most instances that the amount paid at the later date is much more, perhaps double, the amount paid at the first date. Is that due to the fact that more fertilizer is being used, or to a material increase in the price of fertilizer, or both?

Mr. BLACK. I will furnish the Senator from New York with a table which embodies the answer as to the amount. That is the amount of fertilizer used. However, as the States grow older, and as the Western States grow older, by the way, the nitrogen will tend to become exhausted, and the longer the farm is worked without replenishing the nitrogen the weaker it becomes in plant-food content; and that is true, perhaps, with reference to New York.

Another thing: The truck farmers are beginning to use more fertilizer and to produce more food.

Mr. COPELAND. Mr. President, will the Senator yield just a moment further?

Mr. BLACK. Yes, sir; I yield.

Mr. COPELAND. I notice in my State, referring to the second map handed me by the Senator, that the quantity consumed was practically the same in 1920 and in 1910. Therefore, it must indicate, since the bill is twice as great, that there has been a tremendous increase in the price of the fertilizer. I assume that the chief thought the Senator from Alabama and also the Senator from Nebraska have in mind is that some means shall be found materially to reduce the cost of fertilizer, so that the farmers may have it at a decent price.

Mr. BLACK. The Senator has exactly touched the point that I am endeavoring to present here to-day.

I do not join issue with the Senator from Nebraska [Mr. NORRIS] on the good that can come from cheap power, nor do I dispute the point he makes that power is sold too high in America. I think I established my thought with reference to that by my vote in favor of the Walsh resolution which provided for an investigation of the so-called Power Trust. The position I take is that the farmers of the South need a cheapening of the commodity which they must buy in the largest quantities and not the thing which they buy in the smallest quantities.

If this question were put to a vote of the farmers of the South, I venture the assertion that in every State where they use fertilizer, 99 out of 100, or 999 out of 1,000, would vote in favor of the operation of this plant for fertilizer, the operation from which they would derive the greatest benefit.

Mr. NORRIS. Mr. President, will the Senator yield there?

The PRESIDING OFFICER (Mr. BROOKHART in the chair). Does the Senator from Alabama yield to the Senator from Nebraska?

Mr. BLACK. I yield; yes.

Mr. NORRIS. Would those intelligent men vote to operate this plant for cheap fertilizer and utilize the water power to make fertilizer if they knew when they were thus voting that it was an impossibility to make cheap fertilizer until the methods had been improved? In other words, admitting that they want and ought to have cheap fertilizer, would they say, "You shall not cheapen power until you cheapen fertilizer"?

Mr. BLACK. I will answer that by stating to the Senator that I have made a very careful study and shall present figures to show that, in my judgment, the Senator from Nebraska, through his idea of Government operation in order to reduce the price of power—I do not criticize him for it; I am not joining issue with him on the necessity of reducing the price of power—has consistently fought the Ford offer, has fought every other offer, and his vision has been dazzled by the glare of electric power. It can be proven by the figures from the Government engineers in their test plant that the farmers of the South would save millions of dollars if the cyanamide plant at Muscle Shoals were opened up to-morrow.

That is the position I take, with all due deference to the views of the Senator from Nebraska.

Mr. SMITH. Mr. President, if the Senator will allow me, I have here a bulletin on industrial and engineering chemistry from the fixed nitrogen research laboratory of the Department of Agriculture that is very illuminating right on that point. It says, on page 9:

> By diverting the power now being used to fix the 40,000 tons of nitrogen as of the year 1925 by the arc process to the direct synthetic ammonia process, 100,000 tons of nitrogen could be fixed.

Showing that the amount of power used now to produce a unit of nitrogen is perhaps 100 per cent more effective than it ever was before, and it is still developing. By that process of reasoning, each unit of the power that we may develop at Muscle Shoals will produce to-day, under the inventive genius of the age, one hundred times more nitrogen than it would 10 years ago.

Mr. BLACK. I thank the Senator for that.

Mr. NORRIS. Now, will the Senator permit another interruption, so that we may have an understanding with the Senator from South Carolina?

Mr. BLACK. I yield.

Mr. NORRIS. I would like to have the Senator from South Carolina state whether he means, by his statement now, to bear out the statement made by the Senator from Alabama, that if we utilize cyanamide plant No. 2, we can do what he says we can do?

Mr. SMITH. Mr. President, I do not think the cyanamide plant or any other plant should cut any figure whatever in the disposition that is to be made of this project. The question for us to decide as sensible men intrusted with the duty to provide what this law makes it obligatory upon us to do is to determine what is the most efficient method by which we can get fertilizer for the farmers, during times of peace. I do not know whether the nearness or the availability of coal, which is so essential in the production of ammonia under the synthetic process, would justify the utilization of the power at Muscle Shoals for the direct production, or whether it would be better to develop the power, dedicate it to agriculture, sell it as provided under the Norris resolution, and take the proceeds and establish these plants at the points where this ingredient may be the more economically and efficiently produced. I believe it is our duty to dedicate this power to agriculture, as the original law did, appoint a commission of agriculturalists, turn it over to the farmers of this country, and let them, with their intelligence, decide what is best to do for themselves, not turn it over to a power company, not turn it over to some fertilizer trust, but to the men who are directly interested and to whom we have dedicated it. Let them form a proper organization, take charge of the property, and run it for their own benefit. That is my idea about it.

Mr. BLACK. Mr. President, as far as I am concerned, I may repeat what I said yesterday. I do not believe the Senator from Nebraska was here at the time I made the statement. I do not care what process is used; I have no preference. I am convinced in my own mind that fertilizer can be manufactured under either process at a great saving to the American farmer. I am further convinced that if the Senator had gone to the cyanamide plant at the time he went to the Du Pont plant the people who were at that plant would have taken issue with the people at the Du Pont plant. The people at the Du Pont plant have bought and have the privilege of using the synthetic process patent. The people at the cyanamide plant have bought and have the privilege of using the cyanamide process. Both of them are manufacturing ammonia at a profit.

Mr. NORRIS. Mr. President, will the Senator yield?

Mr. BLACK. I yield.

Mr. NORRIS. I would like to suggest to the Senator that the difference between what I did and what the Senator is doing is that I sought disinterested witnesses, although I would have been very glad to visit the cyanamide plant, as he has suggested. I did visit the cyanamide plant at Muscle Shoals on two different occasions and had it explained to me in complete detail by experts. But I was seeking disinterested evidence. While the Senator is offering the evidence in favor of the cyanamide process from cyanamide people, I wish he would answer the testimony which I put into the RECORD several days ago from these very officers, when the Ford bill was pending, when they themselves said that fertilizer could not be made at a reasonable price.

Mr. BLACK. I expect to do that.

Mr. NORRIS. While I am interrupting the Senator, and to save another interruption, let me further state that what the Senator from South Carolina has said is just what the resolution that I am trying to pass through the Senate provides for, and I am perfectly willing, although it is not included by name in the resolution, to amend it to include cyanamide plant No. 2 and turn it over to the Secretary of Agriculture. I am perfectly willing to do that. If he is a practical man, as he says in his letter he is, and knows something about fertilizer, he would not, unless he were directed and compelled to do so, waste the power to operate plant No. 2 in making fertilizer, when he knew in advance that he was going to lose money by the operation. Under my resolution he would have the authority; he would not be confined to any process. He could take the cyanamide process if he wanted to. The world would be open to him. There would be no strings tied to him. He could take any process, any method, now known or which may hereafter be discovered, and develop it to almost any size that he sees fit, either at Muscle Shoals or elsewhere.

Mr. BLACK. Does the Senator know where Mr. Ernst is working now, the gentleman who was formerly with the Department of Agriculture, from whom the Senator quoted?

Mr. NORRIS. I quoted from the testimony of Mr. Hanna, who was vice president of the Cyanamid Co.

Mr. BLACK. I remember that, but I am talking about Mr. Ernst.

Mr. NORRIS. And from Mr. Washburn.

Mr. BLACK. I expect to answer those statements, but does the Senator recall quoting from a man in the Department of Agriculture?

Mr. NORRIS. I do not remember the name.

Mr. BLACK. My information is that shortly after that statement was given out he went with the synthetic people, and I might state right here——

Mr. NORRIS. Let me say, while I know nothing about any chemist who was going into the business of getting nitrogen from the air and wanted to do it on a scientific basis, under the present knowledge in the scientific world of the method of extracting nitrogen from the air, he would not have any place to go except to some of the people operating under the synthetic process, because that is acknowledged in the scientific world to be head and shoulders above every other.

Mr. BLACK. That is where the Senator and I differ.

Mr. NORRIS. Assuming, for the sake of the argument, that the Senator is right, and that all the scientific world is wrong, the disinterested scientific world——

Mr. BLACK. The Senator is assuming that all the scientific world has taken his side on the question, and all the scientific world has not.

Mr. NORRIS. I do not say it has. I think in the great scientific world there are as many disinterested people as in any profession in the world. I did not exhaust the witnesses; I can get hundreds more of them, but in my humble judgment some of the witnesses who appeared have no interest in any particular process, no object on earth except to do what is right and to do the best thing.

Mr. BLACK. The Agricultural Yearbook for 1926 contains this significant statement:

> A number of technical men have left this department to enter the synthetic-ammonia industry.

Mr. NORRIS. That is the most natural thing in the world. You would not expect anything else.

Mr. BLACK. No; I would not expect anything else from a department that is giving out propaganda to the effect that a process is a failure, when that process is competing in the open markets of the world with the synthetic process and in certain instances is driving them from the field in which they engage in business.

Now, may I say this: I have before me a letter from Dr. Albert R. Franck, the well-known German chemical engineer, with reference to a part of this propaganda. I did not expect to bring this up at this time, but since the question of the scientific world is brought up, I desire to read from this letter to Mr. Ernst. He states:

> I have read with much interest your article on nitrogen fixation which appeared in the Journal of Industrial and Engineering Chemistry last February, and which has been reproduced in abstract in a number of other publications.

I am reading this, because one may keep on saying a thing until everybody will believe it. The statement has been made so many times that the cyanamide process is obsolete and worn-out and useless, that many people have accepted the statement as true without investigation. I read further:

It seems clear to me that the purpose of this article was to make propaganda for political purposes, and you have departed so widely from the existing facts in the presentation of your data in order to meet your object that I must, in fairness to the industry, bring to your and to the public's attention a much more correct and true picture.

Under your classification of arc process plants, the truth is that the plant at Rhina has a capacity of only 2,000 metric tons of nitrogen per year (against the 4,500 tons given by you), and is producing at the rate of only 1,000 metric tons of nitrogen per year. The plant at Pierrefitte (France) has been abandoned for some time and is dismantled.

With regard to the cyanamide process plants our Piesteritz plant has been, and is to-day, operating at its full rated capacity of 35,000 metric tons of nitrogen per year. Our Trostberg plant was enlarged last year to a capacity of 55,000 metric tons of nitrogen per year, and is operating to full capacity. The Knapsack plant produced, in 1926, 3,000 metric tons of nitrogen more than you credit it with. A new German plant at Hirschfelde was started last year and plans for its enlargement are under way. Still another large plant in Upper Silesia is at present under construction. Also you seem to have overlooked the Swiss cyanamide plant at Gampel, though it was in full production in 1926.

That is part of the propaganda that has been issued by this department.

The Polish plant produced 5,000 metric tons of nitrogen more than you credit it, and when construction work on both the power and the cyanamide plant are completed a much greater production is in sight. The Karlsbad (Falkenau) plant is producing to capacity and Czechoslovakia has been forced to import cyanamide to meet the local demands. The large plant of the Russ Co. in Yugoslavia has been omitted from your tabulation, though it has been in operation for years.

That, Senators, is the kind of propaganda that has been issued by the Department of Agriculture, a large number of whose men have gone into the service of the synthetic plant, monopolized by the Allied Chemical Co. of this Nation.

Mr. SMITH. Mr. President, may I ask the Senator from whom he is reading?

Mr. BLACK. I am reading from Dr. Albert R. Franck, of Germany.

Mr. SMITH. He is interested in what?

Mr. BLACK. He is interested in cyanamide. He is interested in both processes.

Mr. NORRIS. He is the same man who testified over here in favor of cyanamide, who was sent out without saying that he was a vice president of the cyanamide company.

Mr. BLACK. This man Frank?

Mr. NORRIS. He has a direct interest in what he is talking about.

Mr. BLACK. The Senator is very badly mistaken about that, I think. This man lives in Germany.

Mr. NORRIS. That is what I say.

Mr. BLACK. Vice president of the cyanamide company here?

Mr. NORRIS. No; I did not say he was.

Mr. BLACK. Let me read this, and if anybody can prove it is not true let him produce the facts. I have a statement of the facts here from the Department of Commerce for anybody who desires to read it. I have a large number of bulletins before me. When certain people went to the Department of Commerce and said, "There is something wrong about cyanamide; we want you to investigate it yourself," the Department of Commerce proceeded to do so, and I have a great many of their bulletins here on my desk. Let me read the rest of this:

One would naturally infer from reading your French statistics that the plants there were operating at only a small percentage of their capacity. But the contrary is true, for all these plants have produced to the limit of installed manufacturing capacity, or to the limit of the power available. The consumption of cyanamide during the fertilizer year just closing has shown some remarkable increases. In percentage increase over the previous year for several of the larger consuming countries of Europe we find for Germany, 20 per cent; for Belgium, 100 per cent; for Sweden, 60 per cent; and for Poland, 60 per cent. There has also been large exports to countries which have not used cyanamide before, as, for example, Spain, Egypt, and India.

Your choice of method of presentation of the statistics of the direct synthetic ammonia process is so different from that used for the other processes, and the data therein given of such a different character, that similar comment to the above is not possible. Not only have you been careful not to omit any synthetic plants, but I find a number in your list that my most careful research can not confirm their possible existence within measurable time. You list as operative and prospective capacities some 650,000 metric tons of nitrogen per year, of which the two large plants in my country are given 360,000 metric tons (which is not correct), leaving as a remainder for all other 290,000 metric tons of nitrogen per year. The actual present rate of production, including plants completed since your paper was written, will not exceed, for countries other than Germany, 110,000 metric tons of nitrogen per year. Of plants to be built or finished, according to present plans, we can at most estimate a further production in these countries of 40,000 to 50,000 metric tons of nitrogen per year.

The present productive capacity of the existing nitrogen-fixation plants and those under construction, in addition to the natural and by-product nitrogen, gives the world a large overproduction at the present time. The fierce competition which will ensue during the next few years will result in such a lowering of prices that some of the smaller synthetic plants with their present high overhead charges will, of necessity, be forced out of operation.

May I state right here that one of the synthetic plants which the Senator from Nebraska listed as having been given to him as one of the great producing plants at Niagara Falls is in bankruptcy to-day. Not only that, but before it went into bankruptcy it went to the Cyanamid people and endeavored to get them to buy the process or the plant, and they declined to do it. The Cyanamid Co., which had first right of choice when the synthetic proposition came to this country, according to my information, was asked to buy the synthetic process. Their engineers investigated it and they then declined to do it because their process, as they believed, is cheaper. Then it went to the Allied Chemical Co., and if the Cyanamid Co. is a trust, I ask you, pray tell me what is the Allied Chemical Co.? I will discuss the cyanamide business later.

Mr. NORRIS. Mr. President, I want to ask the Senator a question. I want to ask the Senator if the testimony he has just given about these plants did not come to him from officials of the Cyanamid Co.?

Mr. BLACK. I got the testimony; yes.

Mr. NORRIS. That is what I thought.

Mr. BLACK. About the bankruptcy?

Mr. NORRIS. Yes.

Mr. BLACK. If the Senator challenges the statement that one of the plants he listed is in bankruptcy, I ask him to investigate.

Mr. NORRIS. No; I do not challenge the statement.

Mr. BLACK. I do not care from whom I got it if it is correct information.

Mr. NORRIS. It is all right to get information, but it is always right, even in a lawsuit before a justice of the peace, when a witness is put on the stand, to see whether he is interested in the result of the suit. The witnesses I have had to testify had no interest in the result of the suit.

Mr. SMITH. Mr. President, may I ask the Senator a question?

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from South Carolina?

Mr. BLACK. I yield.

Mr. SMITH. The Senator is quoting from certain parties who are experts. What are we to do? We have a bureau, supported by the Government, charged with the duty of investigating and experimenting in all the processes looking toward the cheapening and increase of facilities for a process, and they in their bulletins from time to time give us the facts. Now, if it has come to pass that we have to impeach our own Government forces and claim that they are interested in private enterprises, it is time for us to abolish those forces or impeach those individuals. I have gone on the assumption that the bureau which we have charged with this matter, in charge of the atmospheric fixation plant down in Virginia, looking toward getting those facts for us, was conducted on an honest basis. I can not understand how they can come here and give us the facts which they do give us if they are prejudiced and if they have a private personal interest. The charge is made that they are interested in the commercial feature, and the claim is made that the facts set forth by our Government forces are untrustworthy, so shot through with determination to break down one and set up another that it arouses me to make the inquiry. However, I am not yet ready to accept that statement.

Mr. BLACK. I can not tell just exactly which side the Senator has taken in that controversy. I did not exactly get the point the Senator made.

Mr. SMITH. The point I am making is that the Senator is reading articles from the employees of the Cyanamid people.

Mr. BLACK. That is a mistake, I may say to the Senator.

Mr. SMITH. The Senator is reading from statements of those engaged in the business.

Mr. BLACK. In Germany.

Mr. SMITH. What we are trying to get at is what is the best process for getting these ingredients for agricultural purposes, and to go immediately to the manufacture thereof without the indirect method of experimentation any further than the Government is forced to.

Mr. BLACK. My idea is, I repeat, that if Senators from the South who are the most interested in this controversy, whose constituents need fertilizer most, are not willing to face the facts as they are, to place fertilizer above power, fertilizer first and always, and act in harmony and unity, how can we expect the Senators from the West, who are not interested in fertilizer, and how can we expect the Senators from the North, who are slightly interested in fertilizer, to do so? I am endeavoring to bring the facts here as I see them. It matters not to me who furnishes the facts. If it is a fact it is the truth.

Now, here is a man in Germany who is in charge of the cyanamide division of the German Government nitrogen syndicate. Why he should want to give a statement which is untrue, which might tend to bring about competition against him in America, is far beyond me to comprehend.

Let me go a little further. The question was asked yesterday about cyanamide and about concentrated fertilizer by the Senator from North Carolina [Mr. SIMMONS]. I have obtained the Agricultural Yearbook for 1926, in which they give a picture of a cotton crop which is growing with the aid of concentrated fertilizer. All these reports say that eventually we must come to concentrated fertilizer. There is no dispute about it. Cyanamide is being shipped into America. There was shipped into this country last year from the cyanamide plant, utilized in fertilizer in the United States, 55,272 tons. That went to fertilizer factories, who took it and substituted it for Chilean nitrate at the lowest prices, as I have given it to the Senate, manufactured under the cyanamide process. But if it had been produced at Muscle Shoals there would have been no intermediaries and the farmer would have received the direct benefit of the reduction. If Muscle Shoals had been operating as a fertilizer plant there would have been a farmers' organization, and the farmers in North Carolina, South Carolina, Georgia, and Mississippi, and all the farmers who are being ground down under the heels of the Chilean trust, paying $12.53 a ton, would have saved money.

My argument is, let us forget the little insignificant differences that amount to nothing with reference to surplus power, because there would not be much there—and I will show it in a few minutes—and let us present a united front and not experiment in fertilizer for 10 years. Let us manufacture fertilizer for the farmer and stop quibbling over immaterial details.

Mr. SIMMONS. Mr. President, I would like to see if I understand what the Senator stated. I have not heard all of his remarks this morning, because I have been necessarily absent from the Chamber, but I believe he said on yesterday that we used about 800,000 tons of nitrate.

Mr. BLACK. Chilean nitrate.

Mr. SIMMONS. As fertilizer?

Mr. BLACK. No; I did not say as fertilizer. The Senator misunderstood me. It is impossible to tell exactly what percentage of that was used in fertilizer and what part was used for other purposes. The guess is by some that probably 75 per cent was used in fertilizer.

Mr. SIMMONS. The Senator has been investigating the matter. Can he tell me what amount of nitrate of soda product is used in the manufacture of fertilizer in this country?

Mr. BLACK. I would say about 75 per cent of 838,000 tons. Does the Senator mean Chilean nitrate?

Mr. SIMMONS. I mean Chilean nitrates and all kinds of nitrates.

Mr. BLACK. I have that figured out and will give the figures to the Senator later.

Mr. SIMMONS. Seventy-five per cent?

Mr. BLACK. That is the estimate.

Mr. SIMMONS. That is, 75 per cent of 800,000 tons?

Mr. BLACK. Seventy-five per cent is estimated to be the amount of the Chilean nitrate that is used in fertilizer.

Mr. SIMMONS. That is 800,000 tons, is it not?

Mr. BLACK. Seventy-five per cent of it.

Mr. SIMMONS. Did not the Senator state that yesterday?

Mr. BLACK. I said 838,000 tons; yes.

Mr. SIMMONS. And the Senator now tells us that there went into the production of the 838,000 tons some 55,000 tons of cyanamide?

Mr. BLACK. No; those two are entirely separate and distinct.

Mr. SIMMONS. I do not see how the Senator separated them.

Mr. BLACK. They are separated because the 838,000 tons was shipped in from Chile as Chilean nitrate, while the 55,000 tons was shipped into America as cyanamide, both of them being used in fertilizer.

Mr. SIMMONS. Does the Senator mean to say that he can state here that there was 55,000 tons of cyanamide shipped into this country that was used——

Mr. BLACK. Fifty-five thousand two hundred and seventy-two tons.

Mr. SIMMONS. That was used in the production of fertilizer?

Mr. BLACK. Yes.

Mr. SIMMONS. Can the Senator tell us what proportion of the amount of cyanamide produced in this country went in the same way?

Mr. BLACK. None was produced in this country.

Mr. SIMMONS. No cyanamide?

Mr. BLACK. No.

Mr. SIMMONS. Then it all came from abroad?

Mr. BLACK. It all came from Niagara Falls, Canada.

Mr. SIMMONS. Is there not some cyanamide produced in this country?

Mr. BLACK. No, sir.

Mr. SIMMONS. None at all?

Mr. BLACK. Part of this work is done at Niagara Falls and part of it was done at Warners, N. J. I am going to point out later that even at present prices the phosphate rock is shipped to Warners, N. J., from Florida. The ammonium is shipped to Warners, N. J., from Niagara Falls.

Mr. SIMMONS. Was there any limitation imposed upon the amount of cyanamide that we might get from abroad for the manufacture of fertilizer?

Mr. BLACK. Any limitation?

Mr. SIMMONS. Yes.

Mr. BLACK. I do not know of any.

Mr. SIMMONS. That is to say, we could have gotten from abroad the whole amount we needed for nitrogen products?

Mr. BLACK. No. That could not be true, because they were importing cyanamide abroad. They did not have enough for their own consumption. They have driven Chilean nitrates out of business over there with the fixed nitrogen. They bought some from over here, instead of shipping it from over there to this country.

Mr. SIMMONS. Can the Senator furnish us any information showing that cyanamide as a substitute for Chilean nitrate is sold in the market to the farmer at less price than he has to pay for the Chilean nitrate?

Mr. BLACK. No, sir; I can not because it is not. I have just explained why. It is shipped now at a low price to the fertilizer factories, and the fertilizer factories keep up the price the same as though it were Chilean nitrate. What we want is to have it manufactured at Muscle Shoals and sold directly to the farmer instead of going through the wholesaler.

Mr. SIMMONS. Then the Senator claims that the fertilizer producers could make fertilizer out of cyanamide and sell it at a very much less price than they can sell Chilean nitrates?

Mr. BLACK. If they had a cyanamide plant, they certainly could do so.

Mr. SIMMONS. I want to ask the Senator if he knows why, if cyanamide is such a cheap substitute for nitrate of soda, that industry has not been developed in this country?

Mr. BLACK. I explained that on yesterday, I will say to the Senator from North Carolina, but I shall be glad to explain it again.

Mr. SIMMONS. I did not understand that the Senator had explained it yesterday.

Mr. BLACK. Fertilizer factories to-day are not built and equipped to manufacture cyanamide. They are not built to fix nitrogen from the air.

Mr. SIMMONS. That is begging the question that I have asked.

Mr. BLACK. If the Senator will let me finish, I shall answer his question as best I can; but if the Senator thinks it is begging, of course I can not help that.

Mr. SIMMONS. I did not say the Senator was begging, but I said that he was begging the question.

Mr. BLACK. I do not think so, with all due deference. Here is the explanation: The fertilizer business is using antiquated machinery. It looks as though unless the Government permits the plant at Muscle Shoals to fix nitrogen from the air and drives the fertilizer companies to abandon their antiquated machinery they will never advance a peg, and that the farmers of the country will continue to buy their fertilizer at an extraordinarily high rate. The farmers of North Carolina bought fertilizer containing cyanamide last year; it was one of the ingredients; but the price has not been reduced. The price would

be reduced, however, in the ultimate course of business if the fertilizer factories were operating and turning loose a huge amount of cyanamide on the market; but the fertilizer factories would have to put in new machinery to fix nitrogen from the air in order to manufacture it.

Mr. BROOKHART. Mr. President, will the Senator from Alabama yield to me?

Mr. BLACK. I yield.

Mr. BROOKHART. On the question of reducing the price, is it not the Cyanamid Co., to which the Senator wants to turn over this plant, the greatest offender of all in the United States? If it were doing its duty to the farmer, could it not have reduced the price of fertilizer years ago?

Mr. BLACK. The Senator's question is one that, of course, would be the first question that would arise in a man's mind. I have no defense for the Cyanamid Co., or for any other company; but, in the first place, they have only been manufacturing cyanamide in quantities for a very few years. At the time its representatives were testifying, from which testimony the Senator from Nebraska [Mr. NORRIS] has read, they were manufacturing a very small amount of nitrogen. Their business has been gradually growing for the last few years.

The result is that they do not sell a mixed fertilizer. The farmers of the Nation have not yet been educated up to a concentrated fertilizer, although that is, of course, what they have got to come to. The Agricultural Yearbook for 1926 says that this concentrated fertilizer, which is good fertilizer, can be shipped in two or three bags, whereas it takes 10 bags of mixed fertilizer.

The Cyanamid Co. has no mixing plant; they never have started one. All they manufacture in the way of fertilizer is the Ammo-phos, which is a combination. The result is that they have not entered into the business in any large degree in this country or to any degree whatever so far as mixing it is concerned; but have sold it to factories that already have mixers. In doing that they have sold it at a cheaper rate than that for which Chilean nitrates were sold. I assume that as time goes on the Cyanamid Co. will, if we should start to operate the Muscle Shoals plant, begin to sell to the farmers; but whether the Cyanamid Co. is good or bad, if it is wholly indefensible, I am not in favor of turning the plant over to any private operator unless the measure ties the matter down in such a way that the farmers will get the benefit of cheap fertilizer.

Mr. BROOKHART. Mr. President, I think the Senator from Alabama pointed out that unless the Government entered into this enterprise there would be no reduction in the price of fertilizer because of this old machinery.

Mr. BLACK. I do not think that, I will say to the Senator. I think the Senator misunderstood me. My idea is this: In the first place, the Cyanamid Co., which has the patent and which owns the process, can naturally manufacture it cheaper than can anybody else. Next, if anybody else should undertake to manufacture it he would pay them a royalty which would, of course, to some extent increase the price. It would not be any tremendous amount when distributed over the tonnage; but my idea is, and I think I can show here in a few minutes—whenever I get down to that point—from the figures of the Government itself, from the very man who operated the test in 1919 or 1918, if they went down there and manufactured fertilizer as these people say they could, the farmer would be saved millions of dollars per year. I think I will show that so that every Senator here will understand it.

Mr. BROOKHART. I understood the Senator's suggestion was that fertilizer plants as they are now operated are using old and antiquated machinery?

Mr. BLACK. Yes, sir.

Mr. BROOKHART. And that they are charging too high a price for their product and the Government would have to enter into the business in order to reduce that price. If that be true, it seems to me the logical thing would not be to turn this plant over to the Cyanamid Co., which has not reduced the price to the farmer, but to have the Government itself operate it.

Mr. BLACK. There is no measure pending which proposes that the Government shall operate a fertilizer plant.

Mr. BROOKHART. The pending joint resolution so provides.

Mr. BLACK. Oh, no. It provides for experimenting in fertilizer and provides that every particle of the power, except a very small percentage, shall be sold under a 10-year contract. That is what it provides. If that power is sold under a 10-year contract, how is it going to be withdrawn in order to manufacture fertilizer?

Here is the serious objection I have: I would not have been going over this subject for such a long time if there had been some kind of proposition offered which guaranteed to the farmers of this Nation fertilizer at a reasonable price; but I am opposed to guaranteeing them a continuation of experimentation which has brought them no reduced price for fertilizer.

Mr. BROOKHART. The Senator from Nebraska just said that he thought the joint resolution as drawn gave authority to turn the plant at Muscle Shoals over to the Department of Agriculture for operation for the purpose of producing fertilizer, and if it does not do that he is willing to amend it so that it will accomplish that purpose.

Mr. BLACK. The joint resolution provides this——

Mr. BROOKHART. There need be no argument about that proposition. It could be amended at once by agreement in order to cover the point.

Mr. NORRIS. Mr. President, may I interrupt the Senator from Alabama there in connection with what the Senator from Iowa has said?

Mr. BLACK. I yield.

Mr. NORRIS. The respect in which I think the Senator from Alabama is mistaken is that he is advocating an impossibility. We can not make cheap fertilizer by passing an act of Congress and saying, "hereafter fertilizer shall be cheap." We can not convert a power proposition into a fertilizer-producing plant by hanging a sign on it and saying, "This is fertilizer; this is not power." The fact is that we will have to experiment to a considerable extent if the cost of fertilizer is to be very much reduced, and, it seems to me, we ought to face the situation. The truth is experimentation is going to be necessary to some extent. I think that the process of experimentation will go on for years, because all processes, even the most improved synthetic ammonia process, are still very technical and complicated, although they are being improved every day. The Congress can not perform an impossibility. If we could pass a law and say, "hereafter fertilizer, nitrogen from the air, shall not cost anything; it must be free because the air is free," and could make such a law effective, I would be very much in favor of enacting it, but we can not do an impossibility. If fertilizer can be manufactured now so cheaply that it is not necessary to experiment, there is no reason why we should legislate at all. Why does not the Cyanamid Co., to which the Senator is so anxious to turn over all this property, now make fertilizer and sell it cheaper to the American farmer whom they love so much?

I am not complaining that they do not. I have more respect for them than has the Senator, because I think they are up against an impossibility. We will have to experiment; we will have to improve whatever method we have, in my judgment, before we will very much cheapen fertilizer. We only make it difficult for ourselves and for the farmers of the country if we hold out false hopes. According to the testimony of all scientific men, what we seek is entirely possible; but we have to continue to study the problem. We have been improving the process every year, especially since the war, and doing wonderfully well at it; but it is still susceptible of improvement, and I think it is necessary that the process should be further improved before American agriculture is going to get much benefit out of it.

Mr. BLACK. Mr. President, the Senator has pretty clearly expressed the different views that he and I entertain on this matter. The Senator wants to go ahead with the experimentation and turn the power——

Mr. NORRIS. The Senator from Alabama does not want to experiment; he wants to make fertilizer now, as I understand.

Mr. BLACK. Exactly. I want to make fertilizer; I just started to state the difference between us.

Mr. NORRIS. I understand the Senator is opposed to any experimentation either by the Agricultural Department or anybody else at public expense for the purpose of reducing the price of fertilizer.

Mr. BLACK. I do not think the Senator understands my position.

Mr. SIMMONS. Mr. President, I should like to ask the Senator from Nebraska a question.

Mr. BLACK. I should like to proceed.

Mr. SIMMONS. I ask the Senator's permission that I may ask the question.

Mr. BLACK. Very well.

Mr. SIMMONS. I assume that the Senator from Nebraska has provided in his joint resolution or that some arrangement has been made to amend the joint resolution so as to provide that the income from the sale of power shall be devoted, so far as may be necessary, to the production of fertilizer for the farmer.

Mr. NORRIS. That is true; yes.

Mr. SIMMONS. Now I understand the Senator from Alabama makes quite a point of the suggestion that we are not proposing anything but experimentation. But here is a propo-

sition to provide for experimentation, to provide for the sale of such power as is not needed, and then to provide that all the income derived from the sale of power shall be used, so far as may be necessary or expedient, for the production of fertilizer. Why is not that a pretty sweeping and comprehensive scheme for the development of this industry, which he says is so essential in order to enable the farmer to obtain cheap fertilizer?

Mr. BLACK. Mr. President, that is absolutely sufficient if all a man wants to give to the farmers of America is experimental fertilizer on a small scale. I am not satisfied with that. I want enough fertilizer manufactured to carry out our promise to the farmer when we put up this plant, to help to reduce the price.

Mr. SIMMONS. May I ask the Senator one question?

Mr. BLACK. Yes, sir.

Mr. SIMMONS. Is there any reason in the world why American capital can not engage in the competitive production of cyanamide?

Mr. BLACK. I am not on close enough terms with American capital to speak for them.

Mr. SIMMONS. I am asking if there is any difficulty in the way of privately owned American capital engaging in the competitive production of cyanamide?

Mr. HEFLIN. Mr. President, if my colleague will permit me to interrupt him, the Cyanamid people own the patent.

Mr. SIMMONS. I anticipated that that would be the answer.

Mr. HEFLIN. And any concern doing business in the United States would have to pay them a royalty of a million and a half to two million dollars a year. If they come in and make this fertilizer they waive the royalty, and it does not cost the farmer anything.

Mr. SIMMONS. Mr. President, I anticipated that that would be the answer to the argument I made just a little while ago that if this cyanamide was so all-sufficient and so cheap, on account of the great demand for ammonia as a fertilizer, American private capital would be induced to go into that industry and supply the demand of the American farmer. Now the Senator says that no cyanamide is produced in this country, and he says that that is because foreigners own the patent and will not sell it.

Mr. BLACK. No, sir; the Senator is mistaken about that.

Mr. SIMMONS. Or that the patent is owned by somebody who will not sell it except at an exorbitant price.

Mr. BLACK. The Senator is mistaken about that.

Mr. SIMMONS. That is what the senior Senator from Alabama said.

Mr. BLACK. He did not say "exorbitant price."

Mr. HEFLIN. I did not say "exorbitant price." I said they own the patent, and they would charge for the use of the patent, and they have a right to.

Mr. SIMMONS. The Senator says they would charge for the sale, and then charge a royalty for the use of the patent.

Mr. BLACK. Would the Senator from North Carolina object to a man who owned a patent, who had bought it, getting money for the use of it?

Mr. SIMMONS. No; but what the Senator from Alabama is arguing here is that he wants Muscle Shoals for the purpose of making cyanamide.

Mr. BLACK. The Senator is mistaken.

Mr. SIMMONS. If the Senator is not making that argument, I do not know what sort of argument he is making.

Mr. BLACK. I regret that I have not been able to make myself clear to the Senator.

Mr. SIMMONS. What does the Senator want to do with Muscle Shoals?

Mr. BLACK. When the Senator from North Carolina completes his questioning I shall be glad to tell him, if he will just let me proceed.

Mr. SIMMONS. I should like the Senator to tell me what he would do with Muscle Shoals. I have stopped. I have asked my question.

Mr. BLACK. I want a manufacture of fertilizer that will reduce the price of fertilizer to the farmers of North Carolina and Alabama and the other States. That is what I want. I want a manufacture of fertilizer that will be sufficient so that the farmers of the South will not be ground down by the Fertilizer Trust that exists in this Nation, part of it in the State of North Carolina. I want, sir, to be able to manufacture fertilizer instead of using power, which the farmers do not need.

Mr. SIMMONS. Is not the Senator now insisting that Muscle Shoals is necessary to that purpose?

Mr. BLACK. That is exactly what it was built for. That is what the Senator from North Carolina voted for it to be built for.

Mr. SIMMONS. Exactly.

Mr. BLACK. That is what we have told the farmers it would be used for. That is what we tell them every year. That is what we tell them every time we come up here, and then we disagree on nonessentials.

Mr. SIMMONS. Then the Senator's position is that he is in favor of the Government's holding Muscle Shoals for the purpose of manufacturing cyanamide?

Mr. BLACK. No, sir; that is not my position at all.

Mr. SIMMONS. The Senator's whole argument has been made in favor of cyanamide. He has denied that any substitute for cyanamide could be produced in this country as cheaply as cyanamide can be produced.

Mr. BLACK. The Senator is mistaken about that.

Mr. SIMMONS. Or that it was as good when produced in this country.

Mr. BLACK. The Senator is mistaken about that.

Mr. SIMMONS. The Senator from North Carolina understood the Senator from Alabama yesterday to deny emphatically that the synthetic process was better than the cyanamide process.

Mr. BLACK. The Senator is partially correct in that understanding.

Mr. SIMMONS. The Senator's position now is, then——

Mr. BLACK. It has not been changed since the Senator from Alabama began.

Mr. SIMMONS. No; I do not know that it has, and I do not know that the Senate has understood the Senator's position. I have not exactly understood his position.

Mr. BLACK. I regret that. If the Senator will allow me to proceed, I will try to tell him.

Mr. SIMMONS. The Senator has been a day and a half at it now.

Mr. BLACK. No, sir; I have occupied the floor a day and a half, but I have spent about three hours answering questions.

Mr. SIMMONS. I find that other Senators as well as myself are very much mystified.

Mr. BLACK. That may be true. I do not claim to have any especial clarity of expression.

Mr. SIMMONS. But I understand now that the Senator's position is that we ought to keep all the power developed at Muscle Shoals for the purpose of making fertilizer.

Mr. BLACK. No, sir; the Senator does not understand me correctly. I will tell the Senator what I want. I want to use every kilowatt of that power that is necessary for the manufacture of fertilizer. That is right.

Mr. SIMMONS. I want to ask the Senator another question. Can not cyanamide be made by the steam process as well as by the hydroelectric process?

Mr. BLACK. Why, certainly, if you want to pay enough to manufacture your power; but it costs more to manufacture power by the steam process. Why use the steam process and force that extra gulp down the farmer's throat when you have this power that you promised him years ago you would give him?

Mr. SIMMONS. Does not the Senator know that practically all the synthetic ammonia that is being produced in this country at this time is produced by steam power?

Mr. BLACK. I do not know whether it is produced by steam power or not; but I know that it is not used in the manufacture of fertilizer.

Mr. SIMMONS. Does the Senator know of any synthetic ammonia that is produced in this country by water power?

Mr. BLACK. I will answer that when the Senator answers this question: Does the Senator know of any case where a farmer has had the cost of his fertilizer reduced at all by the synthetic process?

Mr. SIMMONS. No; I do not.

Mr. BLACK. Does the Senator claim that he can have it reduced by the synthetic process?

Mr. SIMMONS. No; I do not.

Mr. BLACK. The Senator just thinks it is impossible to reduce it anyway?

Mr. SIMMONS. No; the Senator does not believe that. The Senator believes that a very small quantity of either the synthetic ammonia or the cyanamide is used in the manufacture of fertilizer in this country. He is informed, and he thinks reliably informed, that it is not satisfactory, and that the fertilizer producers in this country are getting the bulk of their ammonia from nitrates imported from Chile.

Mr. BLACK. Suppose I let the Senator have the report issued by the Department of Agriculture, where they say this—if the Senator is not interested in it, of course I will not take the time to read it.

Mr. SIMMONS. I am interested in it. I should like to hear it.

Mr. BLACK. The department says:

It is estimated at present that at least one-half of the world's inorganic nitrogen comes from the atmosphere through nitrogen-fixation methods, as against only 7 to 8 per cent in 1913.

And I might state, for the Senator's benefit, that the country that has not advanced is the country in which we now live, the Cyanamid Co.'s plant being on the Canadian side at Niagara Falls.

Experiments to determine the effect of these concentrated air-derived nitrogen salts under American farm conditions have been made covering a period of several years with cotton, potatoes, corn, garden, and truck crops. These have been located on official test farms and on commercial farms on some of the principal soil types in the Eastern States. The effect of the air-derived nitro-salts, when used in mixed fertilizers with acid phosphate and potash, has generally been good, and compares favorably with nitrate of soda and sulphate of ammonia.

* * * * * * *

With potatoes, a crop requiring large quantities of fertilizers, the air-derived nitrogen salts have shown up well. Fertilizers having their nitrogen derived from these concentrated materials have produced as large yields as those having their nitrogen derived from nitrate of soda or sulphate of ammonia. This has proven true in all the large potato-growing sections of the Atlantic seaboard.

Mr. SIMMONS. Mr. President, I do not dispute that. I know that some of this manufactured material that is extracted from the air is being used. I know that it does very well with reference to certain crops; but I know that it is not being used to any very great extent. I know that the use of it at present has not had the effect of reducing the price of fertilizer to the farmer.

I am just as anxious as the Senator is that that great plant at Muscle Shoals shall be dedicated to the production of cheaper fertilizer for the farmer. No man in this Chamber is more anxious about that than I am; but I doubt very much whether at the present time we are producing nitrogen from the air at such a price as to enable the farmer, even if there were millions of tons of it produced, to get his fertilizer any cheaper than the price he pays for it now.

So that I am in favor of experimentation. I want the Government to undertake it and to carry it forward with efficiency and with zeal, so as to bring about some results; and I want the Government in the meantime to hold on to this Muscle Shoals property, and not turn it over to a power company in Alabama or anywhere else. If it wants to sell the power, let it sell the power for a limited term, and then use the income that is derived from that sale for the manufacture of fertilizer for the farmer until the expiration of the lease, and then use the power directly for that purpose.

Mr. BLACK. I think it might be pretty generally conceded that a man who voted and worked to have a power investigation by a Senate committee instead of by the Federal Trade Commission does not want to give it to the power company. I did that. I thought then it was a mistake to turn it over to the Federal Trade Commission, and I still think so. I do not want this power turned over to the power company. I stated that to the people of Alabama in my campaign, and I state it now; but I state to the Senator that if the joint resolution of the Senator from Nebraska goes through the power will go to the Alabama Power Co. and nowhere else.

So much for that.

Mr. BROOKHART. Mr. President——

The VICE PRESIDENT. Does the Senator from Alabama yield to the Senator from Iowa?

Mr. BLACK. I yield for a short question. I want to get through.

Mr. BROOKHART. What I can not understand is that while the Senator is opposed to turning this plant over to the Alabama Power Co. he seems to be favorable to turning it over to somebody that is worse, I believe, namely, the American Cyanamid Co.

Mr. BLACK. I will explain that to the Senator very briefly now, just as I did the other day in talking to him.

Mr. SIMMONS. The Senator seems to be further opposed to the Government using it for the purpose of experimentation——

Mr. BLACK. The Senator is very badly mistaken.

Mr. SIMMONS. And leasing the power that is not needed in those experiments, and using the money derived from the sale of it for the manufacture of fertilizer. The Senator is opposed to the joint resolution of the Senator from Nebraska——

Mr. BLACK. Yes, sir.

Mr. SIMMONS. But what joint resolution or bill is the Senator in favor of? I do not know. He does not want the power sold. He does not want it used by the Government for purposes——

Mr. BLACK. Who said I did not want it used by the Government? Has the Senator heard me say that?

Mr. SIMMONS. I understood that the Senator was arguing against the experimentation.

Mr. BLACK. There is a good deal of difference between turning over some money to a few people to peer around in glass tubes, theorists theorizing around for 10 years, and turning over the plant to somebody to actually manufacture fertilizer that will benefit the farmers of the State where the Senator lives.

Mr. SIMMONS. I suppose, then, the Senator means——

Mr. BLACK. May I continue now, Mr. President?

Mr. SIMMONS. I will not interrupt the Senator any more. I suppose the Senator means this, then——

Mr. BLACK. I will tell the Senator what I mean if he will just ask me.

Mr. SIMMONS. I suppose the Senator means that he wants the Government to hold this plant and go to work at once and establish a plant down there for manufacturing cyanamide and utilize the whole power for that purpose.

Mr. BLACK. If it is of any interest to know where I stand on a question which is not before the body, I shall be glad to state it.

Mr. SIMMONS. I have not been able to find out yet.

Mr. BLACK. I would have been glad to tell the Senator if he had asked me. Of course, I could not read his mind and see what he wanted to know.

Here is the proposition:

That power was dedicated to the use of the farmer. If the Senator from Nebraska will amend his joint resolution and provide for the operation of that plant for the manufacture of fertilizer or the operation of another plant for the manufacture of fertilizer by the Government, although I think it would be wrong, although I believe it would be wasteful, I will sit down and not open my mouth against his joint resolution.

If the Cyanamid Co., which owns the patents—provided the proper contractual restraints could be placed upon it—with their knowledge of the business, and without having people appointed down there because they happen to be deserving Republicans or deserving Democrats, according to the party which happens to be in power, were to operate the plant as a cool financial business proposition, at 8 per cent profit, I believe the farmer would get more benefit from it. But what I insist on is the operation of that plant, Government or otherwise—and I favor otherwise—or another one that will produce just as much fertilizer for the benefit of the farmers, who are ground down under the heel of the trusts of this Nation. That is what I insist on.

I assume all of us have open minds. I am very glad, indeed, to have any question asked that I can answer. I can not answer them all satisfactorily or clearly, as the Senator has stated.

Mr. SIMMONS. The Senator has answered the question satisfactorily to me finally. His answer is that he wants the plant run either by the Government as a fertilizer plant, or he wants it leased to the Cyanamid Co.

Mr. BLACK. If there are any other bidders that will run it, yes; and I prefer private operation of the plant by a company that knows how to operate it. That ought to be perfectly clear.

Now, I want to call the attention of the Senate to this fact, that 460 pounds of concentrated fertilizer contains as much nitrogen and phosphate plant food as one ton of 3–11–3, regular fertilizer. The freight from Muscle Shoals to Lynchburg, Va., for instance, on one ton of ordinary fertilizer is $5.65. The same railroad would carry this 440 pounds of concentrated fertilizer from Muscle Shoals to Lynchburg for $1.39, or a difference in freight of $4.35. I call attention to that fact for the reason that there are a great many who have said, "What benefit would States far removed from Alabama get from this?" I will answer that. They would get fertilizer which could be shipped in two or three bags, instead of ten. Their fertilizer hereafter would not be three-fourths dirt, because they would get concentrated fertilizer, and mix it for themselves, and besides they would stop having to pay freight on dirt.

Mr. SMITH. What is the percentage of actual nitrogen contained in cyanamide?

Mr. BLACK. Cyanamide?

Mr. SMITH. Yes.

Mr. BLACK. I had the figures here and read them yesterday.

Mr. SMITH. My impression is that it is about 12 to 15 per cent. The lime content is what they call a filler. The Senator is speaking about concentrated fertilizer. That, as the Senator knows, is still in an extremely experimental stage. There was an attempt to get phosphoric acid with just pure sand in a superheated furnace, but they found that by treating the phosphate rock, even though there was a great percentage of iron in the rock, with the sand process they could get a perfect phosphoric acid. But the process was costly and did not turn out to be a practical commercial venture. They have gone back now to the old sulphuric-acid process of treating the phosphate rock with sulphuric acid, producing phosphoric acid, and that is the only practical process, so far as I have been able to gather the facts, by which you can get anything approximating the concentrate. The percentage of actual available soluble phosphoric acid, using that process, is only 16 per cent to the hundred pounds.

As to potash, which is the other ingredient, the only source that we have that is commercially feasible at all is the potash wells of Germany. It is so abundant and so cheap in its raw state that they bring it over here in the form of what they call "kainit" for less than $10 a ton. They bring it sometimes in ballast, and by utilizing nitrate of soda, kainit, or potash, and phosphoric acid you get the perfectly balanced fertilizer.

As the Senator maintains, we haul about 1,500 pounds of dirt in every 2,000 pounds, or every short ton, of fertilizer. But there has been no practical way up to the present, outside of the experimental stage in the laboratory down here, to find how to get a 100 per cent potash, 100 per cent phosphoric acid, and 100 per cent of ammonia. It is a very costly process. I think we will ultimately work up to that, and the farmers would be willing to pay for it, but under the terms that the Senator is fighting for and that I am fighting for we are to turn this over to the farmers of this country under the auspices of our Government and let them work out the problem of producing a cheap fertilizer for the farmers.

Mr. BLACK. Mr. President, I would like to finish by 5 o'clock. I appreciate the statement of the Senator from South Carolina [Mr. SMITH], because it is very enlightening; but I would rather, unless there are some particular questions that some Senators desire to ask, that I may proceed until I finish.

Mr. KING. Mr. President, may I ask the Senator one question?

The PRESIDING OFFICER (Mr. SACKETT in the chair). Does the Senator from Alabama yield to the Senator from Utah?

Mr. BLACK. I yield.

Mr. KING. In reference to the statement made by the Senator from North Carolina, I understood him to say that there was no product used by the farmers for fertilizing purposes that came from the cyanamide plant. My understanding is that the plant at Niagara Falls producing cyanamide——

Mr. SIMMONS. I did not say that. The Senator misunderstood me.

Mr. KING. I understood the Senator to say that.

Mr. SIMMONS. I said there was a very small percentage, and that it did not cheapen the fertilizer to the farmer at all.

Mr. KING. I do not agree with the Senator in that statement; but my understanding is that the cyanamide plant does transship a considerable quantity to Warners, N. J., and there fertilizer is made from the nitrogen which is gathered from the air by the cyanamide plant at Niagara.

Mr. BLACK. That is correct.

Mr. KING. That the cyanamide process is a failure I do not think can be supported by a fair examination of the facts and the scientific investigation which has been made.

Mr. SIMMONS. What I said about that was, that according to the figures stated by the Senator from Alabama himself, there was only about 55,000 tons of cyanamide imported into this country, and that all of that was not used for fertilizer, but a good part of it was used for fertilizer. But that was a small percentage of the total amount of ammonia used in fertilizers in this country. That is what I said with reference to that.

Mr. HEFLIN. Mr. President, if my colleague will permit me just there, pertinent to this question, at Muscle Shoals—and I want the Senator from Utah to hear this——

Mr. KING. I am listening.

Mr. HEFLIN. They used a cyanamide fertilizer, they used cyanamide made at Muscle Shoals, with the other ingredients, on an acre of ground, and that acre of ground produced 2,300 pounds of lint cotton. Alongside of that acre no fertilizer was used, and the unfertilized acre produced 100 pounds of seed cotton. This 2,300 pounds of lint cotton was made on one acre where the cyanamide fertilizer was used.

Mr. BLACK. Mr. President, I am not going to quarrel with anybody over the fact that fertilizer has not been reduced in price. It has not been, but I claim that if the facts show that the price can be reduced, to turn this power over for the use of industry is a crime against the American farmer. That is all I am talking against. I say that the vote on this power resolution will distinctly show the farmer more clearly than professions, whether a man stands for the use of the farmers' power for use in industry or for fertilizer for the farmer.

There is no doubt but that phosphoric acid can be manufactured at Muscle Shoals by the use of electricity. That is recognized to-day as a method of its production. It would require about 180,000 horsepower to produce enough phosphoric acid to mix with the nitrogen.

I just want to give a few more figures about this shipment of the concentrated fertilizer to show that if you really want to distribute this power the only way to do it is to put it in fertilizer. You can not distribute it as power. Not much of it will get out to Arkansas if you are going to put it on the wires of the public utility companies. But it will, under the administration of the farm board, if you put it in fertilizer.

One ton of mixed fertilizer shipped to Albany, Ga., would be $4.50, as against $1.05 for 460 pounds of the concentrated product, or a difference in freight of $3.55.

The freight to Jackson, Miss., on 1 ton would be $3.95, and on 460 pounds it would be 90 cents, or a difference of $3.05 in favor of the concentrated product. I say to the Senators from Mississippi that if they want to save the farmers in their State money the way to do it is to save it on fertilizer and not on power. Do not be fooled by the statement that when this electricity gets on the wires of the public utility companies it will reduce the price of electricity a dime. It will not do it.

On March 26, 1925, a committee was appointed to investigate the entire Muscle Shoals situation. Considering the operating costs of nitrate plant No. 2, basing the operating expenses upon the figures reported by General Williams and Colonel Burns, after a test run at the plant, taking into consideration the costs of operation and the freight, this committee reported that the average saving to the farmers in the various States would be 43.4 per cent.

Senators talk about nonpartisan evidence, they talk about evidence that is not bound down by contractual ties to the Cyanamid Co. This was a committee appointed by the President of the United States. On this committee was a distinguished chemist from Yale University and a former distinguished Senator of the United States. On it were others, and they reported—and I have the figures here, and their reports—that if this plant were put into operation it would reduce the average price of fertilizer to the farmers of this Nation 43.4 per cent. Yet we hear somebody say, "I want power. I want power in my State. I do not want fertilizer; I want power."

Some of the Senators present may be interested in what this nonpartisan committee found this action would save the farmers in their States. Let us look down the list. For instance, Alabama, 44.1 per cent; Connecticut, 47.3 per cent—it even extends as far as Connecticut; Georgia, 44.2 per cent; Indiana, 46.9 per cent. Getting on down, we find that the biggest saving they figure was for Louisiana, by reason of the fact that they could ship by water. That saving would be 54 per cent.

Mr. HEFLIN. Does it show Michigan?

Mr. BLACK. In Michigan they found it would save them 45.1 per cent. This was a nonpartisan board, not a board of cyanamide experts, not a board of synthetic experts, not a board composed of people who wanted Government operation, but of people who did not want Government operation. It was not a board composed of people who were going to discuss the varying merits or demerits of one or the other process, when the very life of the farmer was at stake. It was a nonpartisan board. Yet Senators still say that it is a question of the plant being "obsolete," after a board appointed by the President of the United States, without any evidence of partisanship on the part of the board, comes to this body and says, "It will save the farmers of North Carolina and of South Carolina more than 45 per cent."

Mr. HEFLIN. Does it give Texas?

Mr. BLACK. They do not buy much out in Texas. They buy so little the board did not even figure it out. But a great deal of it could be shipped down there by water.

Now, I want to call attention to what General Williams said in his report on the test. This is not the Cyanamid Co. Gen-

eral Williams is not connected with the Cyanamid Co. This is the statement of the Chief of Ordnance of the United States Army, as I understand it.

General Williams in his report made February 19, 1927, after the test had been held, figured that nitrogen could be made at Muscle Shoals at 8.57 cents per pound. Now, I hope Senators will get that figure.

Mr. NORRIS. Mr. President, will the Senator permit an interruption there?

Mr. BLACK. I yield.

Mr. NORRIS. Is the Senator aware that nitrogen can be produced from the air by the synthetic process for practically half that cost?

Mr. BLACK. No, I am not aware of that, but I am aware that it has not been done so far as the farmer of America is concerned.

Mr. NORRIS. Yes; it is being done now.

Mr. BLACK. Is the farmer getting any of it?

Mr. NORRIS. Probably not. Does the Senator expect——

Mr. BLACK. No; the farmer is not getting it largely because, in my judgment, the Senator from Nebraska has fought the Ford offer, honestly and conscientiously of course.

Mr. NORRIS. All right. I want to ask the Senator if he expects to reduce the price of fertilizer to the farmer on the nitrogen contents by charging over 8 cents a pound for nitrogen.

Mr. BLACK. Of course I could.

Mr. NORRIS. The Senator can not do it. It is a physical impossibility.

Mr. BLACK. The farmer is paying 15.5 cents now.

Mr. NORRIS. If we get nitrogen for 8 cents a pound at Muscle Shoals, we have increased the cost of fertilizer instead of decreasing it at the present market.

Mr. BLACK. He is paying 15.5 cents; and if 8.7 is not less than 15.5, then I do not know my arithmetic.

Mr. NORRIS. There is no use in anyone paying over 8 cents a pound for nitrogen.

Mr. BLACK. He is paying $47 a ton port prices on Chilean nitrates, and that figures out, on the basis of the nitrogen content, 15.5 cents per pound. While this is actually 1 cent more than it sells for at Warners, N. J., manufactured by the cyanamide process, it is 6.58 cents cheaper than the farmer actually pays for Chilean nitrate to-day—that is, if he gets it under the cooperative method at $47. I had a telegram yesterday from a farmer in my State in which he stated that he had paid $60 for Chilean nitrate.

Mr. NORRIS. Mr. President, will the Senator allow me to ask him another question? Let me ask the Senator if the Cyanamid Co. is getting nitrogen now for 1 cent less than 8 and a fraction cents, why is the price of fertilizer so high?

Mr. BLACK. I explained that twice while the Senator was out of the Chamber and I would rather not go over it again.

Mr. NORRIS. The Senator never made an explanation that will stand.

Mr. BLACK. The Senator is taking judgment without having heard my explanation. He does not know how good it was.

Mr. NORRIS. If the cyanamide people now can make nitrogen so much cheaper than anybody else and have such wonderful capacity to make it, I can not understand why they sell to and deal with the Fertilizer Trust instead of selling direct to the farmer.

Mr. BLACK. I have explained that. What I want to do is to make them deal with the farmer.

It is also interesting to note that the Muscle Shoals Commission, in reaching its conclusions of 43 per cent saving to the farmers in the use of ammonium phosphate, figured its cost at $70.23 and it is now sold in the open market for $64.40

In the estimate of General Williams of cost at Muscle Shoals he includes royalties and operating fees. If these are excluded his figure for the cost of pure nitrogen is 7.9 cents. In other words, if the company that owned the royalties were operating it and we waived the royalties, General Williams's figures would be reduced to 7.9 cents, while the Cyanamid Co. actually sells it now at 7.6 cents per pound. Each penny of reduction in the price of nitrogen, on the maximum production of 50,000 tons at nitrate plant No. 2, means $1,000,000 saved to the farmers.

Mr. NORRIS. Mr. President, will the Senator permit another interruption?

Mr. BLACK. I will permit this one. I stated while the Senator was out that I wanted to finish, and asked not to be interrupted further.

Mr. NORRIS. Then I shall not interrupt the Senator again after this one.

Mr. BLACK. That is all right.

Mr. NORRIS. If the statement be true as the Senator has just made it, then the thing I can not understand is, with that terrible reduction, that awfully cheap price for nitrogen that the Cyanamid people are producing, why there can possibly be any complaint about fertilizer being too high.

Mr. BLACK. I shall be glad to explain that to the Senator and then I shall ask to be permitted to proceed.

Mr. NORRIS. What I am trying to do is to reduce the cost of extracting nitrogen from the air, and I think we have got to do it in order to get the price of fertilizer down where it ought to be. These other or newer plants are doing that very thing wherever they are established.

Mr. BLACK. I will state it again for the Senator's benefit. The Cyanamid Co. is not making enough fixed nitrogen to sell all over the United States. That which they have sold has been sold, as the Senator stated, to the fertilizer factories, and the profits have gone not to the farmer, but to the factories. That is correct. What I want is to make some provision for the synthetic process or some other process whereby the profit will go to the farmer rather than to the factory. Now, I must proceed.

If, therefore, General Williams is correct in his figures of 8.7 cents per pound, the American farmer would save $6,450,000 every time the plants produced 50,000 tons. Taking his own report and figuring it out for themselves for their own States, Senators will see that this is the result they get. Let them then figure on what the farmers of their States are paying to-day and go back to them, if you please, and tell them, "I found that under the estimate of the engineer who made the test, it would save you a million dollars, but I would not vote for it because I wanted it to attain perfection."

If Colonel Burns is correct in his report of 1920, as to the cost of producing ammonia gas, the production price of pure nitrogen would be 8.3 cents, or 6.85 cents less than the price of Chilean nitrate. On the output of plant No. 2, this would save the American farmer $6,850,000 on each 50,000 tons if it were turned loose on the market, besides the indirect benefit that would be received from causing the fertilizer trust to reduce its price.

Mr. NORRIS. Mr. President, may I indulge in just one more question?

Mr. BLACK. I yield for one more question.

Mr. NORRIS. The Senator has referred to Colonel Burns. I would like to make him a proposition.

Mr. BLACK. I do not care for a proposition. I yielded for a question.

Mr. NORRIS. I will state now for the RECORD that if the Senator will agree with me that Colonel Burns shall be sent for to appear before the Committee on Agriculture and Forestry, or any other committee, and if Colonel Burns shall state that, in his judgment from his study, we can use nitrate plant No. 2 as it stands and make fertilizer cheaper for the farmer than we could by the synthetic process of getting nitrogen from the air, I will agree, so far as I am concerned, to withdraw my resolution and to resign my seat in the Senate.

Mr. BLACK. I do not care whether he swears it could be made cheaper by the synthetic process or the cyanamide process. I do not care one particle which process we use. I do not need him to come here and testify after years of thought. I have his testimony.

Mr. NORRIS. I have his testimony, too, over and over again.

Mr. BLACK. I have it, and it shows as I have stated.

Mr. NORRIS. I can produce it. I do not agree with the Senator, but I do not care which process is used. I want to use the cheapest process, and I know, from my association of years in a study of this question with Colonel Burns, just what he thinks about it and what his study has led him to.

Mr. HEFLIN. I suggest that Colonel Burns contradicted himself on my interrogation before the committee.

Mr. BLACK. Mr. President, I do not care to yield any further. I will state that if there is any Senator here who doubts what Colonel Burns has testified and put in the record, that ammonium, can be produced by the process stated, if he will get the hearings before the Committee on Military Affairs on House bill 16396, Part I, 1927, and turn to page 1065, he will find that that is what Colonel Burns said it would take to manufacture the nitrogen. He will find further that if that profit went to the farmer on the cyanamide process as tested by him, the farmers of the South would have saved $6,450,000 this last year.

I am talking in the interest of the people, not the big farmer who owns 18 cows and has his cows milked by electricity. I am talking in the interest of the great unorganized mass of farmers, many of them rental farmers. I want to state to the Senate that in my own experience I have known farmers in the county in which I was reared who came to town in the fall of the year and sold their cotton, and when they paid off the mortgage that was already on the crop and paid for the

fertilizer they did not have a dime left to buy food and clothes for the children in the next year. Then tell me, with circumstances like that all over the Nation, especially in the land of the South, that it is fair or it is right or it is just to deprive the farmer of the reduction which we know he will get if we take every word of Colonel Burns's statement as true and say "No! We want power, we want power!" I ask Senators after they have given the farmer the benefit of cheap power, that they shall pass another law reducing to him the price of silk hats and evening clothes and Lincoln automobiles.

What do we find about a shortage of power? There is a lot of propaganda going on down south in Alabama. I made my statement about it when one of the Senators from Mississippi was away. So far as I am concerned, I think it would be an outrageous piece of legislation to tell any State that any natural resource within its borders had to go, by legislative mandate, into another State. But if we can get a fertilizer factory operating in Alabama, operating there with this power which is dedicated to the farmers' use, so far as I am concerned, I am willing to yield that point about the so-called equal distribution of the assets of one State and sending them into another State, and let it go in just as the Senator from Mississippi or Louisiana or any other State wants it.

What we want is not power. We want fertilizer. I am going to show the Senate that if the power went into the wires we would not get a reduction, in spite of the fact that power companies have been sending out propaganda to Senators and Congressmen from various places that the rate to the public would be lowered.

I hold here in my hand a lot of documents that came to me from Alabama, sent out by a power company to the farmers of Alabama. These documents argue against the use of Muscle Shoals for fertilizer, claiming it can not be done.

It is alleged that there is a shortage of power in the South. That statement is absolutely baseless propaganda. I hope Senators will listen to what I am about to say, especially those who claim there is a shortage of power in the South.

In a special southern issue of the Manufacturers' Record for December, 1924, there appears an article by Mr. Thomas W. Martin, president of the Alabama Power Co., with reference to the large interconnected power companies' survey of the Southern States and their future requirements. Mr. Martin therein states that the total additional power needed to supply the needs of these companies for the supply of the States they serve is 1,071,000 horsepower. Maj. Harold C. Fiske, of the United States Engineer Corps, made a survey of the Tennessee in November, 1925, and reported that 13 sites on that river, not including Dam No. 2 and Dam No. 3, would produce 1,125,000 continuous horsepower. The latest report made by the Secretary of War last week of 88 sites, with 28 still to be investigated, shows the potential power of the entire basin to be 3,900,000 continuous horsepower. With 30 per cent of the potential water power of the Tennessee Basin, therefore, the needs of the companies set out by Mr. Martin could be met for 20 years, leaving 70 per cent of the power to waste.

Note that statement, Senators! With 30 per cent of the potential power of the Tennessee Basin alone, leaving out the Coosa River, where they have dams, and the Tallapoosa and others, they could supply for 20 years every Southern State that gets power from these companies, and yet it is claimed that there is a shortage of power. That is just one river, too.

The latest report of the total primary power available under the joint resolution of the Senator from Nebraska is 187,000 horsepower, as I understand. He fought for a bill last year which I think was better than this joint resolution; but the pending joint resolution does not provide for the building of an additional dam at all; it does not provide for the building of Dam No. 3 or Cove Creek Dam. According to Colonel Tyler, the total primary power from the river at Muscle Shoals to-day, 100 per cent of the time, is 67,000 horsepower. Under the Senator's joint resolution that is all the power that will be produced, except from the steam plant; and by the steam plant, according to the figures, it costs 4 mills an hour to produce it, but the primary power available at that dam under the joint resolution of the Senator from Nebraska, with no improvement, is only 67,000 horsepower. That does not sound like any tremendous power that ought to be divided out equally among all the 48 States; and, of course, if it ought to be legislated to one of them, it ought to be legislated equally to all of them. That is all right so far as that is concerned. If they give us a fertilizer factory, we do not object to that. But Wilson Dam, or Dam No. 2, cost the Government, at peak prices for labor and material, $43,388,000, of which $27,500,000 is chargeable to power development.

There is also a completed steam plant built at a cost of $12,326,000. The actual primary power the dam now constructed is capable of producing is 67,000 horsepower, and the steam-plant capacity is 80,000 horsepower. Under the joint resolution of the Senator from Nebraska there is no other development of any kind or character, as I understand, of that dam or of any other dam.

Under the joint resolution of the Senator from Nebraska there will be only a primary water-power production of 67,000 horsepower 100 per cent of the time. Power can not be sold to the public unless it is available 100 per cent of the time—we all know that—unless some day we may utilize the system about which the Senator from Nebraska has spoken of, interconnected wires, which would be a wonderful thing to take advantage of in various districts. I agree with the Senator fully that when that time comes there will be a saving, and it will come, of course, when there shall be a scarcity of water. Remembering there will be a production of only 67,000 horsepower—hydroelectric—under the Senator's joint resolution, it is interesting to note that Birmingham alone in 1925 used about 69,000 horsepower at its peak consumption; that Memphis uses 51,600 horsepower continuously, making necessary the installation, so as to have it available at all times for peak use, 86,000 horsepower. So under this joint resolution neither of those two cities, for instance, Memphis and Birmingham, which want this power could get quite enough primary horsepower to supply their needs. Every other little municipality that wanted to obtain power from this source would be cut off the moment it was given to Birmingham or Memphis. Of course, if the Government contracted to supply them with power it would have to have it available at all times. When it is considered that the amount of this hydroelectric power is but 3.35 per cent of the total developed power of the associated power companies when they submitted their bid for Muscle Shoals in 1926, how small it is to hold up in a great legislative body legislation which would benefit the farmers by reducing the price of fertilizer because somebody, in some particular State, may want a part of that 3.35 per cent of power.

The combined production of both the steam plant and Dam No. 2 is only 6.3 per cent of the 1926 power development of the associated power companies. Who, therefore, believes that the power from Muscle Shoals would decrease the price to the users?

I call attention to the fact that under the joint resolution of the Senator from Nebraska it is provided that municipalities shall have the preference. The Senator from Mississippi [Mr. HARRISON] has offered an amendment which, as I understand it—and if I do not understand it correctly, I should like to be corrected—will take away that preference. Under the joint resolution of the Senator from Nebraska, according to my belief, in practical effect the power would very shortly go to the Alabama Power Co. for two reasons: First, most of the municipalities in the surrounding sections have contracts with power companies. That, unfortunately, is true. I agree with the Senator from Nebraska in all he has said as to the value that ownership of public utilities by municipalities has had in this Nation in bringing about a reduction in the price of power. I have no controversy with him whatever on that point; but under the proposed law with these municipalities unable to take advantage of it, the Secretary of War, of course, would not wait long before selling the power to the Alabama Power Co. That is what would happen under the joint resolution. Of course, under the amendment proposed by the Senator from Mississippi it would have to go to the Alabama Power Co. Therefore the question arises, under either measure would the price of power be reduced? If any Senator believes that the Alabama Power Co. will reduce the price of power when they get it on their wires, I advise him to read the opening lines of Doctor Johnson's Rasselas, and I say to him, just as Doctor Johnson remarked—

> ye who listen with credulity to the whispers of fancy and pursue with eagerness the phantoms of hope, who expect that age will perform the promises of youth, and that the deficiencies of the present day will be supplied by the morrow attend the story of Rasselas, Prince of Abyssinia.

Those who look far out into the future and paint pictures and dream dreams will be dreaming a long time before there is a penny's reduction in the power that goes to Arkansas, Mississippi, or Tennessee by reason of the fact that the power from Muscle Shoals has been put into the hands of the public utility companies. I agree with the Senator from Nebraska completely to the effect that there will not be a reduction of a dime to any consumer if this power gets in the hands of the power companies for distribution.

Why do I say that? I say that because they said it themselves. They did not say it when they were talking to a Senator and telling him, "We want you to remember that if we

get this power we will reduce the price of the power to the consumer"; but they said it before the State board of public utilities in Alabama when they were asked the question, "Will you reduce the price of power to your customers if you get Muscle Shoals for your benefit and use?" Here is what they said. I have telegrams about it.

I call the attention of Senators from Mississippi, Arkansas, Georgia, and the other States to this telegram. The Alabama Power Co., as those Senators know, is linked up with companies in their States, and this gentleman had authority to speak not only for the power companies of Alabama but of Mississippi and Georgia and Tennessee and the other States. When asked whether or not the acquisition of Muscle Shoals would reduce the cost of power to the people, the representative of the company said:

I don't believe so. The Muscle Shoals plant apparently has been dedicated to the farmer to a great extent, and I don't believe we can ever get away from it.

Let me refer to what they said when they were bidding for Muscle Shoals. When they were asked the question whether they would reduce the rate, Mr. Martin, who had already testified before the committee, said:

Sir, it may take the entire primary power of 200,000 horsepower; it may take a nominal amount—

He did not know which.

You know there are great developments in the chemical industry.

In other words, he did not know whether it would take a great amount or a little amount.

My contention is that under his offer it would have taken a very nominal amount, because there was not any fertilizer guaranteed under it, but he did not know whether it would take a nominal amount or a big amount. When, however, he was talking before the Alabama Public Utilities Commission with reference to the benefit the farmers of Mississippi and Georgia and other States would receive if they got that great power project, he said:

No; I do not think it would reduce the price of power.

And in that I agree with him. That being true, what hope is there of the surrounding States of getting any benefit from this power unless it is transferred into fertilizer? That is the only point on which the Senator from Nebraska and I differ. He does not believe it can be done, while I do. I agree with the remainder of his remarks. I would be perfectly willing if the fertilizer plant were to be operated, for the remainder of the power to go to the municipalities, and would be delighted to see that done. I do not agree with the views of the Senator from Nebraska about that. I appreciate the fact, even though he takes a stand which is contrary to mine and contrary to that of the vast majority of the people of Alabama that he has waged a conscientious fight and has fought with the belief that his side was right, and, even though he lived in the far West, he has taken sufficient interest in the South at least to understand, according to his best judgment, the principles involved in this great plan. I appreciate the extent of interest he has shown in it, although I do not agree with his viewpoint. The only difference we have is this: I believe that for the manufacture of fertilizer under a chemical process, which as he states, is constantly changing, a private company that is in the business would more likely benefit the farmers than would the Agricultural Department of the Government.

I agree with his former colleague here, the late Senator from South Dakota, Mr. Ladd, as to that. Former Senator Ladd said, "while I agree with Senator NORRIS's idea of Government ownership in the main, I would not want to see the Government start out in the very hazardous business of manufacturing fertilizer and electrochemical supplies."

Mr. President, I am just about through; I merely wish to make one or two additional statements.

A great deal has been said about the cyanamide process. As I have said, I do not care to go into any controversy as to which process is the most successful. My judgment is that the price of fertilizer can be reduced by both or either. My judgment is that it is unfair to the American farmer to tie this power up for 10 years while we experiment and try to secure perfection, instead of absolutely going into the manufacture of fertilizer to-day. That is my main objection to the joint resolution of the Senator from Nebraska.

I call the attention of Senators who think that that measure provides for fertilizer that it does not provide for fertilizer for actual sale and use and consumption by the farmers of the South. It provides for experimenting and manufacturing a little fertilizer. It does not provide enough power to manufacture fertilizer to supply the farmers of the South, nor does it give even a faint ray of hope that they will get any fertilizer under it for 10 years. It does not settle the Muscle Shoals problem. It ties it up again for 10 years and places that power down there, in its last analysis, not in the hands in which the Senator from Nebraska conscientiously wants it to be placed, namely, in the hands of municipalities, but places it, practically without any interruption, into the channels of trade through the public-utility companies of the South. That is where it will go.

The objection we have is that instead of guaranteeing the manufacture of fertilizer it does exactly the contrary, and provides that for 10 years this plant, which is dedicated to the American farmer, shall remain idle so far as the manufacture of fertilizer is concerned, and it tells the department of the Government engaged in experimentation, and which has been experimenting, I imagine, for 40 years under appropriations from the Government to go on and experiment some more. It would not reduce the price of fertilizer a dime.

What has been done in Germany? They have driven Chilean nitrates off the market, while we over here have sat with folded hands and waited on vain dreams and on experiments. Germany, war-torn as she was, rose from her ashes and drove Chilean nitrates out of her borders, and fertilized the lands of the people of Germany with nitrogen fixed from the air. What do we do 10 years after the war, despite the lesson we have had, and with the knowledge that one of the first naval battles of the war was fought off the coast of Chile? We spent billions of dollars for ships and guns and now are quarreling and squabbling over whether or not the Government might lose a few dollars if it should operate the plant at Muscle Shoals.

While we are doing that, Germany, with whom we were at war, utilizing her experience, does not experiment but drives Chilean nitrates out of Germany. America, instead of doing what it ought to have done, namely, operate this plant and use this power which was dedicated to the purpose of fertilizer and of war material; instead of proceeding on the upward way with reference to the electrochemical industry; instead of learning the lesson which it should have learned from the fact that it was without explosives necessary to fire a gun when war was declared, America sits with folded hands and argues as to the various methods, the synthetic and cyanamide processes, and proceeds to experiment some more. We wait 10 more years, with this power tied up, going into the hands of the public utilities eventually, not for the benefit of the farmers or the people but to increase their profits. We sit here and wait and say, "What will you do?" The farmer looks up to this Congress and he says, "There is hope. There is friendship. Every one of them proclaims friendship for me every day. Oh, they are going to do something for me."

Do they do it? With the fact before us from the speech of the Senator from Nebraska himself that Germany is manufacturing nitrates from the air, and with the further fact given to me by the Department of Commerce that they have stopped shipping Chilean nitrate into Germany, we do not propose to use the plant for that—oh, no! We are going to let the wheels remain idle while people experiment around, not to give anybody fertilizer at a cheap rate—oh, no!—but simply to theorize some more as we try to attain perfection.

If when Benjamin Franklin put his kite into the skies we had proceeded with the same caution that some want to manifest now and experimented and experimented until we got perfection, no kilowatt of electric power would ever have turned a wheel and no great industry would ever have been moved by the power that comes from the rolling waters of Niagara. That is what the joint resolution of the Senator from Nebraska proposes, and that is why we are against it—against it to the death.

You who are not interested in fertilizer, you who have not seen the pain and anguish of the people whose backs are bent under the load—you may vote us down, and you may say to the farmers of the South, "We want to wait. Seven million five hundred and fifty thousand dollars a year is not enough to save you. We want to wait until we get to where we can save you $100,000,000." Then when the farmer comes in after a hard day's work following a mule on some red-clay hillside and finally puts his tired limbs to rest on an old-fashioned feather bed he can lie there and pass into dreamland, with the sweet hope and fancy that Congress at last has done something which will guarantee that his children's children's children's children may some day get fertilizer as cheaply as they are getting it in Germany to-day. That is the Senator's joint resolution, and that is all it provides.

I challenge any living human being to examine that joint resolution and find any fertilizer for the American farmer. I challenge any man to examine any bill that has been offered, any amendment that has been offered, and find where the man who

toils behind the plow is going to get anything but words—vain, empty words, that sound like tinkling cymbals but bring him no help in time of trouble and do not raise his weary limbs an inch on the way of progress and prosperity.

This Congress has a chance to prove that it is something more than a professed friend of the farmer. I want to state, so far as other bills in the Senate are concerned, that I will vote for any measure that is proposed for the farmer unless I am convinced beyond a reasonable doubt that it does not offer him relief. I am going to do it because of the fact that to-day while every other business has marched forward by leaps and bounds, the farmer is loaded down with fifteen billions of mortgages; the farmer is paying in some States, as in Michigan, according to published reports, 67 per cent of his net profits in taxes; the farmer is borne down by the weight of increased transportation rates, shipping 11 per cent of the produce of the country, and paying 19 per cent of the revenue. Everything is bearing down upon him, and yet he is going out into the market and purchasing under a protective system that makes him pay his hard-earned dimes and pennies for aluminum dippers and pans produced by a concern protected as an "infant industry" that has grown into such stupendous proportions that it stands like a giant colossus astride the world; and then what do we do? What do we give him? Words—vain, empty words!

We come in and say, "There are two processes by either one of which—or at least one of which—you can get fertilizer cheaper." Do you give it to him? No! What do you do? Why, you tell him you are his friend!

Mr. BROOKHART. Mr. President——

The PRESIDING OFFICER (Mr. WATERMAN in the Chair). Does the Senator from Alabama yield to the Senator from Iowa?

Mr. BLACK. Yes, sir.

Mr. BROOKHART. After listening to another great Alabaman, the Senator's predecessor, Mr. Underwood, it seems to me that the vain words have been largely because all the time we have been trying to deliver this great national resource to some private institution, instead of going ahead and doing the beautiful thing that the Senator has outlined.

Mr. BLACK. I will repeat what I said awhile ago: I believe that a private institution could operate a fertilizer factory better than the Government.

Mr. BROOKHART. But if we are going to do these things that the Senator suggests we ought to go ahead and do them, even though we can not do them so well as the private institution.

Mr. BLACK. Yes, sir; and I will say that I am anxious and ready and willing to meet with Members of this body on any common ground where we can stand and pass any law that will reduce the price of fertilizer, either by Government operation or private operation. If that is plain enough, that is where I stand. I do say, though, that instead of going off on theories and one sticking to one theory and the other to the other theory, and letting 10 years pass by—long, weary years, filled with 365 days of labor to the man behind the plow, filled with 12 months of anguish to know whether or not the products that he raises on the land will be sufficient to pay the fertilizer bill, 10 years filled with all these things and 10 years in which the Government has neglected to perform its duty to prepare for war in time of peace—I say that the time has come when people should give up their pet theories and stand on common ground, as I am willing to do on anybody's bill that will guarantee to the fertilizer users of the South that they are going to have fertilizer manufactured by any kind of process that will reduce the price to the man who labors.

Mr. BROOKHART. The Senator mentions 10 years in which the Government has neglected its duty. That has been 10 years of fighting these private interests that have been trying to Teapot Dome Muscle Shoals; and it has been 10 of the best years of fight that the Government ever put in. It is the greatest fight that has ever been made in the history of the United States Senate.

Mr. BLACK. That is one time that the Senator and I do not agree, and I will state why.

If the Government is not capable of drawing a contract with a private individual or corporation that will protect the Government from repetitions of Teapot Dome, then the Government is in the hands of men whose intelligence really is not equal, as the Senator said yesterday, to that of the man whose brains would fill a teaspoon. If the time has come when the Government has nobody in its employ who can draw a contract that will so restrict the rights of private capital in its operation of public assets that it will protect the rights of the Government and the people, then the time has come to discharge those men who are incapable of drawing such a contract and to employ some who can.

Senators, that is the situation. I present it to you. I have done it with great diffidence, owing to my short service; but it is a matter in which the people of the State which I in part represent are vitally interested. It means more to them than any other one question which can be raised. It offers to my friends back down there—the people who live far out in the hills and valleys and pursue a course of life which is their own, who constitute the backbone of this Nation, and who have been borne down by overwhelming prices of fertilizer—the only ray of hope which they see in the sky.

I know that the Senator from Nebraska thinks his measure is the best; but I would that he could go with me back down there into those hills at a time when the cotton has just been picked, and go with me into the little town where they sell the cotton, and look into the faces of those people who have mortgaged the very mule they drive, and who have mortgaged the very cow that they do not milk with electricity, but milk with their hands, who have mortgaged them in order that they may get their daily bread; and I wish then that my friend could go with me at a time when they are going to pay the fertilizer bill that bears down on them, and then see if he would come back and say that any scheme would be robbery or fraud which would reduce to any appreciable extent the burden of the man behind the plow—not experiment, but actually reduce it.

I will state this for the Senator from Nebraska and all the other Senators: I will support any measure which the Senator offers or which any other Senator offers on this floor which, in my judgment, guarantees to the American farmer the production of fertilizer in such quantities as we proposed to have it produced down there. I care nothing for the power. It is infinitesimal in importance to the great and overwhelming question which confronts the farmers of Mississippi and Alabama and Georgia and Virginia and North Carolina. The man who would permit himself to go upon the theory of power, and more power, and benefit the industries of the Nation, and forget the farmer—the one class of citizenship in this Nation that is laboring under burdens which are too heavy for it to continue to bear—that man surely could not say, "I love the farmers of my State." We care nothing for power.

I conclude my remarks with this statement:

So far as the power is concerned, if you give us fertilizer, and if Mississippi, for instance, should demand every kilowatt of remaining power, in God's name let them have it; but first give to the farmers of the Southland and of America the benefit which they have been led to believe they would receive; and prepare now, before any war clouds appear on the horizon, for the time when the big guns and ships which we have built at an expense of billions of dollars may be called into use. Ships and guns without explosives are vain and useless. Let us not permit this plant to stand idle which should mean protection in war and joy to the farmer in peace.

In conclusion, I beg and plead with the Members of this body, those who really have the interest of the farmers of America at heart, to find something better than a mere experiment for 10 years. When you find something that will give the farmer fertilizer I will go with you as far as you desire on every other provision of your bill.

WAR DEPARTMENT APPROPRIATIONS

Mr. REED of Pennsylvania submitted the following conference report:

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 10286) making appropriations for the military and nonmilitary activities of the War Department for the fiscal year ending June 30, 1929, and for other purposes, having met, after full and free conference have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 3, 14, 17, 23, 24, 27, 38, 51, and 52.

That the House recede from its disagreement to the amendments of the Senate numbered 1, 2, 5, 6, 7, 12, 13, 15, 16, 18, 19, 20, 28, 29, 30, 31, 32, 34, 35, 40, 41, 44, 46, 47, 48, 49, and 53, and agree to the same.

Amendment numbered 4: That the House recede from its disagreement to the amendment of the Senate numbered 4, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$69,740"; and the Senate agree to the same.

Amendment numbered 8: That the House recede from its disagreement to the amendment of the Senate numbered 8, and agree to the same with an amendment as follows: In lieu of the

sum proposed insert "$10,274,278.50"; and the Senate agree to the same.

Amendment numbered 9: That the House recede from its disagreement to the amendment of the Senate numbered 9, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$17,464,551"; and the Senate agree to the same.

Amendment numbered 10: That the House recede from its disagreement to the amendment of the Senate numbered 10, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$529,500"; and the Senate agree to the same.

Amendment numbered 11: That the House recede from its disagreement to the amendment of the Senate numbered 11, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: "as amended by the act approved February 18, 1928, and including $310,000 for Walter Reed General Hospital as authorized by the act approved February 18, 1928"; and the Senate agree to the same.

Amendment numbered 21: That the House recede from its disagreement to the amendment of the Senate numbered 21, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: ", and in addition to the sum of $1,736,619, there is hereby reappropriated the following unexpended balances of continuing appropriations: 'Cantonment construction, Panama Canal,' $204,546.61, and 'Sites for military purposes,' $241,932.39; in all, $446,479, to be available for the following, as authorized by the act approved February 18, 1928: Steel hangar, $39,500, and addition to radio hut, $6,979, Hawaiian Islands; and construction of landing field, Albrook Field, Canal Zone, $400,000"; and the Senate agree to the same.

Amendment numbered 22: That the House recede from its disagreement to the amendment of the Senate numbered 22, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: ", and in addition to the sum of $11,257,445, there is hereby reappropriated for expenditure for bombardment planes and their equipment, spare parts, and accessories, the sum of $580,000 of the unexpended balance of the appropriation for 'Army transportation, 1926'"; and the Senate agree to the same.

Amendment numbered 33: That the House recede from its disagreement to the amendment of the Senate numbered 33, and agree to the same with an amendment as follows: In lieu of the sum "$425,000," proposed in said amendment, insert the following: "$150,000"; and the Senate agree to the same.

Amendment numbered 36: That the House recede from its disagreement to the amendment of the Senate numbered 36, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: ": *Provided*, That the number of trainees shall not exceed the number which can be trained by the expenditure of this sum and"; and the Senate agree to the same.

Amendment numbered 37: That the House recede from its disagreement to the amendment of the Senate numbered 37, and agree to the same with an amendment as follows: In lieu of the matter inserted by said amendment insert the following: "except the pay and allowances of officers and of enlisted men of the Regular Army who are on duty in any capacity in connection with the national matches and the small-arms firing school, and except the subsistence of enlisted men of the Regular Army who are not members of authorized teams, which pay, allowances, and subsistence shall be paid from other funds appropriated for that purpose"; and the Senate agree to the same.

Amendment numbered 43: That the House recede from its disagreement to the amendment of the Senate numbered 43, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$825,000"; and the Senate agree to the same.

Amendment numbered 50: That the House recede from its disagreement to the amendment of the Senate numbered 50, and agree to the same with an amendment as follows: Restore the matter stricken out by said amendment amended to read as follows: "Sites for military purposes, $93,736.92"; and the Senate agree to the same.

Amendment numbered 54: That the House recede from its disagreement to the amendment of the Senate numbered 54, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$89,191.48"; and the Senate agree to the same.

Amendment numbered 55: That the House recede from its disagreement to the amendment of the Senate numbered 55, and agree to the same with an amendment as follows: In lieu of the sum proposed insert "$876,395.73"; and the Senate agree to the same.

The committee of conference have not agreed on amendments numbered 25, 26, 39, 42, and 45.

DAVID A. REED,
W. L. JONES,
F. E. WARREN,
WM. J. HARRIS,
DUNCAN U. FLETCHER,
Managers on the part of the Senate.

HENRY E. BARBOUR,
FRANK CLAGUE,
JOHN TABER,
Managers on the part of the House.

Mr. REED of Pennsylvania. I ask unanimous consent that the unfinished business be temporarily laid aside for the consideration of the report.

The PRESIDING OFFICER (Mr. WATERMAN in the chair). Is there objection? The Chair hears none.

Mr. McKELLAR. Mr. President, will the Senator explain what was done in the conference?

Mr. REED of Pennsylvania. I shall be glad to do so. I think it will not take more than a moment or two to do that.

On the item of most general interest, the item for river and harbor work, no change is made. The action of the Senate stands.

On the item for reserve officers' training, which the Senate fixed by a roll-call vote, the action of the Senate stands. No change is made on that.

On the item of horses and mules for the Army, about which there was very serious disagreement, the House has conceded practically all that the Senate asked. They give us a total of 1,700 mules and 2,300 horses. The Senate had fixed the number at 2,400 horses and 1,931 mules. We get substantially all we asked.

On putting the Air Corps of the Army out of the lighter-than-air business, the House recedes and agrees to all of the Senate amendments.

We put in a considerable item for new fire control for the antiaircraft guns at Panama, Hawaii, and in continental United States. The House has receded, so far as Hawaii and Panama are concerned, but has agreed to carry on further experimentation before spending a lot of money in continental United States.

The aviation increases were considerable. The Senate had authorized 40 bombing planes of a newly developed type in place of 23 authorized by the House. We compromised at enough money to buy approximately 35, so that the point raised is recognized.

On developments for the Air Corps in Panama, the House concedes all that is authorized by legislation; that is, the completion of Albrook Field, in Panama, and the completion of the hangar and radio station in Hawaii.

The next item of importance was the item of horses for the National Guard. We had provided for 500 horses for the guard. On that the House recedes entirely, and our full amount stands.

On the item of additional vacation, under pay, for caretakers of the animals of the guard, the Senate was forced to recede, and we receded for the reason that this year vacation with pay is being given to those caretakers, and it was believed the department could manage to do so next year with the same amount of money.

On reserve flying we had to make the most serious of all concessions. For the reason that the War Department has not sifted out the older flyers who would not be suitable for active war work, it was thought best to hold the amount for reserve officers' flying at the figure fixed last year. The House had reduced it somewhat. We got it back to last year's figure, and we can not increase it, and I think ought not, until the War Department has sorted out those who will be efficient in war, and gives them alone the benefit of that training.

The item we put in for horses for the Reserve Officers' Training Corps stands. The House recedes.

In substance, we provided for the training of 40,000 civilian boys in the summer training camps. The House has receded in principle on that, and we have changed the wording of the amendment slightly, leaving in the amount of money as passed by the House, and providing that the department should train as many as they could with that sum, but forbidding transfers from other funds for that purpose.

Mr. McKELLAR. In other words, the amount to be expended was not considerably increased, but a larger number was provided for?

Mr. REED of Pennsylvania. The House cut it down to 35,000, which we thought was too low, and we have corrected it.

On the item for national rifle matches no change has been made in the substance of the bill as it passed the Senate, except

that we have agreed on certain amendments, satisfactory, I may say, to the Senator from Iowa [Mr. BROOKHART], which will permit the payment of return travel before it is actually done, so that settlement can be made with competitors at the matches, and travel will be permitted by automobile.

Mr. McKELLAR. The matches will take place yearly hereafter?

Mr. REED of Pennsylvania. The matches will take place this year, just as the Senate intended.

On the item for Alaskan roads and trails, the only other item that is of any importance that I have not explained, we compromised at $825,000. The House had allowed $590,000, we had increased it to $900,000, and after considerable debate the conferees fixed it at $825,000.

Mr. McKELLAR. That is about what we expected, I believe.

Mr. REED of Pennsylvania. Of course, expectations differ; but we are pretty well satisfied with the results, on the whole.

Mr. ROBINSON of Arkansas. Mr. President, there is one amendment, proposed by me, and reported by the committee, found at page 84 of the bill as it was reported by the committee, providing $1,500,000, to be immediately available, to be expended by the Mississippi River Commission in reimbursement of funds contributed by local interests to the Mississippi River Commission to use for emergency levee construction and repair work on the lower Mississippi River. I would like to ask the Senator whether the House managers accepted the amendment. I think I ought to say that my information is that the estimate for the item was sent to the House too late for it to be incorporated in the bill. In any event, it was not incorporated in the bill in the House and it was ordered to be approved by the Senate committee, and it was passed by the Senate.

Mr. REED of Pennsylvania. I thank the Senator for calling my attention to that, because I had neglected to mention it. The House has receded on that and accepted the Senate amendment exactly as we passed it.

Mr. ROBINSON of Arkansas. I am very glad to learn that, because it was a very important amendment.

Mr. HALE. Mr. President, as I recall it, the Senate increased the House appropriation for the completion of the five-year program some $2,000,000. Can the Senator tell me what was agreed to by the conferees?

Mr. REED of Pennsylvania. Various items went to make up that $2,000,000. In substance, the amount remaining in the bill is something more than half of the increase which the Senate put in.

Mr. HALE. The increase was something over a million dollars.

Mr. REED of Pennsylvania. The increase will be slightly over a million. I ought also to say that the item for the Chalmette Cemetery, in Louisiana, has been accepted by the House, and the appropriation which the Senate put in for the Pacific Coast Branch of the National Home for Disabled Volunteer Soldiers was accepted. Both of those were accepted without question.

Mr. President, the report is a final one, except that under the rules of the House a separate vote will have to be taken on five items. There is a technical disagreement only as to those five items. The conferees are in full accord.

Mr. WILLIS. Mr. President, I desire to submit an interrogatory to the Senator from Pennsylvania. I wish to ask the Senator what provision is made in the bill touching the matter about which we had some debate the other day, as he will remember, the item for pay for armory drills.

Mr. REED of Pennsylvania. The item for pay for armory drills stands as it passed the Senate and the House. The amount appropriated is about $700,000 over that appropriated for the current year. It will not be sufficient for the 48 armory drills that we desire to have, but it is agreed on all hands, by House and Senate conferees, that a deficiency estimate is to be submitted when the figures are available, and that 48 drills will be held. There is no disposition on the part of the department, or either House of Congress, so far as I know, to reduce the number of drills. The only reason that we did not provide a larger amount is that the department is utterly unable to estimate the exact amount that will be needed.

Mr. WILLIS. The provision as it now stands in the bill is to the effect that this arrangement for the transfer of 10 per cent is applicable to the provision for armory pay, the same as to any other.

Mr. REED of Pennsylvania. The interchangeability item applies to the armory drill appropriation, and it is understood that, in addition to that, enough will be provided in a supplemental estimate to take care of any deficiency.

Mr. WILLIS. The Senator apprehends the point I am driving at. I certainly shall not delay the agreement on the conference report, but it never has been made clear to me what advantage there is in doing the very thing the Senator points out. There has to be a deficiency appropriation to take care of the lack in armory pay. I can not see what advantage there is in providing that a portion can be transferred from that item, when there has to be a deficiency appropriation to take care of it.

Mr. REED of Pennsylvania. I get the Senator's point. I do not think it is ever intended to transfer any money out of that fund, because everybody realizes that it will not be sufficient.

Mr. WILLIS. I merely wanted to put that intention in the form of law so that they could not transfer it out.

Mr. REED of Pennsylvania. I will be very glad to meet the Senator half way next year, if I have anything to do with the bill then, and I am sure there will be no objection to it.

Mr. WILLIS. I know the Senator is in favor of proper pay for armory drills.

The VICE PRESIDENT. The question is on agreeing to the conference report.

The conference report was agreed to.

MUSCLE SHOALS

The Senate, as in Committee of the Whole, resumed the consideration of the joint resolution (S. J. Res. 46) providing for the completion of Dam No. 2 and the steam plant at nitrate plant No. 2, in the vicinity of Muscle Shoals, for the manufacture and distribution of fertilizer, and for other purposes.

Mr. HEFLIN. Mr. President, it is about time for a recess or an adjournment, and I understand the Senator from Kansas wants to have an executive session. To-morrow, unless the Senator from South Carolina [Mr. SMITH] or some other Senator wishes to speak, I shall discuss the pending Muscle Shoals resolution.

Mr. HARRISON. Mr. President, I want to add an additional paragraph to the amendment that is pending, and I ask unanimous consent that I may modify my amendment by the insertion of the paragraph.

The VICE PRESIDENT. The clerk will read the paragraph.

The CHIEF CLERK. In the amendment proposed by the Senator from Mississippi [Mr. HARRISON], on page 2, after line 16, insert the following:

It is hereby further declared to be the policy of the Government that in case of any such sale or lease to a public service corporation the amounts paid to the Secretary of War by such corporation shall be considered by the public service agencies of the several States in regulating the rates charged by such corporation to the consumers.

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from Mississippi as modified.

Mr. CURTIS. Mr. President, I ask unanimous consent that when the Senate concludes its business to-day it take a recess until to-morrow at 12 o'clock.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

EXECUTIVE SESSION

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 10 minutes spent in executive session the doors were reopened, and the Senate (at 5 o'clock and 10 minutes p. m.), under the order previously entered, took a recess until to-morrow, Wednesday, March 7, 1928, at 12 o'clock meridian.

ARBITRATION TREATY WITH FRANCE

In executive session this day the Senate, having had under consideration a treaty of arbitration between the United States and France and the notes exchanged between the two Governments regarding said treaty, advised and consented to its ratification. (On February 8, 1928, the injunction of secrecy was removed from this treaty, on request of Mr. BORAH, and it is printed at page 2688, CONGRESSIONAL RECORD of that date.)

NOMINATION

Executive nomination received by the Senate March 6, 1928

POSTMASTER

TENNESSEE

George T. Taylor to be postmaster at Memphis, Tenn., in place of Solomon Seches. Incumbent's commission expired March 29, 1926.

CONFIRMATIONS

Executive nominations confirmed by the Senate March 6, 1928

UNITED STATES ATTORNEY

Joseph A. Tolbert to be United States attorney, western district of South Carolina.

UNITED STATES MARSHAL

Samuel L. Gross to be United States marshal, northern district of Texas.

POSTMASTER

MARYLAND

Harry E. Pyle, Aberdeen Proving Ground.

REJECTION

Executive nomination rejected by the Senate March 6, 1928

POSTMASTER

TENNESSEE

George T. Taylor to be postmaster at Memphis, Tenn.

HOUSE OF REPRESENTATIVES

TUESDAY, *March 6, 1928*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Thy will, O Lord, be done. It bids the bad be good, the weak be strong, the unjust be upright, and the unclean be pure. Wherever there is oppression, repression, and injustice, O God, Thy arm make bare and Thy holy will be done. Come Thou in a wonderful evolution in the thoughts, lives, and spirits of men. Lift the veil and let them catch the sight of the heights of life, the world, the unseen, and the eternal. Let Thy outstretched finger point out the climbing path ahead. So direct, so lead, so inspire us that we shall become gripped by the glory of service for our country, which protects our homes and secures our happiness. Amen.

The Journal of the proceedings of yesterday was read and approved.

CHIPPEWA TRIBE OF MINNESOTA

Mr. LEAVITT. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill S. 2342 and pass the same.

The Clerk read the bill, as follows:

A bill (S. 2342) providing for a per capita payment of $25 to each enrolled member of the Chippewa Tribe of Minnesota from the funds standing to their credit in the Treasury of the United States

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized to withdraw from the Treasury of the United States so much as may be necessary of the principal fund on deposit to the credit of the Chippewa Indians in the State of Minnesota, arising under section 7 of the act of January 14, 1889 (25 Stat. L. 642), entitled "An act for the relief and civilization of the Chippewa Indians in the State of Minnesota," and to make therefrom a per capita payment or distribution of $25 to each enrolled member of the tribe, under such rules and regulations as the said Secretary may prescribe: *Provided*, That before any payment is made hereunder the Chippewa Indians of Minnesota shall, in such manner as may be prescribed by the Secretary of the Interior, ratify the provisions of this act and accept same: *Provided further*, That the money paid to the Indians as authorized herein shall not be subject to any lien or claim of attorneys or other parties.

Mr. CRAMTON. Mr. Speaker, will the gentleman yield to me for two minutes?

Mr. LEAVITT. I will.

Mr. CRAMTON. Generally the payments per capita from funds to the Indians are in a large measure a dissipation of the Indian funds. It is very much better for their funds when available to be used for the construction of homes, the buying of implements, stock, and so forth. In this particular case, as I understand, the action of the Senate reduced the amount from $100 to $25.

Mr. LEAVITT. That action had been taken in the House committee, also.

Mr. CRAMTON. I also understand that in the hearings, I think in the House, there was quite a definite assurance given that this payment would not be followed by any other demand for per capita payment to these Indians in the near future.

Mr. LEAVITT. That proposal was made in the House committee, and in the discussion it was brought out that there would be cooperation and effort to work out a plan for the future that would set aside sufficient indigent funds so that it would leave the tribal funds themselves intact. That is the situation. It is not in the form of a final pledge that a case might not be presented for another per capita payment.

Mr. CRAMTON. But the effort is to be made in that direction?

Mr. LEAVITT. Yes. The gentleman from Minnesota [Mr. SELVIG] presented the need of a per capita payment to the committee and said that if a favorable report was taken by the committee on this measure that would be his effort, and Mr. KNUTSON said the same thing.

Mr. CRAMTON. I have had the pleasure of going over the matter with the gentleman from Minnesota [Mr. SELVIG] and I have been impressed by his statement of the present condition and by his desire for some constructive plan in the future.

The bill was ordered to be read a third time, was read the third time, and passed.

A similar House bill (H. R. 8317) was laid on the table.

PETER P. PITCHLYNN

Mr. DYER. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (S. 1705) authorizing the Court of Claims to render judgment in favor of the administrator of or collector for the estate of Peter P. Pitchlynn, deceased, instead of the heirs of Peter P. Pitchlynn, and for other purposes, and pass the same.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Court of Claims is hereby authorized to render judgment in the suit of the heirs of Peter P. Pitchlynn, deceased, against the Choctaw Nation, No. 30532, now pending in said court on mandate from the Supreme Court of the United States in favor of the administrator of or collector for the estate of Peter P. Pitchlynn, deceased, appointed or to be appointed under the laws of the District of Columbia, for $3,113.92, the amount the Court of Claims on June 9, 1924, found to be due the heirs of said Pitchlynn from the Choctaw Nation. Said judgment shall be paid out of any funds in the Treasury or custody of the United States belonging to the Choctaw Nation.

SEC. 2. To the above extent, the act of Congress approved June 21, 1906 (34 Stat. L., pp. 325, 345), under which said suit was instituted in said Court of Claims, is hereby amended, and all acts or parts of acts inconsistent herewith are hereby repealed.

Mr. DYER. This bill does only one thing, and that is to substitute an administrator for the heirs. The Judiciary Committee has reported a similar bill.

Mr. CRAMTON. Has the bill been reported by the Judiciary Committee of the House to the same effect as this bill?

Mr. DYER. Absolutely the same.

Mr. CHINDBLOM. Mr. Speaker, I did not interpose an objection, but I think it is setting a bad precedent to call up bills on the Private Calendar by unanimous consent.

Mr. DYER. It is on the Speaker's table, a similar bill having been reported to the House.

Mr. CHINDBLOM. A bill on the Private Calendar does not have that status.

The SPEAKER. Is there objection?

There was no objection.

The bill was ordered to be read a third time, was read the third time, and passed.

A similar House bill (H. R. 7824) was laid on the table.

PERMISSION TO FILE MINORITY VIEWS ON H. R. 11526

Mr. McCLINTIC. Mr. Speaker, I ask unanimous consent that I may file minority views on the bill H. R. 11526.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

NEW CADET BARRACKS AT UNITED STATES MILITARY ACADEMY, WEST POINT

Mr. MORIN. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill H. R. 9202 and concur in the Senate amendments.

The Clerk read the Senate amendments.

The SPEAKER. Is there objection?

Mr. SCHAFER. Reserving the right to object, what is the effect of the Senate amendments?

Mr. MORIN. The words "United States Military Academy" were in the original bill, but they authorized the amount of that before this bill reached the Senate, and it was thought not to be necessary.

The SPEAKER. The question is on agreeing to the Senate amendment.

The Senate amendment was agreed to.

CERTAIN AMENDMENTS TO THE CONSTITUTION

Mr. BURTON. Mr. Speaker, for the Committee on Rules I desire to call up the privileged resolution, House Resolution 133.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

House Resolution 133

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of S. J. Res. 47, proposing certain amendments to the Constitution. That after general debate, which shall be confined to the Senate joint resolution and shall continue not to exceed five hours, to be equally divided and controlled by those favoring and opposing the Senate joint resolution, the Senate joint resolution shall be read for amendment under the five-minute rule. For the purpose of amendment the House committee substitute shall be considered as an original bill. At the conclusion of the reading of the Senate joint resolution for amendment the committee shall rise and report the Senate joint resolution to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the Senate joint resolution and the amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. BLANTON. Mr. Speaker, a point of order. This is such an important matter that I demand a quorum.

The SPEAKER. The gentleman from Texas makes the point of order that there is no quorum present. The Chair will count.

Mr. BLANTON. Mr. Speaker, now that they have come in from the galleries and cloakrooms, I withdraw the point of order.

The SPEAKER. The point of order is withdrawn.

Mr. BURTON. Mr. Speaker, before the discussion of this resolution, I ask unanimous consent that there be one hour of debate on the resolution reported from the Committee on Rules. Several gentlemen have asked for time.

The SPEAKER. The gentleman from Ohio asks unanimous consent that there be one hour of debate on the resolution. Is there objection?

Mr. GARRETT of Tennessee. I understand the time will be divided between the gentleman from Ohio and the gentleman from Alabama [Mr. BANKHEAD].

Mr. BURTON. And, Mr. Speaker, I submit further the request that I anticipated making separately, that one-half of the time be controlled by myself and the other half by the gentleman from Alabama.

The SPEAKER. The gentleman from Ohio asks unanimous consent that the debate be for one hour, the time to be controlled one-half by himself and one-half by the gentleman from Alabama. Is there objection?

There was no objection.

Mr. BURTON. This amendment—and in referring to the amendment I refer to the House substitute—proposes that, instead of March 4 as now, the terms of the President and Vice President shall end at noon on the 24th day of January and that of Senators and Representatives at noon on the 4th day of January, and the terms of their successors shall then begin.

The second section provides that Congress shall assemble at least once in every year. In the odd-numbered years the meeting shall be on the 4th day of January, though Congress has the right to appoint a different day. In the even numbered or election years the meeting shall be on the 4th day of January and the session shall not continue after noon on the 4th of May.

There is thus established a much shorter interval between the date of election and the functioning of the newly elected President and members of the legislative branch of the Government. In fact, although the right now exists to change by law the date for the convening of Congress and the President may call an extra session, the Constitution provides that the newly elected Congress shall assemble on the first Monday of December in the year following the election, thus creating an interval of one year and one month.

The amendment promises a more prompt and effective compliance with the will of the people, as expressed in the election; also a Congress or administration defeated at the election might in the short session following seriously embarrass their successors in carrying out the policies they were chosen to support. Representatives and Senators are assured of a longer time in which to conduct their campaigns for reelection, and, what is equally important, their appeal to the people can be made after their record and that of the Congress to which they belong is completed.

It is perfectly obvious that if primaries are held in the midst of the first session following the election of Congress the Members are diverted from their duties here and are unable to appeal to the people with any record of things accomplished.

In case of a failure by the Electoral College to select a President and Vice President, the choice of these officials will be made by the incoming Congress instead of the outgoing Congress, as now.

The third section provides that if the House of Representatives has not chosen a President whenever the right of choice devolves upon it—that is, in case of failure to choose by the Electoral College—then the Vice President chosen for the ensuing term shall act as President until the House of Representatives chooses a President. It is maintained there is some ambiguity under the constitutional provisions now existing whether the Vice President for the outgoing or the incoming term should act as President in case of failure to choose a President.

The fourth section provides that if the President elect dies before the time fixed for the beginning of his term, then the Vice President elect shall become President.

The amendment authorizes further legislation by Congress to provide for the following contingencies, which, though unlikely, might arise:

(a) Where neither a President nor a Vice President has been chosen before the time fixed for the beginning of their terms. (The right is given to declare what officer shall then act as President, such officer to act until the House of Representatives chooses a President or the Senate chooses a Vice President.)

(b) The death of both the President elect and the Vice President elect before the time fixed for the beginning of their terms.

(c) The death of any of the three persons from whom the House of Representatives may choose a President whenever the right of choice devolves upon them.

A situation might arise in which the three eligibles provided for by the Constitution from whom the House of Representatives might make a choice would lose one of their number and there would be only two. There is also a provision in regard to the two eligibles chosen by the Senate.

(d) The death of either of the two persons from whom the Senate may choose a Vice President whenever the right of choice devolves upon them.

(e) As above stated, Congress may by law change the date for the assembling of the first session of the newly elected Congress. It is hoped that the committee bringing in the bill may give the reason for conferring this right.

The amendment as drawn proposes that Congress shall sit on the 4th of January and that the President shall be inaugurated on the 24th of January. A situation might arise in which the House of Representatives would have to choose a President; also the newly elected House must organize and count the vote, and it seems to me the interval of 20 days is none too much for making provision for the duties of the incoming House or the contingencies which might arise. Nevertheless, the amendment gives the right to Congress to change the date, January 4.

The present lengthy interval between the date of election and the commencement of the tenure of executive and legislative officers is due to circumstances existing in the earlier years of this Government which now are absent, chief among which was the lack of ready means of communication both in the transmission of news and in traveling. Conditions which led to this situation do not now exist and the dates fixed are in part the result of accident.

September 13, 1788, the Continental Congress provided for the selection of presidential electors and Representatives in Congress, and fixed the first Wednesday in January for the selection of electors in their respective States, the first Wednesday in February for the electors to assemble and vote for President and Vice President, and the first Wednesday in March for commencing proceedings under the Constitution.

It was intended at that time that the President elect should be installed in his office March 4, although the first President was not inaugurated until April 30, 1789.

The first Wednesday in March of the succeeding year was the 4th. By an act passed by Congress, that of March 1, 1792, it was provided that the terms of the President and Vice President should commence on the 4th day of March after election. That is the manner in which this date has been fixed.

In comparison with other countries the intervening period between election and the convening of the legislative bodies is much longer here than elsewhere. Indeed, the interval in this country is altogether without precedent.

In England the Parliament usually convenes in two or three weeks after election. In Canada there is no definite time fixed by law, but the time has generally been short, in analogy to conditions prevailing in England. In France the Chamber of Deputies, in case of prorogation and a new election, must convene within 10 days following the close of the elections.

The German constitution of August, 1919—and in the preparation of that constitution they no doubt had the regulations in many countries under consideration—provides that the Reich-

stag shall assemble for the first meeting not later than 30 days after the election.

In Hungary the date of assembling is within six weeks; in Australia, 30 days after the day fixed for the return of the writs of election; in Brazil the elections are held on the first Sunday in February, except that when they occur in the same year with elections for President and Vice President, they are to be held on the 1st of March, and the Congress must assemble May 1. In the first case there is an interval of three months, and in the second two months. In Argentina the elections take place on the first Sunday in March, and the constitution requires the Congress to meet on May 1, an interval of two months. In the Netherlands the States General must assemble within three months. The Polish Parliament must convene on the third Tuesday after election.

Incidentally, it is interesting to note that the terms of members in other countries are considerably longer than in the United States, though the legislative body may be dissolved or prorogued by the sovereign authority—king, president, or prime minister. In England, Canada, Italy, and Hungary the term of members of the House of Commons, or popular branch, is five years; in France, Germany, Austria, Japan, Sweden, Belgium, The Netherlands, Chile, and Argentina members serve for four years; in Finland, New Zealand, Australia, and Brazil, three years.

As regards the interval elapsing between the election and the date of the assembling of the Congress there is nothing similar to the conditions which this amendment seeks to obviate in any of the State governments. One reason why the 4th of March was fixed for the beginning of the new term was the fact that Members of the Senate were elected by State legislatures, and those legislatures, practically all of them, met at the beginning of January, so that in case the Congress should convene on that date Senators might not have been chosen. Under the seventeenth amendment that condition no longer exists.

In conclusion I wish to say, Mr. Speaker, that the fundamental ideas which pertain to popular rule will be promoted by the adoption of the pending proposition. [Applause.]

Mr. MAPES. Mr. Speaker, will the gentleman, before he takes his seat, yield for a question?

Mr. BURTON. Yes.

Mr. MAPES. The gentleman has made as much of a study of government and has had as much experience here as anybody that I know of. I would like to ask him a question with relation to the date of the convening of Congress and the inauguration of the President. Except in case the Electoral College fails to elect a President after the fall election every four years, can the gentleman see any advantage, and might there not be some embarrassment, in Congress meeting 20 days before the President is inaugurated? What is it going to do before receiving the President's message? Does the gentleman know of any country where the executive is elected at the same time that the members of the legislative body are where the legislative body convenes before the president, or the chief executive of that country, is inaugurated?

Mr. BURTON. That is true in quite a number of our States, where the legislative body convenes before the inauguration of the governor. I have already mentioned the two duties imposed upon the incoming Congress; first, organizing and the counting of the electoral votes, and, second, the very serious situation which would arise if no choice should be made by the Electoral College, when the election of the President would rest with the House of Representatives and the election of a Vice President with the Senate.

Mr. MAPES. What does the gentleman think the Congress will do during that 20 days in case a President has been chosen by the Electoral College?

Mr. BURTON. Some of the time would be spent in organizing, and no doubt committees would be selected. There are divers ways in which the Congress could be useful during those 20 days.

Mr. MAPES. Can the gentleman suggest anything for it to do except to organize?

Mr. BURTON. Yes. Bills might be introduced and considered by committees.

Mr. HOCH. Will the gentleman yield?

Mr. BURTON. Yes.

Mr. HOCH. There would be nothing to prevent Congress from functioning as it ordinarily does in the passage of legislation, would there?

Mr. BURTON. They would naturally not engage in the adoption of legislation until after January 24. I take it the intent of this resolution is that a new Congress shall not expect legislation to be completed until after the President, elected with them, comes in. Of course, there is absolutely nothing to prevent it, but that would be the natural course of things.

Mr. HOCH. That might be very persuasive; but I can see no reason why, if Congress were in session and desired to legislate, it should not legislate and send bills to the President to be signed.

Mr. BURTON. There might be emergency legislation, but I do not believe as a practical matter that assumes importance.

Mr. NEWTON. Will the gentleman yield?

Mr. BURTON. Yes.

Mr. NEWTON. I might suggest that Congress might transact all of its investigating duties during that period and legislate afterwards.

Mr. BURTON. If they could get those things off of their hands it would be helpful.

Mr. CELLER. Will the gentleman yield?

Mr. BURTON. Yes.

Mr. CELLER. I am anxious to get the gentleman's point of view on the following: The committee amended the Senate resolution and provided that in the even-numbered years Congress should adjourn on the 4th of May. Will the gentleman tell us in what respect that would end the vice of the filibuster?

Mr. BURTON. There would be four months instead of a scant three months. It would not do away with the filibuster absolutely, because at least in one body of the National Legislature a filibuster may occur at any time. However, I believe this would obviate that situation, because there would be four months instead of practically two.

Mr. CELLER. Is it the gentleman's idea that a filibuster results when there is a definite date for adjournment known?

Mr. BURTON. Yes.

Mr. CELLER. And would not that situation be exactly the same if this resolution were passed as the committee has amended it, just as we have it now?

Mr. BURTON. Yes; but with a very much larger opportunity to finish the business in the four months.

Mr. BEGG. Will the gentleman yield for a question?

Mr. BURTON. I yield to the gentleman.

Mr. BEGG. I am very curious to know why this lapse of 20 days. I have not been in Congress so very long, but I have seen five organizations, and I think I am entirely correct when I say in no instance have we spent more than five days in getting right down to business. Now, I can not think of any reason why we want 15 more days to "mill around."

Mr. BURTON. I believe I have already dwelt on that question.

Mr. BEGG. I do not think the gentleman got anywhere. I do not mean to be discourteous, but I do not think the gentleman said anything. [Laughter.] I am as serious as I can be. Why take 20 days to do a thing that we have been doing for 10 years in from 3 days to 5 days?

Mr. BURTON. You must provide not only for the ordinary course of things, but for emergencies, and if there should be an emergency in which a President had to be elected, it would surely require the whole of the 20 days.

Mr. BEGG. If the gentleman will permit, how many times in the history of the country covering 150 years has such an emergency happened?

Mr. BURTON. Twice.

Mr. BEGG. What damage was done?

Mr. BURTON. In one case the vote was protracted for a very considerable time.

Mr. BEGG. I do not question that; but what damage was done to the country? In other words, every four years you are going to have 15 days with the time of 435 Members thrown away in order to provide for an emergency that has happened twice in the past 150 years.

Mr. BURTON. It is more than that. It is perfectly well known that the business of the Congress does not begin until committees are chosen and usually until hearings are held.

Mr. BEGG. The gentleman is thoroughly familiar with the fact that we have had important legislation up for consideration on the first day of a session.

Mr. BURTON. And when the President is inducted into office and his message presented to the Congress, Congress can begin to function just as promptly and as efficiently as possible.

Mr. LEAVITT. Will the gentleman yield?

Mr. BURTON. Yes.

Mr. LEAVITT. The provision in the Constitution now is that Congress shall assemble at least once in every year, and such meeting shall be on the first Monday in December, unless they shall by law appoint a different day.

Mr. BURTON. They have that right. I have already stated that.

Mr. LEAVITT. Why could not the Congress at the present time meet this situation or meet the need of an earlier meeting by establishing a meeting on the 4th or 5th of the ensuing March?

Mr. BURTON. Because the Constitution provides that the term of Senators shall be six years, and by implication the Representatives, being chosen every second year, their term is two years. This amendment would shorten the term and nullify a constitutional provision. That is the reason for this proposed constitutional amendment. If it were not for the fixing of the terms of the President and the Vice President at four years, Senators at six years, and Representatives at two years the constitutional amendment would not be necessary.

Mr. LEAVITT. That does not clear my point on the question of the necessity of an earlier meeting of the new Congress. Could not that be practically met by an act of Congress, as now provided in the Constitution, which would make it necessary for Congress to meet on the 4th of the next March following their election instead of waiting until the first Monday in December?

Mr. BURTON. That, of course, could be done.

Mr. SIMMONS. Will the gentleman yield?

Mr. BURTON. I yield to the gentleman from Nebraska.

Mr. SIMMONS. The proposal just made by the gentleman from Montana would not provide for the newly elected Congress taking care of a possible election of the President.

Mr. BURTON. No. I do not believe I correctly understood the gentleman from Montana.

Mr. SIMMONS. We would still be left with the so-called "lame duck" Congress electing a new President.

Mr. BURTON. Yes.

Mr. SIMMONS. And that is a thing it is desired to avoid.

Mr. BURTON. Yes.

Mr. QUIN. Will the gentleman yield?

Mr. BURTON. Yes.

Mr. QUIN. What does the gentleman from Ohio think relative to extending the term of Members of the House of Representatives to four years?

Mr. BURTON. That will come up later, I presume, on an amendment which, I believe, has already been proposed. If I have any views to express on it, I will express them at that time.

Mr. LEA. Will the gentleman yield?

Mr. BURTON. Yes.

Mr. LEA. I would like to make the suggestion—and I would like the attention of the gentleman from Ohio—in reference to the 20-day period between the installation of the Members of the House and the installation of the President. Following the presidential election Congress must canvas the returns from the States, and previous experience has shown that in some cases there are contests in the States, so there is danger of a delay and Congress must have some opportunity in which to deliberate for that reason, outside of the matter of the organization of the House.

Mr. MICHENER. Does not the gentleman feel there should be some limitation in the resolution as to time in which the States must ratify the proposed amendment?

Mr. BURTON. Oh, as a general proposition, I believe in a limitation on that of seven or nine years or some such time.

Mr. MONTAGUE. May I ask the gentleman from Ohio a question?

Mr. BURTON. I yield to the gentleman from Virginia.

Mr. MONTAGUE. The question I wish to propound is more or less a matter of detail, but all details when related to the Constitution of the United States assume the form and matter of dignity.

I notice in the resolution in some instances that the House of Representatives is sometimes singular and sometimes plural.

Mr. BURTON. I have noticed that very thing.

Mr. MONTAGUE. Sometimes it is referred to as "they" and sometimes "it." It says that on the 4th day of January annually they—who is "they"? "They" is the Congress. I simply throw these out—I am not speaking on the merits, but I think the gentleman will agree with me that we should when we are amending the Constitution do it with dignity and have some conformity and dignity of style.

Mr. BURTON. That will come up in the debate under the five-minute rule. I think a serious objection is the possible ambiguity in lines 20 to 22, where I may possibly offer an amendment myself.

Mr. GIFFORD. Will the gentleman yield?

Mr. BURTON. I will.

Mr. GIFFORD. I would like to make an observation. Section 2 says that—

> Congress shall assemble at least once in every year. In each odd-numbered year such meeting shall be on the 4th day of January, unless they shall by law appoint a different day.

It is so drawn that Congress shall have the power to legislate, if the 20 days seems insufficient or is a longer period than necessary. We will notice that the intent of this article is to give Congress the power in the future to remedy by legislation.

Mr. BURTON. Congress would not have it in the even-numbered years, but does in the odd-numbered years.

Mr. CELLER. Will the gentleman yield?

Mr. BURTON. Yes.

Mr. CELLER. If this amendment is adopted, will it have the effect of lengthening or shortening the terms of Members of Congress at that particular time?

Mr. BURTON. Shortening from March 4 to January 4.

Mr. CELLER. Will that mean that Congress could provide for salaries during that time?

Mr. BURTON. That is for you to decide when the time comes. It is doubtful whether it would be done.

Mr. RAMSEYER. Will the gentleman yield?

Mr. BURTON. Yes.

Mr. RAMSEYER. The gentleman from Virginia criticized the language. I call attention to the fact that the phraseology is taken from the Constitution at present. Article I, section 4, clause 2:

> The Congress shall assemble at least once in every year and such meeting shall be on the first Monday in December, unless they shall by law appoint a different day.

Mr. MONTAGUE. The gentleman misunderstood me; the word "they" as embodied in this makes it doubtful as to what it refers. I think that it ought to be explicit.

Mr. BURTON. At the time the Constitution was framed the words "United States" were regarded as plural. They are now regarded as singular. Mr. Speaker, I reserve the balance of my time.

Mr. BANKHEAD. Mr. Speaker, I yield 15 minutes to the gentleman from Tennessee [Mr. GARRETT].

Mr. GARRETT of Tennessee. Mr. Speaker, it has seemed to me ever since I gave any thought to the subject that it would be more in accord with the spirit of this self-governing Republic to have its agents, both in the executive and the legislative branches, assemble for business earlier after election than has heretofore been the case. Also, it has always seemed to me to be perfectly proper that the meetings of Congress should be so arranged as that there would be no meeting of a Congress immediately after the election of its successor. And so with all that part of this amendment which proposes to do this, I find myself in entire sympathy and am sincerely desirous of supporting it.

But there is a provision in the proposed amendment concerning which I confess I am extremely doubtful, and that is the provision that in the even-numbered years the meeting of Congress shall be on the 4th day of January and that the session shall not continue after noon on the 4th day of May.

That is a limitation by constitutional enactment. It seems to me that there is nothing in the experience of the past to indicate that any good reason exists for now removing from the discretion of Congresses that are to come the date when they shall adjourn. The reasons that have so far been presented do not seem to me to be weighty enough to justify constitutional amendment. The only reasons given practically are the political reasons, the fact that these are to be election years. Somehow, some way, I have such a respect for the Constitution of the United States that I dislike to see any provision go into it that is predicated simply upon the question of political expediency.

Mr. GIFFORD. Will the gentleman yield?

Mr. GARRETT of Tennessee. Yes.

Mr. GIFFORD. I hardly think it is fair, inasmuch as the arguments presented are only such as have been incorporated in the report, and thus far no opportunity has been given to state the many reasons to be given therefor.

Thus far in the debate no opportunity has been afforded to give the reasons that we may have and which have not been presented. Those reasons, I am sure, will be advanced in the debate to-day. I do not desire to allow just the report to be thought to contain all the arguments. The gentleman from Tennessee, I know, wants to be fair and will understand that many reasons will be advanced.

Mr. GARRETT of Tennessee. Yes. I hope in the discussion that that question will be dealt with, because, in my mind, it is probably the most serious question involved in the amendment.

I desire to give notice of a proposal which I propose to present by way of amendment, and which I hope to have the opportunity of discussing at more length at some time as the debate proceeds. I propose to offer at the end or near the end as section 6 the following:

"This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the States within seven years from the date of the submission hereof to the States by Congress, and the act of ratification shall be by legislatures, the entire membership of at least one branch of which shall have been elected subsequent to such date of submission.

It is to this proposal I desire to address myself for a moment. Of course, we are all familiar with the different methods by which the Constitution may be amended; that is, the different methods of ratification. In an address made on the floor of this House a few years ago, dealing with this question of amendment, I had occasion to point out that under the system which we have and which has been clarified by recent judicial decisions, it is perfectly clear now that fewer than 4,000 individuals in this Republic of 120,000,000 can bring about an amendment to the organic law of the United States without there being any opportunity whatsoever for a public expression upon it.

Of course, this amendment which I propose consists of two parts. One is the time limit. I think there should be a time limit. I am unable to see why the proponents of any amendment should be opposed to a reasonable time limit.

Mr. GIFFORD. Mr. Speaker, will the gentleman yield right there?

Mr. GARRETT of Tennessee. Yes.

Mr. GIFFORD. I am sure the gentleman understands that the committee is not opposed to a time limit. Some of the legislatures meet only once in four years. I wish the gentleman in framing the amendment would consider nine years instead of seven. It seems to me the legislatures should have opportunity to pass twice upon an amendment like this, which may be further amended before finally voted upon.

Mr. GARRETT of Tennessee. I shall be glad to consider it. It is the principle of limitation which I favor. My reason for fixing seven years was that in that we would follow the only precedent we had, and that is the eighteenth or prohibition amendment.

Mr. MOORE of Virginia. Mr. Speaker, will the gentleman yield there?

Mr. GARRETT of Tennessee. Yes.

Mr. MOORE of Virginia. Heretofore a number of Members have indorsed the view that the gentleman is now expressing, favoring a seven-year limitation.

Mr. GARRETT of Tennessee. Yes. The Supreme Court of the United States, in the case of Dillon *v.* Gloss (256 U. S. 368), deals with that question, and I commend it to gentlemen considering this proposition. I shall not have time to read it. The court holds then seven years to be reasonable and valid.

Mr. RAMSEYER. Mr. Speaker, will the gentleman yield?

Mr. GARRETT of Tennessee. Yes.

Mr. RAMSEYER. It is stated in the court decision the gentleman has before him that every proposed amendment to the Constitution adopted to date was adopted within four years after the amendment was submitted, so that there does not seem to be any weight to the objection that the seven-year limitation is not long enough.

Mr. GARRETT of Tennessee. The gentleman from Massachusetts [Mr. GIFFORD] suggests that every legislature should have an opportunity to pass upon it twice. That is worthy of consideration.

Mr. GIFFORD. There would not be full opportunity to pass upon it if the modification is too limited in character.

Mr. GARRETT of Tennessee. Yes. I think that point is worthy of consideration.

Mr. LEA. Mr. Speaker, will the gentleman yield?

Mr. GARRETT of Tennessee. Yes.

Mr. LEA. In our State the State senators are elected every four years. If they are elected the same year as the President is elected, they would be incapable of voting under the proposition you propose for four years. A State senator is elected for four years, and if he must have been elected before the amendment is adopted, that would require that he must have been elected previously.

Mr. GARRETT of Tennessee. I provide in my amendment that at least one branch should be elected subsequent to the submission. It seems to me that is a proposition, or at least a principle, which should go into every amendment which the Congress may see fit hereafter to propose.

Mr. LOZIER. Mr. Speaker, will the gentleman yield?

Mr. GARRETT of Tennessee. Yes.

Mr. LOZIER. Apropos to that suggestion, does not the gentleman think that it might not be necessary, in view of the fact that there never has been a constitutional amendment submitted to the States or the American people for ratification that has not been the subject of discussion for one or two or three decades? And is it not true that no constitutional amendment has ever been adopted until it has been submitted in response to a state-wide and nation-wide public demand?

Mr. GARRETT of Tennessee. I do not concur with the gentleman that that has been always true. Generally speaking, it may be stated perhaps as to most of the amendments; but I am trying to cast my view into the future to consider not only probabilities, but possibilities, and I am unable, as a believer in our system of democracy, expressed in the only way the democracy can be expressed—that is, through a representative government—as a believer in the principle of democracy I am unable to understand why we should not have such a provision as this with relation to all amendments, so that there may be at least the opportunity on the part of the people whose government is to be affected to give some sort of expression upon the proposition.

Mr. CELLER. Will the gentleman yield?

Mr. GARRETT of Tennessee. I yield.

Mr. CELLER. The Constitution was adopted by conventions called in 11 States, excluding Rhode Island and North Carolina, and all the amendments were ratified by the legislatures. Will the gentleman seriously consider an amendment which would provide that the ratification of this amendment shall be by conventions convoked in the respective States in order to carry out the Democratic theory which, I think, prevails in the gentleman's mind?

Mr. GARRETT of Tennessee. Let me say this to the gentleman—and I am glad he asked the question—that upon any amendment which fundamentally affected the rights of individuals or the relations of the States and the Federal Government, I should say it ought to be submitted to conventions. Now, so far as this particular amendment is concerned, let me say, in all frankness, that it is not very fundamental in its nature.

It is rather a matter of mechanics, a matter of the time of the meeting of the Congress, so that I should not, except for the purpose of making the precedent, be particularly insistent that an amendment relatively as unimportant as I regard this to be, should be forced before conventions which could only be held at an enormous expense to the people of the different States.

Mr. CELLER. Has the gentleman examined the subject matter of our amendments up to date and found out why it was those amendments were not submitted for ratification to conventions called in the States?

Mr. GARRETT of Tennessee. I have tried to find something about that. I think the theory as regards the first 10 amendments is that it was so well understood, even before the original Constitution had been ratified, that the principles involved in the first 10 amendments would be submitted and would become a part of the Constitution as that it was scarcely regarded necessary to have conventions, because it was known in advance of the ratification—all history indicates that, especially after the larger States had practically demanded these principles—that they were going to be submitted and that they were going to be adopted, and hence they did not deem it necessary to submit them other than to the legislatures. So far as some of the others are concerned, I will say very frankly that I believe there were a lot of political reasons, which it would be interesting to go into. [Applause.]

The SPEAKER. The time of the gentleman from Tennessee has expired.

Mr. BANKHEAD. Mr. Speaker, I ask recognition to discuss the rule.

The SPEAKER. The gentleman from Alabama is recognized.

Mr. BANKHEAD. Gentlemen of the House, when we undertake to consider a resolution of such profound political significance as an amendment to our organic law, it is a matter that, in my opinion, should be approached with great deliberation with reference to the consideration of all the features involved in it.

I quite agree with my distinguished colleague from Tennessee that as far as the things involved in these various amendments to the Constitution are concerned they are very largely matters of legislative mechanical importance. I have not personally been very profoundly impressed with the urgency or the necessity of this constitutional amendment as now presented, because I think that most of the things they are seeking to accomplish under this resolution could be achieved by the enactment of congressional statutes affecting those problems, but inasmuch as we have embarked upon the consideration of some changes in our fundamental law, especially with reference to the terms of the President and the Members of the Senate and the House of Representatives, I gave notice upon yesterday that it was my intention at the proper time to offer an amendment to the pending resolution to the effect that the terms of the Members of the House of Representatives should be changed so that their

tenure of office would be for four instead of two years, as now provided in the Constitution. [Applause.]

I want to say to you gentlemen very frankly that if there has been any question with reference to a change of our Constitution that has been suggested to me by inquiries from my own constituents back home, it has been with reference to this particular feature of our existing Constitution.

Mr. JOHNSON of Texas. Will the gentleman yield?

Mr. BANKHEAD. For a brief question, because my time is limited.

Mr. JOHNSON of Texas. Is it not understood by a great many people that that is the present term?

Mr. BANKHEAD. That is true, but I know it is certainly not so understood by gentlemen who seek to come back here every two years. [Laughter.] They make this inquiry of me and I imagine it has been the universal experience of Members of the House of Representatives.

You are elected in November of a given year and the next spring or summer after your term commences you have to embark upon another campaign for reelection. You start in the contest if you have opposition or if you do not have opposition, and the people will say, "Why, we thought we just elected you the other day for a term in Congress. What are you running for again now?" And it has to be explained to them that under the Constitution of our Government the tenure of office of Representative is fixed at two years. The primary thing, gentlemen, I have in mind in offering this amendment is that in my opinion it would make for better government for the people of our country than the present system.

Mr. CELLER. Will the gentleman yield?

Mr. BANKHEAD. I would rather not be interrupted just now, but if I have the time I will yield to the gentleman. I want to present a few suggestions with reference to this amendment.

A Member of the House of Representatives, gentlemen, is just an ordinary representative of a cross section of the intelligence and patriotism of the people of America. He is just a human being; and if a man embarks upon a political career and has an aspiration to serve his people in the Congress of the United States, he necessarily puts behind him his professional and business associations, and—in theory, at least—he intends to devote his time and his energies and his talents to a real service in a representative capacity to the economic and political interests of the people whom he has undertaken to represent.

But that same humanity, asserting itself as it does with reference to a continuation of his political career, every two years his mind is for a long time diverted from a real study of government. It is taken away from a consideration of problems involving the interests of the people as reflected in our committee work and in our legislative deliberations; and when some man is running against him, which is very often the case, he feels in duty bound to himself—and he is not to be blamed for it—to devote a considerable share of his time and thought and energy to the question of preserving his own political career. By virtue of this, his constituents and the country at large are deprived of that real character of effective service to which he might devote himself if it were not for these political diversions coming up every two years.

On the contrary, if the tenure of office were four years, this would give a Representative in Congress at least three years for the exercise of those talents and the devotion of that time to real questions of constructive legislation.

There is another phase of it, and we might as well look at these things frankly. This might be considered a personal consideration on the part of the candidate, but these recurrent elections under our modern, political system require, in many cases, personal campaigns. They exact a somewhat substantial contribution not only from his time, but physical efforts, his nervous energy, and they compel men who are anxious, as I say, to preserve their political careers, to expend considerable sums of money in legitimate expenses for their campaigns, and most of the Members of the House, it is my experience, are not men of large affairs, they are not men of means, and as to a large number of them, their salary is all they have to rely upon. This itself works a hardship upon the man who is devoting his life and his time and his talents, at least theoretically, to the public service.

Mr. GIFFORD. Will the gentleman yield?

Mr. BANKHEAD. Yes; I yield to the gentleman who is a member of the committee.

Mr. GIFFORD. Because all of us will not have proper time to discuss the matter I would like to ask the gentleman if he thinks this is a proper and an opportune time to present such an amendment, the amendment not having been considered by a committee and being one that possibly, and probably, will jeopardize an amendment which is presented at this time to purge ourselves of something that perhaps ought not to exist, and also to correct certain things that must be corrected in our election machinery. Will not the gentleman's amendment be regarded by the public at large as selfish matter which is presented at a time when we are trying to present the opposite? The second question is——

Mr. BANKHEAD. Do not take too long. Let me answer the question first, and then maybe the gentleman will not propound the other question.

Mr. GIFFORD. I think this second question should be presented. The other question is simple.

Mr. BANKHEAD. Make it as brief as simple.

Mr. GIFFORD. Does the gentleman think under the title of this resolution his amendment is germane?

Mr. BANKHEAD. I will answer both of those questions. I think they are fair questions. If I did not think it opportune to pass it—and this is a matter, I will say to the gentleman, upon which I have given some promise to my people back home—I think the people of this country are really more interested and would be more interested in an amendment of this character than they would with reference to the other features of your proposed resolution [applause], and I will state to the gentleman it is not a matter of such involved phases that it would require any exhaustive hearings by a committee. It presents a very simple and brief proposition, simply to change one word in the existing Constitution of the United States, and it is a matter that requires no recommendation by a committee of the Congress in order that every man upon this floor may understand its purpose and its objective.

The gentleman says it might jeopardize the passage of this resolution. I think I know what the gentleman has in mind—the theory that the Senate of the United States would not accept it if it were put upon this resolution by the House upon the theory that it might give some Member of Congress, under a four-year term, an opportunity to run for the Senate against a sitting Member of the Senate without the necessity of giving up his seat on the floor of the House, and therefore for personal reasons they would not approve of such an amendment.

Mr. GIFFORD. If the gentleman will yield——

Mr. BANKHEAD. Let me first answer the gentleman. The gentleman has submitted at least two questions, and I am entitled to answer them.

With reference to the question of germaneness, as the proponent of this proposition, of course, I would have to take chances upon the construction of the parliamentary law of the House upon that question. In my own personal opinion, it is germane to the pending resolution because it affects directly some of the things that are mentioned in the resolution. It relates to the terms of the President and of the House, and of the Senate, and if the resolution, as the gentleman from Ohio [Mr. BURTON] admitted, shortens the terms of the President and the Members of Congress, I ask the gentleman from Massachusetts, as a parliamentarian, if you could not amend it by lengthening the terms of the Congress which is the very proposition that is in the first section of the resolution?

Mr. GIFFORD. Will the gentleman allow me to answer that?

Mr. BANKHEAD. But I do not wish to go into that parliamentary question because that will be a matter that will be presented to the Chairman of the Committee of the Whole when the amendment is offered.

Mr. GIFFORD. Will the gentleman permit a brief question? If his amendment is seriously thought of, would the gentleman be willing to present it in such a form that the present amendment and the gentleman's amendment might be voted upon separately by the legislatures of the various States?

Mr. BANKHEAD. I had not thought about that. I do not know what the gentleman has in mind in submitting that inquiry, but I will say to the gentleman, as I said before, in my judgment, although I may be entirely in error about it, there would be more popular appeal in this section of your resolution which I am proposing, if adopted, than there would be with reference to the other features of the resolution.

If the amendments affecting all these matters of change in our Constitution are to be submitted for ratification of the States, I do not see why you should be opposed to one other proposal, because you are already undertaking to change four, and this would only add a fifth.

Mr. GIFFORD. I will suggest that when we adopted the first amendments to the Constitution they were presented at the same time and divided. Rather than have this resolution jeopardized, I hope the gentleman will agree to the procedure I have offered.

Mr. BANKHEAD. I do not know what the feeling in this House is with reference to this report. I have not attempted to make any campaign and I do not know how many Democrats

are in favor of it or how many Republicans are opposed to it. It has been a matter in my mind for a number of years, and I think this is the only opportunity that the House will get to pass upon it. I am submitting this for your calm consideration and not from a political standpoint, but simply from the standpoint of an attempt which I think in the long run will result in better service and better Government for the American people. [Applause.]

Mr. BURTNESS. Will the gentleman yield?

Mr. BANKHEAD. Yes.

Mr. BURTNESS. Is the gentleman clear that if he should divide the membership up into two classes, electing half at one time and half at another, is permissible where Members of the House would be elected at the same time as the President?

Mr. BANKHEAD. That matter I have given careful thought and attention to. And yesterday I read the amendment that I would propose. Since that time some gentlemen have made suggestions to me, and, as I say, I am entirely agreeable to have any suggestions proposed. It might be better when the time comes to offering it in this form to say that the House of Representatives shall be composed of Members chosen every four years by the people of the several States. That would only create one change in the existing section of the Constitution, by striking out in Article I, section 2, the word "second" instead of "fourth." [Applause.]

Mr. BURTNESS. I think that would be better.

Mr. BURTON. Mr. Speaker, I move the previous question on the pending resolution.

The previous question was ordered.

The resolution was agreed to.

The SPEAKER. Under the resolution the House resolves itself into the Committee of the Whole House on the state of the Union, and the gentleman from New Jersey [Mr. LEHLBACH] will take the chair.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union, with Mr. LEHLBACH in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of Senate joint resolution, which the Clerk will report.

The Clerk proceeded to read the Senate joint resolution, when Mr. RAMSEYER asked unanimous consent that the first reading of the resolution be dispensed with, which was agreed to.

Mr. WHITE of Kansas. Mr. Chairman, the legal phases of the subject having been discussed, I shall direct my remarks to the principles involved in the bill. It was stated in the discussion of the rule that the fixing of the term was rather more than anything else the result of accident. With this I fully agree.

The great purpose of the resolution is to bring the Congress into prompt activity a short time after the election and because the long delay after the election is without reason or excuse. It contradicts our theory of free representative government. The plan now followed is the result of accident and is not approved by any constitutional provision or direction whatever.

The resolution passed on the 13th day of September, 1788, fixing the 4th of March as the day may have easily been in a degree anticipatory upon the date of the passage of the resolution. Not a large number of United States Senators from the States ratifying the Constitution had at that time been chosen nor had all the States as yet ratified the Constitution as is shown in the following table:

Election of first United States Senators

State	Elected by legislature	Name of Senators
Delaware	Oct. 24, 1788	George Read and Richard Bassett.
Pennsylvania	Jan. —, 1789	William Maclay and Robert Morris.
New Jersey	Nov. 25, 1788	William Patterson and Jonathan Elmer.
Georgia	Jan. 17, 1789	William Few and James Gunn.
Connecticut	——, —, 1789	William S. Johnson and Roger Sherman.
Massachusetts	Feb. 8, 1789	Caleb Strong and Tristram Dalton.
Maryland	Dec. 9, 1788	John Henry.
	Dec. 10, 1788	Charles Carroll.
South Carolina	Not known.	Ralph Izard and Pierce Butler.
New Hampshire	Nov. 12, 1788	John Langdon.
	Jan. 3, 1788	Paine Wingate.
Virginia	Nov. 8, 1788	Richard Henry Lee.
	May 21, 1789	William Grayson.
New York	July 16, 1789	Philip Schuyler and Rufus King.
North Carolina	Nov. 27, 1789	Samuel Johnston.
	Dec. 9, 1789	Benjamin Hawkins.
Rhode Island	June 7, 1790	Joseph Stanton and Theodore Foster.

It is impossible that such work as that of Madison, Mason, Randolph, and Wilson, after being in entire agreement on the first branch of the legislature, should have at once and immediately agreed to a rule that would deny the results of that plan, so that it is entirely fair to say that the plan in the first instance is the result of accident rather than otherwise.

EARLY CONVENING OF THE CONGRESS

This proposed amendment is not an innovation. This is not a unique or novel proposition. I heard it discussed 50 years ago. Thousands of news articles and editorials have been printed upon the subject. The purpose of the amendment is to bring the rule into conformity with the theory of representative government. What valid reason can be urged for retaining in power for four months a Congress which has been displaced at the election by a new and different Congress? I say, What reason can be urged for so doing which can not be urged with equal propriety for retaining them for one or two years or even a longer period?

Why do we hold elections? Why do we vote on each recurring second year? Certainly not to exercise in a perfunctory manner a constitutional right. No, indeed; we write the platforms of the parties in clear terms. We declare for well-defined policies. We discuss the issues and we record our decisions. The votes are counted; the results are ascertained and declared. When are the results sought by this decision to be realized? There is but one normal answer, and that answer is, immediately. The people say, "We have discussed the issues; we have recorded our decision; we have declared for the change; we want it, and we want it now."

No chain ere forged on anvil's brink
Is stronger than its weakest link.

I do not believe for a moment that the fathers ever contemplated that we should operate under such a rule.

I shall not generalize on the question of presidential succession in any extended statement, but will first submit in proof of its importance the eminent constitutional authority, Joseph F. Story, who, in commenting on the presidential succession, says in volume 2, section 1482, of his Treatise upon the Constitution:

> No provision seems to be made, or at least directly made, for the case of the nonelection of any President and Vice President at the period prescribed by the Constitution. The case of a vacancy by removal, death, or resignation is expressly provided for, but not of a vacancy by the expiration of the official term of office. A learned commentator has thought that such a case is not likely to happen until the people of the United States shall be weary of the Constitution and Government, and shall adopt this method of putting a period to both; a mode of dissolution which seems from its peaceable character to recommend itself to his mind as fit for such a crisis.

In the Constitutional Convention there seemed to be unanimous agreement that the Government should be made equal to the purposes for which it was constituted.

As to the best means for achieving this end, there was constant disagreement from the very beginning of the deliberations of the convention. On the question of the organization of the first branch of the legislature there was practical unanimity, and with a minimum of debate it was agreed that its membership should be drawn directly from the people. On the fifth article there was unanimous agreement.

It is surprising to me that any man shall say that we should cease to tinker with the Constitution. I wonder if gentlemen have forgotten that it was generally felt by the members of the Constitutional Convention that the instrument should and subsequently would be amended.

Every citizen well knows that the First Federal Congress in 1779 submitted 12 amendments, 10 of which were promptly ratified.

I believe it is generally known that Article V of the Constitution making provision for submitting amendments was one of the very few provisions of the Constitution agreed to nem. con. or without objection—this should forever stop the futile opposition to the general desire to amend the Constitution. I ask, Why should we not seek to amend it when such amendment is for the purpose of increasing its efficiency? The language of George Mason, of Virginia, is little less than an admonition to so do. Mr. Mason said:

> Although the convention is composed of distinguished persons, it can not be expected they shall furnish a perfect Government.

And he further stated that he would prefer leaving its completion to posterity, rather than push the matter too far. It was at the very time at which the convention was considering the Constitution, laying, as we might say, the foundation of Government, that Mr. Mason stated it would be amended. I

say it should not be made more difficult to submit a proposition to the people providing for an amendment to the Constitution, but rather easier.

Now, I have heard it said that there should be a long vacation or cooling-off period between the election and the assembling of the Congress elect. This is a myth and an error. While it is true that the Government is representative, nominally it is nevertheless democratic in theory, and should be, in fact. Why do I say this? Because every great issue, national in character and extent, is seriously discussed in every biennial, and especially every quadrennial, campaign. Every question is given the most careful consideration.

Now, it is not very logical that anyone should say that a Representative, after the fullest discussion of the issues involved, after having expressed himself as being in accord with his constituency, should for any good reason ask for a postponement of his official duties. Has he any moral right to do so? The people have spoken their sentiments—they have a right to expect an early response in legislation and to say they shall not have it is an intolerable denial of their rights. There is no justification nor is there any valid excuse for the opposition to this amendment whatever.

I see beneath the calm surface of American character no lurking fury of democracy. If wrong in their conclusions, they have the right to be mistaken.

The stock argument of many who oppose this amendment seems to be that we should not meddle with the Constitution. Now, this may be a genealogical notion, but it does not seem to run far back to its origin; certainly it was not entertained by the fathers; certain it is that such an idea was not expressed in the convention, but, on the contrary, it was suggested by Mason, of Virginia, Ellsworth, and others; and the States in extending their ratification to the Constitution memorialized the Congress to pass certain—12—resolutions proposing amendments to the Constitution which were submitted, 10 of them being promptly ratified as I have heretofore stated. But, to the fearful and perturbed spirits of some persons, any proposal to amend the Constitution falls as a sound "fearful and ominous, depressing as the said wailing of November winds on the blank midnight."

It is also true that distinguished authors have pointed out that no provision has been made in the Constitution for the case of the death of both the President and Vice President elect before the day for the beginning of the term. I do not say before the day "fixed" because there is no day fixed by and in the Constitution.

It may be interesting here to make a brief allusion as to how and why the 4th of March became fixed as the date for the beginning of the congressional term. The 4th of March is referred to only once in the Constitution and that is in the twelfth amendment, and which reference does not seek to fix the beginning of the term but seems to presume it had already been fixed.

THE LIMITATION OF THE SESSIONS IN EVEN NUMBERED YEARS

This is a sound provision. I believe a continuous period of four months precludes the likelihood of any public business being retarded through a filibuster, and besides it is only fair that the Member shall have opportunity to personally present his record to his constituents.

It is a matter of common knowledge that under the present rule little is accomplished until after the 1st of January, affording only approximately two months to devote to the public business. Under the proposed resolution four months of sustained effort may be devoted to that business; besides, I feel that the people have a right to have the complete record of the Congress before them at the time they are choosing the successors to that Congress.

At a session of four months I believe the likelihood of filibuster is practically eliminated. Further upon this question, will say that in the case of the development of a filibuster the Congress could be immediately reconvened and proceed from the point at which it left off, the same Congress functioning without interruption, which gentlemen know could not be under the present plan of procedure.

I allow no one to exceed me in my veneration and admiration for the Constitution. It is the greatest human product of its kind in existence. It is the strongest foundation of society ever laid in all time, and upon that foundation is the most glorious fabric of society ever erected by mankind. The spirit of accommodation, admirable beyond expression, was not inspired by or exercised by pure magnanimity. The different views held by the delegates could not have been greater. The grave necessities of the situation more than anything else compelled an agreement, and no great question was unanimously concurred in unless it was the necessities of the Union and that the Constitution should and would be subsequently amended, and also that the first branch of the National Legislature should be drawn from and chosen directly by the people.

The manner of choosing the Executive was much debated; it was defined as being one of the most difficult problems before the convention. The plan finally adopted seemed to furnish the very best solution suggested. As to whether the Congress shall consist of one or two branches was debated at length.

PREFACE

As an emphasis to my reference to the necessities of the Union, I here insert a part of Madison's preface to his notes in the convention and a short eulogy by him on the Constitution.

As a natural consequence of this distracted and disheartening condition of the Union, the Federal authority had ceased to be respected abroad, and dispositions were shown there, particularly in Great Britain, to take advantage of its imbecility and to speculate on its approaching downfall. At home it had lost all confidence essential to order and good government, involving a general decay of confidence and credit between man and man. It was found, moreover, that those least partial to popular government or most distrustful of its efficacy were yielding to anticipations, that from an increase of the confusion a government might result more congenial with their taste or their opinions; whilst those most devoted to the principles and forms of republic were alarmed for the cause of liberty itself, at stake in the American experiment, and anxious for a system that would avoid the inefficacy of a mere confederacy, without passing into the opposite extreme of a consolidated government.

It was known that there were individuals who had betrayed a bias toward monarchy, and there had always been some not unfavorable to a partition of the Union into several confederacies; either from a better chance of figuring on a sectional theater, or that the sections would require stronger governments, or by their hostile conflicts lead to a monarchial consolidation. The idea of dismemberment had recently made its appearance in the newspapers.

Such were the defects, the deformities, the diseases, and the ominous prospects for which the convention were to provide a remedy, and which ought never to be overlooked in expounding and appreciating the constitutional charter, the remedy that was provided.

But after all his writings Madison says of the finished work of the Constitution the following:

> It remained for the British colonies, now United States of North America, to add to those examples one of a more interesting character than any of them, which led to a system without an example ancient or modern. A system founded on popular rights and so combining a Federal form with the forms of individual republics as may enable each to supply the defects of the other and obtain that advantage of both. (Madison Papers, vol. 2, 686.)

Under the present plan we have gotten along very well and have made great advancement. Fully granted a man may have gotten along very successfully with a bad limb, for example a bad knee, one arm or what not. Does it then follow that he might not have gotten along much better without the handicap? Or does the statement prove that if he has gotten along reasonably well in spite of the handicap he should seek to preserve it? He should keep away from the doctor—he should shun the surgeon because he has succeeded reasonably well and should faithfully preserve the handicap and not let it go. Of course this view is chimerical. This position is not admittedly taken by those opposing any amendment to the Constitution, but it is their position, and such without any misrepresentation whatever. [Applause.]

Mr. JEFFERS. Mr. Chairman, I yield myself five minutes.

The CHAIRMAN. The gentleman from Alabama is recognized for five minutes.

Mr. JEFFERS. Mr. Chairman and ladies and gentlemen of the House, we have a constitutional amendment before us for consideration, a very important matter. If passed by Congress it must, of course, then be submitted to the people of the country for ratification. We have a number of Members who have given a great deal of time and thought to the study of the provisions of this proposed constitutional amendment, and as it is my desire to accommodate as many as possible of the Members who wish time to speak on the proposition, I am going to be content with only a brief statement at the present time, just to explain my own position regarding the amendment.

I have the honor of serving on the committee which has reported this constitutional amendment. In the committee I opposed as vigorously as I possibly could some of the provisions of this amendment, and I reserved the right, and so stated when this amendment was reported out of committee, to be free, whenever the matter should reach the floor of the House, to support certain amendments here at the proper time.

Summing up very briefly, I will state that I thought it unwise to place in this amendment so many details which could better be handled by legislative action by the Congress, should the general idea of the amendment be proposed to the people and ratified by the necessary number of States. For example, I think it is unnecessary and unwise to include in this constitutional amendment these specific dates. I believe that a flexible clause could be put into the constitutional amendment providing that the first Congress after the constitutional amendment should be ratified should enact the necessary legislation to set the date for the convening of the Congress.

Mr. CELLER. Mr. Chairman, will the gentleman yield?

Mr. JEFFERS. Not now. I will yield later, if I consume more time.

For example, such a flexible clause could provide that the convening of Congress after its election in November should be at some convenient date in January, to be decided by the first Congress after the amendment is ratified, not less than six weeks nor more than two months, we might say, prior to the 4th of March. We do not know what the experience of the future will teach us. We may find that the 4th of January would be not a wise date; but if these specific dates go into the Constitution, of course they are then parts of the Constitution, and it would take other and further constitutional amendments in order to correct them and make them the dates that they should be. These dates can be set by legislative act, and it is not necessary to write them into the Constitution.

Furthermore, this specific arbitrary date of adjournment on May 4 in the even-numbered years is, in my judgment, unwise and entirely unnecessary. If that arbitrary date is provided, we will run into a jam of legislation, paving the way for a filibuster, just as we do now when Congress adjourns on the arbitrary date of March 4.

For these reasons, in committee I opposed inserting those hard-and-fast dates into the constitutional amendment, and for those reasons I reserved the right to oppose those features of the proposed amendment on the floor of the House.

Mr. Chairman, I shall not consume more time at present, but will yield 10 minutes now to the gentleman from Nebraska [Mr. NORTON].

The CHAIRMAN. The gentleman from Nebraska is recognized for 10 minutes.

Mr. NORTON of Nebraska. Mr. Chairman and gentlemen, 19 amendments have been added to the Federal Constitution since its adoption. Five additional amendments, as I now recall, have been submitted by Congress that have not been ratified by a sufficient number of States to become a part of the Constitution. Of the 19 amendments ratified, the first 10 were submitted by the first session of Congress, and as a matter of fact, several of the Colonies ratified the Constitution, in the first place, with the distinct understanding that the first session of Congress should submit those amendments, known as the Bill of Rights, for their approval.

Consequently, in the last 140 years, or thereabouts, Congress has submitted, and the required number of States have ratified, only nine additional constitutional amendments. Congress has reluctantly submitted amendments, and the legislatures of the States have, with care and caution, ratified those which have been added as a part of the Constitution. That is as it should be.

There are some, I realize, who maintain that since the work of the convention was so well done, we should not tamper with the Constitution; we should refrain from making changes for fear we might err in our efforts. But that, apparently, was not the viewpoint of the framers of the Constitution, since they provided two different ways by means of which we might amend the Constitution. They were farseeing men who realized that the changing conditions of the years to come would necessitate changes in the fundamental law of the land. Furthermore, it must be remembered that the Constitution, in several ways, was a compromise. Then, as now, there were two viewpoints that predominated.

There were those who entertained the view that the people were not competent of self-government, and there were others who entertained the opposite view, and who had implicit faith in the people's ability to decide for themselves the course of their Government. They held that even though the people might make mistakes they had a fundamental right to do so, and only by profiting from the mistakes which they might have made would they be able to learn how to best govern themselves, and to direct the course of their Government.

However that may be, our country has adopted 19 amendments in the way provided for by the Constitution, and it is interesting to note that each change made has been in keeping with the view of those who have believed in the principles of popular Government. That is true with reference to the presidential electors, who do not exercise the duties originally intended that they should perform. That is true with respect to the direct election of Senators, and it is likewise true of the nineteenth amendment, which provides for equal suffrage. Furthermore, not a single amendment once added has ever been repealed and no serious effort has ever been made to repeal it. Apparently, then, each amendment has been added because changed conditions demanded it.

We now have before us another amendment which, if submitted and ratified, will be in keeping with the requirements of our times. Conditions have materially changed, in many respects, since the latter part of the eighteenth century. At that time they lacked the modes of communication enjoyed to-day. There were no telegraphs, no telephones, no radios, and no fast mail service. It took weeks before the result of an election in one part of the country could be known in another. Even when known, it required considerable time to gather returns preparatory to the convening of Congress and the inauguration of the President and Vice President. Roads in those days were almost impassable. They had no automobiles, no train service, no airplanes, and must rely, in the main, upon the stagecoach and the saddle horse. Besides, another most important change has been made in our Constitution which affects this matter.

The United States Senators were then elected by the legislatures of the various States. The legislatures did not meet until in January, and since contests often developed, it was considerably later than that before selections were made. Senators so elected could not have attended a session of Congress convening in the month of January.

What would be the result if this amendment should be adopted? As has already been stated, it would provide for the seating of Senators and Representatives and the inauguration of the President and Vice President in January following their election. It likewise would empower Congress to provide for the election of a President in certain emergencies. It is with reference to the former provision that I desire to speak. I shall not attempt to discuss every possible advantage, but only those that appear to me to be the most important. The first result would be the immediate taking over of the offices by those chosen in the preceding election. The newly elected Members would be fresh from the people. The result of the election and the issues discussed during the campaign would be fresh in their minds. Therefore they would be anxious to carry out the wishes of the people whom they were to represent.

We often hear the expression that we need a cooling-off period. That was not the intent of the framers of the Constitution with reference to this particular phase, since they provided for two-year terms for the Representatives. It was planned that they should come back frequently for further indorsement. Furthermore, have we not sufficient check now? Is not two months sufficient? If not, by what system of time measurement are we to decide that period? If four months is better than two, would not four years be even better? Can not a Member act as well the day after election as two or four months later? Also, we have two legislative branches, each acting as a check upon the other, and their acts must receive the approval of the Chief Executive, whereas the legislative representatives of some countries, with only one legislative branch, meet almost immediately after their election to administer the affairs of government. Besides, is there not often danger in too much cooling off? We have recently heard a great deal about the influences of the highly financed lobby, accused of adopting corrupt methods to influence legislation.

With those influences constantly at work in an effort to cool the ardor and the enthusiasm of the Members, is it not logical to assume that the greater the delay the less apt becomes the Member to correctly register his vote in keeping with the wishes and interests of his constituents, and the more apt will he be to register the wishes of these cooling-off influences.

Another objection to the present system is that the new Member is not generally sworn in until in December, 13 months after his election. Then, almost immediately thereafter, he finds himself in the midst of a campaign for renomination. Up to that time he has had little chance to demonstrate his capabilities. By virtue of such a situation the people whom he represents have not had a chance to properly weigh his qualifications before they are called upon to vote for his renomination. If I may be permitted a personal reference, at the present time a primary campaign is being fought out in my State, the date for the election being April 10. Fortunately I have no opposition for the nomination, but if I did have I would be confronted with the necessity of making that campaign now, before having completed my services in my first session. Also, I would have to choose between neglecting my duties as a Member of Congress in order to make a campaign and remaining on the job and

letting the campaign take care of itself. Fortunately, under the circumstances, I have no such decision to make in the case. If this amendment should be adopted the newly elected Member would have ample time to demonstrate his ability before seeking renomination.

The third point which I desire to make deals with the present situation wherein a defeated Member continues to serve during the following session. It is not fair to him to ridicule his position. He is not to blame for that situation. He has not only the right, but it is his duty, to continue to serve in that capacity. However humiliated he may be in his public efforts after having been defeated, his is not the fault. Neither can the blame be placed upon the people, since the sentiment in favor of this proposed Constitution change seems to be overwhelming. Nor can it be charged to the States, since the legislative bodies thereof have never been given an opportunity to ratify a change. The blame, if any there be, must rest with Congress for its failure to sooner act upon this important matter.

Even though the defeated candidate is not at fault, the situation is an undesirable one. For instance, he may have supported certain legislation prior to the election which may have been the cause of his defeat, and yet he can return and aid in the passage of such legislation, contrary to the verdict and wishes of his people. In the event that the election of a President, in an emergency, should be thrown into the House he could vote for a minority candidate, likewise contrary to the verdict of the electorate. It is often charged that a defeated Member is influenced in his voting through promise of an appointment to be received later. Whether that be true or not, the present situation makes possible such a charge and such an arrangement.

The CHAIRMAN. The time of the gentleman from Nebraska has expired.

Mr. JEFFERS. Mr. Chairman, I yield two additional minutes to the gentleman from Nebraska.

Mr. NORTON of Nebraska. Finally, the proposed change would result in the elimination of the short session. In a short session appropriation measures involving the expenditure of not only millions, but billions, are given improper consideration through lack of time. Many important measures are sidetracked, and in the rush good legislation is often defeated while that which is less desirable is passed. By abolishing the short session the incentive to filibuster would be gone.

Mr. LEAVITT. Will the gentleman yield for a question?

Mr. NORTON of Nebraska. Yes.

Mr. LEAVITT. Does not this proposed amendment provide for a short session that is to begin on the 4th of January and end on the 4th of May?

Mr. NORTON of Nebraska. I was coming to that. I am not in favor of that part of the resolution, and as a member of the committee I reserved the right, just as my colleague the gentleman from Alabama [Mr. JEFFERS] reserved the right to vote for a change in the part of the resolution which provides that Congress is to adjourn every alternate year on the 4th of May. I feel Congress should be left to be its own judge as to the length of the second session, as well as the length of the first session.

In conclusion, what opposition is there to the adoption of this amendment? I have received many letters and other communications in support of it and I have received none in opposition. The press of the country is overwhelmingly in favor of the amendment. The American Bar Association has indorsed it. In 1917 the association appointed a committee to study the question and to report. The report which was later adopted by the bar association was strongly in favor of this constitutional change. Business and professional men everywhere are for it. Leading farmers' organizations have indorsed it, as has also the American Federation of Labor. Women's clubs have done likewise. Many others are enthusiastic advocates of the proposal. It is strange that something which everybody wants no one seems to be able to secure. Not a single civilized nation in the world permits of a similar situation, and not a single State in the Union has such an arrangement with reference to the assembling of its legislative body.

The change would be in the interest of more efficient, more direct, and more representative administration of governmental affairs. It will be in harmony with present conditions and with the requirement of our times. I sincerely trust that the resolution may be submitted by Congress during its present session.

Mr. WHITE of Kansas. Mr. Chairman, I yield 15 minutes to the gentleman from West Virginia [Mr. BOWMAN].

Mr. BOWMAN. Mr. Chairman, the Constitution of the United States is a sacred covenant among men. It is inviolable. It is holy. It is hallowed by the blood of all ages in the unequal struggle and contest for political freedom. It is dedicated to the fundamental principles of free government, which have made the United States of America the greatest and the most successful democracy the world has ever known. In this conception of the Constitution we find the essence of a national patriotism and loyalty which impel us to view with evident suspicion and distrust all proposals to amend the Constitution of the United States and to regard them as stealthy encroachments upon the rights and privileges of free government. This attitude of national reverence is most commendable. Without it no nation can endure; but in it lies the hope of individual security and national permanence.

This most commendable attitude of loyalty and devotion may close our eyes to glaring defects and imperfections in our Government. Patriotism is often uncomprehending, uncompromising, and blind. As American citizens it is our duty to oppose with vigor any proposal to alter or change the constitutional laws of our Nation which proposal would commit us to strange and untried policies, wholly inimical, foreign, and contrary to the accepted ideals of representative government.

On the other hand, however, the adoption of a resolution proposing an amendment to the Constitution of the United States which would assure more perfect coordination of governmental agencies and would reflect the will of the people with greater spontaneity in national legislation, without destroying the principles and ideals of government, is also a distinct mark of intense loyalty and an evidence of a high sense of patriotism. It may be more patriotic to propose and adopt a constitutional amendment than to oppose and prevent its adoption. I am certain this is true if the proposed amendment seeks to facilitate and expedite the various operations of the Government in accordance with the original intentions of the Constitution of the United States. Conscientious efforts to bring all branches of our Government into complete coordination and cooperation, and to make them directly responsive to the expressed will of the people, are born of a nobler patriotism than are those which seek to delay and impede because of peculiar loyalties and devotion to the traditions of the past. All good in government is not directly traceable to the past. The present presents new problems for solution which the past had no opportunity to solve.

The test of governments is not founded upon abstract theories and principles but upon the practical, every-day operation of governments. The Government of the United States is no exception to this rule. Its success is wholly dependent upon its ability to operate and function smoothly and efficiently in all departments and at all times. A failure in this respect presents no other alternative except a widespread dissatisfaction and discontent among those whom the Government seeks to serve.

In the Constitution of the United States we find the origin of widespread dissatisfaction and criticism of our procedure in national legislation. For many years the press of the country has advocated an amendment to the Constitution which would correct and modify the illogical and inconsistent procedure of the Congress of the United States. For several prior sessions of Congress and during the present session of the Seventieth Congress the Senate of the United States has given heed to this popular demand of the people and has adopted resolutions proposing an amendment to the Constitution which, in effect, would eliminate the direct and approximate causes for this growing dissatisfaction; but heretofore the House of Representatives has given no serious thought or consideration to any proposed plan or method to remedy the apparent evils affecting legislation. It has remained silent to the urgent demands of the people.

However, in this session of Congress the Committee on the Election of the President, Vice President, and Representatives in Congress, in the House of Representatives, by unanimous vote, has reported favorably House Concurrent Resolution 18, introduced by the gentleman from Kansas [Mr. WHITE] and the resolution has been given a rule for consideration.

This resolution, if adopted by Congress and ratified by the legislatures of three-fourths of the several States, would make the Congress of the United States more directly responsive to the will of the people and incidentally remedy the remote but possible contingencies affecting the executive or administrative division of our Government.

The resolution is in the words and figures following:

(1) *Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein)*, that the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

ARTICLE —

SECTION 1. The terms of the President and Vice President shall end at noon on the 24th day of January, and the terms of Senators and Representatives at noon on the 4th day of January of the years in which such terms would have ended if this article had not been ratified.

SEC. 2. The Congress shall assemble at least once in every year. In each odd-numbered year such meeting shall be on the 4th day of January unless they shall by law appoint a different day. In each even-numbered year such meeting shall be on the 4th day of January, and the session shall not continue after noon on the 4th day of May.

SEC. 3. If the House of Representatives has not chosen a President, whenever the right of choice devolves upon them, before the time fixed for the beginning of his term, then the Vice President chosen for the same term shall act as President until the House of Representatives chooses a President; and the Congress may by law provide for the case where the Vice President has not been chosen before the time fixed for the beginning of his term, declaring what officer shall then act as President, and such officer shall act accordingly until the House of Representatives chooses a President, or until the Senate chooses a Vice President.

SEC. 4. If the President elect dies before the time fixed for the beginning of his term, then the Vice President elect shall become President; and the Congress may by law provide for the case of the death of both the President elect and the Vice President elect before the time fixed for the beginning of the term, for the case of the death of any of the persons from whom the House of Representatives may choose a President whenever the right of choice devolves upon them, and for the case of the death of any of the persons from whom the Senate may choose a Vice President whenever the right of choice devolves upon them.

SEC. 5. Sections 1 and 2 shall take effect on the 30th day of November of the year following the year in which this article is ratified.

The constitutional amendment, which the said concurrent resolution proposes, will affect the legislative and administrative divisions of our Government in the following manner:

First. The newly elected Members of the Congress of the United States will take office on the 4th day of January of the years in which such terms would have ended if this proposed amendment to the Constitution had not been ratified.

Second. Congress will assemble once in each year; and shall convene on January 4 of each year, except Congress may by law appoint a different day for assembling in the odd-numbered years. A new Congress will assemble approximately two months after the congressional election.

Third. The sessions of Congress in the even-numbered years shall not continue beyond noon on the 4th day of May in that year. In effect this prevents state-wide primaries and the general election of that year from interfering with national legislation.

Fourth. The short sessions of Congress will be eliminated and abolished.

Fifth. Congressional elections will be held after the second session of Congress instead of between the first and second session of Congress.

Sixth. The power of the House of Representatives to choose a President of the United States under certain conditions and circumstances is specifically affirmed.

Seventh. The terms of the President and Vice President shall begin and end on the 24th of January instead of the 4th of March.

Eighth. It also provides for three contingencies not now covered by any provisions of the Constitution, to wit:

(a) Congress will be given authority and power to provide for a possible emergency where neither a President nor a Vice President has been chosen before the time fixed for the beginning of the term.

(b) The Vice President elect shall become President in the event that the President elect should die before the time fixed for the beginning of his term.

(c) Congress is authorized to provide for the possibly remote contingency of the death of both the President elect and the Vice President elect before the time fixed for the beginning of their terms.

It is not my purpose to discuss fully the proposed amendment from the standpoint of its effect upon the administrative branches of our Government by clarifying and affirming doubtful and uncertain provisions of the Constitution, or providing for possible contingencies and emergencies not covered by any provisions of the Constitution. These are important in the sense that they should be embodied in the proposed amendment because the powers of Congress in such cases should be specifically and definitely defined. There should be neither doubts nor uncertainties with reference to the selection of the highest administrative officers of our Government. The fact that there are certain possible contingencies and emergencies not provided for in the Constitution of the United States presents a condition which merits worthy consideration by this Congress. To acknowledge and concede this situation in our Government tends only to broaden and heighten our legislative responsibility in an effort to remedy and correct.

In this connection, however, it might be noted that the said White resolution provides that Members of Congress shall begin their terms on the 4th day of January following their election in November, and also provides that the terms of the President and Vice President shall begin on the 24th day of January following their election. This interim is especially provided so that the new Congress, assembled on the 4th of January after their election, shall have sufficient time to count the electoral votes certified by the several States in determining the election of a President and Vice President as provided by the twelfth amendment to the Constitution of the United States. All provisions of the twelfth amendment concerning electors and the electoral count are preserved and maintained without any changes whatsoever. However, in the event the proposed amendment is ratified by the several States, the two Houses of Congress by concurrent resolutions will be compelled to provide for a different time than now is required by law for the electoral count.

Mr. JOHNSON of Texas. Will the gentleman yield there?

Mr. BOWMAN. Yes.

Mr. JOHNSON of Texas. The term of office, I understand, is to begin on the 4th of January, a definite date; but what about the suggestion with reference to the beginning of the session of Congress? Suppose the 4th of January should come on Sunday, would the Congress convene on Sunday?

Mr. BOWMAN. I presume so. There is nothing to the contrary. In fact, many of the parliaments of other nations convene on Sunday.

Mr. JOHNSON of Texas. The present Constitution provides that the Congress shall convene on the first Monday in December, and I was wondering why it would not be proper to have a similar provision here.

Mr. BOWMAN. The proposed amendment provides at least 20 days between the assembling of Congress and the inauguration of the President.

Mr. JOHNSON of Texas. But the President's inauguration could be fixed definitely for the 4th of March.

Mr. BOWMAN. That is possible.

Mr. JOHNSON of Texas. I understand you have to have a definite date for the term of office to begin and to expire, but I was wondering if the convening of Congress could not be fixed for a certain Monday rather than upon a specific date.

Mr. BOWMAN. I see no objection to that unless the time for the assembling of Congress might conflict with the inauguration of the President and bring the time to such a point that there would be very little time between the assembling of Congress and the inauguration of the President of the United States.

Mr. HASTINGS. Is the gentleman going to discuss what it is expected Congress would do between January 4 and January 24? It has already been suggested that the election of the President might be thrown into the House, but that has not happened for a long number of years and perhaps will not happen again. Assuming that does not happen, what is there to be done, outside of the organization of the House and the appointment of committees, between January 4 and January 24?

Mr. BOWMAN. In answer to my friend, I think the Congress could very wisely take up some of the appropriation bills and discuss general legislation pending the inauguration of the President.

Mr. HASTINGS. Prior to the message of the President and the submission of the Budget by the incoming President?

Mr. BOWMAN. I think so.

Mr. GIFFORD. Will the gentleman tell us what Congress could not do within the 20 days except to listen to the message of the President?

Mr. HASTINGS. Suppose you took up the appropriations. How is the Budget going to be submitted when you have no President?

Mr. DENISON. We have inaugurated the practice of a number of committees coming here before December and having important hearings before Congress convenes. I never did approve of it, but if we adopt this system the hearings can be proceeded with.

Mr. HASTINGS. But now we have a President and a Bureau of the Budget, and you know the views of the President on all legislation. But in this case you would not have the President and he would not have submitted a message.

Mr. BOWMAN. The greatest merit of the said proposed amendment is founded upon an honest, conscientious effort to

remedy the crude, cumbersome, and wholly illogical methods and conditions in the legislative branch of our Government. This effort should have the personal consideration and support of each Member of the present House of Representatives. Today the House stands charged and indicted before the bar of public opinion because it has refused to give thought and consideration to the most glaring inconsistencies of our representative Government. To this charge we can no longer plead the plea of confession and avoidance—confessing and conceding gross inconsistencies; but intentionally avoiding justification for changes. This plea does not join issue. It only delays and avoids issue. Indifference, carelessness, or neglect can in no wise be interpreted as a defense against the well-founded charges of the public.

The Constitution of the United States provides a two-year term for Members of the House of Representatives and a six-year term for Members of the United States Senate. Under these provisions all the Members of the House and one-third of the Senate are elected every two years. The election is held during the early part of November in the even-numbered years, and the newly elected Members of both the House and Senate are inducted into their respective offices on the following 4th of March. This creates an interim of approximately four months between the election of the Members of the House and one-third of the Senators and their informal induction into office. There is no severe criticism of this delay alone; but it is the beginning and the foundation of an irresponsive system of our Government that impedes and prevents full and complete expression of the popular will of the people in national legislation.

In the manner provided by the Constitution of the United States, Members of the Senate and the House of Representatives are elected to represent the sovereign States and the individuals, respectively, in the legislative branches of our Government; but the Constitution which creates this basis of representation also inadvertently denies to its chosen representatives in Congress the freedom and privilege to exercise the rights and duties for which they were elected. This condition is intolerable. It has no place in free government. The fact that one-third of the Members of the Senate and all of the Members of the House of Representatives duly elected in November in one year can not participate in the legislative council of the Nation until the December of the year following their election, unless there is a special session of Congress, is almost inconceivable in the range of the purpose and business of organized governments. This system checks and holds in abeyance the popular will of the people for a period of nine months from the induction of our representatives into office, and approximately 13 months from the date of their election. In this system there is no semblance of a responsive government. On the other hand, it represents an irresponsible, irresponsive, and an indifferent condition of the legislative branch of our Government—the only branch of our Government which has a direct, vital contact with the people themselves.

In the consideration of this particular phase of the problem let us look at the concrete facts confronting the House of Representatives. To do so might awaken a personal interest in this legislation. The House of Representatives is composed of 435 Members, who, with the possible exceptions of 1 or 2 Members, were elected at the general election held in November, 1926. We became Members of the House on March 4, 1927, and assembled for the first and long session of the Seventieth Congress on the first Monday of December, 1927.

Regardless of the expressed will of the people at the general election of 1926, this is the first opportunity of the Seventieth Congress to enact legislation; and, before the adoption of a legislative program or the enactment of legislation, we find ourselves entangled in the meshes of state-wide primaries for reelection which have been adopted by a great majority of the States. In this statement I am assuming that all the Members of the present House desire to succeed themselves. There are many Members of the House who aspire to represent their States in the United States Senate. However, the ambitious desires of many Members of the House of Representatives do not alter the present situation but only add strength and verity to the truth of my contention. The fact still remains that many Members of this House are prohibited and prevented from giving deliberate thought to pending legislation because of actual or threatened opposition in the early State primaries which will be held before the adjournment of the first session of this Congress. This statement is no reflection upon the honest intentions of the Members of Congress to serve well their constituents in legislative matters; but it is a criticism and arraignment against the system that prevents deliberate and thorough consideration of national legislation. This problem should be a personal problem with each Member of the House of Representatives, in that efforts for national legislation should be wholly divorced from political ambitions and aspirations.

There is still another phase of the present system which makes it still more reprehensible. Aside from the said interference with our national legislative program by the demands and uncertainties of state-wide primaries, Members of the Congress of the United States are elected between the long session and the short session of each Congress. For example, Members of the House of Representatives in the Seventy-first Congress will be elected in the general election of November next, between the long and short session of the Seventieth Congress. Consider well the system that annoys and vexes the Members of the lower House of Congress during the long legislative session of Congress and during the interim between the long and short sessions with matters entirely foreign and extraneous to legislation. After the election of the Members of the Seventy-first Congress the Members of the Seventieth Congress will continue to function in legislative matters from the early part of December, 1928, to the 4th day of March, 1929. What precedents in the parliaments of either ancient or modern times can we find to justify the existence of this obsolete system? What wonder, then, that the public has dubbed the short session of every Congress as the "lame duck" Congress! There is not a single member of this House who would permit the old directors of any corporation in which he is a stockholder to continue in the matter of directing and formulating corporate policies after a new board of directors had been elected. To do so would be to subscribe to an unwieldly, arbitrary system of corporate management.

The contemplated changes in the Constitution of the United States as proposed in the White resolution are neither an attack nor a charge against the wisdom of our forefathers in framing a constitution. They wisely provided such legislative machinery as the conditions of the age and time warranted. There were no railroads, no telegraph nor telephone lines. Mud and mire marked the trails and highways of commerce. Postal facilities were crude and inefficient. Under these conditions time was the very essence in the establishment and operation of our experimental government.

Such unsatisfactory conditions were deciding elements that practically dictated the present unreasonable delays in our legislative program. Section 3, Article I, of the Constitution of the United States provided:

> The Senate of the United States shall be composed of two Senators from each State, chosen by the legislature thereof, for six years——

As the legislatures of many, if not all, of the States did not convene until the beginning of a new year, it was most difficult and often impossible for the Senators to be chosen until February and March and even later. It is apparent that the constitutional provisions for delay were most beneficial to the individual States; but conditions have changed. The original cause for delay in this particular has been eliminated. The seventeenth amendment to the Constitution of the United States provides for the election of United States Senators by direct popular vote. This amendment obviously eliminates any reason for a continuance of the unpopular methods of our national legislative system.

In all other things we have grown and developed with the spirit of the times, but our devoted adherence to the traditions established by our constitutional fathers has not imparted to us their characteristic wisdom and foresight of providing and adjusting the machinery of government to meet the conditions of the age. The adoption of the White resolution by the Congress of the United States and its subsequent ratification by the legislatures of the required States would not change a single fundamental principle of our Constitution, nor does it destroy the principles and ideals of free government; but would assist, aid, and accelerate more perfectly the machinery of government established for the preservation and maintenance of representative government. To perfect and adjust the machinery of government to the conditions of the times is born of the same patriotic incentives that inspired the hopes and ambitions of our forefathers in the adoption of the Constitution. Present conditions could not well have been anticipated by the framers of the Constitution, but they must be met by us.

It is not often we turn our attention to the governments of other nations for precedent; but a comparative analysis of foreign governments reveals the startling truth that the Government of the United States of America is the only Government among the civilized nations of the world with a parliament that deliberately prevents and delays the crystallization of the will of the people into statutes of law by obsolete and illogical provisions of its Constitution. In matters of legislation, every government of the world is more responsive to the will of the people than the Government of the United States.

The practice in Great Britain has been to make the interval between the elections and the summoning of Parliament as short as possible. This practice has its origin in the fact that the ministry, which constitutes the administrative branch of the English Government, must at all times possess the confidence and support of a majority of the House of Commons. In order to determine whether or not the ministry possesses this support it is necessary to assemble Parliament very soon after the elections. In that country ministries fall and Parliaments are dissolved, and the Government must reorganize and adjust itself in accordance with the popular will and demands of the people.

Article XXIII of the German constitution, adopted August, 1919, provides that the Reichstag shall assemble for the first meeting not later than 30 days after the election. Members of the Reichstag are elected for a term of four years.

In Norway's constitution, which is called the "Grundlov," adopted May 17, 1814, the legislative power is vested in the Storthing, which shall assemble every year on the first week day after the 10th of January in each year; and further provides that the election of its members must be concluded before the end of the month of November. These constitutional provisions permit less than a 60-day interim between the election of the members of the Storthing and the assembling of its Parliament.

The lower house of Sweden's legislative branch is composed of 250 members, elected for a term of four years. The election is held in September and the constitution requires that Parliament should convene on January 1 of every year, or on the day following if this day happens to be a holiday.

Canada has a system of government similar to the Government of Great Britain. The members of the lower house, or House of Commons, are elected by the people of Canada for a term of five years. The interval between the election of the members of the House of Commons and the assembling of Parliament is necessarily exceptionally short for reasons similar to those prevailing in Great Britain.

In Hungary the law convening the annual sessions of the Diet provides that the election of representatives in the Diet shall take place throughout the country at the expiration of every fifth year and within six weeks prior to the opening of the first annual session of the new Diet. This provision creates a tenure of five years for members of the Diet and compels the new Diet to assemble within 42 days after the election of the members.

The constitution of the Commonwealth of Australia provides that the Australian Parliament must be summoned to meet and assemble not later than 30 days after the day fixed for the return of the writs of election. Members of the lower house of this Parliament are elected for a term of three years.

Brazil's constitution of February 24, 1891, provides that the election of deputies or members of the lower house shall be held on the first Sunday in February preceding the first session of the new legislature, which shall assemble in the federal capital annually on the 3d day of May. This limits the interim between elections and the assembling of its Parliaments to a period not exceeding 62 days. It is interesting to note that members of the lower house are elected for a term of three years.

In Argentina the members of the lower house are elected for a term of four years. One-half of the house is renewed or reelected every two years, and the elections are held on the first Sunday in March of all years of even number. The national legislature must meet annually, beginning May 1. This provision limits the interim between the election and the assembling of the newly elected members in Parliament to approximately 60 days.

I might continue the results of my investigation indefinitely, but each additional country named would tend to make more conclusive the truth that the United States of America is the only country in the civilized world that permits by constitutional provisions an interim of 13 months between the election of the members of the lower house and the assembling of Congress, and the only country that makes it possible for members of the legislative branch of the Government to legislate for months after their repudiation and rejection by the people. The very country that is supposed to represent the highest ideals of democracy is charged with unwarranted interference in preventing its citizens from exercising their political rights by constitutional provisions.

What is the necessity for an amendment to the Constitution of the United States? The Constitution provided and fixed definite limitations to the terms of the office of President and Vice President, Members of the Senate, and Members of the House of Representatives, but did not provide a time certain for the new Government to begin operations under the proposed Constitution. The failure to fix a definite time was due to the existing doubt and uncertainty as to whether or not the proposed Constitution would be adopted and ratified by the required number of the thirteen original Colonies. However, after the ratification of the Constitution, the Continental Congress by resolution fixed and established the beginning and the end of said terms by declaring that the new Government should go into effect on the 4th day of March. A similar resolution was later adopted by Congress under the new Constitution in 1792 which was simply declaratory. In this manner colonial existence ceased and the terms of the President and Members of Congress began on March 4, and consequently they can end only at noon on March 4. This is due to the fact that the Constitution definitely prescribed the length of terms of the said administrative officers and the said Members of Congress.

For 139 years our Government has been confronted by this epochal date of March 4, not mentioned in the Constitution, but an accident in American political history by resolutions, which date has its constitutional justification in that no term of the said officials and representatives can end sooner than that date because of the constitutional provisions declaring the length of the terms. It is evident, therefore, that no term can be shortened arbitrarily save only by a constitutional amendment. To change the dates for the inauguration of the President and the Vice President and the beginning of the terms of Members of Congress as proposed by the White resolution necessarily involves a change in the length of the terms of the said administrative officials and Members of Congress for one term only. If the said White resolution is adopted and ratified as provided by the Constitution of the United States, one four-year term of the Presidency and Vice Presidency of the United States would be reduced by practically 45 days and one term of the Members of Congress would be reduced by approximately 60 days. After this adjustment the provisions of the Constitution relating to the terms of office would continue in full force and effect.

We should not concern ourselves too much about the few complications involved in meeting the requirements of the proposed amendment; neither should we offset the constitutional advantages and benefits contemplated in the proposed amendment by magnifying and exaggerating the disadvantages in making the change. The consideration of this matter should be had without prejudice and without bias. If there is any merit in the proposed amendment to the Constitution, it will certainly justify and warrant the inconveniences and disadvantages, if any, in making all necessary changes and adjustments. To my mind, the adoption and ratification of the proposed amendment is the important issue for consideration. It is superior to all other issues. If the proposed amendment is essential, worth while, reasonable, and consistent with the ideals of our representative government, nothing should stand in the way of its immediate adoption by the House of Representatives.

Mr. JEFFERS. Mr. Chairman, I yield 20 minutes to the gentleman from Missouri [Mr. LOZIER].

Mr. LOZIER. Mr. Chairman and members of the committee, the Committee on Election of President and Vice President, and Representatives in Congress, of which I have the honor and privilege of being a Member, has had under consideration this or similar resolutions for the five years during which time I have been a Member of this body.

Our committee with a commendable industry, under the leadership of our chairman, the gentleman from Kansas [Mr. WHITE] held extensive hearings and made a diligent effort to arrive at a decision on the resolution which would meet what we consider to be practically a nation-wide demand from the American people for the reforms embodied in this resolution.

In this connection may I say that the gentleman from Kansas [Mr. WHITE] will not be a candidate to succeed himself in the Seventy-first Congress. I want here and now to bear cheerful testimony to the fact that he, as chairman of this committee, has labored with an industry, fidelity, unselfishness, and patriotism which is worthy of the highest commendation. [Applause.]

I also want to state that when this resolution is submitted to the States for ratification, as I believe it will be, much of the credit, yea, the major portion of the credit for its submission, will undoubtedly be due to the senior Senator from Nebraska [Mr. NORRIS], who for years has, under the most discouraging conditions, diligently and whole-heartedly kept this far-reaching reform before Congress and the American people. Under his able leadership, three times the Senate of the United States passed this resolution, or a resolution almost identical with this one which you are considering. Three times that resolution came over from the Senate to the House. Three times the House, under fiat of the Republican triumvirate, failed to act upon the measure. Now, for the fourth time the Senate has passed this resolution, and in all good conscience the House should face the issue and submit this proposed

amendment to the States for ratification. In each of these sessions of Congress, for the last five years, the Committee on Election of President, Vice President, and Representatives in Congress, of which I am a Member, reported favorably this resolution, or a similar resolution. Patiently and persistently for five long years my committee made earnest efforts to secure a rule or place on the calendar for this resolution which would enable us to present this proposed amendment to the House for its consideration.

But no; the reactionary forces that dominate this House refused for five long years to even allow the Members of the House the poor privilege of voting on this resolution. But under the whip and spur of public opinion the House oligarchy now permits us to debate this proposal and vote on whether or not this amendment shall be submitted to the States for ratification.

I consider this a very important legislative proposal. There are in the United States two classes of individuals; one class looks upon the Constitution as a sacred document that must not be amended or altered one iota, and they are opposed, as they say, to any tinkering with the Constitution, believing that under the genius and spirit of our institutions it is better to accept for all time the conception and mechanism of government prescribed by those who wrote this great organic document in the dawn of our national life. They are not willing to amend the Constitution to meet new conditions incident to our complex and rapidly changing civilization. The other class wants to change the Constitution overnight, cure imaginary ills, and to meet every conceivable emergency of temporary condition. They want to change this, change that, and change the other, change everything, without thoughtful consideration of the proposed changes.

I belong to neither one of these classes. I reject the ultra and reactionary conservatism of one class and the unconscionable radicalism of the other class. I favor the amendment of our Federal Constitution whenever the amendment will promote better and more orderly government and insure a greater measure of social justice for the masses. I favor every amendment that will promote the interests of the American people and perfect our admirable scheme of government.

Our constitutional fathers recognized the fact that the Constitution they prepared was not a perfect document; that it would not be sufficient for all time; that new issues, new problems, new conditions would arise which would necessitate amendments to the Constitution, and so in their wisdom they made provision for such amendment. I believe the Constitution was made for the American people and not the people made for the Constitution.

There is a class of men in public life in America who believe in making it just as hard as possible to amend the Constitution of the United States. I say that this was not the conception of our constitutional fathers. They made it comparatively easy to amend the Constitution, because in the last analysis the supreme purpose in having a constitution is to promote the public good. Those who framed the Constitution realized that they were finite and could not foresee conditions that would arise in the oncoming years. They knew society and government were not static but changeable, and they provided for such changes as might from time to time be necessary.

They threw no unnecessary barriers between the Constitution and the right of the American people to amend it. They believed the people would cherish and preserve our institutions; that they would be conservative notwithstanding their progressive tendencies, and that they would not recklessly exercise their right to amend the Constitution; that they would always carefully consider every proposed change and propose amendments only when such amendments will clearly promote the public weal.

I want to call attention to the fact that since the adoption of our Federal Constitution in 1787, of the 19 amendments to the Constitution, the first 10 of them were proposed by the First Congress on September 25, 1789, and the eleventh amendment was proposed by the Third Congress on September 5, 1794, and all were adopted within a few years after the original document was promulgated and ratified; most of them were adopted almost immediately after the ratification of the original Constitution of the United States. Indeed, 10 of those 11 amendments were formulated before the Constitution was submitted, or, at least, before the document was ratified by the several States, and many of the States of the Union ratified the Constitution with the express understanding and assurance that amendments 1 to 10 had been formulated and would be submitted to the States for ratification. These first 10 amendments dealt largely with human rights, and on them is built the bulwark of American freedom.

We must look upon those first 10 or 11 amendments, not as amendments in reality, but as a part of the original document. The thirteenth, the fourteenth, and the fifteenth amendments were the fruitage of intestine conflict and were born out of the sanguinary passions, hatreds, and tragedies of the great Civil War. Then came the sixteenth amendment with reference to the income tax, and the seventeenth amendment providing for the direct election of Senators by the people, and the eighteenth amendment with reference to prohibition, and the nineteenth amendment giving to women the right of suffrage.

Does the record of the American people with reference to the adoption of constitutional amendments indicate that they will recklessly, heedlessly, thoughtlessly, and rashly emasculate or amend their Constitution? No. The fact that only a comparatively few amendments have been adopted in the 140 years of our national existence is conclusive proof that the American people are conservative, notwithstanding their progressive impulses and purposes. No, gentlemen, the American people have been exceedingly slow to amend their Constitution, and by supporting the pending resolution we are not tinkering with the Constitution but submitting a well-matured and forward-looking amendment, which will improve legislative conditions and materially aid the American people in having their sovereign will translated into legislation.

Because of the conservatism of the American people and because of the caution with which they consider changes in our organic law, we have been living under a condition of affairs which may at any time involve our people in serious difficulties, perhaps invite internal strife. I wonder if the American people realize what serious situations may result from our failure to ratify this amendment.

Let me call your attention to section 4 of this resolution; this provision that is not in the original Norris resolution. That is not to the discredit of Mr. NORRIS, because it is not found in the original House resolution. It is the result of several years' thoughtful consideration given to this resolution by the House committee of which I am a member. The more we studied the Norris resolution, the more we were convinced that it did not go far enough; and to meet a very serious defect in our machinery for the election of President and Vice President, our committee formulated section 4, which I am sure, on examination, you will find to embody exceedingly wholesome provisions which are omitted from the Norris resolution as it came to the House from the Senate. I understand this section has the approval of Senator NORRIS and its inclusion tremendously strengthens this resolution.

Now, let us see what defect in our present Constitution section 4 is designed to correct. In 1924 the American people were threatened with a serious political predicament. Suppose in the 1924 presidential election no candidate for President received a majority and the election in that event would have been thrown into the House of Representatives. Under this state of facts and under our Constitution, the Constitution that some of our colleagues do not want to tinker with or amend, if Calvin Coolidge had died between the second Monday in January, 1925, the day the Electoral College functioned, and the second Wednesday in February, the day the House of Representatives would have been called on to choose a President, the Republican Party would have been disfranchised, because the present Constitution limits the choice of the House to the three persons receiving the highest number of votes in the Electoral College, and the death of Mr. Coolidge would have left no Republican in this list of three, and in that event the Republicans in the House would have been compelled to choose between John W. Davis and Robert M. La Follette.

The election in the House would have been by States, and under the conditions I have mentioned it would have been absolutely impossible for the Republican Members of this House to have voted for a Republican candidate for President, because under the present Constitution, which some people do not want to change, it is provided that when no candidate has a majority in the Electoral College and the House functions, it must elect the President from the three highest, or, to be more accurate, the highest three, and if one of those parties dies between the time the Electoral College meets and the time Congress proceeds to elect the President the Members of the House who belong to the party of the deceased candidate have no candidate of their own party to vote for and they must either not vote at all or vote for a candidate of some other party. The American people do not realize that under our present organic law a majority of voters may be disfranchised in the next or in some future presidential election.

On the other hand, if no candidate in 1924 had a majority in the Electoral College and John W. Davis had died between the time the Electoral College functioned and the second Wednesday of February, 1925, when the House met to declare the result of the election, under the present law the Democrats

in the House could not have voted for any other Democrat, because the present Constitution provides that when the House chooses a President the selection must be made from the three who received the highest number of votes in the Electoral College. So, gentlemen, we have been tolerating a condition here that is un-American and unrepublican and undemocratic, and while this situation has never arisen we have no assurance that this condition will not arise some time in the future. Why not provide against such an intolerable situation?

In order to meet this condition the committee of which I am a member has added to the Norris resolution section 4, which takes care of a contingency of the kind I have described and provides remedies and methods by which the will of the people can be carried out under conditions such as I have mentioned. To give effect to the will of the people is the supreme object and purpose of all government.

I must hurry on. Next, I want to call your attention to the suggestion made by my leader, the able gentleman from Tennessee [Mr. GARRETT], for whom I entertain the highest respect and sincerest affection. He favors an amendment which will delay ratification by the States until one branch of each State's legislature has been elected by the people after the submission of this constitutional amendment, on the theory, of course, that the people of that State have the right to express their opinions upon this proposed change in our organic law.

There may be some substantial reason or ground for his position under some circumstances, but there is no real necessity for it in the instant case for this reason: The American people have had this Norris resolution under consideration for many years, and the public is well informed as to its provisions; and this resolution is being submitted in response to a nation-wide demand. I am convinced that the legislatures of the several States in voting to ratify or reject this resolution would reflect the will and desire of the people of their respective States.

The American Congress in its conservatism has never submitted a constitutional amendment until it has been made the subject of a nation-wide discussion, until it has been considered in and out of Congress for years, until the leading writers and thinkers of America have analyzed its provisions, and until there is a nation-wide demand for its submission. I call your attention to the fact that with the exception of the three amendments that grew out of the issues of the Civil War, there has never been submitted by the Congress of the United States a single amendment that had not been the subject of discussion for 10, 20, or 30 years; and the American people, when constitutional amendments are submitted, are in a position to act upon them intelligently and act upon them without delay.

Mr. RAMSEYER. Will the gentleman yield?

Mr. LOZIER. I yield.

Mr. RAMSEYER. What objection could there be in principle to the requirement of delay of action by any legislature until at least one branch of the legislature had been elected?

Mr. LOZIER. Answering the gentleman, I think it would be a useless ceremony. The gentleman knows that in his State of Iowa, if this amendment is submitted, the members of your State legislature who are elected next November will not be elected upon this issue. It will not be an issue in the campaign. Those men will be elected to the legislature upon other issues and upon other questions, and no good would result from the proposed delay.

Mr. RAMSEYER. If the people regard it as something vital and there is opposition to it, it certainly will become an issue in election of members of the legislature.

Mr. LOZIER. Well, my idea is that the people will never have an opportunity to ratify a constitutional amendment that has not already been the subject of discussion for 10, 20, or 30 years.

Mr. RAMSEYER. Some years ago we passed the child labor amendment through Congress by an overwhelming vote. The friends of that amendment thought there would be no difficulty whatever in getting the required three-fourths of the State legislatures to ratify it, but when it got out among the people for some reason, which we need not discuss here, there was opposition to it. Now, suppose the legislatures had met before elections were held, what would have been the result?

Mr. LOZIER. If those same legislatures had met the next day after that resolution was submitted, the action would have been the same, because it was a leading question in every State in the Union. There were many, many States in which the question was an issue, and I believe the result would have been the same, even if it had been submitted to the legislatures the day after its passage through Congress.

Mr. RAMSEYER. Does the gentleman mean to say that Congress, in passing that resolution, mistook the sentiment of the country?

Mr. LOZIER. Some Congressmen did and some did not. The point I am making is that you accomplish nothing by a delay, because the American people are just as able and ready to pass upon a constitutional amendment after its submission as they would be in two or three years from that time, because it has been the subject of disputation and consideration for many, many years.

Mr. GOLDSBOROUGH. Will the gentleman yield?

Mr. LOZIER. I yield.

Mr. GOLDSBOROUGH. The gentleman's theory, as I take it, is that the legislature will reflect the will of the people, whether the legislature is elected before or after.

Mr. LOZIER. Why, certainly, they reflect the will of the people.

Mr. STEVENSON. Will the gentleman yield?

Mr. LOZIER. Yes.

Mr. STEVENSON. The gentleman no doubt remembers that on one occasion there were two constitutional amendments adopted and ratified by the Legislatures of Ohio and New Jersey which had already been elected, but as soon as new legislatures were elected they passed resolutions undertaking to withdraw the ratification.

Mr. LOZIER. Oh, yes; and that is true as to other constitutional amendments. Some of those who had been elected after the ratification of such amendments might be in favor of repealing former action.

Mr. STEVENSON. Then there is a reason for some little delay in order that you might have the true expression of the people?

Mr. LOZIER. There is no reason, only a pretext. Those, it seems to me, who favor this proposition want to make it just as hard as possible and throw just as many obstacles as possible in the way of the adoption of the constitutional amendment. My theory is that the American people have the right to change their laws. The American people under our form of government have a right to be wrong if they want to be wrong.

Mr. GARRETT of Tennessee. Will the gentleman yield?

Mr. LOZIER. Yes.

Mr. GARRETT of Tennessee. The American people do have such a right, and I am making an effort to give them an opportunity to exercise that right. The gentleman surely does not mean to say that fewer than 4,000 ought to have the right to change the Constitution.

Mr. LOZIER. Four thousand members of State legislatures, drawn from the body of the public——

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. JEFFERS. Mr. Chairman, I yield the gentleman five additional minutes.

Mr. LOZIER. Four thousand members of the legislatures, drawn from the body of the public, knowing the sentiment of the people whom they represent, are capable of casting their vote for the approval or disapproval of constitutional amendments of this character.

Now, just one moment before my time is consumed. The gentleman from Alabama [Mr. BANKHEAD] has proposed an amendment, or will propose an amendment, to make the elective term of Congressmen four years.

Mr. GARRETT of Tennessee. Will the gentleman yield further?

Mr. LOZIER. Yes.

Mr. GARRETT of Tennessee. In the gentleman's own State of Missouri, in order to amend the State constitution, do you not have to submit it to a popular vote?

Mr. LOZIER. Oh, yes.

Mr. GARRETT of Tennessee. Does the gentleman contend that his legislature is not capable of amending the constitution of his State?

Mr. LOZIER. Oh, no; no one contends that, and that argument is not apropos. Amendments to State constitutions must be submitted to the people of the State because the organic law prescribes the method and the formula by which the State constitution may be amended.

Now, with reference to the Bankhead amendment: I am opposed to it. In the first place, it is poor strategy for the friends of this resolution to vote for this amendment. I do not believe it should be tacked onto this resolution; and if it is adopted, I believe it will defeat the submission of this resolution and, if submitted, prevent its ratification.

The Bankhead amendment injects a highly controversial matter into this resolution. I am opposed to the Bankhead amendment in toto. I favor a two-year term for Representatives for reasons that I will state before the debate on this resolution is concluded.

The American people want this Norris-White resolution submitted. They know what it is. They are ready to vote upon

it. But the other proposition embodied in the Bankhead amendment has not been the subject of nation-wide discussion and, as a matter of fact, the American people have not made up their minds on that question. Why should we endanger the submission and ratification of the Norris-White amendment by incorporating a lot of half-baked provisions, some of which might be meritorious when considered separately, but I certainly will oppose tacking the Bankhead amendment onto this resolution.

A few more words and then I am through. I am opposed to the provision in section 2 which limits the life of Congress on even-numbered years to four months. If this provision remains in the resolution, you will have under the new system just what you are trying to get away from in the old.

This provision in section 2 automatically and arbitrarily limits the life of every other congressional session to four months, and no matter how much legislation may be pending Congress must adjourn in even-numbered years on May 4, or four months after it convenes. If the public business demands a longer session, why compel Congress to adjourn before important public business can be completed? By limiting this session to four months you are making it easy to defeat legislation by filibustering. You are making it harder for Congress to function.

While I voted to favorably report out this resolution, I voted in the committee against this amendment limiting every other session of Congress to four months, and I notified my associates on the committee that I would oppose that part of section 2 when it came before the House for consideration, and if I can have an opportunity I am going to offer an amendment at the proper time to strike out this provision which limits the life of Congress on even-numbered years to four months.

My friends, there is no reason for such a provision. If the business of the Nation is of such a character as to demand and require that Congress stay in session five, six, seven, or eight months instead of four, why should we limit any session to four months? What right have we to put all future Congresses in a strait-jacket and say in our Federal Constitution that they must not remain in session more than four months in even-numbered years?

In reason, now, what right have we to say that the Seventy-first Congress or the Seventy-second Congress or the Seventy-third Congress, or any or all succeeding Congresses, must adjourn on May 4 without regard to the condition of the public business? I do not care if the even-numbered years are political years. I do not care if they are campaign years. If the business of the Nation is of such a character as to require and justify Congress remaining in session longer, then certainly each Congress should be permitted to determine that matter for itself. [Applause.]

Mr. LEAVITT. Will the gentleman yield?

Mr. LOZIER. Yes.

Mr. LEAVITT. Even if that provision were in the Constitution, would it not be possible under other provisions of the Constitution for the President to call the Congress in extra session the next day?

Mr. LOZIER. Oh, yes; and that is why the adoption of this resolution is demanded by the American people. The idea of the American people electing Representatives to Congress and then providing no Congress in which they may serve! The present system is absurd, because men elected to Congress do not take their seats until 13 months after their election—until their terms are practically half expired. The American people have the right to register their will on economic problems at the ballot box. They have the right to have their will translated into laws without waiting 13 months for Congress to convene.

True, the President may, if he so desires, call a special session of Congress, but this means that everything depends on the whim or caprice of a President. And some Presidents would, no doubt, be happy if there would be no more sessions of Congress to interfere with their bureaucratic administration of public affairs.

Mr. COOPER of Wisconsin. Will the gentleman yield?

Mr. LOZIER. I yield to the gentleman from Wisconsin.

Mr. COOPER of Wisconsin. I would like to ask the gentleman this question. The Senate filibustered, so the papers say, last spring because they knew that Congress, by constitutional limitation, would expire on the 4th of March. Now, if the Constitution, in accordance with the proposed amendment, is to fix——

The CHAIRMAN. The time of the gentleman from Missouri has again expired.

Mr. JEFFERS. Mr. Chairman, I yield the gentleman one additional minute.

Mr. COOPER of Wisconsin. If the Constitution is to be amended as proposed by this resolution and the day fixed in the instrument when Congress shall adjourn, would it not simply invite the same style of filibuster?

Mr. LOZIER. Yes; the gentleman from Wisconsin has clearly sensed the situation that would inevitably result if this four-month limitation is not stricken out. And, moreover, gentlemen, this four-month limitation puts every succeeding Congress in a strait-jacket.

Mr. STEVENSON. Will the gentleman yield?

Mr. LOZIER. Certainly.

Mr. STEVENSON. The gentleman overlooks the fact that Congress can itself fix any date it wants to meet upon, and therefore Congress can say it shall meet every year on the 4th of March and the Congress elected on the 1st of November will go into office the 4th of March, or nearly as soon as you are providing under this resolution.

Mr. LOZIER. I have not overlooked the fact to which the gentleman from South Carolina refers. I know that under the present system Congress can enact a statute providing for a session of Congress immediately after March 4 on odd-numbered years. But that will not correct the manifest injustice of allowing Members of Congress who have been defeated for reelection continue in office and legislate three months after they and their policies have been repudiated by their constituents. The power to which the gentleman refers does not do away with the so-called lame-duck Congresses. And, moreover, many of the other defects in our present system which will be cured by the adoption of the Norris-White resolution can only be reached and corrected by a constitutional amendment.

Under unanimous consent granted to revise and extend my remarks, I desire to call your attention to some concrete problems that confront us and which relate to the election of a President and Vice President:

I. A PARTY NOMINEE MAY DIE BEFORE THE NOVEMBER ELECTIONS

A constitutional amendment is not necessary to cover this case:

First. Theoretically the electors would be free to choose. An elector, as a legal proposition, is not compelled to vote for the presidential nominee.

Second. Congress by general statute—passed now—could postpone the day of election or the day of the meeting of the electors in order to give the political party whose candidate had died an opportunity to make another nomination.

Third. This is a problem which the political parties themselves should be prepared to meet.

II. A PARTY NOMINEE MAY DIE AFTER THE NOVEMBER ELECTIONS AND BEFORE THE ELECTORS VOTE

For the reasons specified above, a constitutional amendment is not necessary.

It might be noted at this point that undoubtedly votes cast by electors for a person who has died would be invalid and would not be counted. The problem confronting the political party, therefore, would be the designation of a person for whom electors could vote. For if one name is not presented the electors chosen from that political party would probably so scatter their votes that the election would be thrown into the House. Practical difficulties, of course, would be encountered, if, for example, only a short time remained before the meeting of the electors.

As stated above, however, the political parties themselves should be prepared to meet this problem.

III. THE PERSON WHO HAS RECEIVED A MAJORITY OF THE ELECTORAL VOTES MAY DIE AFTER THE ELECTORS VOTE AND BEFORE THE VOTES ARE COUNTED

In case the candidate successful in the Electoral College should die after the votes are cast and before the votes are counted by Congress, the principal problem is whether the votes cast for him could be counted; that is, whether the terms "the person" and "no person," as used in the twelfth amendment, would be interpreted to mean only a living person.

If the votes for the candidate who has died can not be counted, the election would be thrown into the House, for no person would have a majority. If a majority of the States in the House were of the same political party as the deceased candidate, that party would undoubtedly attempt to prevent the election of a President. If they were successful, and if the House did not choose a President before the day set for the beginning of his term, then under the provisions of the twelfth amendment the Vice President would become President. However, if a majority of the States were not of the same political party as the deceased candidate, a President might be chosen by the House. The problem involved in the determination of the persons for whom the House could vote is discussed in IV, below.

It may seem inconceivable to some that the votes for the deceased candidate can be counted. A definite interpretation, of course, can not be given, but an analysis of the functions of Congress indicates that no discretion is given and that Congress must declare the actual vote. I will discuss this matter later on in more detail, but in order to present the problem, however, let us assume, for the purposes of this discussion, that the votes of the deceased candidate will be counted. In this case he would be declared elected President. The problem then is, Would the Vice President became President; that is, does the sixth paragraph of section 1 of Article II cover the death, and so forth, of a President elect?

Constitutional writers say, and the wording of the paragraph supports the conclusion, that it is applicable only to those actually in office. On the other hand, if the Supreme Court were confronted with the practical application of the paragraph, it is very probable that it would decide that the Vice President elect would become President.

In order to remove all possible doubt and to render unnecessary a judicial decision the Constitution should expressly declare that, in the event that the person who has received the majority of the electoral votes dies, the Vice President elect should become President.

IV. IF THE ELECTION OF THE PRESIDENT IS THROWN INTO THE HOUSE, ONE OF THE THREE HIGHEST MAY DIE BEFORE THE VOTES ARE COUNTED

This situation may arise either because no person has received a majority of the electoral votes or, as pointed out in III, above, because it is decided that the votes for a deceased candidate can not be counted.

The principal problem presented is: For whom may the House vote; that is, would they be limited to the remaining two of the three highest or would the fourth person on the list be substituted for the deceased person?

In no event could the House vote for a person of the same political party as the deceased candidate. It would then be necessary, politically, for that party, through political strategy to prevent an election by the House, and risk securing favorable results in the Senate—assuming that the election of the Vice President is thrown into the Senate, as would undoubtedly happen. If only the two highest are to be voted upon, it would be much more difficult for the members of that party to divide their votes and thus prevent an election than it would be if the fourth highest could also be voted upon.

Should this contingency be covered by constitutional amendment? I think so, and prudence justifies this action. While the probability of this situation ever occurring may be remote, wisdom suggests that every possible complication and uncertainty be obviated. During our entire history the election of the President has been thrown into the House but twice, and never has one of the successful candidates died before the 4th of March. But theoretically the above situation is possible and may arise at any time. There is no sound reason why provision should not be made to meet this contingency.

V. DEATH OF THE PRESIDENT ELECT BEFORE THE DAY FIXED FOR THE BEGINNING OF HIS TERM

This situation might happen in case of the death of the person who received the majority of the electoral votes after the votes are counted and he has been declared elected; or, in case the election has been thrown into the House, after choosing by the House and before the day fixed for the beginning of his term.

The same problem presented in III above is presented, Would the Vice President elect become President? (It should be noted that in this case, however, the election can not be thrown into the House.)

It would seem that there should be an express declaration that the Vice President elect should become President.

VI. DEATH OF THE VICE PRESIDENT ELECT

There is no immediate emergency presented if a candidate for Vice President, or if the person chosen Vice President, dies before the time fixed for the beginning of his term—assuming that the President elect is living upon the day fixed for the beginning of his term.

If the election is thrown into the Senate, a similar political difficulty arises as in the case of the election of the President by the House. For whom can the Senate vote? If the third highest on the list is not substituted for the deceased candidate, it would mean that the Senate would have no choice, but would be forced to vote solely for the one living candidate.

VII. DEATH OF BOTH PRESIDENT ELECT AND VICE PRESIDENT ELECT

This situation should be expressly covered by constitutional amendment.

There is no specific provision in the Constitution applicable to this case. Even assuming that the "necessary and proper" clause (the last paragraph of section 8 of Article I) would be interpreted as giving Congress power to act, a final decision would necessarily require several months or more. A specific provision in the Constitution will prevent this period of uncertainty.

The principal problems of policy are—

First. Should Congress declare what officer is to act as President for the entire term; or

Second. Should Congress declare what officer is to act until a special election can be held?

Third. If a special election is held, should it be only to elect a President to hold office during the remainder of the unexpired term, or for a complete term of four years?

CONCLUSION

Two situations should be covered by constitutional amendment:

First. There should be an express declaration that, in the event of the death of the President elect, the Vice President elect should become President.

Second. There should be an express declaration that, in the event of the death of the President elect and the Vice President elect, Congress should have power to meet the situation, with an express declaration of the policy adopted—either that the designated officer is to hold office for the entire term, or that he should serve until a special election is held and a President elected for the remainder of the term.

I have thought it worth while to discuss in detail the law with reference to the election of a President and Vice President. I have, I believe, shown that the present system is archaic, indefinite, and obviously very incomplete. Serious complications may at any time result from our failure to correct these defects. The Norris-White resolution, if submitted and ratified by the States, will remedy practically all the defects in our presidential election machinery. I shall vote to strike out the provision in section 2 that limits the sessions of Congress in even-numbered years to four months. I have advocated the submission of this Norris-White amendment ever since I came to Congress. I hope it may be submitted to the States for ratification without further delay. [Applause.]

Mr. JEFFERS. Mr. Chairman, I yield 10 minutes to the gentleman from California [Mr. LEA].

Mr. LEA. Mr. Chairman and gentlemen, every consideration of public welfare suggests that no constitutional amendment should be proposed without the most serious consideration by Congress. On the other hand, if provisions of the Constitution are inimical to the best interest of the people, the duty to amending the Constitution is greater, more positive, and certain than is the duty to amend an ordinary law of this country.

VACANCIES

I am in favor of the first section of this proposed amendment. I am opposed to two provisions in its subsequent sections. It is for the purpose of calling attention of the House to these two features that I have requested an opportunity to address you. I call your attention to the provisions for filling vacancies in the offices of President and Vice President. The Constitution at present provides for the filling of such vacancies that occur after those officers have been installed. The object of sections 3 and 4 of the proposed amendments is to take care of vacancies that originate before these officers are installed. As I view the proposed amendment, it is to a degree improvident because it fails to furnish a method of filling vacancies in all those cases where it is now recognized such vacancies may occur.

For 100 years every person, every student of the Constitution of our country has recognized there is a gap in the Constitution of the United States in reference to filling vacancies. We are in danger at any time of facing a vacancy in the Presidency without a constitutional method of filling it.

The Constitution provides for filling vacancies due to the "death, resignation, or inability to discharge the powers of duty of said office," and so forth, by the incumbent.

These proposed amendments in attempting to provide for vacancies that originate before the President and Vice President elect are installed fail to provide for a case of inability of the President to fill the office—for the vacancy caused by insanity of the elected man or to provide for the case of a man who refuses to accept the duties of the office. Such a refusal might occur in cases where there might be an exposure of corruption in the election. The guilty candidates would necessarily be impeached and thrown out, if installed. They would therefore refuse to qualify. We should provide for every vacancy that may occur.

What does the proposed amendment do? It provides for two conditions under which the Constitution will automatically provide for filling the vacancies. The first is when the President

is not "chosen" before the beginning of the term. The second is when he dies before the beginning of his term. Vacancies due to the physical inability or insanity of the President elect or his refusal to act are totally ignored.

In four other cases in the proposed amendment it is provided that Congress shall have the power to provide for filling vacancies in the case of the Vice President. This amendment, let me say without disrespect, approaches those questions from the back door. It attempts to define several particular causes of vacancies and then authorizes Congress to fill the specified vacancies that may so occur. The important thing is not what occasions the vacancy. The important thing is to fill the vacancy that occurs, regardless of how it occurs.

I am going to offer an amendment proposing a substitute for sections 3 and 4, one simple section that will provide for all vacancies covered by those two sections and for all other possible vacancies that may occur. At this time I am going to ask the Clerk to read this amendment for the information of the House.

The Clerk read as follows:

Amendment to be offered by Mr. LEA: Strike out section 3 and insert:

"SEC. 3. If a President is not chosen before the beginning of a presidential term, or the President elect dies, or fails to qualify or enter on the execution of his office, then the Vice President elect shall act as President until the disability be removed or a President shall be elected. Congress may provide for filling a vacancy in the office of Vice President due to a nonelection or to a contingency not otherwise provided for in the Constitution."

Mr. LEA. If that amendment carries, I will follow it by a motion to strike out section 4, which would thereby be made unnecessary. This amendment would simplify and clarify this resolution. It would cover all vacancies that may hereafter occur. It would complete the gap in the Constitution as to vacancies.

AUTOMATIC END OF SESSION

The other feature of these amendments to which I direct my remarks is one which has already been mentioned here, the proposed provision that automatically terminates the second session of Congress. This proposal will have this effect: A Member of Congress is elected for 24 months. Under the provision proposed here, at the end of 16 months we automatically retire the Congressmen. We place them in a congressional reserve force. We leave the President the power to call us back to duty, but unless the President sees fit to call us back, or we provide for a second session by law, we are functionless.

Now, if I understand the history of America, if I understand the value of the Constitution to the United States, the first duty of this Congress is to preserve its own independence. There never was a time in the history of this Republic when it was more important to preserve the independence of Congress than it will be in the few decades that are in front of us. [Applause.] This amendment proposes a debasement of the Congress of the United States. I am thoroughly convinced that the great offense of the Congress of the United States is its own subserviency, its lack of courage, its lack of independence, its dodging of responsibility, its failure to stand up and perform the functions that were assigned it by the Constitution of our country. [Applause.]

Contemplate for one moment the powers of the executive department that are being accumulated in this Government. I have no reference to immediate conditions, but I am looking at it from the standpoint of the years. The executive departments are expending $4,000,000,000 a year. They have 540,000 civilian Federal employees, and in addition the Army and Navy. All the Federal judges of the country are appointed by the President, all the prosecuting attorneys, all the Federal peace officers, the members of the Interstate Commerce Commission, the Federal Trade Commission, the Tariff Commission, the Shipping Board, the Federal Reserve, the heads of all departments, the Director of the Budget, and the heads of all the activities of the Government. All this power is accumulated and concentrated in the President. He has a prestige and a power never before known in any government in the history of civilization. The possibility of the abuse of that power is everywhere.

One of the greatest duties, as I see it, that devolves upon Congress is to be here to perform its functions. I have been here 11 years, and I make bold to express the thought that the primary demand, speaking cynically, of the executive departments of the Government is for money and power. When we give money and power, after that the Congress becomes a nuisance. But it may be that at that very point commences the real duty and the real value of Congress. I am not in favor of Congress itself perpetuating its own debasement and its own humiliation and helping to write it into the Constitution of our country. On the contrary, I would rather see Congress turn, as it ought to turn, from the way it has already gone too far, and write a record of independence and courage and self-reliance. Is Congress so lacking in men of quality, courage, and intelligence that we ourselves must help to write into the Constitution of our country our own distrust of our own fitness to answer the poor question, "When shall we quit and go home?" [Applause.] Is Congress devoid of men of courage and independence?

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. WHITE of Kansas. Mr. Chairman, I would like to speak for one minute by unanimous consent.

The CHAIRMAN. The Chair understands the time is fixed by the rule. The gentleman can yield time to himself.

Mr. WHITE of Kansas. Then I yield myself half a minute. I overlooked for a moment the fact that the time was to be divided equally between the chairman of the committee and the ranking member. But we expect to yield time equally to those opposing and to those favoring the resolution, and if the gentleman from Alabama [Mr. JEFFERS] will concede me this time, I would like to yield 10 minutes to the gentleman from Connecticut [Mr. MERRITT] or more if it is desired.

The CHAIRMAN. The gentleman from Connecticut is recognized for 10 minutes.

Mr. MERRITT. Mr. Chairman, during the past 10 years the attention of the country, so far as the Constitution is concerned, has been so much taken up with the eighteenth amendment, commonly known as the prohibition amendment, and the nineteenth, known as the woman suffrage amendment, that little attention has been paid to the far-reaching effect of the seventeenth amendment, which provided for the election of Senators by popular vote. This amendment, with the very general adoption throughout the country of the direct primaries for nominations, marked, in my opinion, the most far-reaching departure from the basic ideas on which the Constitution was founded which has occurred in the history of the Nation.

I am not bold enough, and it is not necessary before this House, which contains so many eminent constitutional lawyers and students, to discuss in detail the story of the Constitution. But all will agree that what the founders intended to produce was a representative Republic and not a strict democracy. The arguments which were used to change the method of election of Senators and change the method of nominations were that the changes would give the people more direct voice in the election of their representatives, and also that it would do away with the influence of individuals and corporations of great wealth in the choice of Senators and Representatives.

I think it will be conceded that whether or not these changes have made the action of the people more direct, the result has not been any substantial improvement, but perhaps rather the reverse, in the average character of the Members of the other body. Certainly the seventeenth amendment has not removed either the influence of individuals and corporations of great wealth, but rather has made it impossible for men without great wealth of their own or who are not backed by great wealth to conduct a primary campaign in any of the large States.

Most, if not all, the scandals which have occupied the attention of the country in connection with the election of Senators in the past few years have been connected with direct primaries.

I mention these facts for the purpose of illustrating the danger of changes which alter or tend to alter the frame of our Government, which was founded by men of great wisdom and who were profound students of the history of government throughout the world. Assuming, as I think we safely can assume, that human nature has not fundamentally changed, we can not safely ignore the teachings of history.

A reading of the Constitution and the debates of the Constitutional Convention will show that the founders were anxious to provide proper checks and balances not only to preserve the rights of individuals against the action of government and the rights of sovereign States, but also the rights of minorities against oppression by majorities.

They also intended to guard against hasty legislation and to provide for due consideration of measures before they should be passed. The result of their labors was to produce a constitution which has been the admiration of the world, and under which this country has grown from a union of weak and straggling colonies along the Atlantic seaboard into a nation of continental extent and with more than a hundred millions of people. It has provided a stable local government by sovereign States and an efficient Central Government by an indestructible union of those States.

What I am contending for is that with this history of 150 years, and knowing the dangers and the troubles which have come from several of the amendments which have already been made in the Constitution, the least that can be said to-day is

that those who propose changes in the Constitution should, in the first place, be able to show actual evils and actual harm which have come to the Nation by reason of existing provisions and prove also that their suggested change would not only cure evils they allege but not produce other evils in their place which may be even greater.

So far as I have seen, the arguments on which this proposed amendment is based are, first, that a new Congress should meet almost immediately after its election to carry out any supposed mandates of the people; and second, that evils may occur in the present short session from so-called lame ducks. As to the first argument; if there is any mandate from the people which should be promptly carried out, history has shown that in case of a great emergency like the World War party lines are obliterated and any Congress will, as a matter of course, carry out the policy of the ruling administration and the mandates of the people. But supposing that, even in time of peace there should be a very distinct overturn in the membership of Congress, and supposing that the then existing Congress, under present arrangements, should not be willing to vote in accordance with the results of the election, the greatest necessary delay under existing conditions would only be 60 days, because the President could call an extra session as was done several times during the war, to meet on the very day after the Congress in office had ended. And it is inconceivable that a delay of 60 days, except in case of war, when it could not possibly occur, would be of any importance to a great nation. It should be pointed out here that, as a matter of history, overturns in Congress have usually occurred in the midst of a presidential term, there having been many instances where the majority of Congress and the President did not agree. This was anticipated by those who founded the Constitution and was intended as a matter of conservatism so that the policies of the country should not be rudely and frequently overturned, as they appreciated might be the case if we followed the continental system of making the Executive dependent on the legislature.

As to the second objection, about the danger from the presence in Congress of lame ducks, I am not aware of any serious or lasting injury which has ever happened to the Nation because of them.

Mr. CELLER. Mr. Chairman, will the gentleman yield?

Mr. MERRITT. Yes.

Mr. CELLER. Is the gentleman aware that three presidential elections in the House of Representatives were determined by lame ducks? I refer to the election contests between Burr and Jefferson, and John Quincy Adams and Jackson, and Tilden and Hayes. Does the gentleman think that was a fair proposition, to let lame ducks participate in that election in the House?

Mr. MERRITT. I said I was not aware of any lasting or serious injury that would happen, or that had happened.

Mr. CELLER. Was not that lasting and serious?

Mr. MERRITT. It was not. It appears to me that in ordinary times it is an advantage to the country that the newly elected Congress should not meet for several months after it has been elected. With modern methods of communication, favoring, as they do, all kinds of propaganda, it is easy to stir up popular movements which, on further consideration, may prove to have no just basis. It is much better, after the excitements of an election are over, to have time for careful consideration of matters which have been agitating the public mind. There is not the slightest fear that general public opinion which persists will not be duly embodied in the law.

There are a number of instances where hasty legislation has caused great confusion and, I believe, harm to the Nation. But, as I have said before, I am not aware of any case where delay in legislation has caused any lasting injury.

With the changes to which I have referred, which have been in the direction of strict democracy and direct action by the people, the necessity for reasonable delay and reasonable consideration of important measures has greatly increased.

The CHAIRMAN. The time of the gentleman from Connecticut has expired.

Mr. SNELL. Mr. Chairman, I ask the gentleman from Kansas to yield five minutes more to the gentleman from Connecticut.

Mr. WHITE of Kansas. I yield five minutes to the gentleman.

The CHAIRMAN. The gentleman from Connecticut is recognized for five minutes more.

Mr. MERRITT. Where a man has been through an intense campaign, first in the primary for the nomination and then for an election in a congressional district and, still more, throughout a whole State, his attention and energies have naturally been centered on winning votes for himself. Under these circumstances there is a great temptation to advocate measures and to make promises which will attract the greatest number of votes, and these measures under such conditions will be framed not primarily because of their wisdom or not because they appeal to the judgment of the candidate himself but on the other hand they will be such as lend themselves to some popular slogan and which appeal to the mass.

After an election of this sort not only do the people themselves need some time to consider the questions more calmly but a successful candidate will after a few months be better qualified to form a cool and unprejudiced judgment if he has to consider the matters which he so glibly supported during the heat of an election when the catching of votes was the great consideration.

It is certain that history has not shown that referendum votes are governed by the calmness or reason which should govern a Representative in the considerattion of his vote which directly affects the law. And therefore, as I have said, after the excitement of a great popular contest and election the country and Members of Congress would be better for a considerable delay before beginning their actual work of lawmaking.

Mr. GIFFORD. Mr. Chairman, will the gentleman yield?

Mr. MERRITT. Yes.

Mr. GIFFORD. As a matter of opinion, does not the gentleman agree that the other things contemplated in the proposed amendment ought to be remedied and remedied now?

Mr. MERRITT. I will speak of that later. Let me repeat my last sentence.

So far as I have been able to observe, there has not been in the country at large any strong opinion or decided movement for the change in the Constitution which is now under consideration. It seems to have been based on purely theoretical grounds which has no basis in history or in fact; that is to say, no evils have been shown, and the country has suffered no harm from the present practice, and therefore there is no cause for any change. The movement has been pushed by a persistent and active minority who base their argument on suggested evils that may occur, and it has been acquiesced in to some extent by those who think that it probably will do no harm.

Mr. LOZIER. Will the gentleman yield?

Mr. MERRITT. I yield.

Mr. LOZIER. Do I understand the gentleman's position to be that the American people, after they have considered and voted upon a proposition, have no right to have their will written into law under our system of government, and that a Congress which has been rejected shall serve as a wet nurse for the American people for a period of 13 months? Is that the position of the gentleman?

Mr. MERRITT. The old Congress goes out in three months.

Mr. LOZIER. But under the present system the American people have no absolute right to have a session of Congress reflect their will for 13 months after the election?

Mr. MERRITT. They have under the Constitution, if the President thinks best.

Mr. MOORE of Virginia. May I interrupt the gentleman for a moment?

Mr. MERRITT. Yes.

Mr. MOORE of Virginia. If Congress wishes to do it, Congress can provide for a new Congress to come in on the 4th of March?

Mr. MERRITT. They can.

Mr. MOORE of Virginia. Which will only mean a difference in time, as provided in the proposed amendment, between a date in January and the 4th of March.

Mr. MERRITT. Yes; less than 60 days.

Mr. LOZIER. And will it not save the damage that a Congress can do that has been rejected by the American people?

The CHAIRMAN. The time of the gentleman from Connecticut has again expired.

Mr. WHITE of Kansas. Mr. Chairman, I yield the gentleman two additional minutes.

Mr. LEAVITT. Will the gentleman yield?

Mr. MERRITT. Yes.

Mr. LEAVITT. Is it not provided in the present Constitution that in case of a national necessity the President may call Congress in session on the 4th of March?

Mr. MERRITT. It is.

Mr. MONTAGUE. Would it interrupt the gentleman if I suggested that since the Sixty-fifth Congress the average turnover has been 12 per cent of the Members of the House?

Mr. MERRITT. That is true.

Mr. MONTAGUE. And of that turnover fully 70 per cent has been by voluntary retirement?

Mr. MERRITT. That is true.

But no change in the Constitution should be undertaken on any such grounds; that is, on the theory and on the ground that no harm may result, because history has shown that changes have produced evils which have not been anticipated and that therefore any additional changes should be based only upon the proof of positive present evils and upon sound reasons for hoping for future benefit. In this case, in my opinion, the reasons both from history and from theory are against the adoption of sections 1 and 2 of the joint resolution.

There may be some reason for the adoption of sections 3 and 4, although the country has thus far suffered no harm from the absence of these sections, but conceivably there might be confusion under certain conditions set forth. But they form no necessary or inferential reasons why sections 1 and 2 should be adopted.

I hope therefore, Mr. Chairman, that the joint resolution, and especially sections 1, 2, and 5 thereof, may be not adopted. [Applause.]

Mr. JEFFERS. Mr. Chairman, I yield 10 minutes to the gentleman from Alabama [Mr. BOWLING]. [Applause.]

Mr. BOWLING. Mr. Chairman and gentlemen of the committee, I do not think there will be any very great danger to the Republic if this amendment is never adopted. At the same time, as it is drawn, it achieves an excellent purpose that has already been pointed out to you, but which I desire to emphasize and that is that it destroys that 13 months of time which now exists between the election of a Member of Congress and the assumption of his duties. That is entirely too long a time to elapse, and I think it is wise that this Congress has begun to consider the question of eliminating that from our system. That works in several ways detrimentally, it seems to me. One is personal, of course, to the Member of the House of Representatives. I happen to know right now two individual instances of Members of this present House who were elected in November, 1926, but did not begin to discharge their duties as Representatives until December, 1927, and before they were ever sworn in as Members of the House of Representatives they were confronted with active and announced opposition to their reelection, the argument against their reelection being that they had done nothing. That reminds me of something that the late Champ Clark said to me one day. I asked him in the course of a conversation what it was that his opponent had as a campaign issue against him in 1920, the year of his defeat, and he said:

> Well, the same thing that you will have brought against you and that every other man will have brought against him if he stays in Congress long enough, and that is that he had never done anything while he had been a Member of Congress.

Of course, as I say, that is just merely a personal thing, but usually Members of Congress and Presidents are elected on political issues, and the attention of the country is directed to some great question of public policy and the country has determined by its vote in the election that it desires certain things to be done by the Congress. Those things should be done as soon as is reasonably possible after the mandate of the people has been ascertained. So far this reason that 13 months' hiatus should be destroyed; and really, I think, so far as this amendment goes, that is the most important thing in it, and all of the rest of it might be left out without disturbing anything. We have been getting along here for 139 years with conditions as they are, but all of the while objections being raised to this 13 months' elapsing between election and the assumption of office.

I really believe that the inherent power of the Congress under the Constitution would permit it to legislate to meet several of the contingencies that are sought to be met by section 3 of the proposed amendment. I certainly think that the amendment proposed to be offered by our colleague from California [Mr. LEA] meets that situation in decidedly better form and language than that proposed in the printed copy of the resolution. So much for that.

Really, gentlemen, I think one of the most valuable things that has come to us is the opportunity to offer some other amendments to this resolution that might never have been considered for lack of opportunity. One of them is the provision that has been suggested by the gentleman from Tennessee [Mr. GARRETT], the seven-year period of limitation, which, I think, should certainly be incorporated in principle, if not actually in years. You are familiar, of course, with the fact that we have flying in the air, so to speak, a number of amendments that were submitted to the States 100 years ago which might, so far as any law is concerned, be taken up now and ratified by the States of the Union. I understand, of course, that the Supreme Court of the United States has held that the time contemplated for ratification must be a reasonable time, and that a long period of years, 50, 75, or 100 years, from the time of the submission of an amendment without ratification would render it null.

Mr. CELLER. Will the gentleman yield?

Mr. BOWLING. I yield to the gentleman.

Mr. CELLER. There seems to be a good deal of common sense in that decision of the Supreme Court in the case of Dillon *v.* Gloss (256 U. S. 368), because the gentleman will quite agree that the action of the States in ratification could not be cumulative over 50 years or 100 years, because there must be contemporaneous action implied between the presentation of the amendment by the Congress and the ratification by the States.

Mr. BOWLING. Yes.

Mr. CELLER. So that there must be some unity of time involved within the contemplation of the framers of the Constitution.

Mr. BOWLING. That is the theory on which the Supreme Court acted, I apprehend, in rendering their opinion.

The other proposition suggested by the gentleman from Tennessee [Mr. GARRETT] is that before this amendment shall have been voted upon by a State that at least one of the houses of the legislature of that State shall have been elected. I think this is a very wholesome provision, notwithstanding the argument advanced by the gentleman from Missouri [Mr. LOZIER].

Mr. O'CONNOR of New York. Will the gentleman yield?

Mr. BOWLING. In just a moment. When I finish this statement I will be pleased to yield.

The only way to reach that is through the amendment submitted. The States can not reach that situation by their own legislative enactment. They can not provide for a referendum on a constitutional amendment. They can not provide that their own legislative body must be elected after the submission of the amendment. This has been held by the Supreme Court, the theory being that when a State legislature acts upon a constitutional amendment submitted to it the State is then an agency of the Federal Government, and for that reason no legislative enactment of that legislature itself is binding upon them.

It so happened that with respect to the ratification of the woman suffrage amendment down in Tennessee the legislature met there and ratified that amendment in defiance of an act of the Legislature of Tennessee which demanded——

Mr. GARRETT of Tennessee. In defiance of a provision of the State constitution.

Mr. BOWLING. I thank the gentleman. I was thinking it was an act of the legislature.

The State of Tennessee had provided in its constitution that at least one of the houses of the legislature should be elected after the amendment was submitted, and in the face of that the legislature met and passed its resolution of ratification of this particular amendment, and the Supreme Court would have said, in view of another decision it had rendered, that it could do that because the legislature was acting merely as a Federal agency.

So, gentlemen, this is the only way you can reach this situation, and I think it is very wholesome that it should be reached in order to give the State an opportunity, if it so desires, to have every such amendment made a part of the issues upon which the legislature is elected.

I now yield to the gentleman from New York.

Mr. O'CONNOR of New York. The gentleman has referred to the gentleman from Missouri [Mr. LOZIER] as being in opposition to the position of the gentleman from Tennessee that at least one house of the legislature be elected.

Mr. BOWLING. Yes.

Mr. O'CONNOR of New York. Now, in Missouri, the same State from which the gentleman comes, there was a state-wide referendum on prohibition, an amendment of the State constitution, that was defeated.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. JEFFERS. Mr. Chairman, I yield the gentleman three additional minutes.

Mr. O'CONNOR of New York. There was a state-wide referendum on prohibition, an amendment of the State constitution, that was defeated by 75,000 votes, and at the same election the legislature was elected. That legislature met in January and ratified the eighteenth amendment.

Mr. BOWLING. I can see how that might have happened by reason of the distribution of the representation in the State legislature; but, gentlemen, it does not change the proposition, that seems to me is a sound one, that the State that proposes to bind itself and all the other States by the ratification of a constitutional amendment should have the attention of the electorate of the State called directly to that issue, among the other issues that are involved in the campaign, and give the people a

chance for expression, whether they exercise that chance of expression or not.

Mr. DENISON. Will the gentleman yield?

Mr. BOWLING. Yes.

Mr. DENISON. Before the gentleman leaves the floor I would like to have the benefit of his judgment on the question of the election of Members of the House for four years.

Mr. BOWLING. Well, sir, you know that is what I got up here to talk about. [Laughter.] I think I can talk about that freely, considering the situation particularly of myself. I will soon go out of Congress and will not have the opportunity to associate with the finest body of men I have ever had the honor of associating with in all my life. [Applause.]

Mr. McMILLAN. Will the gentleman yield?

Mr. BOWLING. Yes.

Mr. McMILLAN. I think a great deal of the gentleman's opinion, legal and judicial, and as I study this proposition I would like to hear the gentleman give his opinion on the question of the date as it is incorporated in this proposal which will be a part of the organic law.

Mr. BOWLING. Let me first talk about this four-year proposition. Gentleman, I have thought about this a good deal. To me it is a highly important thing; and you talk about courage, this House ought to have the courage to submit that to the people of the United States. They will ratify it, in my opinion, and will be glad to do it. [Applause.] The reason that originally obtained for fixing the term of a Member of Congress at two years no longer exists.

Back in 1787, when this Constitution went into effect, the means of communication were nothing as compared with now, and the idea, as you find it expressed in Madison's papers and contemporary publications, was that they thought it was a good idea to get the opinion of the country quickly upon a given proposition, or, in other words, to get the reaction of the folks back home on some proposed question of legislation or some great policy of the President. But now, with the airplane, and the radio, and the telegraph, and the telephone, and the newspapers, and the magazines, and the good roads, and the automobiles, you can find out what the people of this country are thinking about in 24 hours. So why is it necessary to have a Congress elected every two years in order to find out what the people are thinking about.

Gentlemen, the question of the submission of this amendment could not affect you in your present situation with respect to your election next year. You could not look at it from a selfish standpoint. You should not do so, if I may say it, on that particular basis.

But above and beyond all, a Member of the Congress of the United States should have a period of four years for several real reasons. One of them is it will lift off your shoulders this weight of uncertainty under which every one of you labors every day you are in Congress. [Applause.] It does not apply only to you who come here for the first time, but it applies to the oldest in service who always has his ear to the ground, and perhaps that is the reason why he has been here so long.

Here is the Alabama delegation, my beloved colleagues; not a single one has any opposition to his renomination. The time for filing has closed, and when they came in here March 2 and found they had gotten by without opposition, their faces alight as if a halo surrounded them, because they knew they were safe for two years more. Representatives ought not to be elected for only two years and have the sword of Damocles hanging over them all that time. Give them four years and they will be free for the greater period of time and allowed to act as conscience dictates without having to do so much demagoging back home. They can approach questions from the standpoint of statesmen and consider them in a brighter and finer view without respect to the effect their votes will have on their personal political fortunes. You can reach this, and it is a fine thing and can be done. I thank you. [Applause.]

Mr. LOZIER. Mr. Chairman, I ask unanimous consent to revise and extend the remarks I made a short time ago.

The CHAIRMAN. Without objection, the gentleman will have that privilege.

There was no objection.

Mr. JEFFERS. Mr. Chairman, I yield five minutes to the gentleman from Mississippi [Mr. QUIN].

Mr. QUIN. Mr. Chairman and gentlemen, in my judgment this is a far-reaching matter that the House has under consideration. I am for it in every sense of the word. I revere the Constitution of the United States, the organic law of our land, as much as any other man in this country, but I do not think it is so sacred that it should not be amended occasionally.

When the Constitution was adopted I believe it was right and all the provisions as to election and terms of office of this Republic. But times have changed; we have advanced. Seventeen hundred and eighty-nine is a long time ago. To-day with the great growth of this Republic, with the advent of increased methods of communication, with business methods, commerce, and all these modern inventions, they have made practically a new country. Our Constitution must be kept up with the times.

Why should we wait until the 4th of March for a President to take his office after he has been elected in November? Why should we wait for Members of Congress to take their office 13 months after they have been elected? The people of the United States change administrations for a reason and a purpose. When the same old crowd is in office following the November election, although they may have been repudiated at the polls in November, between the 1st of December and the 4th of March they may pass legislation contrary to the will of the people expressed at the polls in the previous November.

Certainly the people of the United States are entitled to have their officers put into office within a reasonable time after they are elected. As one Member of this House I believe that the large majority in the United States wishes this to be done. I believe it is for the best interests of our country. I believe it is the only instrumentality that we can use to prevent the lame ducks from thwarting the will of the people.

Now, as to our right to have the time extended four years for a Representative, I think that is for the best interests of the country. One-third of the Senators are elected every two years, and why should not a Member of the House be elected for four years? At the time the Constitution was adopted that was a wise provision for a two-year term, because of the fact that legislatures of their respective States selected the Senators, but now the Senators come directly from the people the same as the Representatives in the House. For that reason it is no longer necessary for the reelection of a Member of the House every two years.

Then, too, the President of the United States holds for a period of four years. He is elected to serve for his term, and under this resolution to amend the Constitution, if his administration is all right, at the end of two years he can have a crowd in Congress to stand up for him. If his administration is all wrong, the people of the United States can put a crowd in Congress that will keep him from thwarting the will of the people. In my judgment a Member of the House can do better and more effective work if he is elected for a four-year term.

You take the situation that prevails back in the States. Many of the States of this Union have changed the tenure of all their county and State officers and fixed it at four years. In Mississippi they have arranged it so that our officers, State and county, are elected for four years. It had been at the beginning like that of the Federal Government—two years for each officer. Now that four-year term is deemed to be more satisfactory and better for the State of Mississippi, and it will be better for the Federal Government if the lower House of Congress, the House of Representatives, is elected for a four-year term, and the people of the United States know it, when they elect them, that they are to serve for four years. That will help us, and relieve us of the necessity of looking all the time to see whether or not we can be returned to Congress in the next two years. As it is now, we are in doubt all the time. From one end of the country to the other the people of the United States look to their Representative in Congress to do everything that can be done. Of course, the impossible can not be done. A man is not worthy to be trusted and ought not to be sent here in the first place unless he is a man of integrity and character, and if he is such a man, four years is a short enough term. And if the Representative proves himself worthy, his constituents will see to it that he comes back here as long as he is capable of transacting properly the business of the people who elected him.

Why should Members be unwilling to vote to extend the term of office to four years? Courageous men always have the courage to do the right thing for the country. In my judgment, a four-year term will help us individually, as well as help the country; and a Member who casts his vote that way is casting a vote for the best interests of the Government, for the best interests of the people, and I believe for the best interests of himself. [Laughter and applause.]

Mr. WHITE of Kansas. Mr. Chairman, I yield 10 minutes to the gentleman from Massachusetts [Mr. STOBBS].

The CHAIRMAN. The gentleman from Massachusetts is recognized for 10 minutes.

Mr. STOBBS. Mr. Chairman and gentlemen of the committee, I have listened with a great deal of interest to the arguments which have been presented on the floor of this House against this proposed resolution, and they seem to boil down in

my mind to three. In the first place, the argument which has been discussed on the floor and among the seats here most frequently is this: Why use a constitutional amendment to change the time of the meeting of Congress when under the present Constitution there is nothing to prevent having, by an act of Congress, a provision by which Congress shall fix the date of meeting each year? Therefore, why put it in the form of a constitutional amendment?

It is perfectly true that under our Constitution there is nothing to prevent Congress from legislating to-day or to-morrow to have the new session of Congress come in on the 4th day of March, but not earlier. But, my friends, if you do that, that does not do away with the so-called lame-duck Congress, because there must be, if the new President comes in on the 4th day of March, 1929, a session of Congress between the date of election in November and the 4th day of March to take care of a situation when a President has not been elected by popular vote. Therefore, although you may say that the new session will come in on the 4th day of March, yet a session must intervene between the November election and the 4th day of March, and therefore you are in the situation where you have one session ending on the 4th day of March, 1929, and a new session commencing on the same day. It is a practical matter; and although it is legally possible, in practice it probably could not work out to the satisfaction of the Members of the House.

Then, the second argument is made here, What is the harm of a lame-duck session? They say there is only a small turnover, something like 10 or 15 or 17 per cent. What harm does it do if a lame-duck session is the body that elects the President in case there is no election by the Electoral College? There may be a small turnover, but that small turnover may be sufficient to change the result in the election of a President of the United States; because in the House the President is elected by States, and one or two more men from each State, if changed, might change the whole result.

But there is more than that to the proposition. If you are going to have a President elected by Congress, he ought to be elected by a Congress that is elected on the same issue with himself, and not one that has been elected on an issue two years before. I do not need to remind my friends on the other side of the House of what happened in 1824, when the election was thrown into the House. In the popular election Jackson had received half as many more votes as John Quincy Adams, and yet Adams was chosen in the election by the House. Jackson had received 153,000 votes and Adams 108,000 votes, and Crawford got something like 40,000 and odd votes in the popular vote.

What happened? Was Andrew Jackson elected President of the United States in that lame-duck Congress? Not at all. He had a plurality of the popular vote and in a Congress made up of Members elected in the same election with him he might have been elected. But what happened? He had 99 votes in the Electoral College, John Quincy Adams had 84, Crawford had something like forty-odd, and Henry Clay had 37, so Clay was out of consideration. What happened? Notwithstanding the fact that Jackson had 99 votes in the Electoral College and John Quincy Adams 84—there were 24 States voting at that time, and each State cast 1 vote—John Quincy Adams was elected President of the United States by 13 votes in that lame-duck session and Jackson only received 7 and Crawford 4. Do you mean to say there would not be any change in the situation with such a small turnover in your lame-duck Congress? Yet there was an illustration right there, when Jackson had 99 votes in the Electoral College and only received 7, while John Quincy Adams, who had a less number of votes in the Electoral College, was elected President of the United States. Of course, John Quincy Adams was from Massachusetts and we from Massachusetts are very proud of the fact that he was elected President of the United States, but I use that as an illustration to combat the argument that is being made on the floor.

Mr. LEAVITT. Mr. Chairman, will the gentleman yield?

Mr. STOBBS. Yes.

Mr. LEAVITT. How many lame-duck Congressmen were in that Congress?

Mr. STOBBS. It is not a question of how many lame-duck Members there were in the Congress. The question is the fact that the Congress which elected John Quincy Adams as President of the United States was not the Congress which had been elected upon the issues upon which Jackson had received a plurality of the popular vote. The Congress which actually elected Adams had been elected two years before, and my point is that the men who ought to vote for the President of the United States, if the election is thrown into the House, should be men who are elected on the same issues with the candidate for the Presidency. The President, if the election is thrown into the House, should not be elected by men who were elected two years before.

Mr. MERRITT. Mr. Chairman, will the gentleman yield?

Mr. STOBBS. Yes.

Mr. MERRITT. What would happen if they had been elected by the next Congress?

Mr. STOBBS. The chances are that the man would have been elected President who had received the greatest number of popular votes. In that instance Jackson had one-half again as many votes as John Quincy Adams. As I say, Jackson had 99 votes in the Electoral College while John Quincy Adams had 84. Of course, you can not tell by figures, but the chances are nine out of ten that the man having the greatest number of votes in the Electoral College would have received the votes of the men in that Congress. Let me answer the gentleman in this way: If Calvin Coolidge had not received a majority of the votes in the Electoral College in 1924 and the election had been thrown into the House, what would have happened? In the Sixty-eighth Congress there were 222 Republicans in the House and 208 Democrats. Of course, I was not here at the time, but I understand there were some men classed as Republicans who did not always vote the straight Republican ticket on all matters, and if the election of Calvin Coolidge had been thrown into the House at that time the chances are he would not have received the votes of those men and would not have been elected President. However, if that question had been left to the Congress which was elected at the same time he was elected, when the House had a much larger Republican majority, having something like 248 Republican Members, the chances are that there would have been no difficulty at all about his election in the House. That answers the gentleman's question I believe.

Mr. TEMPLE. Let me suggest to the gentleman that Mr. Coolidge would not have received the votes of the 248 Members, because each State has but 1 vote.

Mr. STOBBS. That is true, but the fact remains that with just a small turnover Calvin Coolidge might not have received a sufficient number of votes to be elected as President if his election had been thrown into the House.

Mr. TEMPLE. Will the gentleman permit another question?

Mr. STOBBS. Yes.

Mr. TEMPLE. In case an election fails to result in the choice of a President through the Electoral College, it has been a very close election and the Congress elected at the same time would have been elected in the same close election and there would be a great many contested seats. The contested seats might have the balance of power, so instead of having a President elected by a lame-duck Congress we would have him elected by a Congress of unhatched eggs. [Laughter and applause.]

Mr. STOBBS. The answer to that is that under this resolution they would keep voting for President and they would take care of those contested-election cases as rapidly as possible, so as to put them in a position to vote. But at least the principle stands and remains the same, that the Congressmen who vote for the election of a President, if the election is thrown into the House, should be Members of the Congress elected on the same issue with him. The Jackson case stands out preeminently on that one point.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. WHITE of Kansas. Mr. Chairman, I yield the gentleman two additional minutes.

Mr. STOBBS. Now, one other point in reference to whether or not we ought to come back at once instead of waiting 13 months. The argument made on the floor is that there is no great difficulty connected with that because you can come back at any time in special session. However, we are interested in creating a condition for taking care of the ordinary situation without being obliged to resort to special sessions. Let me call your attention to this fact to show whether or not under present conditions Congress is immediately responsive to the will of the people. The McKinley tariff bill, if I am right in my history, was passed in 1890. It became an issue before the people in 1892 in the election between Harrison and Cleveland, and that election was won by the Democrats on the so-called iniquities of the McKinley tariff bill. The opponents of Mr. Harrison said it was an iniquitous bill, but that is neither here nor there; but the fact remains that the Democrats won that election on the issue that that was a bad tariff bill. Now, that was in November, 1892, and the people rose up in arms and repudiated that tariff bill. In my own section of New England for the first time in years a majority of the men who came to Congress were Democrats. That was true of Michigan and any number of rock-ribbed Republican States. There was a majority of Democrats greater than had been the case for a great many years. Now, what happened? It was not until February 1, 1894, or

15 months after the people had repudiated that McKinley tariff bill, that the Wilson tariff bill was passed in this House. [Applause.]

The CHAIRMAN. The time of the gentleman from Massachusetts has again expired.

Mr. WHITE of Kansas. Mr. Chairman, I yield 10 minutes to the gentleman from Minnesota [Mr. NEWTON].

Mr. NEWTON. Mr. Chairman, before speaking to the resolution I want to say a word of personal appreciation of the splendid service that has been rendered by the gentleman from Kansas [Mr. WHITE] during his nine years of service here. This applies not only to his work as the chairman of the committee which for several years has been deliberating upon this constitutional amendment, but for the good work generally which he has rendered his district, State, and country while he has been our colleague. [Applause.]

Mr. Chairman, I am for this resolution. I believe in the general principles embodied in it, but I am not in accord with some of the statements that have been made here and elsewhere in reference to so-called "lame ducks" and "lame-duck" sessions of Congress. I shall have more to say about this later.

This resolution seeks to amend our fundamental law in several particulars. They can be summarized briefly as follows:

First. It provides that the President, Vice President, and Members of Congress shall take office in the month of January following their election. It thereby does away with the "short" or "hold-over" session of the old Congress.

Second. It further provides that this newly organized Congress will constitute the election machinery for the electing of a President and Vice President in the event of the failure of any one candidate to receive a majority vote in the Electoral College. Under the present provisions of the Constitution, this duty devolves upon the old Congress.

Third. Further provisions are made with the idea of meeting certain possible contingencies that may arise in reference to the election of President and Vice President and the clearing up of certain ambiguous provisions in the Constitution relating thereto.

In passing upon any change in our fundamental law we must always bear in mind the very substantial difference between our form of government and that of a great many other countries where the representative system prevails. Furthermore, one should always approach the question of a change in our Constitution carefully and with the utmost deliberation. This should especially be the case where the proposed change involves a departure from a fundamental constitutional principle. In this particular instance the substance of the proposed amendment has been debated pro and con in the press over a period of several years. And it does not involve any change in a fundamental constitutional principle. In fact, it is a proposal to change the mechanics or procedure.

Mr. Chairman, I am a firm believer in popular government. I believe that the best form of popular government is through a representative republic such as we have. I want to see that form of government preserved. In a representative form of government the only direct opportunity that the people have to express their will as to questions of governmental policy is through the election of representatives following a campaign in which important public questions are debated pro and con. After such a campaign it is my idea of popular government that the wishes of the majority, subject to constitutional limitations, should then be reflected in legislation and administration just as soon as it is reasonably or practically possible.

Generally speaking, that is not the case in our country today. Here is the situation: We will elect a President, Vice President, and Members of Congress in November of 1928. The President and Vice President would not take their office until March 4, 1929. Unless the new President thereupon called Congress in extra session, the new Congress would not convene until the first Monday in December following, which would be 13 months after its election by the people. In the meantime the old Congress would convene and remain in session until March 4. During that time, generally speaking, they would pass the appropriation bills and legislate generally. Unless something unusual should arise, the new President, the appropriation bills having been passed by the old Congress, would not convene Congress until the Constitution required him to do so. I think it would be much better if the new Congress and the new President should assume their duties earlier. This applies especially to the new Congress. I think that if Lincoln and the new Congress had assumed their duties, say, in January instead of some weeks later, the Civil War might have been averted. If not averted, the task of President Lincoln and the Congress in preserving the Union would have been substantially easier.

I realize that Congress can now provide by law for the convening of the new Congress at any time after noon of March 4. However, that means a session well on into the summer. Anyone who has spent a summer here, as some of us have, know full well that that should be avoided wherever it is possible.

There are those here who feel that it would be better to have the new Congress wait 13 months before commencing to legislate. They want a "cooling-off time." I do not think that we need any "cooling-off time" in this country. In the long run I believe we will get better results by having the people's Representatives meet fairly soon after their election, so as to then carry out the governmental policies prevailing at the election. Possibly sometime there will be legislation enacted that will be unwise. However, generally speaking, responsibility of enacting legislation makes for conservatism. But even if a mistake is made, the people will then realize more and more their own responsibility in electing Representatives. They will exercise greater care the next time. The way it is to-day, a candidate can promise almost anything that appears attractive, knowing that 13 months will almost certainly elapse before he will be in a position where he will be expected to carry out that promise. By that time he knows that there is a fair chance of the promise being forgotten. I firmly believe that the calling of Congress earlier will be the means of instilling a greater sense of responsibility in our citizenship in the selection of their Representatives. To my mind this is the principal argument that can be made in favor of this feature of the resolution.

Mr. Chairman, I now want to return to the claim that has been made about the evils that have come upon the country in a legislative way by the hold-over or short-term Congress, which some have described as the lame-duck Congress. I want this body and the legislation which it enacts to be truly representative and responsive to the will of the people.

But in order to get this resolution adopted there is no occasion whatever to misrepresent the work in times past of the short-term or hold-over Congress. I am serving my fifth term in this House. During this period I do not recall a single instance of the passage of legislation by a short-term or hold-over Congress which was not in the best interests of the country, and I challenge any one of these gentlemen to cite an instance during that period of time where the country has been harmed by legislation passed at the instance of a short-term or hold-over Congress.

Mr. Chairman, on the contrary I can recall that some of the best legislation that has passed Congress during this period has passed during the hold-over session. It was initiated in the long session and completed in the short session. We have all observed evidence of increased independence in the hold-over session. Furthermore, many of the Members who retire do so voluntarily. They are in no sense "lame ducks," yet one would think from the press and magazine accounts from time to time that a short session of Congress was dominated by men who had been defeated at the polls, and who, having been defeated, were striving to get even by enacting legislation that could not otherwise be passed. Again let me say that I do not recall a single instance in my term of service here where that situation has prevailed. So let us have an end to this "lame-duck" argument and pass this resolution on its merits.

Mr. CARSS. Will the gentleman yield?

Mr. NEWTON. Yes.

Mr. CARSS. And has it not been the gentleman's experience that many of these men who were defeated acted more independently and voted their own convictions to a greater extent than ever before?

Mr. NEWTON. There can be no question about it. Take appropriations, for example. There is little time to consider them in a short session. In considering them the wisdom and experience of the older men has been invaluable.

Mr. Chairman, I yield to no man in my respect and devotion to the fathers who framed our Constitution. It has been intimated if not said here that they planned on having a long time intervene between the election and the convening of the new Congress. That I deny. On the contrary, I think it can be said without fear of successful contradiction that they intended that the President and the Members of Congress should take office within a reasonable time following the election. In fact, I think it has been said upon the floor either to-day or on some previous occasion that this was the thought. The Constitution says nothing about when the President's term shall commence or when the terms of Members of Congress shall commence following their election. It does say that the term of the President shall be four years. It does say that the term of a Member of the House of Representatives shall be two years, and that Congress shall convene on the first Monday in Decem-

ber unless Congress shall by law provide otherwise. In setting the time in December they undoubtedly had in mind something of the difficulties that would ensue in having the Constitution adopted by the several States, the length of time involved, and also the length of time involved after adoption in getting the new Government under way.

When the Constitution was adopted and ratified we were being governed under the Articles of Confederation. The Congress of the Confederation was in session in New York City at or about the time when the last State necessary to ratification ratified. This Congress thereupon passed a resolution providing that the selection of presidential electors by the several States should occur on the first Wednesday in January, 1789, and that the electors should cast their votes for President on the first Wednesday in February, and that the President thus elected should be inaugurated on the first Wednesday in March. In other words it was a congressional act by the expiring Congress under the Articles of Confederation. I suppose some would say it was a lame-duck Congress and a lame-duck government that provided the machinery for this present great Government of ours. This first Wednesday of March happened to be the 4th day of March.

Mr. Chairman, there were no railways, telegraphs, radios, telephones, and so forth, at that time. History tells us that General Washington did not receive official notice of his election in time to arrive at the seat of government on March 4. In fact, it was impossible to inaugurate him until April 30. Members of Congress had great difficulty in getting there before that time. Congress then provided by law that the President's term should commence on March 4. This was likewise true as to the terms of Members of Congress. Therefore the first term of the President of the United States and the first term of the Members of the House were fixed by law at less than the constitutional requirement of four years and two years, respectively. No one questioned it at the time, and, of course, it is of no special consequence to-day. I mention it to show there was no thought of a long cooling-off time.

Mr. COLTON. Will the gentleman yield?

Mr. NEWTON. Yes.

Mr. COLTON. Does the gentleman believe that two months is enough time for the incoming President to get his Cabinet appointed and get acquainted with the Budget system and make the necessary recommendations to the Congress?

Mr. NEWTON. Oh, yes; I think so. I think that is ample time within which to make the selection of the Cabinet, and so far as the Budget is concerned, in a great and vast government such as ours there must be a continuance in office of the subordinate Budget officers, who will necessarily commence work upon the Budget even long before the election. This preliminary work must be done.

Mr. TEMPLE. Will the gentleman yield?

Mr. NEWTON. Yes.

Mr. TEMPLE. Would not the Budget be prepared and sent to Congress at its opening on the 4th of January?

Mr. NEWTON. I presume it would.

Mr. TEMPLE. And in that case the Budget would be prepared by a "lame-duck" President.

Mr. NEWTON. It would. The gentleman is correct, unless Congress determined otherwise; and, as a matter of fact, if Congress did determine otherwise and had the Budget postponed until after the new President had gone into office—and I can see where they might well do that—the new President would in large measure have to depend upon these subordinate officers in the preparation of his Budget.

Mr. MADDEN and Mr. DENISON rose.

Mr. MADDEN. Not only that, but it would take five months to do it and otherwise you would be sitting around waiting for him to get that work done.

Mr. NEWTON. That is true.

Mr. DENISON. The gentleman is aware that the Budget is not a matter of political controversy and ought not to be.

Mr. NEWTON. No. There are certain major propositions in the Budget that might become a question of controversy, but, generally speaking, the items in the Budget, as the gentleman from Illinois suggests, are not a matter of political controversy.

Mr. MONTAGUE. Will the gentleman yield?

Mr. NEWTON. I will.

Mr. MONTAGUE. The gentleman knows that some Presidents have been elected who were not trained in the Federal service. There are several notable instances. Instances where they have been elected without any experience in the Federal service. Take that case, does the gentleman think that from November until the 4th of March is an adequate time for the President to make proper preparation for the discharge of his duties? Does the gentleman think it is too much time?

Mr. DENISON. I do not think it is too much time, but at the same time I do not think a difference of five weeks is going to make any great amount of difference in a practical way.

Mr. MONTAGUE. In bringing it back from March until January?

Mr. NEWTON. I think, generally speaking, that a majority of the Cabinet officers are selected before January 1.

Mr. MONTAGUE. For the President to select his Cabinet officers, prepare his message, formulate his policies, familiarize himself with the operations of the Government, especially the Budget system—how can he do it in less time than from November to the 4th of March?

Mr. NEWTON. If he is the kind of man that ought to be nominated for President by either one of the great political parties, he ought to have some well defined governmental ideas at the time of his nomination, and if he has not he will certainly formulate them in the course of the campaign. I do not think the question of less time would be a material one.

Mr. MOORE of Virginia. Will the gentleman yield?

Mr. NEWTON. I yield to the gentleman.

Mr. MOORE of Virginia. The gentleman has an admirable argument against this resolution, it seems to me. So far as Congress is concerned he has eliminated the lame-duck theory, but does he think there is such a material difference between two months from November to January and from November to the 4th of March, when it is now possible to bring the new Congress in, as to justify a constitutional amendment?

Mr. NEWTON. Yes; I do. The old Congress by the Constitution must convene on the first Monday of December unless Congress by law otherwise provides. We have authority to-day to provide for the new Congress to convene on March 4 at noon. It seems to me there is no occasion whatever for the old Congress to be in existence with the new Congress having been elected. When that is permitted you do violence to the principle of keeping a representative government truly representative. Neither do you cultivate and develop on the part of the people a feeling of responsibility in the work of their chosen Representatives.

Mr. MOORE of Virginia. Does the gentleman favor the termination of the final session of the preceding Congress at a certain date?

Mr. NEWTON. The gentleman refers to the May 4 date?

Mr. MOORE of Virginia. Yes. I want to know in what way you are going to provide for the old Congress terminating prior to a date in January?

Mr. NEWTON. I do not know that I understand the gentleman.

Mr. MOORE of Virginia. The Norris resolution does not say anything about that.

Mr. NEWTON. I am not familiar with the terms of the Norris resolution. I am talking about the White resolution. I do not favor the May 4 limitation. I do not believe such a detail should be written in our Constitution. It should be amended so as to read, say, May 4 unless Congress shall by law provide otherwise.

Mr. MOORE of Virginia. If we are going to amend the Constitution, does not the gentleman think that it might be well to consider the expediency of vesting discretion in Congress that will enable it to deal with the whole subject instead of rigidly tying Congress to this, that, and the other date?

Mr. NEWTON. I presume that this suggestion by the gentleman would apply more to certain other features of the resolution that is pending before us.

Mr. Chairman, before I conclude I want to briefly discuss the second and third propositions. Again with the idea of carrying out the will of the people as expressed in the election as promptly and as certainly as possible, I think that the incoming Congress, rather than the hold-over Congress, should elect the President and Vice President whenever none of the candidates received a majority vote in the electoral college. I do not think that the country has suffered as a result of the election by Congress of President and Vice President on the two different occasions when Congress has been called upon to act. Certainly its action in electing Jefferson over Burr was a wise one. The country did not suffer when Congress elected John Quincy Adams. So far as I can recall, these are the only two instances in which Congress has been called upon to elect a President and Vice President. But I do feel that the machinery for carrying into effect the will of the majority should be kept at all times representative, with the idea of preserving to its fullest extent the theory of representative government.

As to the third proposition: In the drafting of the Constitution certain contingencies in reference to the President and Vice President were not foreseen and provided for. There were certain ambiguities in other provisions. The committee has

sought to provide for these contingencies and to clear up some of the ambiguities. In my judgment, these contingencies should be provided for and the ambiguities should be eliminated. That constitutes an added reason why, in my judgment, this resolution when perfected as I have suggested, should be passed.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. JEFFERS. Mr. Chairman, I yield five minutes to the gentleman from Texas [Mr. SUMNERS].

The CHAIRMAN. The gentleman from Texas is recognized for five minutes.

Mr. SUMNERS of Texas. Mr. Chairman and gentlemen of the committee, it is not my purpose this afternoon to undertake a discussion of all the sections of this resolution. I want to direct the attention of the House particularly to what is proposed in section 2 in order that you may fully consider between this and the time when we come to the further consideration of the resolution.

The Constitution now provides that Congress shall assemble at least once in every year, and that meeting shall be on the first Monday of December, unless by law they shall appoint a different date. The effect of that provision is to give Congress by its own enactment a determination as to when it shall convene and when it shall adjourn. That is a constitutional right now. The first article of the first section of the Constitution puts the legislative power and responsibility in the Congress. When this committee first prepared its resolution it did not undertake to limit the power of Congress over that subject, but as this resolution is now presented to the House it takes away the unlimited power of Congress to exercise control over its own meetings and the length of time in which it is to sit for the discharge of its responsibliity. The second session is to terminate by constitutional limitation on May 4. I submit to the gentlemen who are responsible for that proposed change, in view of the fact that they are suggesting in this proposed constitutional amendment a limit upon the discretion of Congress, putting it more in a strait-jacket—I submit, under those circumstances, that the duty rests upon those gentlemen to explain why that ought to be done.

I hope when we convene for the further consideration of this resolution that gentlemen will present the reasons which have been responsible for that proposed curtailment of the power of Congress over its sessions, in order that we may fairly consider the matter.

Mr. SNELL. Mr. Chairman, will the gentleman yield there for a question?

Mr. SUMNERS of Texas. Yes.

Mr. SNELL. Does the gentleman believe that there is anything in this proposed amendment that Congress has not the power to do now?

Mr. SUMNERS of Texas. Yes; there are some things.

Mr. SNELL. I mean with reference to the time of meeting and the length of sessions?

Mr. SUMNERS of Texas. Congress has unlimited power now to fix the time when it shall convene, and to fix as many sessions as it wants, and to fix the time it shall adjourn. But when you submit this constitutional amendment and the States ratify it, Congress must adjourn on the 4th of May, and if its work is unfinished Congress then will be dependent on the Executive will and discretion as to whether it shall meet again and discharge its constitutional responsibilities. I never will vote for it. [Applause.]

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. JEFFERS. I yield to the gentleman one minute more.

Mr. SUMNERS of Texas. I never will vote, gentlemen of this House, to give to the executive or any other branch of the Government any such power of control over the legislative branch of the Government. [Applause.] Gentlemen proposing that sort of thing ought to give us their reasons.

Mr. LUCE. Mr. Chairman, will the gentleman yield?

Mr. SUMNERS of Texas. Yes.

Mr. LUCE. Does not the Constitution itself by restricting the life of the Congress impose a restriction upon Congress?

Mr. SUMNERS of Texas. Oh, yes; one Congress can not go on forever through all eternity; it must quit at the expiration of the commission that the people have given it.

Mr. LUCE. I understood the gentleman to say there is no restriction in the Constitution.

Mr. SUMNERS of Texas. I thought the gentleman would do me the credit to understand that I meant within constitutional limitations upon the life of a Congress. [Applause.]

Mr. JEFFERS. Mr. Chairman, I yield five minutes to the gentleman from Texas [Mr. BLANTON].

The CHAIRMAN. The gentleman from Texas is recognized for five minutes.

Mr. BLANTON. Mr. Chairman and gentlemen, one can not in five minutes give his reasons for opposing legislation of this character. He can only state that he is against it and is going to vote against it.

But I do want to say a word on the floor against the amendment that is proposed by our friend from Alabama [Mr. BANKHEAD] to extend the term of office of Representatives to four years. The greatest safeguard for proper service that the people of the United States have is the fact that we have to go back to them every two years and render an account of our stewardship. That is their greatest safeguard for good service. No one will deny that this of the two bodies is the more representative of the people. Why? It is because we are closer to the people. It is because we have to go back to them every two years and get another commission from them. And I want to say to the people of the United States that if they know what they are about they will not permit their legislatures to approve of an amendment to the Constitution that will extend the office of a Representative of the lower House beyond two years. [Applause.]

Mr. TILSON. Will the gentleman yield?

Mr. BLANTON. Yes; certainly, to the majority leader.

Mr. TILSON. Does not the gentleman expect to render just as good service to the people after he obtains from his people a six-year commission in the Senate? Does he think that will make him any less worthy or less likely to render efficient service?

Mr. BLANTON. I doubt it. A man becomes a little careless with a long term in office, sometimes a little careless. Now, I could mention, if I wanted to be unkind to some of my colleagues who are absent—I could name three of them who have been here three times since they were sworn in at this session. They come from districts where all they have to do is to please the bosses and please the machine. They are not responsive to the voters, because the machine furnishes the votes, and they are a little careless about their service here, and they are a little careless about attending to the people's business here. Oh, you colleagues of mine know just as well as I do that we are close to the people and representative of the people simply because we have to go back to them every two years. I would hate to see the day come when that provision of our law is changed. I am here to tell the people of the United States—and I am serving my eleventh year here—that if they want the best service from their Representatives make them come back every two years and render an accounting. [Applause.]

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. JEFFERS. Mr. Chairman, I yield 10 minutes to the gentleman from New York [Mr. CELLER].

Mr. CELLER. Mr. Chairman and gentlemen of the committee, in the Federalist, 53, you find this very significant remark:

> Where annual elections end then tyranny begins.

In Story on the Constitution, section 588, fifth edition, from which this significant passage has been quoted, you find a very interesting discussion as to why the fathers determined upon biennial sessions and a tenure of office for Members of the Lower House of two years. They very wisely, after a considerable amount of deliberation, fixed a two-year term because they felt that as the term of the President was four years and the term of the Senate six years, there should be closer proximity to the people as far as the House was concerned. There should be a turnover every two years, so as to insure greater responsibility on the part of Members of the Lower House to the people that elected them.

In the letter signed "Publius" by Hamilton February 8, 1788, No. 52, Federalist, he said:

> That biennial elections will be as useful to the affairs of the public as * * * they will be safe to the liberty of the people.

Hamilton also pointed out that the distance that many Representatives would be obliged to travel must be considered a serious reason for insistence upon a two-year term. There was much public clamor against the two-year term. The desire was for one-year terms. Travel since Hamilton's day has changed considerably. Space has become shortened by improved methods of transportation, and soon the airplane will bring California Members to Washington within one day.

Thus if distance was then an argument for longer tenure of office, the shortening of distance to-day is an argument against increasing the tenure beyond two years. The gentleman from Mississippi [Mr. QUIN] has just spoken in favor of the proposed amendment of the gentleman from Alabama [Mr. BANKHEAD]. I quite agree with Mr. QUIN's very last remark. He said:

A Member who casts his vote that way is casting a vote for the best interests of the Government, for the best interests of the people, and I believe for the best interests of himself.

Most assuredly such an amendment would be for the best interests only of ourselves.

Blackstone in his Commentaries said (v. 1, p. 189) that—

A legislative assembly which is sure to be separated again would be bound to feel its own interests as well as its duties bound up with those of the community at large.

Story on the Constitution (sec. 588, 5th ed.) says that—

Frequent elections are unquestionably the soundest, if not the sole, policy by which dependence upon the people, sympathy with the people, and responsibility to the people that elected them can be effectually secured from the people's representatives.

Then Story, citing Hamilton, further says (sec. 587):

It may, therefore, be safely laid down as a fundamental axiom of republican governments that there must be a dependence on and responsibility to the people on the part of the representative which shall constantly exert an influence upon his acts and opinions and produce a sympathy between him and his constituents.

A Representative further removed from his people than two years will to that extent become less dependent upon them and less subject to their influence.

The sympathy and responsibility, I submit, will be woefully lacking if you extend the term of office of a Member of this House from two to four years. I for one shall vote against any such amendment, because the two-year term brings me close to my constituents. I am willing to consult them frequently; I am willing to follow their advice constantly, and if I am further removed from them than by two years that situation will not prevail.

It is, indeed, unfortunate that discussion has turned upon the proposal of the four-year tenure. Although such an amendment might be germane, it nevertheless in all honesty has no place in the constitutional amendments before us called lame-duck amendment. In fact, the proposed Bankhead amendment, if pressed, will lame the lame-duck amendment.

Now, gentlemen, we hear much about a lame duck. What is a lame duck? I have thought that a lame duck is that kind of a wild bird which is brought down by the hunter. Usually that wild bird, thus brought down, is lame, and its very lameness tames it. So we have political lame ducks who have been brought down by the buckshots or votes of their constituents. They, too, become lame, and their very lameness tames them.

They are very tractable, very docile, and usually, under a promise of a job, will vote any way demanded of them. Despite their defeat in the even-numbered year, in November they continue to serve until the March 4 of the odd-numbered year—the short session. In a speech I made on the subject, March 3, 1927, I said:

Although not wanted by their constituents, a hackneyed and worn-out provision of our Constitution forces those same constituents to be represented by men that they have unseated. Usually little service is rendered by these "lame ducks," or rather "sore ducks"; more often it is disservice. Surely, their head is not in their work. They are disgruntled and dissatisfied, and their tempers are usually bad. The remedy for this wretched system is the adoption by Congress and the States of the so-called Norris amendment to the Constitution, which reads:

"SECTION 1. The terms of the President and Vice President shall end at noon on the 24th day of January, and the terms of Senators and Representatives on the 4th day of January in the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

"SEC. 2. The Congress shall assemble at least once in every year, and such meeting shall be on the 4th day of January, unless they shall by law appoint another day."

Let us have no more of these defeated Congressmen serving in the months of December, January, February, and part of March after their defeat.

Furthermore, under the present system a man newly elected to Congress must cool his heels 13 months before he may serve.

The gentleman from Connecticut, my esteemed friend Mr. MERRITT, said there can be no serious and lasting difficulty resulting from the present condition of affairs; but I pointed out to him that on three momentous occasions Presidents were elected as the result of the votes of "lame ducks," when the elections of Jefferson and Burr, Adams and Jefferson, and Tilden and Hayes were thrown into the House. One of the speakers this afternoon went into more details with reference to those elections, and I shall not say more thereupon. If there were nothing else, however, my good friends, the mere fact that "lame ducks," defeated candidates, can come back into this Chamber and participate in the election of a President, that would carry great weight with me in deciding to cast my vote in favor of this Norris amendment.

Unfortunately, there is a provision in the amendment, submitted by the committee to the so-called Norris resolution, which to my mind is regrettable, and that is the provision which provides that in even-numbered years the sessions of the House shall terminate on May 4.

The Norris amendment as it came over from the Senate did not provide any limitation as to the termination of the sessions. Within the tenure of the two years Congress has a right to begin or end its sessions whenever it wishes to. The Norris amendment does not interfere with that right. Your committee, however, on the Election of the President and Vice President in bringing S. J. Res. 47, the Norris amendment, to this House provides that in the even-numbered year—now the year of the short session ending March 4—the session shall not continue after noon on the 4th of May. In other words, we shall still have a short session. It will extend to May 4 instead of March 4.

The very reason that actuated the Members in the other Chamber in bringing about this Norris amendment to the Constitution was to do away with the obnoxious filibuster. But what do you do by this May 4 amendment? I say to the members of the committee that you still continue the filibuster. You had presented to you the handle of a sword that would cut out the filibuster, but you have failed to grasp it. I have as yet to hear a proper explanation as to why you have put the May 4 provision in the resolution. There is no reason why you should fix the limitation as of May 4. Why can you not leave that out and disregard it entirely as the Senate did? They set no limitation, and, you know, if you leave it at May 4 and there are men who are "filibuster minded," as it were, when that day approaches they are going to train their guns so as to conduct a filibuster and talk against time. But if you have the right to change the date from time to time and the session draws near to the day agreed for closing and a filibuster is brewing, then you can agree to postpone for a week or two weeks or indefinitely the closing time, and thus frustrate the plans of those who would filibuster.

Under the committee amendment you are blocked. You can not agree to adjourn beyond May 4. That becomes the constitutional limitation of time for adjournment, just as now that limitation is March 4. Filibusters always occur just before March 4 of the even years. Under the proposal they will occur just prior to May 4. There is really no difference. If we are going to do a job, let us do the job right.

Mr. TILSON. Will the gentleman yield?

Mr. CELLER. I yield.

Mr. TILSON. Does the gentleman undertake to say that we are limited now as to the time of meeting and adjournment? Did not the gentleman hear the gentleman from Texas when he explained thoroughly how we now have absolute power under the Constitution to meet any day within the two years?

Mr. CELLER. Yes; but because the term of office comes to an end on March 4 of the even year, you can not go beyond that by constitutional limitation.

Mr. TILSON. Of course, we can not go beyond the period for which we are elected, but we can fix any date within that period of time under the Constitution now.

Mr. CELLER. Yes; adjourn any time up to March 4, but you can not now even turn back the hands of the clock after noon March 4, as was often tried.

Mr. TILSON. Certainly not after our term of office or our commission has expired.

Mr. CELLER. I say that should not occur; in other words, you can take away the May 4 limitation and you will do away with the obnoxious filibuster. There should be no short session either to March 4 or May 4. Both sessions should be indefinite, as the long session is now. That is not provided in this resolution and for that reason I hope an amendment will be offered to strike out that date.

Mr. LOWREY. Will the gentleman yield?

Mr. CELLER. I yield to the gentleman.

Mr. LOWREY. I think I agree with the gentleman about removing this limitation of May 4, but that has been mentioned several times and I believe it ought to be said that this does give at least two more months than we have now for the short term, and there is that much advantage over the present situation.

Mr. CELLER. Oh, yes; indeed. There is the advantage of that small period of time over the present condition, but I say when you have at hand the means of going further, why not take advantage of such means.

Mr. LOWREY. Why not set the time for opening further back and give us longer than three months for the short session? Congress has the right to do that.

Mr. CELLER. Congress is authorized to do that, except that the sessions can not begin prior to December 1.

In my aforesaid remarks, which appeared in the RECORD as of March 3, 1927, I included a careful research of parliamentary practice of 14 leading countries concerning the length of time that elapses between the election of legislators and the meeting of legislatures. In no country other than ours does 13 months elapse between election and convocation of parliament. The practice in Great Britain, Canada, Australia, and New Zealand has been to make the interval between elections and the summoning of parliaments as short as possible. In France the Chamber of Deputies meets 10 days after election. In Norway the election is in November and the meeting in January. In Sweden the election occurs in September and the lower house convenes in January.

In Germany the Reichstag assembles not later than 30 days after the election. This lapse of 30 days appears in almost all constitutions in the republics of Europe created out of the World War. In Italy the King is authorized to prorogue the sessions and to dissolve the Chamber of Deputies any time he sees fit. In the event of a dissolution, however, the King must order new elections and convoke a new meeting within the space of four months. In Austria the Nationalrat must be summoned by the President to meet within 30 days after election. In Hungary the new Diet must meet six weeks after it has been elected. In Brazil the Chamber of Deputies assembles May 3 (unless a sooner day is designated by law) following election, which occurs on the first Sunday in February. In Argentina the House of Deputies meets in regular session from May 1 to September 30. The election occurs on the first Sunday in March of even-numbered years. I am in hearty accord with the amendments to the pending bill which will be offered by the gentleman from Tennessee [Mr. GARRETT]. One provides for the limitation of seven years within which the States may ratify. Up to the time of the case of Dillon *v.* Gloss, decided in the Supreme Court May 16, 1921 (256 U. S. 368), there was uncertainty as to the time within which an amendment had to be ratified.

The power to amend the Constitution is found in Article V thereof. This article says nothing about the time within which ratification may be had—neither that it shall be unlimited nor that it shall be fixed by Congress. It would be absurd to say that the time might be considered accumulative; that is, one State could ratify within 1 year, another State 5 years, still another State 15 years, and then have the amendment lie dormant for a longer period and then have it picked up for ratification by a number of States until the three-fourths of the States had acted favorably. The Supreme Court in the aforesaid case said that it is not a fair construction to hold that an amendment, once proposed, is to be open to ratification for all time or that ratification in some of the States may be separated from that in others by many years and yet be effective. The court held that the proposal by Congress and ratification by the States must be treated as related acts and as succeeding steps in a single endeavor. They can not be separated widely in time. Both must be considered "presently." Furthermore, since ratification is the expression of the approval of the people in the States, that approval must be reasonably contemporaneous in the ratifying States in order to be effective. Ratification scattered through a long series of years would not be the reflection of the will of the people in all sections at relatively the same period. Therefore ratification must be had by the States within some reasonable time after the proposal. The court then held that the seven-year limitation for ratification tacked on to the eighteenth amendment was a reasonable exercise of congressional power.

It is interesting to note that prior to the eighteenth amendment 17 amendments were ratified—some within a single year after their proposal, and all within four years.

The other Garrett amendment to be offered provides that no State can ratify unless one branch of its legislature shall have been elected subsequent to the submission of the amendment. If adopted, this would mean that the constitutional amendment would become an issue in the campaign in the election of the membership of one branch of the State legislatures. Thus the people would have an opportunity to elect those for or against the amendment. The ratification or the rejection of the amendment would, to that extent, reflect the will of the voters.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. WHITE of Kansas. Mr. Chairman, I yield 10 minutes to the gentleman from Massachusetts [Mr. GIFFORD].

Mr. GIFFORD. Mr. Chairman, I think that the committee should know that of the time allowed for general debate about one hour and three-quarters remain. The intention is, after a very few moments more, to continue the discussion on Thursday. My purpose in rising at this time is merely to call to the attention of the Members certain features of the resolution to which I have been giving special attention over a period of five years.

As a member of the committee I have listened to witness after witness in favor of the resolution and I am very glad to find to-day that the general proposition, at least, is presumably indorsed by nearly all the Members of this House. If such is not the case I am sure that those who are opposed to the resolution would have spoken, or at least have asked for time to speak against it.

The one thing which gives me particular concern is as to what amendments may be offered when the time for such action comes. From what I have been able to learn the one which seems to have created the most interest is to seek "to change the length of our term of office." This is a surprise to me. I hope that the parliamentarians of this body will give most earnest consideration to the question whether or not such an amendment would be germane. It seems to me that the proposal that every time a possible amendment to one part of the Constitution is offered the whole Constitution can be laid open for alteration is a most dangerous one.

If we can, under the cloak of this present resolution, vote to extend the term from two to four years we can as easily attempt to decree that the presidential term shall be not four but six years and place a ban on a second term, as many, perhaps, would like to do. If such a proposition is possible, several phases of the Constitution might be regarded as open to alteration under each proposed amendment.

But to revert to the present amendment. It is one which I believe should have been adopted half a century ago. We have had it repeatedly pointed out to us that if either Calvin Coolidge, John W. Davis, or Robert M. La Follette had died after action of the Electoral College, three and a half years ago, there would, under the Constitution, have been no candidates prescribed from among which a selection could have been made, as representative of his party. Such a contingency is possible; it might occur this next year, and the resulting situation would be a very serious one. Too often no effort is made to correct things of this nature until we are actually face to face with the situation. The present line of succession in office was not provided for by congressional legislation until the Vice President died after the election of Grover Cleveland.

Then there is the question as to the so-called "lame-duck" Members, and it has given rise to a difference of opinion as to the necessity of a change. Personally I had hoped this phrase would not be injected into this discussion, but that was too much to expect. The condition is an anomalous one, but I do not think that we should get into a discussion as to whether or not a man who has been beaten for reelection would do his duty after his defeat.

However, it should not be possible for a Congress made up in part of men who have been defeated at the polls to elect the President of the United States, as might be the case were a choice to be thrown into the House, and the only way to prevent such a possibility—if it is to be prevented—is by a constitutional amendment.

Congress could, of course, legislate to have the new Congress meet after March 4, but none of us believe that the session should continue during the summer months. Indeed, we should like to begin in December if that were possible. Three things provided for in this resolution are extremely important and should have been provided for long ago. To me it is remarkable that we have escaped being forced to do it so long and that Congress after Congress has done nothing about it, knowing the need.

If the President elect, Vice President elect—either or both—should die before their inauguration, the executive branch of the Government would be utterly unable to function and, in consequence, the legislative branch would be practically forced to suspend. Because that never has happened should not prevent us from taking the steps necessary to prevent its happening sometime. On the other hand, it seems to me that we should not take advantage of this desirable amendment to do something for our own particular benefit, namely, increase the term to four years. I feel that between now and Thursday we should think this suggested amendment over most seriously, and if it is to be offered, to consider whether it would not be better to follow the method used in proposing the first 10 amendments to the Constitution and divide these two propositions before presenting them to the legislatures of the several States for ratification or rejection. This could be and should be done. If such

an amendment is offered and ruled in order, others not at all contemplated in this article may be. The possibility of trying to use this resolution as a vehicle to carry other extraneous proposals seems to me a very serious matter. As I have stated, it has already been suggested that we could make the term of the President six years, a proposition which has become a matter of great interest to many people.

Mr. SNELL. Will the gentleman yield?

Mr. GIFFORD. I yield.

Mr. SNELL. The gentleman said that he was not for the lame-duck proposition?

Mr. GIFFORD. Not at all. I said that the words "lame duck" were an unfortunate designation for the amendment, and that I did not approve of their use.

Mr. SNELL. Is not it a fact that the lame-duck proposition has been the basis of propaganda put out in the country for the last few years that has forced this constitutional amendment on the floor of the House?

Mr. GIFFORD. I recognize that that is the original reason for the amendment. I would say that personally I was prejudiced against further amending the Constitution when I was first placed on the committee. I would now vote to repeal the sixteenth amendment, and it seems that the results achieved by the seventeenth and eighteenth are of uncertain value.

The nineteenth I approved. With these in mind I felt that it would be a long time before I would care to vote for an additional amendment. But on studying the present proposition I could not allow my prejudices against any former amendments to influence me, since this one has simply to do with the "election machinery" of the Constitution.

I trust that Mr. WHITE, the chairman of the committee, will, after all his years of effort, have the pleasure of seeing this amendment enacted by this present Congress. I would say to the chairman of the Committee on Rules [Mr. SNELL] that although the "lame-duck" part of the proposal did not appeal to me very strongly, study of the subject led me to devote much time to examining the Constitution, and I have found these other things the correction of which seems to me to be extremely important and which I regard as our strict duty. Does that answer the gentleman's question?

Mr. SNELL. I think it does. But what I referred to is what I think the newspapers have been talking most about, that one thing above all others; and I agree with the gentleman that these other matters are important but are very seldom mentioned. But the thing that forced it through the other body was the question of the lame-duck Congresses, and as to that I think there is more bunk in that statement than in anything else that has been said in connection with this constitutional amendment.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. GIFFORD. I yield to myself three minutes more.

I indorse the whole amendment. I do not think that any man should have to wait for 13 months after his election before taking his seat. If I were obliged to wait that length of time before entering upon the duties for which I had been elected I should want to absent myself from my constituents to keep from hearing the repeated question, "Why are not you on your job in Washington?"

As it now works out in actual practice, for four months there may be two Congressmen from a district, each with the franking privilege and each endeavoring to look out for the interests of that constituency. Still I regret that this "lame-duck" phrase should be brought forward, as I think that no one should suggest that any of us would be unwilling to do his full duty after some one else has been elected to take his place.

Congress has always ended by limitation on the 4th of March. In the short session we have heretofore had practically but two and a half months for work. Under this proposal the short session would be extended to four months—that is, from January 4 to May 4—and it is desirable that there be a fixed date for the adjournment of a Congress. However, it would be the same Congress and could, if necessary, be called together again the very next day. Now you have to call a new Congress.

It takes time to organize and is an altogether different proposition. Under the new arrangement if we had not completed our work on May 4, the same Congress could be convened immediately after adjournment and no time would be wasted. However, this time limit does not effect the whole proposition and may be altered if it is thought desirable.

Mr. TILSON. Would it not be a fact that the same Congress could be immediately reconvened without the expense of mileage or anything else if it became necessary to go beyond May 4? The same committees and the same Members could be called in without any additional expense whatever?

Mr. GIFFORD. Yes. I regret that the report seemed to indicate some political significance in this limitation. Of course, there is no limitation on the life of the first session, but I believe that there should be a time limit set on the second. We can never fully prevent filibustering, and I am as opposed as anyone else to the sort of filibuster which I have had to witness at the close of the last two sessions of Congress.

The CHAIRMAN. The time of the gentleman from Massachusetts has again expired.

Mr. JEFFERS. Mr. Chairman, I yield five minutes to the gentleman from Missouri [Mr. COCHRAN].

The CHAIRMAN. The gentleman from Missouri is recognized for five minutes.

Mr. COCHRAN of Missouri. Mr. Chairman and Members of the House, the original Norris resolution sought to correct two existing evils: First, to give the people of the country an opportunity to be heard on national issues, through their chosen representatives, within 2 months after date of election, and not 13 months; second, to discontinue the short session of Congress, thus preventing filibusters.

What do we find to-day? We are confronted with an amendment to the Norris resolution which, while it corrects one evil, the first, makes it possible to stage a well-organized filibuster in the Senate.

In my humble opinion one is equally as important as the other and I propose to support an amendment which will be offered to strike out the language limiting the second or final session of the Congress. If this amendment does not prevail in committee, I will support a motion to recommit the bill with instructions to the Committee on Elections to strike out this objectionable feature.

Look at the situation at the present time. Legislation of great importance can not be considered because it authorizes appropriations. And why does this situation exist? For no other reason but a filibuster in the Senate during the closing days of the Sixty-ninth Congress prevented the passage of the deficiency bill, the public building bill, and other important legislation. Had these measures passed the Senate in the Sixty-ninth Congress, and as we all know, they have passed during the present session, the money appropriated would have been taken out of the revenue at that time and not be charged against the revenue for the present fiscal year.

The enormous surplus in round figures, $600,000,000, applied to the public debt July 1, 1927, was due in part to the failure of important legislation in the Sixty-ninth Congress.

Several hundreds of millions of dollars used during the present fiscal year to carry out the purposes of legislation that should have been passed in the first six months of 1927 seems to prevent tax reduction, and the consideration of legislation equally important. It is to prevent a recurrence of such a situation that I propose to vote against limiting the final session of a Congress.

It is beyond me to conceive why the time limit was added to the resolution as it passed the Senate. There is some underlying motive. Our distinguished Vice President had but one issue to advance in the event of his selection as the Republican nominee for President, revision of the rules of the Senate so as to prevent a filibuster. The Norris resolution deprived him of his lone issue. Are his friends in the House insisting that his sole issue be restored? I concede it is rather unfair to deprive one of his only issue, but it seems to me we should think of the welfare of the country and not the individual in considering this resolution. I sincerely hope the House will strike out the language in the bill which sets a date for adjourment of the final session of a Congress.

I desire, if possible, to support the Norris resolution as it passed the Senate, with section 4 of the pending resolution added.

Mr. WHITE of Kansas. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and Mr. TILSON having resumed the chair as Speaker pro tempore, Mr. LEHLBACH, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee, having under consideration H. J. Res. 47, proposing an amendment to the Constitution of the United States fixing the commencement of the terms of President and Vice President and Members of Congress and fixing the time of the assembling of Congress, had come to no resolution thereon.

MINORITY VIEWS

Mr. GILBERT. Mr. Speaker, I ask unanimous consent to file minority views on H. R. 8567.

Mr. GARRETT of Tennessee. For how long a time?

Mr. GILBERT. For five days.

Mr. SNELL. Has the majority report been filed?

Mr. GILBERT. Yes; and the committee authorized me to file minority views, but I let the time expire.

The SPEAKER pro tempore. The gentleman from Kentucky asks unanimous consent to file minority views on the bill designated by him. Is there objection?

There was no objection.

Mr. DICKSTEIN. Mr. Speaker, I ask unanimous consent to file a minority report on H. R. 10078, a bill from the Committee on Immigration providing for the deportation of certain aliens.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

Mr. SNELL. Is that the bill that has just been reported?

Mr. DICKSTEIN. Yes. The majority report has been filed, and this minority report I propose to file right now.

Mr. SNELL. I think the chairman of the committee should be here if extra minority reports are to be filed.

Mr. DICKSTEIN. This is the minority report of the minority members of the committee. We are asking permission to file a minority report on H. R. 10078.

Mr. SNELL. When was the majority report filed?

Mr. DICKSTEIN. About two weeks ago. I had no opportunity to prepare the minority report until to-day. I am ready to file it to-day. I do not know of any unusual procedure which requires the chairman to be here.

Mr. SNELL. It is usually expected that the minority report will be filed with the majority report.

Mr. DICKSTEIN. But this minority report had to be prepared. It is a bill containing about 60 or 70 pages, with quite a number of sections. I hope the gentleman will not object.

Mr. SNELL. I feel it is only fair to the chairman of the committee that he be here when permission is asked to file a minority report. I think the gentleman should wait until the chairman of the committee is here.

Mr. DICKSTEIN. Will the gentleman withhold his objection for a moment?

Mr. SNELL. Yes.

Mr. DICKSTEIN. At the time the majority filed its report I advised them in the committee that I would file a minority report.

Mr. SNELL. The gentleman should have gotten permission at the time if he wanted to file it.

Mr. DICKSTEIN. I think it has been done over and over again in this House, and I do not think any objection should be raised against the filing of a minority report on this bill. It should not be expected that the minority should file its report at the time of the filing of the majority report, because it would be a physical impossibility to give the legislation that amount of study it requires. I do not think the gentleman ought to object. I would like to file it to-day.

The SPEAKER pro tempore. Is there objection?

Mr. LEHLBACH. Mr. Speaker, reserving the right to object, I think we ought to go back to the practice which the rules of the House authorize and not follow the loose practice which has sprung up. There is only one report which can be accepted by the House and that is the report of the committee. What the gentleman desires is to file minority views and not any report. If he will ask permission to file minority views, I shall not object.

Mr. DICKSTEIN. That is exactly what I desire to do.

Mr. LEHLBACH. A question arose several years ago because of just this practice. The views are limited to the views of those minority Members who join in expressing them and present them to the House. A report may incorporate extraneous matter, and on one occasion a minority report contained appendixes and extraneous matter. That was done because the permission granted was to file a minority report, for which there is no warrant, and all of this extraneous stuff was brought in.

Mr. DICKSTEIN. Mr. Speaker, may I amend my request by asking that I may be permitted to file minority views?

The SPEAKER pro tempore. The gentleman from New York asks unanimous consent that he may be permitted to file minority views on the bill referred to. Is there objection?

There was no objection.

THE "S–4" DISASTER

Mr. BLACK of New York. Mr. Speaker, a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state it.

Mr. BLACK of New York. Mr. Speaker, have the conferees on the inquiry into the *S–4* disaster made a report to the House?

The SPEAKER pro tempore. The Chair is informed they have not.

ORDER OF BUSINESS

Mr. GARRETT of Tennessee. Mr. Speaker——

The SPEAKER pro tempore. For what purpose does the gentleman from Tennessee rise?

Mr. GARRETT of Tennessee. Mr. Speaker, I want to inquire about the order of business to-morrow. Something was said here yesterday about continuing with the Consent Calendar after a certain period. Has that plan been abandoned?

The SPEAKER pro tempore. The Chair will state that he has not heard of anything of that kind.

Mr. SNELL. The gentlemen who are working on the bills on the Consent Calendar have asked that the Consent Calendar be not taken up.

Mr. GARRETT of Tennessee. I am not personally interested in it, but there seems to be some confusion growing out of a suggestion which was made here yesterday, and some of the Members understood it might possibly be arranged to-day or to-morrow. I was inquiring simply for the benefit of other Members who want to know. So far as now known, to-morrow there will be just the regular Calendar Wednesday business?

Mr. SNELL. So far as now known, yes.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to—

Mr. MOORE of Ohio (at the request of Mr. KEARNS) on account of sickness.

Mr. HARRISON, indefinitely, on account of sickness.

Mr. WILLIAMS of Texas (at the request of Mr. SANDERS), indefinitely.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Craven, its principal clerk, announced that the Senate had agreed to the amendment of the House of Representatives to the amendments of the Senate to the amendment of the House of Representatives to the bill (S. 700) entitled "An act authorizing the Secretary of the Interior to execute an agreement with the Middle Rio Grande conservancy district providing for conservation, irrigation, drainage, and flood control for the Pueblo Indian lands in the Rio Grande Valley, N. Mex., and for other purposes."

The message also announced that the Senate had agreed to the amendments of the House of Representatives to the bill (S. 771) entitled "An act providing for the loan of the U. S. S. *Dispatch* to the State of Florida."

The message further announced that the Senate had agreed to the amendments of the House of Representatives to the bill (S. 2902) entitled "An act granting the consent of Congress to the States of Wisconsin and Michigan to construct, maintain, and operate a free highway bridge across the Menominee River at or near Marinette, Wis."

The message also announced that the Senate had passed without amendment the following bills:

H. R. 2809. An act for the relief of the heirs of Jacob Thomas;

H. R. 5476. An act to authorize the Secretary of War to sell to the Pennsylvania Railroad Co. a tract of land situate in the city of Philadelphia and State of Pennsylvania;

H. R. 6491. An act to amend section 8 of the act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914, as amended;

H. R. 6579. An act for the relief of James W. Kingon;

H. R. 6684. An act to amend section 2455 of the Revised Statutes of the United States, as amended, relating to isolated tracts of public land;

H. R. 7008. An act to authorize appropriations for the completion of the transfer of the experimental and testing plant of the Air Corps to a permanent site at Wright Field, Dayton, Ohio, and for other purposes;

H. R. 7553. An act for the relief of James Neal;

H. R. 8293. An act to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913;

H. R. 8899. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River at or near Epes, Ala.;

H. R. 8900. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River near Gainesville, on the Gainesville-Eutaw road, between Sumter and Greene Counties, Ala.;

H. R. 9019. An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across the Quachita River at or near Calion, Ark.;

H. R. 9063. An act to extend the times for commencing and completing the construction of a bridge across the Chattahoochee River at or near Alaga, Ala.;

H. R. 9204. An act granting the consent of Congress to the Arkansas Highway Commission to construct, maintain, and operate a free highway bridge across the Current River at or near Success, Ark.;

H. R. 9339. An act granting the consent of Congress to a board of county commissioners of Trumbull County, Ohio, to construct, maintain, and operate a free highway bridge across the Mahoning River at or near Warren, Trumbull County, Ohio; and

H. R. 9484. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River at or near Aliceville, on the Gainesville-Aliceville road, in Pickens County, Ala.

SENATE BILLS REFERRED

Bills of the following titles were taken from the Speaker's table and, under the rule, referred to the appropriate committees, as follows:

S. 484. An act for the relief of Joe W. Williams; to the Committee on the Public Lands.

S. 1989. An act to amend the third paragraph of section 13 of the Federal reserve act; to the Committee on Banking and Currency.

S. 2030. An act to provide for research into the causes of poultry diseases, for feeding experimentation, and for an educational program to show the best means of preventing disease in poultry; to the Committee on Agriculture.

S. 2258. An act to give war-time rank to certain officers on the retired list of the Army; to the Committee on Military Affairs.

S. 2537. An act to amend section 110, national defense act, so as to provide better administrative procedure in the disbursements for pay of National Guard officers and enlisted men; to the Committee on Military Affairs.

S. 2657. An act for the relief of George W. Boyer; to the Committee on Claims.

S. 2725. An act to extend the provisions of section 2455, United States Revised Statutes, to certain public lands in the State of Oklahoma; to the Committee on the Public Lands.

S. 2858. An act to authorize the use of certain public lands by the town of Parco, Wyo., for a public aviation field; to the Committee on the Public Lands.

S. 2926. An act for the relief of the Old Dominion Land Co.; to the Committee on War Claims.

S. 2948. An act to amend section 6, act of March 4, 1923, as amended, so as to better provide for care and treatment of members of the civilian components of the Army who suffer personal injury in line of duty, and for other purposes; to the Committee on Military Affairs.

S. 2950. An act to amend the second paragraph of section 67, national defense act, as amended; to the Committee on Military Affairs.

S. 2972. An act for the further protection of fish in the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

S. 3058. An act to amend that provision of the act approved March 3, 1879 (20 Stat. L. 412), relating to issue of arms and ammunition for the protection of public money and property; to the Committee on Military Affairs.

S. 3118. An act to authorize the construction of a temporary railroad bridge across Pearl River at a point in or near section 35, township 10 north, range 6 east, Leake County, Miss.; to the Committee on Interstate and Foreign Commerce.

S. 3119. An act to authorize the construction of a temporary railroad bridge across Pearl River in Rankin County, Miss., and between Madison and Rankin Counties, Miss.; to the Committee on Interstate and Foreign Commerce.

S. 3131. An act to provide additional pay for personnel of the United States Navy assigned to duty on submarines and diving duty; to the Committee on Naval Affairs.

S. 3201. An act for the relief of Paul D. Carlisle; to the Committee on Military Affairs.

S. 3294. An act for the relief of certain newspapers for advertising services rendered the Public Health Service of the Treasury Department; to the Committee on Claims.

S. 3325. An act for the relief of Horace G. Knowles; to the Committee on Claims.

S. 3456. An act allowing the rank, pay, and allowances of a colonel, Medical Corps, United States Army, to the medical officer assigned to duty as personal physician to the President; to the Committee on Military Affairs.

S. J. Res. 61. Joint resolution to provide for an agricultural day; to the Committee on the Judiciary.

ENROLLED BILLS AND JOINT RESOLUTIONS SIGNED

Mr. CAMPBELL, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled a bill and joint resolution of the following titles, when the Speaker signed the same:

H. R. 11197. An act to authorize the Secretary of War to grant rights of way to the Vicksburg Bridge & Terminal Co. upon, over, and across the Vicksburg National Military Park at Vicksburg, Warren County, Miss.; and

H. J. Res. 176. House joint resolution granting consent of Congress to an agreement or compact entered into between the State of Wisconsin and State of Michigan for the construction, maintenance, and operation of a highway bridge across the Menominee River.

The SPEAKER also announced his signature to enrolled bills and a joint resolution of the Senate of the following titles:

S. 1455. An act to grant extensions of time under coal permits;

S. 1946. An act relative to the pay of certain retired warrant officers and enlisted men and warrant officers and enlisted men of the reserve forces of the Army, Navy, Marine Corps, and the Coast Guard, fixed under the terms of the Panama Canal act, as amended;

S. 2483. An act to revive and reenact the act entitled "An act granting the consent of Congress to the State of Illinois and the State of Iowa, or either of them, to construct a bridge across the Mississippi River, connecting the county of Carroll, Ill., and the county of Jackson, Iowa," approved May 26, 1924;

S. 2545. An act to authorize the sale of certain lands near Garden City, Kans.;

S. 2698. An act granting the consent of Congress to the State of Vermont to construct, maintain, and operate a free highway bridge across an arm of Lake Memphremagog at or near Newport, Vt.;

S. 2801. An act granting the consent of Congress to the New Martinsville & Ohio River Bridge Co. (Inc.) to construct, maintain, and operate a bridge across the Ohio River at or near New Martinsville, W. Va.; and

S. J. Res. 66. Joint resolution authorizing an additional appropriation to be used for the memorial building provided for by a joint resolution entitled "Joint resolution in relation to a monument to commemorate the services and sacrifices of the women of the United States of America, its insular possessions, and the District of Columbia in the World War," approved June 7, 1924.

BILLS PRESENTED TO THE PRESIDENT

Mr. CAMPBELL, from the Committee on Enrolled Bills, reported that this day they presented to the President of the United States, for his approval, bills of the following titles:

H. R. 81. An act to authorize the coinage of silver 50-cent pieces in commemoration of the one hundred and fiftieth anniversary of the discovery of the Hawaiian Islands by Capt. James Cook, and for the purpose of aiding in establishing a Capt. James Cook memorial collection in the archives of the Territory of Hawaii;

H. R. 248. An act to authorize appropriations to be made for the disposition of remains of military personnel and civilian employees of the Army; and

H. R. 8741. An act authorizing the Dravo Contracting Co., its successors and assigns, to construct, maintain, and operate a bridge across the Mississippi River at or near Chester, Ill.

ADJOURNMENT

Mr. SNELL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock p. m.) the House adjourned until to-morrow, Wednesday, March 7, 1928, at 12 o'clock noon.

COMMITTEE HEARINGS

Mr. TILSON submitted the following tentative list of committee hearings scheduled for Wednesday, March 7, 1928, as reported to the floor leader by clerks of the several committees:

COMMITTEE ON THE JUDICIARY

(10 a. m.)

To provide that the heads of the executive departments may occupy seats on the floor of the Senate and the House of Representatives (H. R. 5625).

COMMITTEE ON MINES AND MINING

(10 a. m.)

To amend an act entitled "An act to provide relief in cases of contracts connected with the prosecution of the war, approved March 2, 1919, as amended (S. 1347).

COMMITTEE ON PUBLIC BUILDINGS AND GROUNDS

(10.30 a. m.)

To create a commission to secure plans and designs for and to erect a memorial building for the National Memorial Association (Inc.) in the city of Washington as a tribute to the negro's contribution to the achievements of America (H. J. Res. 60).

Providing that the Secretary of Agriculture be directed to give notice that on and after January 1, 1929, the Government will cease to maintain a public market on Pennsylvania Avenue between Seventh and Ninth Streets NW. (H. J. Res. 204).

For the lease of land and the erection of a post office at Philippi, W. Va. (H. R. 10799).

COMMITTEE ON APPROPRIATIONS

(10.30 a. m.)

Navy Department appropriation bill.

COMMITTEE ON THE PUBLIC LANDS

(10.30 a. m.)

To promote the development, protection, and utilization of grazing resources on public lands, to stabilize the range stock-raising industry (H. R. 7950 and H. R. 9283).

COMMITTEE ON THE MERCHANT MARINE AND FISHERIES

(10 a. m.)

To further develop an American merchant marine, to assure its permanence in the transportation of the foreign trade of the United States (S. 744).

To promote, encourage, and develop an American merchant marine in connection with the agricultural and industrial commerce of the United States, provide for the national defense, the transportation of foreign mails, the establishment of a merchant marine training school, and for other purposes (H. R. 2).

To amend the merchant marine act, 1920, insure a permanent passenger and cargo service in the north Atlantic, and for other purposes (H. R. 8914).

To create, develop, and maintain a privately owned American merchant marine adequate to serve trade routes essential in the movement of the industrial and agricultural products of the United States and to meet the requirements of the commerce of the United States; to provide for the transportation of the foreign mails of the United States in vessels of the United States; to provide naval and military auxiliaries; and for other purposes (H. R. 10765).

COMMITTEE ON NAVAL AFFAIRS

(11 a. m.)

A hearing to consider private bills on the committee calendar.

COMMITTEE ON IMMIGRATION AND NATURALIZATION

(10.30 a. m.)

To amend the immigration act of 1924 by making the quota provisions thereof applicable to Mexico, Cuba, Canada, and the countries of continental America and adjacent islands (H. R. 6465).

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

4991. By Mr. JOHNSON of Texas: Petition of Trezevant & Cochran, of Dallas, Tex., favoring control of flood waters in lower Mississippi Valley at entire cost of Federal Government; to the Committee on Flood Control.

4992. By Mr. JOHNSON of Washington: Petition of citizens of Centralia, Wash., and vicinity, protesting against the Lankford Sunday observance bill; to the Committee on the District of Columbia.

4993. Also, petition of citizens of Elma, Wash., and vicinity, protesting against the Lankford Sunday observance bill; to the Committee on the District of Columbia.

4994. Also, petition of citizens of Tacoma, Wash., protesting against the Lankford Sunday observance bill; to the Committee on the District of Columbia.

4995. Also, petition of citizens of Satsop, Wash., and vicinity, protesting against the Lankford Sunday observance bill; to the Committee on the District of Columbia.

4996. Also, petition of citizens of Centralia, Wash., protesting against the Lankford Sunday observance bill; to the Committee on the District of Columbia.

4997. Also, petition of Myrtle E. Byrd and 55 other citizens of Tacoma, Wash., favoring creation of a department of education; to the Committee on Education.

4998. Also, petition of W. C. Malvaney and six other citizens of Puyallup, Wash., opposing compulsory Sunday observance legislation; to the Committee on the District of Columbia.

4999. Also, petition of citizens of Longbranch, Wash., and vicinity, protesting against the Lankford Sunday observance bill; to the Committee on the District of Columbia.

5000. Also, petition of citizens of Seaview, Wash., and vicinity, protesting against the Lankford Sunday observance bill; to the Committee on the District of Columbia.

5001. By Mr. KEMP: Petition against House bill 78, the Lankford compulsory Sunday observance bill; to the Committee on the District of Columbia.

5002. By Mr. KOPP: Petition of Mr. and Mrs. F. P. Greggs and 38 others, residents of Keokuk, Iowa, protesting the passage of the Lankford Sunday observance bill; to the Committee on the District of Columbia.

5003. By Mr. RAGON: Petition for relief of drainage districts in flood areas; to the Committee on Agriculture.

5004. By Mr. LANKFORD: Petition signed by Rosa Jackson and seven others of Oregon, protesting against the enactment of the Lankford bill (H. R. 78) or any Sunday observance laws; to the Committee on the District of Columbia.

5005. Also, petition signed by Mr. and Mrs. W. E. French and 130 others of Lowndes County, Ga., protesting against enactment of the Lankford bill (H. R. 78) or any Sunday observance laws; to the Committee on the District of Columbia.

5006. Also, petition signed by H. R. Lastinger and 89 others of Brooks County, Ga., protesting against enactment of the Lankford bill (H. R. 78) or any Sunday observance laws; to the Committee on the District of Columbia.

5007. By Mr. LINDSAY: Petition of Central Trades and Labor Council of Greater New York and vicinity, presenting a set of resolutions registering a vigorous protest against House bill 11137; to the Committee on the Merchant Marine and Fisheries.

5008. By Mr. LYON: Petition of certain citizens of Wilmington, N. C., protesting against the passage of a Sunday observance law for the District of Columbia; to the Committee on the District of Columbia.

5009. By Mr. O'BRIEN: Petition of over 40 residents, business men, and firms of Clarksburg, Weston, Buckhannon, Glenville, Shinnston, Bridgeport, Salem, Lumberport, West Union, Smithfield, Pennsboro, Cairo, Harrisville, Cowen, Richwood, Burnsville, Sutton, Gassaway, and Elkins, State of West Virginia, favoring House bill 11, to protect trade-mark owners, distributors, etc.; to the Committee on Interstate and Foreign Commerce.

5010. By Mr. O'CONNELL: Petition of the Lafayette Post, the American Legion, Washington, D. C., favoring the naval construction as proposed by President Coolidge and Secretary of the Navy; to the Committee on Naval Affairs.

5011. By Mr. RAMSEYER: Petition of residents of Grinnell, Iowa, protesting against the passage of House bill 78, or any other compulsory Sunday observance legislation; to the Committee on the District of Columbia.

5012. By Mr. SANDERS of New York: Petition of Mrs. F. Gutfrucht, signed by 60 citizens of Rochester, N. Y., protesting against the passage of House bill 78, the Lankford compulsory Sunday observance bill; to the Committee on the District of Columbia.

5013. By Mr. SELVIG: Petition of F. H. Ross and 39 farmers and residents of Fisher, Minn., protesting against the passage of House bill 6465, the purpose of which is to place Mexico and Canada on a quota basis; to the Committee on Immigration and Naturalization.

5014. Also, petition of Walter Ross and 40 farmers and residents of Fisher, Minn., protesting against the passage of House bill 6465, the purpose of which is to place Mexico and Canada on a quota basis; to the Committee on Immigration and Naturalization.

5015. Also, petition of S. J. Ostby and 23 farmers and residents of Erskine, Minn., protesting against the passage of House bill 6465, the purpose of which is to place Mexico and Canada on a quota basis; to the Committee on Immigration and Naturalization.

5016. By Mr. SMITH: Petition signed by O. H. Hungerford and 10 other residents of Idaho Falls, Idaho, protesting against the enactment of any compulsory Sunday observance legislation; to the Committee on the District of Columbia.

5017. Also, petition signed by 25 citizens of Twin Falls County, Idaho, protesting against the enactment of any compulsory Sunday observance legislation; to the Committee on the District of Columbia.

5018. Also, petition signed by 160 residents of Elmore County, Idaho, protesting against the enactment of any compulsory Sunday observance legislation; to the Committee on the District of Columbia.

5019. Also, petition signed by 78 residents of Ada County, Idaho, protesting against the enactment of any compulsory Sunday observance legislation; to the Committee on the District of Columbia.

5020. Also, petition of 411 citizens of Idaho Falls, Idaho, protesting against the enactment of the Lankford bill providing for compulsory Sunday observance; to the Committee on the District of Columbia.

5021. Also, petition of 450 citizens of Idaho Falls, Idaho, protesting against the enactment of the Lankford bill providing for compulsory Sunday observance; to the Committee on the District of Columbia.

5022. Also, petition of citizens of Boise, Idaho, protesting against the enactment of the Lankford Sunday rest bill; to the Committee on the District of Columbia.

5023. Also, petition of citizens of Boise, Idaho, protesting against the enactment of the Lankford Sunday rest bill; to the Committee on the District of Columbia.

5024. Also, petition signed by 585 citizens of Ada County, Idaho, protesting against the enactment of any compulsory Sunday observance legislation; to the Committee on the District of Columbia.

5025. By Mr. SINNOTT: Petition of numerous residents of Hood River County, Oreg., protesting against the passage of House bill 78, the Lankford bill, or any similar compulsory Sunday observance legislation; to the Committee on the District of Columbia.

5026. Also, petition of numerous residents of Pendleton, Oreg., protesting against the enactment of the Lankford bill (H. R. 78) or any similar compulsory Sunday observance legislation; to the Committee on the District of Columbia.

5027. By Mr. STEELE: Petition of 18 citizens of Atlanta, Fulton County, Ga., protesting against the passage of legislation enforcing compulsory Sunday observance (H. R. 78); to the Committee on the District of Columbia.

5028. By Mr. SWING: Petition of residents of San Diego, Calif., protesting against compulsory Sunday observance laws; to the Committee on the District of Columbia.

5029. Also, petition of residents of San Diego, Calif., protesting against compulsory Sunday observance laws; to the Committee on the District of Columbia.

5030. By Mr. THATCHER: Petition of numerous citizens of Louisville, Ky., protesting against the enactment of compulsory Sunday observance legislation; to the Committee on the District of Columbia.

5031. By Mr. VINCENT of Michigan: Petition of residents of Alma, Mich., urging more liberal pension legislation for the benefit of veterans of the Civil War and their widows; to the Committee on Invalid Pensions.

5032. Also, petition of residents of Sheridan, Fenwick, Vickeryville, and Butternut, Mich., urging the enactment into law of House bill 78; to the Committee on the District of Columbia.

5033. Also, petition of residents of the eighth congressional district of Michigan, in opposition to House bill 78, or any other bill providing for compulsory Sunday observance; to the Committee on the District of Columbia.

5034. By Mr. WYANT: Petition of Harry L. Handel Post, No. 401, the American Legion, West Newton, Pa., favoring five-year Navy program; to the Committee on Naval Affairs.

5035. Also, petition of committee on immigration and naturalization, California State Society of the Sons of the American Revolution, favoring passage of Box bill to restrict Mexican, West Indian, Central, and South American immigration; to the Committee on Immigration and Naturalization.

SENATE

WEDNESDAY, *March 7, 1928*

(Legislative day of Tuesday, March 6, 1928)

The Senate reassembled at 12 o'clock meridian, on the expiration of the recess.

The VICE PRESIDENT. The Senate will receive a message from the House of Representatives.

MESSAGE FROM THE HOUSE—ENROLLED BILLS SIGNED

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the Speaker had affixed his signature to the following enrolled bills and joint resolutions, and they were thereupon signed by the Vice President:

S. 1455. An act to grant extensions of time under coal permits;

S. 1946. An act relative to the pay of certain retired warrant officers and enlisted men and warrant officers and enlisted men of the reserve forces of the Army, Navy, Marine Corps, and the Coast Guard, fixed under the terms of the Panama Canal act, as amended;

S. 2483. An act to revive and reenact the act entitled "An act granting the consent of Congress to the State of Illinois and the State of Iowa, or either of them, to construct a bridge across the Mississippi River, connecting the county of Carroll, Ill., and the county of Jackson, Iowa," approved May 26, 1924;

S. 2545. An act to authorize the sale of certain lands near Garden City, Kans.;

S. 2698. An act granting the consent of Congress to the State of Vermont to construct, maintain, and operate a free highway bridge across an arm of Lake Memphremagog at or near Newport, Vt.;

S. 2801. An act granting the consent of Congress to the New Martinsville & Ohio River Bridge Co. (Inc.) to construct, maintain, and operate a bridge across the Ohio River at or near New Martinsville, W. Va.;

H. R. 11197. An act to authorize the Secretary of War to grant rights of way to the Vicksburg Bridge & Terminal Co. upon, over, and across the Vicksburg National Military Park at Vicksburg, Warren County, Miss.;

S. J. Res. 66. Joint resolution authorizing an additional appropriation to be used for the memorial building provided for by a joint resolution entitled "Joint resolution in relation to a monument to commemorate the services and sacrifices of the women of the United States of America, its insular possessions, and the District of Columbia in the World War," approved June 7, 1924; and

H. J. Res. 176. Joint resolution granting consent of Congress to an agreement or compact entered into between the State of Wisconsin and the State of Michigan for the construction, maintenance, and operation of a highway bridge across the Menominee River.

CALL OF THE ROLL

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

Ashurst	Ferris	La Follette	Shipstead
Barkley	Fess	McKellar	Shortridge
Bayard	Fletcher	McMaster	Simmons
Black	Frazier	McNary	Smith
Blaine	George	Mayfield	Smoot
Blease	Gerry	Metcalf	Steck
Borah	Glass	Neely	Steiwer
Bratton	Gooding	Norbeck	Stephens
Brookhart	Gould	Norris	Swanson
Broussard	Greene	Nye	Thomas
Bruce	Hale	Oddie	Tydings
Capper	Harris	Phipps	Tyson
Caraway	Harrison	Pine	Wagner
Copeland	Hayden	Pittman	Walsh, Mass.
Couzens	Heflin	Ransdell	Walsh, Mont.
Curtis	Howell	Reed, Pa.	Warren
Cutting	Johnson	Robinson, Ark.	Waterman
Dale	Jones	Robinson, Ind.	Watson
Deneen	Kendrick	Sackett	Willis
Dill	Keyes	Schall	
Edge	King	Sheppard	

The VICE PRESIDENT. Eighty-two Senators having answered to their names, a quorum is present.

PETITIONS AND MEMORIALS

Mr. WILLIS presented a petition of sundry citizens of Franklin and Delaware Counties, Ohio, praying for the passage of legislation granting increased pensions to Civil War veterans and their widows, which was referred to the Committee on Pensions.

Mr. WATSON presented a petition of sundry citizens of La Porte County, Ind., praying for the passage of legislation granting increased pensions to Civil War veterans and their widows, which was referred to the Committee on Pensions.

Mr. JONES presented a petition of sundry citizens of Tacoma, Wash., praying for the passage of legislation creating a Federal department of education, which was referred to the Committee on Education and Labor.

Mr. FRAZIER presented a resolution of Florence Kimball Post, No. 7, American Legion, of Lisbon, N. Dak., favoring the adoption of a naval building program as recommended by the National Convention of the American Legion, which was referred to the Committee on Naval Affairs.

Mr. REED of Pennsylvania presented a memorial of the Philadelphia (Pa.) Board of Trade, remonstrating against the passage of House bill 10568, to foster agriculture and to stabilize the prices obtained for agricultural commodities, which was referred to the Committee on Agriculture and Forestry.

He also presented a memorial of the Philadelphia (Pa.) Board of Trade, remonstrating against the passage of the bills S. 1176 and H. R. 7940, providing for farm relief, etc., which was referred to the Committee on Agriculture and Forestry.

REPORTS OF COMMITTEES

Mr. ASHURST, from the Committee on Indian Affairs, to which was referred the bill (S. 1145) to authorize appropriations for the survey, construction, and maintenance of highways on or adjacent to untaxed Indian lands, reported it with amendments and submitted a report (No. 495) thereon.

Mr. KENDRICK, from the Committee on Indian Affairs, to which was referred the bill (S. 3343) for the relief of the Arapahoe and Cheyenne Indians, and for other purposes, reported it with an amendment and submitted a report (No. 496) thereon.

Mr. CARAWAY, from the Committee on Agriculture and Forestry, to which was referred the bill (S. 1093) to prevent the sale of cotton and grain in future markets, reported it without amendment and submitted a report (No. 497) thereon.

Mr. BORAH, from the Committee on Foreign Relations, to which was referred the joint resolution (S. J. Res. 57) requesting the President to immediately withdraw the armed forces of the United States from Nicaragua, submitted an adverse report (No. 498) thereon.

Mr. JONES, from the Committee on Indian Affairs, to which was referred the bill (H. R. 308) authorizing an appropriation for the survey and investigation of the placing of water on the Michaud division and other lands in the Fort Hall Indian Reservation, reported it without amendment and submitted a report (No. 499) thereon.

ENROLLED BILLS AND JOINT RESOLUTION PRESENTED

Mr. GREENE, from the Committee on Enrolled Bills, reported that on March 7, 1928, that committee presented to the President of the United States the following enrolled bills and joint resolution:

S. 1455. An act to grant extensions of time under coal permits;

S. 1946. An act relative to the pay of certain retired warrant officers and enlisted men and warrant officers and enlisted men of the reserve forces of the Army, Navy, Marine Corps, and the Coast Guard, fixed under the terms of the Panama Canal act, as amended;

S. 2483. An act to revive and reenact the act entitled "An act granting the consent of Congress to the State of Illinois and the State of Iowa, or either of them, to construct a bridge across the Mississippi River, connecting the county of Carroll, Ill., and the county of Jackson, Iowa," approved May 26, 1924;

S. 2545. An act to authorize the sale of certain lands near Garden City, Kans.;

S. 2698. An act granting the consent of Congress to the State of Vermont to construct, maintain, and operate a free highway bridge across an arm of Lake Memphremagog at or near Newport, Vt.;

S. 2801. An act granting the consent of Congress to the New Martinsville & Ohio River Bridge Co. (Inc.) to construct, maintain, and operate a bridge across the Ohio River at or near New Martinsville, W. Va.; and

S. J. Res. 66. Joint resolution authorizing an additional appropriation to be used for the memorial building provided for by a joint resolution entitled "Joint resolution in relation to a monument to commemorate the services and sacrifices of the women of the United States of America, its insular possessions, and the District of Columbia in the World War," approved June 7, 1924.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. RANSDELL:

A bill (S. 3537) providing for the confirmation of grant of lands formerly the United States barracks at Baton Rouge, La., to the board of supervisors of the Louisiana State University and Agricultural and Mechanical College; to the Committee on Public Lands and Surveys.

By Mr. COPELAND:

A bill (S. 3538) granting an increase of pension to Hannah Geibig;

A bill (S. 3539) granting an increase of pension to Libbie Jump;

A bill (S. 3540) granting an increase of pension to Lucy M. Couse;

A bill (S. 3541) granting an increase of pension to Addie E. Foreman;

A bill (S. 3542) granting an increase of pension to Catherine Whittleton;

A bill (S. 3543) granting an increase of pension to Ida H. Stokes;

A bill (S. 3544) granting an increase of pension to Margaret O'Leary;

A bill (S. 3545) granting an increase of pension to Mary Neff;

A bill (S. 3546) granting an increase of pension to Elizabeth McDowell;

A bill (S. 3547) granting an increase of pension to Frances L. Gamble;

A bill (S. 3548) granting an increase of pension to Elizabeth Baty;

A bill (S. 3549) granting an increase of pension to Mary E. MacAuty;

A bill (S. 3550) granting an increase of pension to Celia Dee;

A bill (S. 3551) granting an increase of pension to Alberta V. Coughnet;

A bill (S. 3552) granting an increase of pension to Ella V. Cazeau; and

A bill (S. 3553) granting a pension to Margaret B. Tew; to the Committee on Pensions.

By Mr. NEELY:

A bill (S. 3554) to authorize the National Academy of Sciences to investigate the means and methods for affording Federal aid in discovering a cure for cancer, and for other purposes; to the Committee on Education and Labor.

By Mr. McNARY:

A bill (S. 3555) to establish a Federal farm board to aid in the orderly marketing and in the control and disposition of the

surplus of agricultural commodities in interstate and foreign commerce; to the Committee on Agriculture and Forestry.

ERADICATION OF LIVESTOCK DISEASES AND AGRICULTURAL PESTS

Mr. MAYFIELD. Mr. President, the invasions of livestock diseases and agricultural pests into the United States from foreign countries always affect the common prosperity, constitute a national menace, and threaten the general welfare. It should therefore be the policy of the Federal Government to bear the entire expense of eradicating such diseases and pests, including all damages to livestock producers for the destruction of their livestock and to farmers by reason of the establishment of noncotton zones by Federal or State authority.

Acting under the authority of the law of the State in which the invasions may take place the Federal Government assumes direct control. The policy to be followed and the measures to be employed are determined by the Federal Government, the States being given no power or authority whatever. During the last few years Texas has had two experiences of these invasions which she has not forgotten. The first of these was the pink bollworm pest which came into our State from Mexico on account of inadequate quarantine facilities and supervision, and the second was the foot-and-mouth disease which came into Texas from a foreign country on account of lack of proper quarantine supervision. The loss to our livestock producers and farmers on account of these two invasions can never be truly estimated, but they are as nothing compared to the losses which our cotton farmers in west Texas will sustain on account of the new invasion of the pink bollworm from Mexico, according to reports which have been made to Federal and State authorities.

Under prevailing conditions Texas and other border States are likely to have forced upon them the burden and the cost of protecting the general welfare of the Nation and at the same time have no hand in quarantine regulations or policies to be pursued. Certainly, States ought not to be penalized because they are border States.

Under existing law part of the expenses incident to the eradication of livestock diseases and agricultural pests that come into the United States from foreign countries is borne by the Federal Government and part by the State where the invasion occurs. Upon the Federal Government alone must rest the responsibility for the invasion of livestock diseases and agricultural pests into the United States from foreign countries. Therefore, the present Congress should acknowledge this responsibility of the Federal Government by enacting into law the measure which I now introduce in the Senate, which provides that the General Government should assume the full cost of control and eradication in such instances.

The bill (S. 3536) to provide that the United States shall bear all expense incurred in the eradication and control of diseases of livestock and of agricultural pests introduced into the United States from any foreign country was read twice by its title and referred to the Committee on Agriculture and Forestry.

Mr. MAYFIELD. I ask unanimous consent to have printed in the RECORD as a part of my remarks and referred to the Agricultural Committee a letter received from Hon. R. M. Kelly, president of the East Texas Chamber of Commerce, and a resolution adopted by that chamber of commerce.

There being no objection, the letter and accompanying resolution were referred to the Committee on Agriculture and Forestry and ordered to be printed in the RECORD, as follows:

EAST TEXAS CHAMBER OF COMMERCE.

Longview, Tex., March 3, 1928.

Hon. EARLE B. MAYFIELD,

Senate Office Building, Washington, D. C.

DEAR SENATOR: Attached hereto is copy of resolution which has been adopted by the board of directors of this organization.

The pink bollworm is characterized by agricultural authorities as one of the most dangerous pests which has ever infested the country. The resolution sets forth the fact that the Federal Government should bear the full expense of stamping out the pest. The responsibility of preventing and controlling this pest rests directly upon the shoulders of the Federal Horticultural Board, which has control of such problems, and it is unfair to ask the State to appropriate two-thirds of this expense.

Trusting that you will give this matter your serious consideration, with my most cordial good wishes, I am,

Very truly yours,

R. M. KELLY, *President.*

Whereas the recent widespread outbreak of the pink bollworm in Texas threatens the cotton industry of the Nation, valued in 1927 by the Crops and Markets Report of the United States for cotton and cottonseed at $1,462,571,000, being 72 per cent of the value of and second in value only to the Nation's corn crop; and

Whereas cotton has for many years carried the balance of trade for the United States and cotton as a resource is so interwoven with our national prosperity as to affect numerous allied and related industries; and

Whereas the National Congress has established a precedent in appropriating $10,000,000 for the control of the European corn borer and now has before Congress a bill appropriating a similar amount for the continued prosecution of this work; and

Whereas the National Government has assumed the responsibility through its Federal Horticultural Board of preventing the introduction of dangerous insect pests into the United States, the said horticultural board having had absolute control of the promulgation and enforcement of quarantines to prevent the entry of dangerous insect pests; and

Whereas the State of Texas and its citizenship is in no wise responsible for the introduction and spread of this insect pest, but, on the other hand, its introduction has come from a foreign nation and it has made its entry into Texas in spite of the promulgation and enforcements of the Federal Horticultural Board: Therefore be it

Resolved, That we recognize this as a national emergency which threatens to shake the whole business fabric of the Nation and therefore requires immediate and vigorous action; be it further

Resolved, That, recognizing this as a national problem confronting the people of Texas and other cotton-growing States and the Nation, in which the Texas people have been in no sense responsible for the entry into and occurrence of the insect, and that the Federal Horticultural Board has had full charge of all quarantine regulations, we therefore believe that the Federal Government should bear the full expense of stamping out this insect pest and for compensating the farmers for the losses incident to handling this problem, believing that the previous experiences in which the insect has been stamped out by the establishment of noncotton zones fully justifies the Federal Government in providing the means and otherwise taking steps to eradicate this insect; be it further

Resolved, That we petition the Seventieth Congress, now in session, through our representatives in the Congress and urge the united support and petition of all the people interested in any way in the cotton industry or related industries to petition their representatives in Congress to immediately appropriate the sum of $6,000,000, or as much thereof as may be necessary, to provide for immediate and active prosecution of the work of eradication, which offers more hope if attacked immediately than if carried out after long and repeated delays.

AMENDMENTS TO MUSCLE SHOALS RESOLUTION

Mr. KING, Mr. CARAWAY, and Mr. McKELLAR each submitted an amendment intended to be proposed by them, respectively, to the joint resolution (S. J. Res. 46) providing for the completion of Dam No. 2 and the steam plant at nitrate plant No. 2 in the vicinity of Muscle Shoals for the manufacture and distribution of fertilizer, and for other purposes, which were severally ordered to lie on the table and to be printed.

MESSAGE FROM THE HOUSE—ENROLLED BILLS SIGNED

A message from the House of Representatives, by Mr. Chaffee, one of its clerks, announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the Vice President:

S. 700. An act authorizing the Secretary of the Interior to execute an agreement with the Middle Rio Grande conservancy district, providing for the conservation, irrigation, drainage, and flood control for the Pueblo Indian lands in the Rio Grande Valley, N. Mex., and for other purposes;

S. 771. An act providing for the gift of the U. S. S. *Dispatch* to the State of Florida;

S. 1705. An act authorizing the Court of Claims to render judgment in favor of the administrator of or collector for the estate of Peter P. Pitchlynn, deceased, instead of the heirs of Peter P. Pitchlynn, and for other purposes;

S. 2342. An act providing for a per capita payment of $25 to each enrolled member of the Chippewa Tribe of Minnesota from the funds standing to their credit in the Treasury of the United States;

S. 2902. An act authorizing the States of Wisconsin and Michigan to construct, maintain, and operate a free highway bridge across the Menominee River at or near Marinette, Wis.;

H. R. 437. An act authorizing the Maysville Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Maysville, Ky.;

H. R. 472. An act authorizing the Dwight P. Robinson & Co. (Inc.), its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Maysville, Ky.;

H. R. 2809. An act for the relief of the heirs of Jacob Thomas;

H. R. 5476. An act to authorize the Secretary of War to sell to the Pennsylvania Railroad Co. a tract of land situate in the city of Philadelphia and State of Pennsylvania;

H. R. 6491. An act to amend section 8 of the act entitled "An act to supplement existing laws against unlawful restraints

and monopolies, and for other purposes," approved October 15, 1914, as amended;

H. R. 6579. An act for the relief of James W. Kingon;

H. R. 6684. An act to amend section 2455 of the Revised Statutes of the United States, as amended, relating to isolated tracts of public land;

H. R. 7008. An act to authorize appropriations for the completion of the transfer of the experimental and testing plant of the Air Corps to a permanent site at Wright Field, Dayton, Ohio, and for other purposes;

H. R. 7553. An act for the relief of James Neal;

H. R. 8293. An act to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913;

H. R. 8899. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River at or near Epes, Ala.;

H. R. 8900. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River near Gainesville, on the Gainesville-Eutaw road between Sumter and Green Counties, Ala.;

H. R. 9019. An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a highway bridge across the Ouachita River at or near Calion, Ark.;

H. R. 9063. An act to extend the times for commencing and completing the construction of a bridge across the Chattahoochee River at or near Alaga, Ala.;

H. R. 9202. An act to authorize construction at the United States Military Academy, West Point, N. Y.;

H. R. 9204. An act granting the consent of Congress to the Arkansas Highway Commission to construct, maintain, and operate a free highway bridge across the Current River at or near Success, Ark.;

H. R. 9339. An act granting the consent of Congress to the board of county commissioners of Trumbull County, Ohio, to construct, maintain, and operate a free highway bridge across the Mahoning River at or near Warren, Trumbull County, Ohio; and

H. R. 9484. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River at or near Aliceville on the Gainesville-Aliceville road in Pickens County, Ala.

SALARY OF MINISTER RESIDENT AND CONSUL GENERAL TO LIBERIA (S. DOC. NO. 69)

The PRESIDING OFFICER (Mr. FESS in the chair) laid before the Senate the following message from the President of the United States, which was read, and, with the accompanying papers, referred to the Committee on Foreign Relations and ordered to be printed:

To the Congress of the United States:

I transmit herewith a report by the Secretary of State recommending legislation authorizing an increase in the salary of the minister resident and consul general to Liberia from $5,000 to $10,000 per annum.

I am in full accord with the reasons advanced by the Secretary of State why the increase should be allowed, and I strongly urge upon the Congress the enactment of legislation authorizing it.

CALVIN COOLIDGE.

THE WHITE HOUSE, *March 7, 1928.*

FLOOD CONTROL

Mr. RANSDELL. Mr. President, I ask leave to call the attention of the Senate to the imperative necessity of legislating on flood control. We have now been in session for over three months. This is an extremely important matter to the whole Nation and especially to the people of the Mississippi Valley States.

I do not wish to interfere in the slightest degree with the progress or passage of the Muscle Shoals legislation nor with the measure for the retirement of certain officers and former officers of the Army, nor the bill to meet the obligations of the Government in regard to migratory birds. Those three measures, I understand, are to come up in this order and then we are to consider flood control.

I merely wish to call attention to the fact that this great flood control legislation must be passed by both Houses of Congress and then come back for a proper appropriation of funds. We are only trying to pass an authorization bill and it takes a great deal of time to do so. I hope that Senators, in considering the three measures which have precedence over flood control, will not take any more time than is absolutely necessary to properly present the claims of their respective measures.

CUMBERLAND RIVER BRIDGE, TENNESSEE

Mr. DALE. Mr. President, from the Committee on Commerce I report back favorably, with amendments, the bill (H. R. 9137) granting the consent of Congress to the Highway Department of the State of Tennessee to construct, maintain, and operate a bridge across the Cumberland River on the Lebanon-Hartsville road in Wilson and Trousdale Counties, Tenn., and I submit a report (No. 492) thereon. I call the attention of the junior Senator from Tennessee [Mr. TYSON] to the fact that I am reporting favorably this bill and another bill from the Committee on Commerce relating to the construction of bridges in Tennessee.

Mr. TYSON. Mr. President, I ask unanimous consent for the immediate consideration of the bill.

The PRESIDING OFFICER (Mr. ODDIE in the chair). Is there objection to the immediate consideration of the bill?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill, which had been reported from the Committee on Commerce with amendments, on page 1, line 7, after the word "navigation," to strike out the words "on the Lebanon-Hartsville road" and insert in lieu thereof "on the projected State highway between Lebanon and Hartsville and Gallatin near Hunters Point," and on page 2, line 10, after the words "amortize the," to strike out the words "cost of the bridge and its" and insert in lieu thereof "cost of the bonds authorized to be issued under the law of the State of Tennessee in connection with the construction of this and other bridges and their," so as to make the bill read:

Be it enacted, etc., That the consent of Congress is hereby granted to the highway department of the State of Tennessee to construct, maintain, and operate a bridge and approaches thereto across the Cumberland river at a point suitable to the interests of navigation, on the projected State highway between Lebanon and Hartsville and Gallatin near Hunters Point in Wilson and Trousdale Counties, in the State of Tennessee, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906, and subject to the conditions and limitations contained in this act.

SEC. 2. If tolls are charged for the use of such bridge, the rates of toll shall be so adjusted as to provide a fund sufficient to pay the reasonable cost of maintaining, repairing, and operating the bridge and its approaches under economical management, and to provide a sinking fund sufficient to amortize the cost of the bonds authorized to be issued under the law of the State of Tennessee in connection with the construction of this and other bridges and their approaches, including reasonable interest and financing cost, as soon as possible under reasonable charges, but within a period of not to exceed 25 years from the completion thereof. After a sinking fund sufficient for such amortization shall have been so provided, such bridge shall thereafter be maintained and operated free of tolls, or the rates of toll shall thereafter be so adjusted as to provide a fund of not to exceed the amount necessary for the proper maintenance, repair, and operation of the bridge and its approaches under economical management. An accurate record of the costs of the bridge and its approaches, the expenditures for maintaining, repairing, and operating the same, and of the daily tolls collected, shall be kept and shall be available for the information of all persons interested.

SEC. 3. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The amendments were agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

The title was amended so as to read: "A bill granting the consent of Congress to the highway department of the State of Tennessee to construct, maintain, and operate a bridge across the Cumberland River on the projected State highway between Lebanon and Hartsville and Gallatin near Hunters Point, in Wilson and Trousdale Counties, Tenn."

CLINCH RIVER BRIDGE, HANCOCK COUNTY, TENN.

Mr. DALE. I also report favorably without amendment from the Committee on Commerce the bill (H. R. 9293) granting the consent of Congress to the Highway Department of the State of Tennessee to construct, maintain, and operate a bridge across the Clinch River on the Sneedville-Rogersville road in Hancock County, Tenn., and I submit a report (No. 493) thereon.

Mr. TYSON. Mr. President, I ask unanimous consent for the present consideration of the bill.

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill.

Mr. JONES. Mr. President, I do not desire to delay the passage of the bill, but I wish to ask the Senator from Louisiana [Mr. RANSDELL] a question. He has just made a statement from which I think it might be inferred——

Mr. TYSON. Mr. President, has House bill 9293 been passed?

The PRESIDING OFFICER. No; it is now before the Senate.

Mr. JONES. I repeat that from the statement which the Senator from Louisiana has just made I think it might be inferred that he thinks there has been undue delay on the part of the Senate committee, at least, in connection with flood control legislation. I think that committee has acted just about as rapidly as it could, and we are prepared to take flood control bill up in the Senate just as soon as it is possible to get the opportunity to do so.

Mr. RANSDELL. Mr. President, I agree with the statement just made by the Senator from Washington. I think the Senate Commerce Committee acted on the flood control measure promptly. We perhaps might have pushed it a little more rapidly if it had not been for delays caused by some of our own Members and the thought that, perhaps, the House of Representatives, which has been considering a similar measure for a long time, would first present its bill. I do not criticize anybody, but simply wish to call attention to the very important situation now confronting us and to express the hope that there will be no further delay in the consideration of the proposed legislation; at least, no more than shall be absolutely necessary.

Mr. HARRISON. Mr. President, in connection with the statement just made by the Senator from Louisiana [Mr. RANSDELL], will the Senator from Tennessee permit me to inquire of the Senator from Washington [Mr. JONES] when he contemplates bringing up for consideration the flood control bill?

Mr. JONES. The steering committee of the Senate has mapped out a program to take up and dispose of the Muscle Shoals measure, which is now before the Senate; then the volunteer officers' retirement bill, in which the Senator from Tennessee [Mr. TYSON] is interested; then the migratory bird bill. Then I understand that the committee has put the flood control bill next in order for consideration. I am prepared to say that the three bills to which I have referred were placed on the program of the Senate before the flood control bill was reported from the committee, and it was felt that we should not undertake to displace those measures which had already been arranged to be considered, but the flood control bill has been put in order for consideration right after the disposition of the other measures I have named.

Mr. HARRISON. Then we ought to get the flood control bill before the Senate some time next week?

Mr. JONES. I should think we should certainly get it before the Senate next week.

Mr. DILL. I wish to say to my colleague that the flood control bill, of course, was not on the calendar when the arrangement was made for the migratory bird bill to be considered.

Mr. JONES. No.

Mr. DILL. And I think I can safely say to the Senator there is not any chance of getting the flood control bill before the Senate next week if the migratory bird bill shall come in between, and perhaps not for some time.

Mr. JONES. We shall do the very best we can, and shall get the flood control bill before the Senate just as soon as possible.

Mr. DILL. I wish the Senator would move to take up an important bill such as the flood control bill rather than the migratory bird bill.

Mr. JONES. The Senate may be disposed to take up the flood control bill and displace one of the other bills.

Mr. WALSH of Massachusetts. Will the Senator tell us what has become of the independent offices appropriation bill? What is its present status?

Mr. JONES. I have not had charge of that bill but, as I understand, there is a motion to reconsider the vote whereby the conference report was adopted, and that motion is now on the table undisposed of.

Mr. WALSH of Massachusetts. When is that question going to be taken up?

Mr. JONES. I will ask the Senator from Utah [Mr. SMOOT], who is in charge of the subject, to answer the question.

Mr. SMOOT. I will say to the Senator from Massachusetts that the question to which he refers will be taken up at the first moment when it is possible to do so.

Mr. WALSH of Massachusetts. I wish to say to the Senator that there are some items carried in the bill which, if the departments were permitted to make use of, would help somewhat to relieve the unemployment conditions in the country. I, therefore, hope the proposed legislation will not be longer delayed.

Mr. SMOOT. Mr. President, I will assure the Senator that the motion in regard to the conference report will be acted on as soon as possible.

Mr. TYSON. Have I the floor, Mr. President?

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. The Senator from Tennessee has the floor. Does he yield to the Senator from Utah?

Mr. TYSON. If the Senator will wait for just one moment until I may have the pending bridge bill passed, I will then yield to him. It will take but a moment.

Mr. SMOOT. I wish to speak on the bridge bill for about 10 minutes as to the question of unemployment.

Mr. TYSON. I ask unanimous consent to proceed with the consideration of the bridge bill which is now before the Senate.

The PRESIDING OFFICER. The question is, Shall the bill be reported to the Senate?

Mr. SMOOT. I wish to be heard, Mr. President.

The PRESIDING OFFICER. The bill is debatable.

Mr. SMOOT. I am not going to object to the bill, but I want to be heard.

Mr. TYSON. If the Senator from Utah will postpone his remarks for just one moment, I desire to say that the pending bill is not contested in any way.

Mr. SMOOT. I have not any objection to the passage of the bill which is before the Senate, but, I repeat, I wish to be heard at this time.

The PRESIDING OFFICER. The question is, Shall the bill be reported to the Senate?

Mr. SMOOT. Mr. President——

Mr. ROBINSON of Arkansas. The Senator from Alabama [Mr. HEFLIN] is entitled to the floor, and I apprehend he would not want to yield time in which to debate the bill.

Mr. HEFLIN. I have no objection to the Senator from Utah [Mr. SMOOT] taking 10 minutes if he wishes to do so after the pending bill shall have been disposed of in the proper way.

Mr. SMOOT. That would be perfectly satisfactory to me. I repeat, I have not any objection at all to the bill.

The PRESIDING OFFICER. The Chair understands that the Senator from Utah had no objection to the passage of the bill.

Mr. SMOOT. None at all.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

UNEMPLOYMENT AND BUSINESS CONDITIONS

Mr. SMOOT. Now, I understand the Senator from Alabama states that I may have about 10 minutes before he begins his speech.

Mr. HEFLIN. I yield to the Senator from Utah.

Mr. WALSH of Massachusetts. Of course the Senator would expect other Senators to have an opportunity to reply to his remarks.

Mr. SMOOT. I have no objection to that whatever.

Mr. HEFLIN. There will be plenty of opportunity during the day for other Senators to speak.

Mr. SMOOT. That is entirely in the hands of the Senator from Alabama.

Mr. HEFLIN. I have no desire to cut off Senators who wish to speak for a few minutes this morning.

Mr. NORRIS. Mr. President, I have no objection to that either; but if we are going into a general debate on another subject, I suggest to the Senator from Alabama that I do not want to see the unfinished business displaced.

Mr. SMOOT. I will say to the Senator from Nebraska that the Senator from Alabama yielded to me.

Mr. NORRIS. That does not make any difference. Any Senator can object to displacing the unfinished business.

Mr. SMOOT. I am not trying to displace the unfinished business. I will speak on the Muscle Shoals resolution.

Mr. NORRIS. The Senator can do that. I thought the Senator was going to discuss another bill.

Mr. SMOOT. Not at all.

Mr. NORRIS. Then the Senator is within his rights, of course.

Mr. SMOOT. Mr. President, the Senator from New York [Mr. WAGNER] in discussing his resolution proposing an investigation of unemployment in the United States criticized the statement of the President in his last message to Congress that—

> Wages are at a very high range. Employment is plentiful.

That was last December. While there is always some unemployment and there are always some idle men, estimated at about a million, the number has increased since last December

when the number of involuntary idle was excessive. Conditions existing in August, September, October, and November, 1927, warranted such a statement as the President made in December. Here are the figures gathered from 54 separate industries by the Department of Labor:

	Number of industries	Number on pay roll	Amount of pay roll
1927:			
July	10,918	3,017,637	$70,080,415
August	10,918	3,028,729	80,566,040
September	10,781	3,030,762	79,212,903
October	10,819	3,018,729	80,081,298
November	10,819	2,953,560	76,722,522
December	10,607	2,922,922	77,975,546

Mr. GERRY. Mr. President, will the Senator yield?

Mr. SMOOT. I should like to put these figures in the RECORD in regular order, and then I will answer any questions.

Mr. GERRY. I simply wish to ask the Senator if he is going to indicate in his remarks what industries are referred to.

Mr. SMOOT. My statement was that the figures covered 54 separate industries, and the number of industries reporting were 10,918 in July, 1927.

Mr. GERRY. But the Senator is not stating what industries they are.

Mr. SMOOT. If the Senator will wait until I get through, I think I will answer his question satisfactorily.

The total number of employed in manufactures was:

	1921	1925
Total establishments	196,267	187,390
Wage earners	6,946,564	8,387,261
Annual wages	$10,600,000,000	$10,729,968,000

The year 1926 was unusually prosperous. The number of wage earners increased over 1925, and wages paid increased.

There was a large increase in the number of voluntary unemployed owing to strikes in 1927. It is estimated that there were a million wage earners out on strike at various periods during the year. However, in 54 separate lines of industry there was a normal number of employed and a normal volume of wage earnings.

In some lines of industry, notably the textile industry, there was less employment and several cuts of wages in certain mills, notably in New England. This was due largely to southern competition in addition to foreign competitive imports. Despite the tariff, foreign competition in the American markets has been intense, and already several lines of industry have asked for an increase in import duties.

Sufficient importance to imports affecting general prosperity has not been given in recent years. Total imports have increased, despite the tariff, clearly indicating that even a protective or high tariff does not prevent imports. Imports of merchandise are shown as follows:

1922	$3,112,747,000
1923	3,792,066,000
1924	3,609,963,000
1925	4,226,589,000
1926	4,430,888,000
1927	4,184,378,000

Mr. WALSH of Massachusetts. Mr. President——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Massachusetts?

Mr. SMOOT. I yield.

Mr. WALSH of Massachusetts. What is the difference between the imports for 1926 and the imports for 1927?

Mr. SMOOT. There was a difference of $246,510,000.

Mr. WALSH of Massachusetts. In other words, there were $246,000,000 less imports in 1927 than in 1926.

Mr. SMOOT. Yes.

Mr. WALSH of Massachusetts. The imports in 1927 were that much less than the imports in 1926?

Mr. SMOOT. But 1926 was the year of highest imports in the history of the United States.

Mr. WALSH of Massachusetts. I understand the Senator to agree that, notwithstanding a lessening of imports, unemployment conditions were worse in the latter part of 1927 than in 1926.

Mr. SMOOT. The small decrease in imports amounts to nothing in considering the vast manufacturing industry of the United States; it is a mere bagatelle; but these imports have had a tendency to supplant large quantities of American goods despite the tariff, thus slowing down many American industries.

Mr. HARRISON. Mr. President, may I ask the Senator a question in that connection?

Mr. SMOOT. Yes.

Mr. HARRISON. Is the Senator then defending the large unemployment because of these importations that are coming in?

Mr. SMOOT. No. I am stating the situation as it is, and stating that the unemployed in the United States are not what the Senator from New York said.

Mr. HARRISON. Why does not the Senator, in his statistics, show the exportations from this country at the same time? He has given only the importations.

Mr. SMOOT. That is what interferes with labor in the United States. Our exports have nothing whatever to do with slackening of employment on the part of American labor.

Mr. HARRISON. Does the Senator hold that the balance of trade is not a test of the prosperity of the country, but that it must all be based upon importations?

Mr. SMOOT. If such a thing should happen as a constant balance of trade against this country, of course it would interfere with the industries of the country and the business of the country. The Senator knows that just as well as he knows any other matter connected with public questions.

Mr. COPELAND. Mr. President, will the Senator yield for a question?

Mr. SMOOT. Yes.

Mr. COPELAND. Is the Senator laying the foundation for an increase in the tariff schedules?

Mr. SMOOT. I am not. I am telling the Senate just exactly the conditions as they are to-day.

Mr. SMITH. Mr. President, may I ask the Senator if the exports of the articles of which he says imports have increased are available, so that he can tell the Senate the relative amount of exports of like articles as compared with previous years?

Mr. SMOOT. I could not say offhand, Mr. President.

Mr. SMITH. That is pertinent for the reason that our exports of the articles of which an increased import is indicated would show whether or not our domestic labor was still employed in producing those things that are exported.

Mr. SMOOT. The percentages are about the same as they were before; that is, between 35 and 40 per cent of the imports are on the dutiable list, and the rest of them are on the free list. That is the percentage of the goods imported into this country.

A slow-down of many industries helps to increase industrial unemployment, and the result is immediately felt in the lowering of the consuming power of the wage earners. This has brought about what may be called an oversupply or overproduction existing in many lines; and I might add that mass production has cut a great figure in the amount of production in the United States in special lines. There has been overproduction or underconsumption, which is the other side of the same picture, especially in the textile and silk industries and in the woolen industries. Styles have changed and seriously affected many lines, especially in women's wear.

Unemployment exists in all industrial countries, and overproduction is the main cause. However, involuntary unemployment in 1926 and 1927 was nothing compared with unemployment in 1920 and 1921, when President Harding appointed an employment or unemployment board to investigate and make recommendations.

It can not be gainsaid that general business conditions and industrial employment here have improved steadily since 1920.

Mr. WALSH of Massachusetts. Mr. President——

Mr. SMOOT. Just a moment.

Mr. WALSH of Massachusetts. I merely wish to ask the Senator to explain a statement he made. Did I understand the Senator to say that the present unemployment conditions do not compare with the unemployment conditions in 1920?

Mr. SMOOT. I say that, without a question of doubt.

Mr. WALSH of Massachusetts. Is it not a well-known fact that the peak of war prosperity, the highest point reached in the prosperity following the war, was in the summer of 1920, and that the decline began after that and was most noticeable in the year 1921, and that 1920 was one of the very best and most prosperous years we have had?

Mr. SMOOT. Yes; as far as general business was concerned, but not as far as manufactures were concerned. They are the ones that employ the great mass of American people.

Mr. WALSH of Massachusetts. Is it not a fact that the unemployment at the present time is greatly in excess of that of 1921, and do not these statistics show it?

Mr. SMOOT. No; I will say to the Senator that that is not the case.

Mr. WALSH of Massachusetts. The Senator is misinformed.

Mr. GERRY. Mr. President, does the Senator say that the

conditions in New England were better in 1920 than they are now?

Mr. SMOOT. I have explained why the conditions in the cotton industry and the woolen industry of New England were not what they have been in the past. The Senator knows why.

Mr. GERRY. No; not entirely.

Mr. SMOOT. I can tell the Senator why right now if he wants to know.

Mr. GERRY. The Senator also has not answered my former question. I wonder if he is going to state what industries his tables are made up from. He has referred to a list of industries.

Mr. SMOOT. They are taken from over 10,000 industries, of every name and nature, in every section of the country. There is not a State in the Union but that they are taken from, and they cover the industries from one end of the country to the other.

Mr. GERRY. But the Senator stated that he was making up his tables from 54 industries, and then he did not give the industries. I was interested to know what his tables were made up from.

Mr. SMOOT. The 54 industries that amount to anything in this country cover nearly all the leading classes of industries of the country.

Mr. GERRY. The Senator has not given a list of those industries in his tables. He has just given a list of figures.

Mr. SMOOT. I care not what the Senator says in relation to that. If he wants to get the industries, all he has to do is to ask the Department of Labor and he will get them.

Mr. GERRY. But the Senator is making the statement.

Mr. HARRISON. Mr. President, I understood the Senator to say that the unemployment is not as acute now as it was in 1921.

Mr. SMOOT. The statement I made was that the involuntary unemployment in 1926 and 1927 was nothing compared with the unemployment in 1920 and 1921.

Mr. HARRISON. In 1921 the present Secretary of Labor made a report on conditions in this country. I think it was in July or August. It showed somewhere around three and a half million to five million men out of employment at that time. That report aggrieved certain Republican leaders.

Mr. SMOOT. What year was that?

Mr. HARRISON. In 1921, when the Republican Party had taken control of the Government, and at a time when the Senator's party had had control of the House of Representatives for two years.

Mr. SMOOT. We took control of the Government on March 4, 1921.

Mr. HARRISON. Is it not a fact that at that time, when the report came in, the Senator was aggrieved and said, "Well, the Secretary will not make such a report as that again?"

Mr. SMOOT. No; I never made such a statement.

Mr. HARRISON. Well, the Senator felt that way about it.

Mr. SMOOT. The Senator may undertake to say how I felt. He always attributes to me exactly what he hopes I may say. I want to say to the Senator that the statement was in regard to the involuntary unemployment. During 1920 and 1921 there were no strikes to speak of in this country, and now there are strikes on in different sections of the country.

Mr. ROBINSON of Arkansas. Mr. President, will the Senator yield just for a brief statement and a question?

Mr. SMOOT. I yield, though I am nearly through.

Mr. ROBINSON of Arkansas. It is in connection with the question asked the Senator from Utah by the Senator from Rhode Island [Mr. GERRY].

The Senator from Utah manifested, I thought, a little petulance because the Senator from Rhode Island called on him to publish a list of the industries which he claims are so prosperous, and in which there is no unemployment. It seems to me that that is the very gist of the value of his statement. A list of the industries would disclose in part, at least, the extent of their operations, and illustrate the number of the employees concerned in them. A mere statement that 54 industries are more prosperous now than they were in another year does not of necessity reflect the general condition of the country, either with respect to unemployment or with respect to prosperity generally.

The Senator has made a statement that I challenge. I do not believe that he can sustain it with the facts, and I think when he reflects he will either modify it or retract it. The Senator said that since 1920 industry generally in the United States had been increasing and growing in prosperity, and that that process is still in progress.

The Washington Post, in an editorial that I saw but have not at hand just now, made the declaration that it is only the giant industries of the country, the large corporations, that are prospering; and I put in the RECORD here some time ago figures that have not been challenged, showing that about three-fifths of the corporations in the country, as I remember the figures now, are not paying any income tax, which means, of course, that they are not earning material profits. I showed, in the statement to which I now refer, that there have been more bank failures during the years to which the Senator has referred as disclosing a constantly growing prosperity throughout the United States than in any similar period of history since this Government began. It is a matter of common knowledge that the agricultural industry throughout that period has been totally lacking in prosperity; and when we consider the country as a whole and industry as a whole, the statement of the Senator from Utah that prosperity has characterized the industries of this country during the years from 1920 to 1928 and is still growing can not be sustained.

Mr. SMOOT. Mr. President, the Senator has made a speech in my time, but——

Mr. ROBINSON of Arkansas. The Senator is making his speech in the time of the Senator from Alabama [Mr. HEFLIN].

Mr. SMOOT. No; I am not. I am making the speech in my own time; and I will say to the Senator now, in regard to the bank failures in this country, What is the fundamental reason for them?

Mr. ROBINSON of Arkansas. It certainly is not prosperity.

Mr. SMOOT. Wait just a minute.

Mr. ROBINSON of Arkansas. The Senator asks me a question, and then resents it when I answer.

Mr. SMOOT. No; I will answer it.

Mr. ROBINSON of Arkansas. The Senator can answer his own questions; but I respectfully suggest to him that he should ask himself, instead of asking me, if he does not want me to answer.

Mr. HARRISON. Mr. President, will not the Senator let me——

Mr. SMOOT. No; I will not. I know what the object of the Senator is.

Mr. ROBINSON of Arkansas. The Senator does not attribute any ulterior motive to me?

Mr. SMOOT. Oh, well, I know what the object of these interruptions is.

Mr. HARRISON. While the Senator——

The PRESIDING OFFICER. The Senator from Utah has the floor.

Mr. SMOOT. I want to finish what I have to say; then I will yield to the Senator.

Mr. ROBINSON of Arkansas. Very well.

Mr. HARRISON. The Senator can answer my question in just a word.

Mr. SMOOT. No; I do not yield.

The PRESIDING OFFICER. The Senator from Utah has the floor.

Mr. CARAWAY. Mr. President, will the Senator yield to me for just a minute?

Mr. SMOOT. No; I will not.

Mr. SWANSON. Will not the Senator yield to a mild-mannered man like me?

Mr. CARAWAY. Mr. President——

The PRESIDING OFFICER. The Senator from Utah has the floor.

Mr. SMOOT. I want to proceed with what I have to say.

Mr. CARAWAY. That is what we want the Senator to do, but we want to ask him a question. We want to help him make it plain.

Mr. SMOOT. Will the Senators please let me go on?

The PRESIDING OFFICER. The Senator from Utah has the floor.

Mr. SMOOT. In answer to the Senator from Arkansas [Mr. ROBINSON] relative to the bank failures in the United States: Business failures are not generally made in hard times. Failures are generally made in prosperous times, and I want to tell you why.

Mr. CARAWAY. Let me ask the Senator——

Mr. SMOOT. No; I want to go on.

Mr. ROBINSON of Arkansas. Mr. President——

The PRESIDING OFFICER. The Senator from Utah has the floor.

Mr. SMOOT. I do not yield.

Mr. CARAWAY. I know the Senator does not.

Mr. SMOOT. Perhaps that statement would appear to some as fundamentally wrong, but it is fundamentally right.

Mr. CARAWAY. It sounds mighty wrong to me.

Mr. SMOOT. Will the Senator please let me go on?

The PRESIDING OFFICER. The Senator from Utah has the floor.

Mr. SMOOT. In prosperous times, money is loaned as it was and has been to an extent to which banks or individuals would never think of making loans in hard times or poor times. Take the number of bank failures in Idaho: The Senators from Idaho knows why it was. The banks there loaned on real estate. A real-estate boom was on. Everything was prosperous, and they thought the value of real estate would increase and increase and increase; and it develops now that those loans were made for two and three times what the real estate would sell for. Many were loans on uncultivated lands. No income from such, and interest accumulating on loans made. That happened in other States, and, of course, when the real-estate boom broke the banks had frozen credits, they could not meet the demands that were made upon them and their doors were closed.

Mr. HARRISON. Mr. President——

Mr. SMOOT. No; I do not yield.

Mr. HARRISON. This is a real question.

Mr. SMOOT. I do not yield, I will say to the Senator.

The PRESIDING OFFICER. The Senator declines to yield.

Mr. SMOOT. I can not complete a sentence without somebody attempting to interrupt me.

Mr. NEELY. Mr. President, a point of order.

Mr. SMOOT. Mr. President——

Mr. NEELY. I rise to a point of order.

The PRESIDING OFFICER. The Senator will state the point of order.

Mr. NEELY. The point of order is this: These Democratic Senators are simply ruining the Senator's speech, and I insist that the Sergeant at Arms give him protection.

The PRESIDING OFFICER. The Senator from Utah has the floor.

Mr. SMOOT. This is the statement I made, to which the Senator from Arkansas referred:

> However, involuntary unemployment in 1926 and 1927 was nothing compared with unemployment in 1920 and 1921, when President Harding appointed an employment or unemployment board to investigate and make recommendations.

I say, Mr. President, that that statement is absolutely true. Now, I have only a very few words more, and I shall continue with what I have to say.

Business in 1926 was the best since the World War. As a result, overproduction was felt, and with it the reaction always following a surplus not only in agriculture but in manufactures. Nevertheless, there is no country on earth where the wage earners as a whole can obtain so much for what they earn as in the United States.

Mr. BLEASE. Mr. President——

Mr. SMOOT. Wages are highest here, a larger proportion of willing wage earners are employed than in any other country, and opportunities for the industrious persons are the best here in the United States.

Domestic development plus free opportunities for energy, skill, and industry, plus thrift, made the United States what it is. Protection made possible this domestic development and all that has followed.

President Coolidge therefore was right when he said:

> Wages are at a very high range. Employment is plentiful.

Mr. HARRISON. Now will the Senator yield, before he takes his seat?

Mr. SMOOT. The Senator can talk in his own time.

Mr. BLEASE. Mr. President, I want to ask the Senator from Utah a question, not for the purpose of disturbing him at all but for information. Are the persons out of employment to-day in this country all American citizens; and if it is a fact that they are American citizens, is that unemployment caused by the admission of cheap foreign labor, which has forced American citizens out of work?

Mr. SMOOT. Mr. President, I do not think the Department of Labor has ever collected any statistics as to whether the employees in the industries of the United States were citizens of the United States or of foreign countries. I have never seen such a report, I will say to the Senator.

Mr. BLEASE. I thank the Senator for the information.

Mr. HARRISON. Mr. President, may I ask the Senator, before he takes his seat, under his statement that failures come with prosperity——

Mr. SMOOT. I did not say they come with prosperity. I said they were never made in hard times, that the foundation was laid when there were good times.

Mr. HARRISON. Have we hard times now or prosperity?

Mr. SMOOT. Generally, prosperity.

Mr. HARRISON. We have not?

Mr. SMOOT. No.

Mr. HARRISON. Why is it that the Senator, with his dominating influence, and his colleagues here, hold up a tax reduction bill from the American people, when it passed the House months ago, and was labeled House Resolution 1?

Mr. SMOOT. As far as I am personally concerned, I want to say this: That I would not want to be chairman of a committee that would report a bill to the Senate which would become a law, and then have to make unanticipated appropriations at the end of 1929, when we would not find in the Treasury sufficient money to pay the debts of our Government.

Mr. HARRISON. But the President has said that the appropriations are within the Budget, and he also says that we ought to have some tax reduction.

Mr. SMOOT. He has also said, providing appropriations would allow it.

Mr. HARRISON. We have passed most of the appropriation bills.

Mr. SMOOT. The Senator is waiting for appropriations for flood control. Senators are waiting here now for Boulder Dam appropriations, we are talking about St. Lawrence canals, we are talking about Columbia Basin, and other projects.

Mr. HARRISON. Then the Senator does not think we are going to get any tax reduction bill?

Mr. SMOOT. I hope we will get a tax reduction bill.

Mr. HARRISON. When will we know?

Mr. SMOOT. We will know just as soon as we find out, after March 15, what the estimated amount of revenues will be.

Mr. GERRY. Does the Senator think the revenues are going to be larger this year?

Mr. SMOOT. No; I do not think they are going to be larger; I think they are going to be less.

Mr. HARRISON. How much less?

Mr. SMOOT. I will say to the Senator that out of 1,200 inquiries that have been made of business organizations throughout the country, asking for a comparison between their incomes in 1927 as compared with 1926, the replies show that they are between 9 and 10 per cent less.

Mr. HARRISON. That is the prosperity the Senator is talking about, then?

Mr. SMOOT. No; that is not prosperity I refer to; these statements, some of them, come from industries that have gone into mass production, selling goods cheaper than they did in 1926, in order to force the merchandise into trade circles so that the mills may be kept running.

Mr. HARRISON. What are the figures of the Senator as to the surplus now in the Treasury for this year?

Mr. SMOOT. Does the Senator mean for 1927?

Mr. HARRISON. Yes.

Mr. SMOOT. I think about $500,000,000. I am not worried about 1928. This tax bill does not cut any figure with 1928. This tax bill reaches into 1929.

Mr. HARRISON. If the Senator makes the same progress with reference to tax reduction for 1929 that he has for 1928, the people will never get any tax reduction.

Mr. SMOOT. The Senator need not worry; they will get tax reduction just as soon as we know that we have money sufficient to pay the expenses and obligations of the Government, and all above that will be used for tax reduction.

Mr. McKELLAR. Mr. President, will the Senator yield for a question?

Mr. SMOOT. Yes; but I really have not the floor.

Mr. McKELLAR. I did not hear the figures the Senator gave as to unemployment now. I heard him say that unemployment in 1920 and 1921 was largely in excess of that at the present time. Did the Senator give any figures? What are the Senator's figures for the present unemployment?

Mr. SMOOT. This is what I said, "Involuntary employment."

Mr. McKELLAR. I heard that.

Mr. SMOOT. That is what makes——

Mr. McKELLAR. Unless the Senator has the figures as to unemployment, how can he compare the unemployment of to-day with the unemployment of 1920 and 1921?

Mr. SMOOT. Mr. President, the Senator was not here, I suppose, when I began my remarks.

Mr. McKELLAR. I was not, and I wanted to have the Senator's figures.

Mr. SMOOT. I have the figures, for instance, as to the number of industries, and so on.

Mr. McKELLAR. But the Senator does not state the figures as to unemployment. The figures for 1920 and 1921 were stated. They showed somewhere between three and five million. Without having the figures before him for to-day, how can the Senator make the broad statement that the unemployment was greater in 1920 and 1921 than it is in 1928?

Mr. SMOOT. Because the Department of Labor will tell the Senator so at once, if he will go down there and ask them, and their report, if the Senator will get it, will show.

Mr. McKELLAR. Have they the figures? Why did not the Senator present the figures, if they are correct, and if the information is available?

Mr. SMOOT. I am sorry I did not ask the Senator what I should present here this morning.

Mr. McKELLAR. But I think the Senator, in presenting the figures for 1921 and comparing them with the figures, in his own mind, of 1928, ought to be willing to present to the Senate and to the country the figures for both periods.

Mr. SMOOT. I am not going to repeat what I have already said.

Mr. HARRISON. Mr. President, may I say that this is the first time the Senator from Utah has ever failed to produce figures, whether they were correct or not.

Mr. SMOOT. I will say to the Senator that if the Senator did produce figures at any time, I would have to look into them mighty carefully before I could accept them.

Mr. WALSH of Massachusetts. Mr. President, I listened with interest to the speech of the Senator from Utah [Mr. SMOOT], but I have not been able to determine whether or not he admits that there is an unemployment problem in the country at the present time. I do understand him to assert that business conditions are good and that there has been no recession of the alleged business prosperity of recent years.

I call his attention to some information which I have gathered with reference to business conditions in general in the country. Setting aside for the moment the question of unemployment, I quote from a publication known as the United States Business Service, which is published weekly and which on its front page states the favorable and unfavorable factors in the business situation in America.

I shall quote what that weekly report has said about unfavorable business factors since December 17, 1927. On that date it stated:

Average daily steel-ingot output was about 16 per cent under 1926.
Cotton-cloth sales in November were only 60.3 per cent of production.

In the edition of December 31, 1927, it asserted:

Early December car loadings at lowest level since the year 1923.
Eleven months' automobile output 21 per cent below the same period in 1926.
Number of new incorporations is averaging fully 57 per cent under 1926.

There was no statement on Christmas Day. In the issue of January 7, 1928, this publication asserted:

Imports in 1927 estimated to have declined 5 per cent from 1926 total.
Car loadings for last 12 months were 2.6 per cent under the 1926 level.
Brokers' loans increased more than $930,000,000 during 1927.

Mr. SMOOT. Mr. President, does the Senator hold that brokers' loans cause unemployment here in the United States?

Mr. WALSH of Massachusetts. I most certainly assert that it is an unfavorable business factor to have such a tremendous increase in loans to brokers who speculate in stocks resulting in taking money from industries and other legitimate activities. This paper considers it an unfavorable business factor.

Mr. SMOOT. Does the Senator object to the Federal Reserve Board stopping those loans from being pyramided?

Mr. WALSH of Massachusetts. I certainly do not. I think their action is commendable. I am stating facts about unfavorable business conditions. Later I shall consider unemployment.

On January 14, 1928, this publication asserted:

Failures during 1927 increased nearly 6 per cent over 1926 level.
December pig-iron output fell 12.7 per cent under the same month a year ago.

On January 21, 1928:

Freight-car loadings averaged about 8 per cent under a year ago.
Building permits have temporarily fallen off 35 per cent under 1927.

On January 28, 1928:

United States industrial employment in December was the lowest since August, 1924.
Cotton-goods production reported 20 per cent lower in the past 60 days.
Labor disturbances have increased slightly, due to recent wage cuts.

February 4, 1928:

Car loadings running below 1, 2, and 3 years ago.
Brokers' loans 38 per cent over a year ago indicate weak market structure.
Cotton spindle output of December was 8.2 per cent below December, 1926.
Unemployment throughout the country is reported increasing.

Mark you, this is a special report made by this business service exclusively to the business men of the country.

In the February 11, 1928, number:

Car loading running 13,000 cars below normal conditions in 1926.
Radio industry is experiencing more than normal seasonal decline.

In the publication of February 25, 1928:

Unemployment situation temporarily acute in eastern centers.
Active cotton spindles in January were 2.8 per cent under January, 1927.
January pig iron declined 7.7 per cent under a year ago.
Imports in January totaled $338,000,000, or 5.2 per cent under January, 1927.
Bituminous-coal output running 25 per cent under a year ago.

Report of March 3, 1928:

Factory employment in January at lowest level since April, 1922.
Weakness evidenced in prices of copper, zinc, lead, and tin.
New business in the shoe industry is currently reported lower.

These statements are from one of the most reliable agencies giving information to business men. How any man can say in the face of this report that favorable business conditions of the country have not receded is beyond my understanding.

Mr. GERRY. Mr. President, will the Senator yield?

Mr. WALSH of Massachusetts. I am glad to yield to the Senator from Rhode Island.

Mr. GERRY. I was wondering if the Senator from Massachusetts could tell us if he has a list of the 54 industries that the Senator quoted the figures from, but could not name, as being so prosperous.

Mr. WALSH of Massachusetts. I will say to the Senator that the 54 industries which report to the Department of Labor are the largest and most important, and only those industries that voluntarily see fit to make a report. The great bulk of the industries, the smaller ones which are likely to be more affected during business depression, do not report, and therefore we have not the information which those industries would furnish.

Mr. SMOOT. Mr. President, will the Senator yield?

Mr. WALSH of Massachusetts. I am always glad to yield to the Senator from Utah.

Mr. SMOOT. There were 54 industries, but there were 10,819——

Mr. WALSH of Massachusetts. Yes; 54 varieties of industries.

Mr. SMOOT. Yes; 54 classes of business, but there were 10,819 industries reporting.

Mr. WALSH of Massachusetts. I so understand.

I call attention now to an article published in the March Survey Graphic. The subject of the article is "Is unemployment here?" The article quotes from employment conditions in various localities throughout the country. I ask the Senate to listen to the quotations which I am going to give, which show that the present business decline is not confined to mere textile industries about which we hear so much, and which has been admitted because it is of such startling proportions. The present unemployment situation and manufacturing business decline is widespread from one end of the country to the other. Let us begin with Portland, Oreg. I quote from a report furnished by the Welfare Society of that city:

In Portland, Oreg., "there is a decided increase in unemployment. At present there are probably 38,000 unemployed people here, which is an increase of over 100 per cent in our usual unemployed population."

In Philadelphia "there is considerably more unemployment this year than last, and the number of applications coming to us (Family Society of Philadelphia) is exceptionally heavy. * * * Last November we received 307 applications, which is a larger number than in any November since 1918, the November of the influenza epidemic. In December, 1927, we received 340 applications, but there have been two Decembers since 1918 when we have received more applications than this. * * * It is exceedingly difficult to obtain jobs, and there is no doubt that, except for the winter of 1921–22, this is the worst period through which we have gone in 10 years."

"The unemployment situation in Milwaukee this year has been the worst since 1922," the general secretary of the Family Welfare Association reports, and adds: "The situation might have been worse had the winter been more serious."

In New York, the State labor department reports that in December employment touched its lowest point for the year 1927, and that in January approximately 20,000 wage earners were laid off. This pulls the index of employment "lower than it has been at any time since the trough of the depression in the summer of 1921."

In Buffalo, N. Y., where the heavier end of the unemployment load is carried by the city department of social welfare, the Charity Organization Society reports: "They are experiencing a worse situation to-day than in any year since 1921. For instance, in the week of January 6–12, 26 per cent of the applicants gave unemployment as the main cause of their difficulty. In the week of January 13–19, 20 per cent; and in the week of the 20th to the 27th, 32 per cent * * *. In the year July 1, 1926, to June 30, 1927, the department of social welfare spent about $310,050 in family-welfare relief. They have increased their fund this year, and have at their disposal $436,525. This increase has been sought on the basis of the pressure from an unemployment situation."

Chicago has caught the backwash both from the Ford lay-off and the soft-coal strike. The city's widely heralded building and engineering program has brought an influx of men looking for jobs. At the same time, steel and iron, meat-packing, and the clothing trades are "slowed up" and "freight tonnage has declined, throwing trainmen and dispatchers out of work."

Philadelphia and the New England communities suffer from the general depression in textiles. Fall River reports a 10 per cent wage cut in addition to a three-day work week.

In St. Louis "the increase in unemployment is probably due to a more complete shutdown in almost all types of factories employing both skilled and unskilled workers * * *. The industries in St. Louis are diversified, but we have noted that several of the large chemical companies producing patent medicines and drugs are not running full force, manufacturing plants making steel railroad cars are almost shut down, canning factories are employing only a portion of their usual force, and the clothing and shoe manufacturing companies, which represent the largest single industry in the city, are producing less than last year."

In Buffalo "the industrial situation as a whole has been bad this winter. The policy of retrenchment began as far back as July and has affected the whole economic situation. The building trades, steel and metal trades, the automobile and the auto-accessory manufacturers seem to have been our principal sufferers * * *. At the same time our local savings bank deposits have increased quite remarkably * * *. Personally, I feel this is because of the quite general feeling that jobs are so scarce that those who are employed are putting away the maximum amount in savings accounts in order to meet the possible break in employment."

Portland, Oreg., reports that "all our local industries are involved, inasmuch as the principal industry which we have, lumber, is only at 50 per cent of its capacity, and you can see what the effect would be upon all the other local industries." A similar situation is reported from the United Charities of Dallas, Tex.: "The opinion of our staff is that there is more unemployment this winter than last winter * * *. There seems to be a general slowing down in all industries. The situation is not due to the closing down of any particular industry."

Three basic causes of widespread unemployment are set forth in this statement from Salt Lake City, Utah: "A great many of the mines in districts surrounding Salt Lake lay off men regularly each winter. These men pour into the city hoping to find work here * * *. In addition to the general business depression and the fact that we have so much seasonal work here three of our largest concerns have laid off men, principally through the installation of improved machinery."

I shall not take the time of the Senate further to read from this article, but from Salt Lake City and various other parts of the country similar reports are received.

Mr. WATSON. Mr. President, will the Senator yield for a question?

The PRESIDING OFFICER (Mr. FESS in the chair). Does the Senator from Massachusetts yield to the Senator from Indiana?

Mr. WALSH of Massachusetts. I am glad to yield.

Mr. WATSON. Let us assume that all the Senator has said about the conditions in the country is true, that there is much unemployment, that the commercial, industrial, and financial condition of the Republic is even worse than he is depicting to us here. What advantage is it to us as legislators to set forth that condition unless we attempt to take two additional steps: First, to find out the reason for it, and, second, to find the remedy for it?

Mr. WALSH of Massachusetts. I certainly do not dispute the Senator. I not only agree with him, but in February, 1927, I asked that the Senate do that very thing, and called the attention of the country to the situation which was then ripening and developing, but nothing was done then and it is apparent nothing will be done now. The statistics that will come from the Department of Labor will not be particularly helpful in view of the fact that the first communication coming from the Department of Labor with reference to the situation to-day is a report to the press that unemployment conditions have improved. The reports of the Department of Labor have invariably been colored with optimistic assertions which were clearly disputed by the statistics covering the same periods of time. I quote from a report entitled "Industrial and general employment prospects" released January 2, 1928. The very front page, before you read the report inside, states:

> Contrary to precedent established in former presidential-election years, when the business world stood by awaiting results before charting their programs, the opposite is true at this time. A careful perusal of this bulletin will disclose the important information that industry and business will mark new high levels in 1928. The pessimists, "doubting Thomases," and the iconoclasts will be obliged to revise their opinions with respect to the Nation's industrial future. All signs point to the biggest year in the history of the automotive industry. Iron and steel point to marked increases over 1927. Indications are that building construction will compare favorably with the previous year. The position of agriculture shows improvement. Railroads will, undoubtedly, enjoy normal business. Owing to the increased introduction of labor-saving machinery, considerable labor will be displaced, but the volume of business is expected to register a new high level.
>
> FRANCIS I. JONES,
> *Director General.*

I will not dispute with the Senator the necessity of something constructive being done; but we must first admit, not deny, the facts. One of the first acts in order to solve such a problem is to do the necessary work in time of depression which the Government will have to do in the comparatively near future. This will somewhat relieve the present condition of unemployment.

Mr. WATSON. Does the Senator think any legislation we could enact here would improve the situation?

Mr. WALSH of Massachusetts. I certainly do.

Mr. WATSON. What would it be?

Mr. WALSH of Massachusetts. Any legislation which will increase and advance the national building program, which calls for an annual expenditure of $100,000,000; any legislation which will tend to bring about the reconditioning and improvement of the Army camps and establishments; the improvement of Navy equipment and vessels; national highways and reclamation projects, rather than to wait for a period when the country may be prosperous. All of the money spent now, instead of next year, along those lines will be helpful and beneficial. Furthermore, there is the important matter of flood control. The expenditure of that money, and the immediate expenditure of it, would be of considerable help. In fact, every activity we undertake and every dollar spent and put to work at once will be of some relief to the country.

Mr. WATSON. The Senator is not advocating any change in the general policy of the country in order to improve its general condition?

Mr. CARAWAY. In November we contemplate making such a change.

Mr. WALSH of Massachusetts. I will say to the Senator that I intend now to discuss some of the factors that I believe are responsible for present unemployment conditions, and that can be remedied by the Government. One of the many factors has been the system of inflating capital and consolidating industry throughout the country, which has driven the independent manufacturer out of business and has tended to centralize the manufacturing business in the hands of a limited number of monopolies or trusts. I will say to the Senator frankly that I consider financial gambling with industry a serious and a grave economic danger to the country, and I regret to say that I believe it is encouraged, supported and, because of passive acquiescence, defended by the administration of which the Senator is one of the influential leaders.

Mr. WATSON. I thank the Senator. May I ask if the Senator proposes to remedy that situation by legislation?

Mr. WALSH of Massachusetts. Yes.

Mr. WATSON. Why and how?

Mr. WALSH of Massachusetts. First of all by making a legislative study of it. To what extent does the removal of competition, the consolidation of business and of industry, and the inflation of capital without check, increase or retard the prosperity and general welfare of the American people? To what extent is it being done illegally? We had one aspect of these questions here recently, one in which the Senator was very much interested. I refer to our consideration of the question of whether the consolidating of the public-utility power systems was resulting in extortion from the American people. Have the public no interest in checking any possible inflation of capital invested in an industry which produces that from which all our people

obtain light, heat, and power, and must purchase in a noncompetitive market? Are the public to be compelled to buy the very necessities of life at any price that may be levied, regardless of the extent to which the distributors have federated their capital improperly and unjustly?

Mr. WATSON. Is not that the direct result of an economic evolution that has been going on?

Mr. WALSH of Massachusetts. Yes, sir; in part, but no unconscionable federation of capital, no unchecked expansion of capital, no improper consolidation of watered-stock corporations can ever be defended by any government that claims to be interested in protecting the unorganized people who must buy the necessities of life from noncompetitive industries.

Therefore, I assert it is a most important governmental problem. I agree that there is a natural evolution toward consolidation in business, but I contend that when that natural evolution in business reaches the point where competition is removed and there is no Government interference to check the issue and expansion of watered stock, and the public is thereby made powerless, it is a solemn obligation—none more solemn—for the Government to step in and prevent groups using their corporate charters, the laws, the authority, and the seal of the Government to exploit the masses of the people by charging excessive prices. Mr. President, I contend extortion is wrong when committed by the powerful, as well as by the poor and weak. Rich combines can commit conspiracy against the public as well as weak and crooked combines that are unable to hide behind the powerful influence of vast sums of money and large financial support. The trouble with some of the political philosophy of the day is that it holds that power and vast wealth is entitled to immunity for extortion of the worker and the consumer.

Mr. WATSON. Will the Senator let me remark that if there be such illegal combinations we have laws on the statute books to dissolve them.

Mr. WALSH of Massachusetts. I am well aware of that, sir, and I am well aware of how little the Republican administration has done to enforce those laws. I am also well aware what the record shows as to the number of cases that have been turned over to the Department of Justice and how few of them have been prosecuted. The Republican Party can not flirt with big business; it can not get its campaign contributions; it can not get big business to name its nominees and at the same time have its administration of the Government concerned with restraining and limiting the natural excesses, greed, and selfishness of its political partners, the trusts. The Senator knows just as well as I that men organize and unite primarily upon the theory that they can make more money by consolidating their finances and their business than by pursuing an independent course.

When they are left alone to proceed with a policy of greed and selfishness, and the Government is inactive or silently approves, then the people are powerless and are to be pitied in the plight in which they sooner or later will find themselves.

Mr. WATSON. Is it not a fact, I will ask the Senator from Massachusetts, that consolidations come about largely because of the force of competition, the necessity of men getting together in order to increase production? Is it not a fact that the present situation is largely due to overproduction and that overproduction——

Mr. WALSH of Massachusetts. I will say——

Mr. WATSON. Let me ask the question, please.

Mr. WALSH of Massachusetts. I shall be glad to have the Senator do so.

Mr. WATSON. And that overproduction results partly from vast capital, well employed by able men, utilizing the best machinery of which the world knows, constantly stimulating inventive genius to make more improvements, and making also the most efficient labor the world ever knew? Is not that true?

Mr. WALSH of Massachusetts. Yes, sir; to a degree that is true; but will not the Senator also agree that the very thing the Senator is describing puts an obligation upon the Government to be active, to be alert, to see that that condition shall not result in an injustice and grave injury to the rights of the worker, the investor, and the consuming public?

Mr. WATSON. I will. I certainly have no doubt in the world about that.

Mr. WALSH of Massachusetts. Turning over the personnel of the regulatory commissions to those businesses that are to be regulated will not do it; neither can it be done by a Department of Justice in sympathy with these combines.

Mr. BRUCE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Maryland?

Mr. WALSH of Massachusetts. Let me say in answer to the question of the Senator from Indiana [Mr. WATSON] that I do not hesitate to assert that I think the reason for the growth of monopolies and trusts is the protective tariff system, because those who have protection under that system are unable to get the full benefits of protective tariffs if competition can still prevail in the domestic market. Therefore, in order to obtain the full benefit of the manufacturer's tariff upon woolen goods, upon aluminum wares, upon all other tariff-protected industries, there is an incentive to those industries to come together, remove competition, and secure the full and exact benefit, the last dollar of protection in the prices they can charge to the American people. The Senator must recognize that that is one of the abuses of the protective tariff system. Perhaps it is not a sufficient reason to destroy the system if we strictly regulate monopolies, but it is sufficient, I repeat, for a government more concerned about the welfare of others than the prosperity of the big business interests to be on the alert to check and restrain the excesses and abuses of noncompetitive big business.

Mr. WATSON. Do I understand the Senator——

Mr. BRUCE. Mr. President——

Mr. WATSON. I wish to ask one more question, I will say to my friend from Maryland, and then I shall desist. Does the Senator from Massachusetts believe that a policy of the revenue tariff would improve conditions?

Mr. WALSH of Massachusetts. I will say to the Senator from Indiana that I personally believe in a reasonable and honest protective tariff system with rates levied upon the basis of the difference in the cost of production here and abroad. My only quarrel with the Senator from Indiana about the protective tariff is that it should not be levied as a matter of favor; it should not be a matter of privilege; that because big, powerful interests in this country can show that imports are flowing into the United States and goods are selling at a less price than they are able to produce them for, they should be given that degree of tariff protection which they ask. I never believed a judge or a juryman should assess the exact amount of damages that a plaintiff claims in a court of justice, but that they ought to hear the defendant. So, in the matter of tariff protection, I say that the consumer and the worker, as well as the petitioner for tariff protection, have a right to be heard and considered.

My complaint about the tariff policy which the Senator from Indiana so ably represents on this floor is that it has been influenced without regard to the rights of the many by political consideration, by campaign contributions, by the powerful propaganda and press support which the tariff barons and big tariff interests have been able to give, and have succeeded in giving, to his political party.

Mr. BRUCE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Maryland?

Mr. WALSH of Massachusetts. I yield.

Mr. BRUCE. May I suggest to the Senator from Massachusetts [Mr. WALSH], now that he is replying to the question of the Senator from Indiana [Mr. WATSON], how relief in one respect might be given by Congress at the present time to the distressing conditions which are now prevalent. That way would be to restore to the Treasury of the United States the half billion dollars or so that it was deriving at the time of the passage of the Volstead Act from excise taxation on spirituous and fermented liquors. [Laughter.]

Mr. WALSH of Massachusetts. With that suggestion of my friend from Maryland I am in general accord, for I am opposed to prohibition by law.

Mr. BRUCE. To say nothing of the large revenues also that the States themselves were deriving at that time from license taxes on the sale of spirituous and fermented liquors.

Mr. WATSON. Does the Senator from Maryland think that would help solve the problem of unemployment?

Mr. BRUCE. I think that it would unquestionably help to solve it. It would help to relieve business, of course, from the enormous burden of taxation that it now carries. It would stimulate industrial activity and, consequently, of course, would afford more employment to labor.

Mr. CARAWAY. May I ask the Senator from Maryland a question?

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Arkansas?

Mr. WALSH of Massachusetts. I yield to the Senator from Arkansas.

Mr. CARAWAY. It is a curious idea to me, if I may use sufficient of the time of the Senator from Massachusetts to make the suggestion to the able Senator from Maryland, that getting drunk will make industry for anybody but the policeman and the jailer. [Laughter.] That has been my observation.

Mr. BRUCE. Mr. President, will the Senator allow me to interrupt him?

Mr. WALSH of Massachusetts. I yield.

Mr. CARAWAY. Go ahead.

Mr. BRUCE. From year to year for a considerable number of years now the Moderation League of New York, of which such illustrious men as Elihu Root and Bishop Fiske and others are directors, has brought out a report in relation to arrests for drunkenness in some 500 cities and towns of the country, and I commend to the attention of the Senator from Arkansas the fact that those reports show that every year for a considerable number of years past the police statistics for those cities and towns evidence the fact that arrests for drunkenness have been steadily increasing. I might say further in that connection that the very last report of the Moderation League, that for the year 1927, shows that this mounting tendency of arrests for drunkenness in those cities and towns is continuing. In 1920 there were less than 5,000 arrests for drunkenness in the city of Washington, but a few days ago the report of Major Hesse showed that, while in recent years the population of Washington has increased only some 40 per cent, arrests for drunkenness have increased some 168 per cent. So I must say it must be by some very tortuous, unsatisfactory process of reasoning that the Senator from Arkansas can find that the proper modification of national prohibition and the restoration of that great volume of revenue to the Treasury of the United States would result in increased drunkenness in this country.

Mr. CARAWAY. Mr. President, will the Senator from Massachusetts pardon me a second more?

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Arkansas?

Mr. WALSH of Massachusetts. Certainly.

Mr. CARAWAY. If everyone is getting all the liquor he wants and more than he used to get, what betterment in industrial conditions would the open saloon give us? Anybody can read police reports who wants to, but I have seen more drunken men in the distance from the Capitol to the White House in the old days before the Volstead Act in one trip than I have seen in the Capital City since that time. I do not care what the police reports may be. It seems the chief of police has been getting a good deal of liquor himself, if reports emanating from the other end of the Capitol may be believed. However, it is well known that if everyone was getting all the liquor he wanted there would not be so much kicking about it.

Mr. BRUCE. Mr. President, will the Senator from Massachusetts yield further to me?

Mr. WALSH of Massachusetts. I yield.

Mr. BRUCE. They do not get it to begin with for as reasonable a price; they do not get it as conveniently; they do not get it of as good quality. Above all, they do not get it lawfully—a consideration certainly of supreme importance. When I say "they" I am not speaking of myself, because I am one of the most temperate of men, as the Senator knows.

Mr. CARAWAY. The Senator is except when he is arguing about letting other people get drunk. He stays sober himself——

Mr. BRUCE. I am not speaking of rhetorical intolerance; I am speaking of bibulous intolerance.

Mr. CARAWAY. The Senator wants to stay sober himself, but he wants everybody else to get drunk. [Laughter.]

Mr. BRUCE. Not at all. I know that the Senator from Arkansas is one of the best of my friends, and I know that it would be absolutely impossible to get him into that condition, and that I must put up with his society, however sober; I would have no choice, even if I did not much prefer him just as he is.

Mr. WALSH of Massachusetts. I wish to remind the Senator from Indiana that there are a good many things the Government can do to assist in relieving unemployment. One is to interest itself in the further improvement of our waterways, which will require in a very few years the expenditure of vast sums of money in order to deepen them so as to make navigation easier, and thereby reduce the cost of transportation.

I might say in this connection, there are two other things the Government might do to help relieve present business conditions. One is to enter upon a study into the extent of our foreign loans, about which I expect later in this session to have something to say—the great volume of money that is going out of production and industry here and being invested in foreign countries by interests in this country that are producing in foreign countries, with the aid of foreign interests, cheaper goods to compete with American products, and thus to take the foreign market away from the home producing manufacturers. That is a field of inquiry that is a very extensive and a very important one. Another thing that Congress and the Government can do is to study and solve the one problem that is affecting the agricultural interests of this country more than any other, and the one problem, in my opinion, that will lead to its solution. That is the reduction in the cost of transportation of agricultural products.

The high cost, the enormous expense, of transporting agricultural products is the chief evil in the agricultural situation, and is responsible for the depleted condition of that great industry. What is more important for the Government to study, and find a solution for, than the question of bringing to the consumers from the farm the agricultural products produced in the far West and the South at the cheapest possible price? Preferential rates, if necessary, might be desirable for the transportation of agricultural products. The excessive cost of transportation is destroying agriculture.

Mr. President, there is not a question here that does not relate directly or indirectly to the great question of prosperity and to the preservation for all, not the few, of lasting, not temporary, prosperity; and if the Senator from Indiana is really interested in finding some constructive way of helping the nonemployment situation, he can turn to almost any measure that is pending before Congress and find out its effect either for or against the improvement of business conditions.

Mr. COPELAND rose.

Mr. WALSH of Massachusetts. I will yield to the Senator from New York; but I am going to close in just a moment by referring to some statistics on my desk, with reference to the extent of unemployment in our industries about which the Senator from Utah has made some observations. Does the Senator from New York wish me to yield to him now?

Mr. COPELAND. Mr. President, I should like to say just a word, if the Senator will yield.

To me, the pathetic thing about the debate is that Senators on the other side have seemed to attempt to explain away the idea that there is unemployment. They do not admit that there is such a thing as unemployment. We are all the time being assured that we have prosperity.

I have here an item an inch long from this morning's Washington Herald speaking about conditions in my city:

ONE $16-A-WEEK POSITION DRAWS 500 MEN AND BOYS

NEW YORK, March 6.—More than 500 men and boys answered a want ad here to-day by a company seeking an errand boy at $16 a week salary.

The horde of unemployed crashed through the walls of the company's office and almost wrecked it in a mad scramble to get the job.

Five hundred men applied for such a job; and that is the condition in my city.

Mr. WALSH of Massachusetts. Does the Senator know how many people applied for the temporary job here of counting the ballots in the Vare contested-election case? There were about 2,000 applications, I was informed, right here at the Capitol.

Mr. COPELAND. Think of it! Now, to me that is the pathetic phase of the thing. We talk about the economics of the problem. We are facing a practical situation. These people are hungry. They are going without food. They are being dispossessed, put into the street. The commissioner of charities in New York told me the other night that never in the last several years have there been so many people applying to the lodging house. How can we resist it? We must find a way to solve this problem and make it possible for these persons to be employed.

Mr. WALSH of Massachusetts. I claim that unemployment is a fundamental economic problem.

Mr. HEFLIN. Mr. President, referring to the number of applicants for positions in connection with the Vare case, the people who were going to count the ballots, there were only about 50 of those places to give out, were there not?

Mr. WALSH of Massachusetts. The Senator is correct.

Mr. SWANSON. Mr. President, will the Senator yield?

Mr. WALSH of Massachusetts. I yield to the Senator from Virginia.

Mr. SWANSON. The Senator ought not to be too harsh with our Republican friends. It seems to me he has been a little harsh in criticizing them. They are reduced to this position:

They won the election of 1920 by promising prosperity. They won the election of 1924 by a pretense that prosperity existed. Now they are confronted with the fact that they can not promise prosperity, because they have had eight years of power, and if they could not fulfill their promises in that time they know the people will not believe them. Consequently, they are reduced to the position of claiming that there is prosperity, and they will contend for it.

But the most remarkable statement I ever heard was the statement of the Senator from Utah [Mr. SMOOT]. In his prepared speech, which seems to have been written and prepared with care——

Mr. WALSH of Massachusetts. The Senator does not make any implication in that statement?

Mr. SWANSON. He said there was prosperity, great and immense, all over the country; that there had been no recession. The greater part of his speech that was not prepared was in regard to tax reduction; and the excuse he gave for not reducing taxes now was that an examination of about 1,200 reports by corporations and individuals showed a reduction of 9 or 10 per cent in prosperity last year over the previous year. In other words, the reports collected by this Government showed a recession in business, in prosperity, in trade, in commerce, of 9 per cent; and he gives that as a reason why he will not have tax reduction until the other reports are examined to see to what extent this recession in trade has gone.

I should like the Senator from Massachusetts, who has been very kind to the Senator from Utah in many respects, to explain this inconsistency on his part. He has refused to explain it himself. He has abandoned the floor. He will not be here to decide which is correct. One is bound to be wrong. You can not have the prosperity the Senator claims and then have the reports of 1,200 corporations examined with a recession of 9 per cent. They are inconsistent; and as the Senator from Utah refuses to explain, I should like to know if the Senator from Massachusetts, who is very able and adroit, can determine for us which of the propositions is true. Is there a recession in business, or not?

Mr. WALSH of Massachusetts. I will say to the very able and very much beloved Senator from Virginia—for he is beloved by everyone here—that I have long ago given up any hope or idea of reconciling the statements of the Senator from Utah. If there is any man in this Chamber who can make emphatic assertions which I have not been able to find facts to support, it is the Senator from Utah. But we must recognize that he is a very strong partisan and therefore naturally prone to color his views.

Mr. SWANSON. Has he abandoned any effort to-day to explain these inconsistencies?

Mr. WALSH of Massachusetts. The Senator is correct. He of course can not explain the inconsistencies; and of course the truth is, whether he admits it or not, that business is depressed, that those connected with this administration know it, and that they are hesitating about enacting a tax-reduction bill because they are fearful that the reports that will come from the business men of this country for the year 1927 will show such a depression of business that tax reduction will not be justified.

Mr. SWANSON. And, as I understand, the Senator's zeal, and a little indication of indignation, is that he feels that it is wrong for a party to win a third election under faked and pretended prosperity that does not exist. The Senator feels indignant that they should present any such proposition and try to force the people of America to believe it?

Mr. WALSH of Massachusetts. I do not think they are going to fool the country a third time. But they have powerful agencies of propaganda that are mighty effective.

Mr. SWANSON. But the Senator does not think they are justified in making an effort to do it by any such proposition?

Mr. WALSH of Massachusetts. No; but they have done it in the past on like propositions. I will say to the Senator that it may be perfectly proper for us to discuss this question here from the standpoint of its political benefit or disadvantage; but, Mr. President, I prefer to think of this unemployment question apart from politics. It is altogether too serious even to associate it with the word "politics." I have hesitated during this debate and during this session to give any figures or facts or statements in reference to conditions in my own part of the country. I did not want to appear here to be parading the depression in business, the suffering, the unemployment, and the want that exist through the part of the country which I have the honor in part to represent. It is a sad story; I want action. I want to arouse the country to demand that their officials give the problem attention and get out of their prosperity dream.

I arose in this Chamber in February, 1927, without any thought of a national election, and asked that a committee of this body sit during the past summer to study this economic question, to study the ever-increasing development of unemployment in this country. I asked that we give up some of our time, some of the nine months of recess for which we were paid, to serve our country in a study of this question. What happened? What became of that resolution? Mr. President, it was protested against from one end of the country to the other.

Because I had the hardihood to make the assertion that there might be some question about the existence of prosperity, a chorus of protests in and out of this Chamber met the suggestion; and we also heard the statement that is always made, that we were not fit to do it, anyway; it ought to be done by a body of experts. We are not fit to do anything, according to those who are disposed to check, if possible, the free, independent opinion and action of the Members of this body. We who represent the unemployed, however, have one power left—the power of protest.

The reason why I prize my seat in this body, the reason why I am prouder of the United States Senate than many other institutions of our country, is because there is still left here—here!—an opportunity for a courageous man to speak his mind, to say what he thinks, to discuss public questions untrammeled and unchecked. The party whip and rules that control majorities and minorities may exist elsewhere, but so long as this body is unshackled any free, courageous Senator can call the attention of the country to the excesses, to the abuses, to the maladministration in any department of our Government; and I welcome the opportunity to-day, once more to call attention to the condition of unemployment and the threatened extinction of the independent manufacturer and the merchant class.

But let us not fool ourselves. The millions of families of working people who are the victims of unemployment conditions are, I fear, not very near or very close to the heartbeats of those who are directing the policies of this country to-day. You know and I know where the forces and influences directing our economic policies emanate, and we are not deceived and can not be deceived. I realize the difficulties that anybody encounters who ask the leaders, who refute the suggestion that the country is not prosperous, to stop and think about the millions of families of honest, patriotic Americans who are suffering in the midst of winter from lack of employment.

Mr. President, I will read a paragraph from a speech which I delivered a year ago in reference to conditions that then existed, and which have become worse since then:

> The pay-roll statistics from the July number of the United States Labor Review show that employment in the manufacturing industries fell off 18.7 per cent from 1920 to 1925. This report reveals also that the pay roll of the industries show a shrinkage of 32.3 per cent from 1920 to 1925. The comparison of the 1920 pay-roll index for the month of May with the 1926 pay roll from the same month shows a six-year shrinkage of more than 40 per cent.

The figures showing an increase of 5 per cent more in the past year in unemployment and pay rolls, quoted Monday when I addressed the Senate on this question, I will not again repeat.

Mere pay-roll shrinkages and increased unemployment! These are problems that we are told we ought not to get excited about. The spokesman for the administration, in his prepared speech on this question, giving the position of the administration, has with a wave of the hand—and finally leaving the Chamber, I suppose, in disgust—assured us that the unemployment problem is not so serious after all, and that business is good, and that there is no reason for the Senator from New York, or for any other Senator, to challenge the statements he has made.

The Senator from South Carolina [Mr. BLEASE] makes the timely suggestion that the Senator from Utah ought to ask the party from whom he has gathered the statistics and the information produced, why he was fooled by him and what the purpose was in fooling him.

It is the same old policy, "Let well enough alone. Do not stir up trouble. Let big business take care of the situation. We must not offend them." If they want an investigation of unemployment they will have it, but if the workers want it they will want in vain, unless it receives the approval of the financial barons of the country, who have a grip upon the dominant party that must be broken. The predominant political issue is whether this Government is to continue to be subsidized, directed, controlled in all its policies by a few powerful financial and industrial monopolists, or whether this Government is to be restored to the recognition and defense of the rights of the average man and the average woman, with some thought by public servants and party leaders about legislation that is beneficial to them, as well as to the big special interests of this country.

Here is the issue of the hour, and I believe my party can impress itself upon the country as a great instrument of benefit to mankind if it unites, comes together, and casts aside some of the differences—differences which the Republican Party also has; if we will bring those differences out into the open and unite upon a great constructive political and economic program of destroying the grip of predatory wealth upon our institutions, and restoring the Government to the average, common man and woman, whom the Democratic Party is especially missioned to represent and protect.

Let me say, in this connection, how well Republicans can suppress their differences! What is the reason for it? Two things:

Money and power. They have the power, and if some rebellious Senator or leader attempts to get the party in trouble by discussing some subject upon which there may be division, he is told that all the power and all the force and all the influence of organized Government employees and political patronage will soon get his political scalp. Power! Power is a mighty suppresser of political differences—a great prop in keeping the divergent elements together.

And money! Money means organization, efficient organization, and efficient organization can suppress and does suppress differences. The Democrats have not money, and have not power, but we have independence, and we have the spirit of democracy. Men in our party are free; leaders can assert openly their differences, as we have just witnessed upon this floor when the very able and distinguished Senators from Maryland and Arkansas expressed and debated entirely different views.

The opposition may have money, they may have political power, but sooner or later the American people will distinguish between a party that voices the real spirit of democracy in its leadership and in its rank and file, in comparison with a party that is muzzled, controlled, and suppressed by the dominance of power and of money.

Mr. President, I have talked longer than I intended to, but I hope I have made some contribution to the discussion of this subject, and I do hope, aside from all the political angles of it, that we will try to do something constructive.

Let us be frank. No one Senator can do it, but a Cabinet officer and an administrative leader can. The Republican governor of my State is trying to do it. He called his forces together yesterday and to his chiefs of departments and bureaus said, in substance: "There is an unemployment problem here, and I want to assume the leadership in solving that problem. What can you suggest, Mr. Department Chief? Where can you improve working conditions in your department? What can you suggest in the way of new appropriations or new undertakings?"

The solution can not come from one or two out of 96 Senators; it must come from those who are in power, to formulate and direct the executive functions of this Government. I do not look to see any solution of the problem that is worth while unless we are able to awaken the administrative officers to realize that the boasted prosperity has vanished. Let the Cabinet get together and talk over the question. Have you heard anything of any Cabinet meeting at which unemployment has been discussed?

Mr. President, I yield the floor.

Mr. HARRISON. Mr. President, I am sorry the Senator from Utah [Mr. SMOOT] is temporarily out of the Chamber. He announced a remarkable doctrine this morning, that "failures are not made in hard times but are made in prosperous times." That is the new doctrine of the Republican Party, as enunciated by its leader in this Chamber: "Failures are not made in hard times but are made in prosperous times."

The unemployment in the country, he says, is due to the importations into the United States, and when we questioned the Senator from Utah with reference to exportations, either of manufactured products, agricultural goods, or whatnot, he did not have at hand the statistics, basing his whole argument upon the proposition that unemployment comes from importations and that exportations do not enter into the question.

I submit, Mr. President, that the real key to the index of the prosperity of the country is found in the balance of trade between our exportations and our importations. Importations may increase, but if exportations increase in greater amount the prosperity of the whole is reflected.

Of course, that prosperity may be felt more in certain industries and in certain lines than in others, and there may be a spotted prosperity in the country due to certain artificial tonics that may be applied to certain industries through governmental legislation.

"Importations have caused the unemployment," the Senator says. I submit, Mr. President, that of the importations the figures as to which the Senator produced this morning, showing the importations as being large—and they have constantly changed—four items alone being imported into the United States constitute practically a third of all the importations entering this country. The importations of rubber amounted in 1926 to $500,000,000, the importations of sugar amounted in 1926 to approximately $300,000,000, the importations of raw silks were approximately $400,000,000 in 1926, and the importations of coffees approached $300,000,000 in 1926—and these figures approximate the figures for the other years—and the importations of those four articles together form practically one-third of all the importations into the United States.

I might enumerate the large importations of copper, of tin, and of tin ore. But how can these importations affect the industrial prosperity of the country by making unemployment greater?

Mr. President, there is unrest in this country, there is uncertainty as to what is going to happen along certain lines, and there is unemployment, as has been graphically portrayed by the distinguished Senators from New York and Massachusetts. The Senator from Utah undertakes to defend the present condition, picturing a roseate setting to the American people, and a prosperous condition, but he does not back up his assertion by stating any facts as to the number of unemployed in this country.

I shall not forget that in 1921, after the Republican Party had been in control of this body and the other House for nearly three years, after the Republican President had taken oath and had his Secretary of Commerce and his Secretary of Labor working under him, the industrial conditions became so acute that, I believe, it was Secretary Hoover who brought pressure to bear to call a great conference here to deal with the question of unemployment. That conference laid down certain policies which should be pursued by the governmental agencies. They stated that all public works that had stopped should start up immediately, that the Government should make adequate appropriations to do that work and to give employment to the millions of unemployed in this country. They appealed to the public that the let-up in building operations should cease, and that building should go ahead, so that this condition might be remedied.

The Secretary of Labor in his report at that time stated that there were between 3,500,000 and 5,000,000 men out of employment in the United States. The situation was appalling. The Republican Party had been in control of the Congress then for nearly three years. Certainly they can not charge in reason that the Democratic Party had any influence in bringing about that condition. Yet the Senator from Utah [Mr. SMOOT], as the spokesman of the administration, trying to minimize present conditions and apply sun baths to the American people, held out some hope that the situation is not as bad as it is reputed to be, but gave no statistics as to the number of unemployed in the country. With as much courage as the Senator from Utah possesses, I dare say he would not venture to go into the State of Rhode Island or the State of Massachusetts, or many of the other States in the country, and make his prosperity argument. There is no telling what they would do to him. They know the situation, because they see it, they hear it, they feel it.

I submit, Mr. President, that if all the prosperity was here that the Senator from Utah talks about, the Congress and the administration are derelict in doing their duty by the taxpayers of the country. From the Senator's own lips, as chairman of the powerful Finance Committee, fell the statement that there is a surplus now coming in, from the revenues drawn from the taxpayers of the country, of approximately $500,000,000. He said that prosperity would probably continue but that they do not know yet what the Congress is going to do with reference to passing appropriation bills, and in order to defend his indefensible position and that of his party colleagues he cites the flood control bill, which has not yet been taken up for consideration by either branch of the Congress. The Senator knows, the administration knows, and everybody knows that the highest amount that will probably be appropriated immediately for flood relief is something like $30,000,000 or $40,000,000, because that is the amount which it is said might be used, and not more than that, during this year.

Yet, with $500,000,000 piled up in the Treasury as a surplus, exacted from the stooped and tired and burdened taxpayers of America, he and his colleagues refused to listen to our appeal to take up for consideration and report out of the Committee on Finance the tax-reduction bill. Ah, the many promises that have been made by those in high authority during the last year with reference to tax reduction! How they have broken those promises. How they have deliberately deceived the American taxpayer with respect to this question. Last year when the Senator from North Carolina [Mr. SIMMONS] employed every parliamentary maneuver and all his fine ability to pass through the Congress a measure so that the people might receive immediate tax relief, those of us over on this side of the aisle who were cooperating with him and fighting for that relief were stopped by those on the other side of the Chamber. The same course was pursued in the House of Representatives.

But those in high authority, from the President down, following the adjournment of the last session of Congress, promised upon the reconvening of the Congress immediate tax relief. The papers were daily carrying those news items. We came here in December, and over in the other branch of Congress

the leaders of the Republican Party got together and said, "Let us pass first the bill to give tax reduction to the American people." They said, "There is nearly $500,000,000 of surplus which has been drawn from the taxpayers of the country. It is indefensible for us not to give immediate relief. President Coolidge in his message has said that it is wrong, that it is unjust to lay a greater tax upon the people than is necessary for the economic administration of the Government." I think he almost went so far as to say that "it was a species of larceny to do it." Yet these gentlemen in the other branch of Congress said, "We must pass this bill," and so they got unanimous consent, at the request of the chairman of the Ways and Means Committee, to label that "House bill No. 1." They were jealous that some little bill might be reported out first which might be given "No. 1," which might have "No. 1" attached to its masthead, and so Mr. GREEN asked unanimous consent, and it was procured, to label it "House bill No. 1."

They passed it even before Christmas. Many of them went back home and no doubt told their constituents that they, acting as Santa Claus, were going to give to the American people some Christmas greetings in a form of tax reduction. The bill came over here. Those of us on this side of the Chamber who are members of the Finance Committee at once moved for the immediate consideration of the bill. We took a vote on it. Every Republican Senator on the Finance Committee voted against the consideration of the bill which only a few weeks before was hailed by the Republican leadership in the House as House bill No. 1. From that day to this, no matter what have been our efforts to force a consideration of that measure by the Finance Committee, being in the minority, we have been blocked. This morning the Senator from Utah, chairman of the Finance Committee, said that he does not know when tax reduction will be considered by this body.

Mr. FLETCHER. Mr. President——

The PRESIDING OFFICER (Mr. REED of Pennsylvania in the chair). Does the Senator from Mississippi yield to the Senator from Florida?

Mr. HARRISON. I yield.

Mr. FLETCHER. It may be that the purpose is to keep up the high taxes and the enormous expenditures under this economical administration. It appears that the ordinary Government expenditures during the four years under the Taft administration averaged $7.14 per capita, while during the four years of Wilson's administration from 1913 to 1916, before the United States entered the World War, the expenditures averaged $7.10 per capita. During the past four years of the Coolidge administration the expenditures have averaged $30.29 per capita.

Mr. HARRISON. That tells the story. Ah, if we could broadcast it from every radio station and through the press of the country from now until election day, the American people would wake up and the nefarious policies advocated by the Republicans in Congress and administered by the present administration, increasing the per capita tax upon the American people from $7 during the Democratic administration to more than $30 now, would be startling news to many people in the country.

The Senator from Utah this morning, in talking about importations, did not tell that behind all he was saying was a desire to speak for no reduction of some tariff rates upon some of the things that are trust controlled in this country, such as aluminum, and that he was pleading for an increased tariff not only on aluminum but other industries for which the Republican Party has long acted as a wet nurse. I doubt not that that speech is the keynote speech, the bugle that is sounding the call in this early morn of the approaching campaign for others of his political faith to wake up, join the ranks, and begin to make the big beneficiaries of the Republican Party believe that we are going to give them more privileges, greater license, that they might exact from an already oppressed American people greater tribute. It might be the beginning of a plan to obtain large contributions from those who are always seeking greater special privileges at the hands of the Government.

I wish he had told in his speech this morning the large cost that these tariff rates which he wishes to increase have placed upon the people of the country. It has been variously estimated that $4,000,000,000 would be about the amount in the increased cost alone through this governmental policy of the present administration. As the campaign period approaches we will perhaps hear more of just such speeches as that, but the American people will soon wake up to the situation and then they will drive from power those who have attempted to debauch the electorate, who have corrupted offices in so many instances which they have filled, and who have in a hundred different ways added to the already great burdens of the American taxpayer.

CONSUMPTION OF AGRICULTURAL PRODUCTS REPRESENTED BY IMPORTS

Mr. WALSH of Massachusetts. Mr. President, will the Senator from Alabama yield?

Mr. HEFLIN. I yield to the Senator from Massachusetts.

Mr. WALSH of Massachusetts. Through the courtesy of the Senator from Alabama, I ask unanimous consent to have printed in the RECORD a statement prepared at my request by the United States Tariff Commission. During the debate on the resolution favoring tariff revision at this session of the Congress a great deal was said about imports of agricultural products. Indeed several requests for additional protection due to imports of agricultural products have been presented to the Congress and the United States Tariff Commission. For information purposes this table, which was prepared by the United States Tariff Commission, will be valuable. It shows the imports of important agricultural products during the last five years, the total domestic consumption and the per cent of consumption as represented by imports. I ask, in order that the Senate and the country may have this information, that the table, together with the accompanying letters from the Tariff Commission, may be printed in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered. The matter referred to is as follows:

UNITED STATES TARIFF COMMISSION,
Washington, February 25, 1928.

Hon. DAVID I. WALSH,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR WALSH: Since the receipt of your letter of January 16 we have been engaged upon the preparation of the five tables transmitted herewith which show for agricultural commodities of significance domestic production, net imports, domestic exports, domestic consumption, and the ratio of imports to consumption for the years 1922, 1923, 1924, 1925, and 1926.

The amount of detail necessary in the preparation of these tables has delayed their completion longer than we had anticipated, but it is believed that they are correct. Some of the figures had to be traced to original sources, and it was necessary to convert some of them into comparable units for use in the several columns of the tables.

We trust that the tables may be of some assistance for your purposes.

Very truly yours,

JOHN F. BETHUNE, *Secretary.*

Memorandum concerning the relation between production and imports for certain commodities shown in the accompanying tables

CHEESE

The domestic production of cheese is largely of the Cheddar type (ordinary cream cheese). Imports are of the Cheddar type from Canada, Swiss cheese from Switzerland, and relatively small quantities of numerous other special cheeses from Europe.

WHEAT

Imports of wheat are largely of the northern spring variety, which competes directly with northern spring wheat produced in the United States. The imports are, therefore, not strictly comparable with the domestic production of all types of wheat. Of our total consumption of hard spring wheat, the imports represented 5.19 per cent in 1922, 5.08 per cent in 1923, 3.15 per cent in 1924, 0.64 per cent in 1925, and 0.28 per cent in 1926.

POTATOES

Imports consist largely of seed potatoes from Canada. Early varieties are imported in smaller amounts from Bermuda, Cuba, and the West Indies.

CATTLE

Live cattle imported into the United States are chiefly stockers and feeders (thin animals) from Canada and Mexico. Cattle of this type constitute the bulk of the surplus production of those countries and compete directly with domestic cattle of the same type.

BUTTER

Imports of butter are chiefly from New Zealand, Denmark, and Canada. The Danish butter competes more directly in New York with the high-grade, sweet-cream butter from Minnesota and Wisconsin than with other grades. Although some high-grade butter comes from New Zealand and Canada, a part of these imports is of lower grades of butter.

ONIONS

Two types of onions are imported. The Spanish onions compete directly with the Spanish onions produced in the Western and Mountain States; Egyptian onions are imported in the spring and compete with the strong type onions held in storage and the Texas and southern California Bermudas, which are marketed during the period of the Egyptian importations.

CORN

Imports of corn are chiefly from Argentina, and compete with American corn, principally upon the Atlantic and Pacific seaboards. The imported corn is flint corn, a hard corn, while the bulk of the domestic production is of the dent varieties considered softer than the flint corn.

UNITED STATES TARIFF COMMISSION,
Washington, March 5, 1928.

Hon. DAVID I. WALSH,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR WALSH: Supplementing the letter of February 25, transmitting table of statistics of certain agricultural commodities, we take pleasure in sending to you herewith a summary table of the information contained in the last two columns of each of the five tables previously sent you.

It is hoped that this additional compilation may be of assistance to you.

Very truly yours, JOHN F. BETHUNE, *Secretary.*

IMPORTANT IMPORTED AGRICULTURAL PRODUCTS

Domestic consumption and per cent of consumption represented by imports

[Source: From detailed tables compiled from Foreign Commerce and Navigation, from official statistics of the Department of Agriculture, and from data supplied by staff experts of the Tariff Commission]

KANAWHA RIVER BRIDGE

Mr. DALE. Mr. President, whether we have unemployment or not we still must continue to build bridges, especially in West Virginia. I call the attention of the Senator from West Virginia to the bill that I ask unanimous consent to report favorably without amendment from the Committee on Commerce. It is the bill (H. R. 9843) to extend the times for commencing and completing the construction of a bridge across the Kanawha River in or near Henderson, W. Va., to a point opposite thereto in or near Point Pleasant, W. Va., and I submit a report (No. 494) thereon.

Mr. NEELY. I ask unanimous consent for the immediate consideration of the bill.

There being no objection, the bill was considered as in Committee of the Whole.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

GARDEN PROFITS AND POULTRY SHIPMENTS IN SOUTH CAROLINA

Mr. BLEASE. Mr. President, I have two short articles from the Columbia (S. C.) State of Monday, March 5, 1928, with reference to garden profits and poultry shipments in that State, which I ask may be printed in the RECORD.

The PRESIDING OFFICER (Mr. FESS in the chair). Without objection, it is so ordered.

The articles are as follows:

PICKENS GARDEN YIELDS PROFITS—MRS. A. P. RAINES OF MAYNARD SECTION CLEARS $2,676.40 FROM VEGETABLES LAST YEAR

(Special to The State)

PICKENS, March 4.—A clear profit on her garden of $2,676.40 is the remarkable record of Mrs. A. P. Raines, of the Maynard section of this county, winner of first place in the best garden contest conducted by the home demonstration department of Winthrop College. The major portion of the profits came from the sale of potato, tomato, and cabbage plants, though the sale of such fresh vegetables as spinach, turnips, and cabbage on near-by markets contributed handsomely. The Greenville market, especially, provided a steady outlet for the products.

Mrs. Raines is a home demonstration club member and became interested in her project through attending the meetings of her club. "I never knew what spinach was until four years ago, when the home demonstration agent talked about it at the meeting, and now it is my best seller," declares Mrs. Raines. The active cooperation of her husband is a partial explanation of the results that have been secured.

The garden profits of this Pickens county farm woman have showed interesting growth during the past four years. In 1924 she cleared $100; in 1925, $682; in 1926, $1,436; and last year, $2,676.40.

ANDERSON SHIPS TWO POULTRY CASES

(Special to The State)

ANDERSON, March 4.—Two carloads of poultry, containing about 35,000 pounds, were shipped to Philadelphia from Anderson. One of the cars was brought here from Belton Wednesday after 10,000 pounds of fowls had been secured there.

Total receipts for the poultry included in the shipment were given as approximately $6,500, of which about $4,500 was paid out at Anderson.

THE COLOR LINE

Mr. BLEASE. Mr. President, I have here an article from the Baltimore Afro-American, which I ask may be read by the clerk.

The PRESIDING OFFICER. The clerk will read, as requested.

The Chief Clerk read as follows:

[From the Afro-American, Baltimore, Md., March 3, 1928]

COLOR LINE IS DRAWN HERE AT NATION DINNER—BALTIMORE COMMITTEE PROMISES DIFFICULTIES AT SOUTHERN HOTEL—POOR FOOD OTHER PLACES—MRS. SPAETH—WASHINGTON COMMITTEE WIRES AFRO, DINNER THERE WELCOMES ALL

The Baltimore Nation dinner scheduled for the Southern Hotel March 9 has drawn the color line.

Invitations were sent out three weeks ago to readers of the New York Nation, inviting them to attend the dinner in honor of Oswald Jamison Villard, for 10 years its editor.

Similar dinners are to be staged next week also in Washington, Rochester, Philadelphia, New York, and Boston.

COLOR-LINE DIFFICULTIES

In Baltimore Wednesday Mrs. R. A. Spaeth, 307 Edgevale Road, Roland Park, secretary of the local committee, sent out the following notice:

"I have been asked to tell you that the Anniversary Nation Dinner in honor of Mr. Villard will be held at the Southern Hotel.

"It is unnecessary for me to point out the difficulties that might arise if you attempted to attend the dinner. Please believe that the policy of the Southern Hotel is not that of the Nation and that we regret very much being unable to take advantage of your kind willingness to cooperate with us in this celebration."

NO DECENT DINNER

Asked why the committee selected the Southern Hotel, knowing its "small-town" policy, Mrs. Spaeth said, "It was the only place in town where a decent dinner could be gotten for the price of $2.50."

WELCOME IN DISTRICT OF COLUMBIA

Miss Dorothy Detzer, head of the Washington Nation committee, wired the Afro Wednesday, "Colored readers of the Nation will be welcome here." The dinner is to be staged at the Washington Hotel, March 1, with Senator NORRIS presiding. The Speakers include Zona Gale, Heywood Broun, and Mr. Villard. Tickets are $3.

Mr. BLEASE. Mr. President, I suggest the absence of a quorum.

Mr. CARAWAY. Mr. President——

Mr. McKELLAR. Mr. President, will the Senator withhold that suggestion for just a moment?

Mr. BLEASE. Very well.

Mr. CARAWAY. What is the dinner they have been keeping these negroes from attending or letting them attend—which is it?

Mr. BLEASE. I would rather that would come out a little bit later. However, I want to say that some men do not mind associating at the table with certain other people, but that the people of my State might object to voting for that kind of a man for President of the United States.

Mr. CARAWAY. Does the negro object to the company? Is that what the Senator complains of? [Laughter.]

Mr. BLEASE. No. The negroes of South Carolina might object to some of the company, I am satisfied.

The PRESIDING OFFICER. Does the Senator from South Carolina withhold his point of no quorum?

Mr. BLEASE. Yes, Mr. President; for the present.

RADIO CONTROL

Mr. McKELLAR. Mr. President, during the last few days I have received a great many protests against the confirmation of the members of the Radio Commission whose names have been sent to the Senate. I have also received a great many protests as to the methods which are now being used by the Radio Commission in the matter of radio control. One of those letters, from Mr. R. M. Henry, of Memphis, Tenn., is pertinent enough to be placed in the RECORD.

Mr. CURTIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Tennessee yield to the Senator from Kansas?

Mr. McKELLAR. I shall do so in just a moment.

Mr. CURTIS. I wish to say I hope the Senator from Tennessee will not place letters in the RECORD that ought to be considered in executive session.

Mr. McKELLAR. The letters have nothing to do with the executive matter; they deal entirely with the radio situation, though it does refer to the Caldwell nomination, incidentally.

Mr. CURTIS. I raised the question because I heard the Senator refer to objections to the confirmation of members of the commission.

Mr. McKELLAR. I not only desire that the letters to which I have just referred may be printed in the RECORD, but I want the reply to that letter, written by the chairman of the Radio Commission, my friend Judge E. O. Sykes, also to be inserted in the RECORD. I desire also to have inserted in the RECORD excerpts from public interviews given by Mr. Caldwell, one of these nominees, for a place on the commission. I also wish to add a statement made by the Senator from Washington [Mr. DILL] on this same subject and let them all be included in the RECORD as a part of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

THE AMERICAN INSURANCE CO.,
Memphis, Tenn., February 23, 1928.

Hon. K. D. MCKELLAR,
United States Senator, Washington, D. C.

Re: Federal Radio Commission.

DEAR MR. MCKELLAR: As one of the invisible radio fans, I am writing you in reference to a controversy between the W. K. Henderson broadcasting station of Shreveport, La., and the Federal Radio Commission.

I have listened to a number of speeches against the station and for the station. It is a well-known fact that warm weather creates static, and naturally a station located as far south as Shreveport could easily be drowned out by the powerful stations of the North and East.

The air, which is the only thing left that is free in this country, to my mind has been gobbled up, as usual, by the northern and eastern broadcasting stations.

The Federal Radio Commission, if you will obtain the data from them, will disclose that about 99.4 per cent of the power of the radio stations has been granted to New York, Pennsylvania, Illinois, and other eastern sections. Very few stations in the South have sufficient power to carry the message of the broadcasting station beyond the State in which the broadcasting station is located.

At the present time, no matter where you turn the dial of your receiving set, you hear the announcer recommend some brand of tooth paste, automobile tires, automobiles, ginger ale, storage batteries, and other merchandise too numerous to mention. The leading power stations of the country are hooked up in a chain. No matter how powerful your receiving set is, you can not tune them out.

I happened to have at the time I purchased a receiving set a Radiola 30, which at the time I purchased same, about a year ago, was considered about the last word in receiving sets. Every night the hook-up of the chain stations is so great that this receiving set has to listen to the same music everywhere.

I mention broadcasting of sales, or the selling of merchandise over the radio, from the fact that one or two independent stations, especially Shenandoah, Iowa, have been criticized severely in attempting to sell seeds and nursery stock, or quote prices over the radio, when the northern and eastern stations are doing nothing in the world but promote large enterprises.

The radio act should be so amended that, of course, a competent Radio Commission could supervise and control the wave lengths and power of the station, but that Radio Commission should be so constituted, Senator, that all sections of the country, of each State, should have their pro rata share of the power and wave lengths that are available.

The North and East have hogged the air, and if you will tune in your radio you will find it out. If a controversy arises between the commission and an independent station, the Federal court of the district in which the broadcasting station is located should be open to the owners of the broadcasting station for the court to adjudicate or decide the rights the station has. A broadcasting station should not have to go to the expense of sending their witnesses to the district court in Washington. There is a man up now for confirmation on the Radio Commission by the name of Caldwell. It has been charged, and not denied, that Caldwell is drawing a salary of $7,000 from a magazine that is controlled by the national hook-up of broadcasting stations. If that is true, he is not the right man to be on the commission and should not be confirmed.

I know that you will take the time and trouble to investigate the controversy between the W. K. Henderson broadcasting station and the Radio Commission, and I know that if once you feel that the South is being discriminated against and that Mr. Henderson has been unfairly dealt with that you will lend your efforts to correcting the wrong.

Since you have been our Senator this is the first letter I have ever addressed you on any subject, although you being my personal friend and attorney for my company for years, and having an opportunity of knowing you intimately before you were elected Senator, I know the type of square shooter you are. It is very largely a deal bordering on the famous "director-stockholder deal" that you ran into in Memphis and licked to a frazzle.

If you will take the time and trouble to look into this controversy and give it a little consideration, I will appreciate same.

With sincere wishes and best personal regards, I am

Yours very truly,

R. M. HENRY.

FEDERAL RADIO COMMISSION,
Washington, D. C., February 28, 1928.

Hon. KENNETH MCKELLAR,
United States Senate, Washington, D. C.

DEAR SENATOR MCKELLAR: Replying to your favor of the 25th instant, with attached letter from Mr. R. M. Henry, under the Federal radio act, the country is divided into five zones.

The first zone has a total watt power of approximately 200,000; the second zone approximately 102,000; the third zone, which is the southern zone, approximately 50,000; the fourth zone approximately 165,000; and the fifth zone approximately 65,000. There are a number of high-powered stations in the New York vicinity, which make a total wattage of the first zone so great. The same situation exists around Chicago, which makes that of the fourth zone so great..

With reference, more particularly to the third, or southern zone, the Federal Radio Commission during its existence has increased the power of a great many stations in this zone, and has a number of applications for increases in power, which I have recommended, and which I think will be granted just as soon as a majority of the commission has been confirmed by the Senate.

Our people in the South, because of lack of large cities, financial backing, etc., have not been in a position to ask for very great increases in power. For instance, the most powerful stations we have at the present time have only 5,000 watts. These stations are satisfied with that power. I have personally taken the matter up with a number of good stations in the South, and recommended to them that they request increases in power in order to serve our part of the country, and have gotten some responses to this appeal.

There is no discrimination against our section by the Federal Radio Commission. On the contrary, I find the other members quite sympathetic with our needs, and believe that my recommendations, or practically all of them, for increases in power in this zone will be granted.

I return Mr. Henry's letter.

With kindest personal regards.

Sincerely yours,

E. O. SYKES, *Acting Chairman.*

Radio stations, first zone: If you have followed newspaper reports of the recent discussions in the committees of Congress charged with radio legislation, you have undoubtedly detected both (1) a very evident dissatisfaction with the present distribution of radio stations, powers, and frequencies throughout the various States; and (2) a demand for these to be more "equitably" divided as between States.

In view of the fact that at present a very few States and metropolitan communities have a high concentration of radio, while nearly 40 other States are far below the average of the country, it is apparent that any redistribution in accordance with the State rights views of Congress must mean withdrawal of many wave lengths from centers and States now having an excessive proportion, as well as reduction of powers in such communities also.

Since such redistribution will be chiefly at the expense of the congested first zone area (which now has by far the greatest power, and also certain excessive channel concentrations), I feel it my duty to call this impending situation to your attention at this time in order that you may duly regard it in your future plans for operation.

O. H. CALDWELL, *Commissioner.*

Mr. McKELLAR. This letter appeared in the Boston Post of February 28. This Caldwell letter admits our contentions as to the present allocation, and at the same time it is very clearly intended as propaganda to arouse opposition to the pending provision on the part of the New England States and people.

In fact, this article predicated upon the false propaganda that the power in all zones must be reduced to that of the third-zone States:

This bill, if passed, will result in the wholesale slaughter of New England stations, wave lengths, and power and force many off the air.

THE RADIO SITUATION

By C. C. DILL, United States Senator from Washington

Although more than a year has elapsed since the radio law was signed by the President, the Radio Commission has entirely failed to solve the problems of radio. Most of all, it has refused to try to improve conditions by such methods as experimental allocations of wave lengths, by trying increases and decreases of power for stations over temporary periods, and by enforcing its own regulations strictly as an earnest, active commission should have done.

Congress may be blamed for not having furnished needed funds during the first nine months, but since December the commission has had all the money it has asked Congress to appropriate and yet it has done less since Congress convened, so far as improving radio reception is concerned, than during any equal length of time since its first meeting. In fact, it has done almost nothing except hold hearings and postpone new allocations of wave lengths.

Mr. Lafount, commissioner for the fifth zone, who was appointed last, has really been trying to improve conditions in the far West. He has acted as speedily as he could learn enough about conditions to act intelligently. In the other zones, the commissioners have postponed action from week to week and month to month. Stations in the first and fourth zones have most of the wave lengths and power, but the equitable radio service clause is entirely disregarded.

Why? Have they plans so revolutionary that, if adopted, Congress would refuse to confirm their appointment? Are they awaiting confirmation in order to give the Radio Corporation and its affiliated corporation stations even more desirable channels and even more power? Their failure to act as well as their failure to outline any definite policy has caused the Senate Interstate Commerce Committee to hesitate to recommend confirmation. The committee is unwilling to trust them, but has hoped they would act to improve conditions.

Stations in the two largest cities, New York and Chicago, have allocations to use more than one-third of the wave lengths, and many of these are on cleared channels. This means that other sections can not secure new stations needed in other parts of the country.

I repeat what I said on the floor of the Senate some days ago, namely, either they lack ability to meet the situation or they are afraid to act. The fact that March 15 is near should cause them to act speedily to have the situation as nearly cleared up as possible if the work is to be turned over to the Department of Commerce then.

Personally, I hope the commission will be continued another year, and if the present commissioners should refuse to do their duty under the law, that the Senate will refuse to confirm them and the President will select new men who will have the courage, the ability, and the independence to solve the numerous and increasingly difficult problems of radio.

Mr. McKELLAR. Mr. President, if the Senator from Alabama [Mr. HEFLIN] will permit me to occupy the floor for a moment longer, I wish to take this occasion to say that, in my judgment, the radio commissioners have wholly misunderstood the purposes for which they were appointed. Instead of looking after the radio situation in the interest of all the people and of all the users of radio and all those who are interested in it and the various sections of the country, I fear they have simply regarded it to be their duty solely and alone to see how much of the air they could put in the control of the great radio corporations of the country. I wish at this time to make my protest against the Radio Commission taking such position as to their duties.

Mr. ROBINSON of Arkansas. Mr. President, will the Senator from Tennessee yield to me for just a moment in connection with his statement?

The PRESIDING OFFICER. Does the Senator from Tennessee yield to the Senator from Arkansas?

Mr. McKELLAR. I shall be happy to do so.

Mr. ROBINSON of Arkansas. I likewise have received many communications complaining of the confusion that exists in the radio field. Many complaints have been registered with the commission concerning which no action has been taken. Upon inquiry of the commission as to whether it was possible to afford relief in a certain case, I was advised that no action was possible until the members of the commission had been confirmed, some of the names presented not having been acted on by the Senate. Does the Senator from Tennessee know of any reason why the commission can not function pending the confirmation of those members?

Mr. McKELLAR. I know of none whatever. They are acting commissioners, and there is no reason in the world why, under the law, they can not function. They ought to function; they ought to carry out the law, as they are required to do, in the interests of all the people; the people ought to know and we ought to know before we confirm them just what their attitude with reference to this great industry is.

Mr. ROBINSON of Arkansas. It has occurred to me that if the members of the commission feel that they can not function until after confirmation has been had the Senate would be justified in taking very stringent action concerning such members of the commission as assumed that attitude; in other words, as to those who advise that no attempt would be made to perform their duties until they had been given assurance that they would be permitted to continue in office to the end of their terms.

Mr. McKELLAR. I agree with the Senator entirely.

Mr. MAYFIELD. Mr. President——

Mr. HEFLIN. I can not yield further.

Mr. ROBINSON of Arkansas. I hope the Senator from Alabama will permit me to conclude my statement.

Mr. HEFLIN. Very well.

Mr. ROBINSON of Arkansas. I realize that the whole subject of radio is surrounded by confusion, and that the difficulties attached to a radio commissioner's position are very great and numerous.

Mr. McKELLAR. I agree with that statement of the Senator from Arkansas.

Mr. MAYFIELD. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Texas?

Mr. HEFLIN. I will yield for merely a question.

Mr. MAYFIELD. I wish to ask the Senator from Tennessee [Mr. McKELLAR] if, under the present law, the Radio Commission does not possess the power to distribute the air equally among the five districts of the country?

Mr. McKELLAR. They possess the power.

Mr. MAYFIELD. Then, why do they not exercise that power?

Mr. McKELLAR. I can not say. I wish to say that I have received a letter, which I have sought and obtained permission to have printed in the RECORD, showing the very unequal distribution of power in the various sections of the country. It is one of the things against which I protest. Under the holding of the commission one zone has 200,000 watt power, while one southern zone has only 50,000 watt power. This is contrary to the intention of the law, is wholly unjust, and absolutely indefensible.

Mr. MAYFIELD. I will ask the Senator from Tennessee if it is not a fact that there is one station in New York that is allowed more watts than are allotted to all of the 11 States of the South put together?

Mr. McKELLAR. One station in New York, as I understand the situation, has more power than have all the entire Southern States.

Mr. MAYFIELD. Then why does not the commission make an equal distribution among the five districts of the country?

Mr. McKELLAR. I think they ought to do so. We ought to confirm no commissioner who is responsible for this unequal division of radio power.

Mr. DILL. Mr. President——

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Washington?

Mr. HEFLIN. I yield.

Mr. DILL. I desire to make one statement in answer to the question of the Senator from Texas [Mr. MAYFIELD]. The Radio Commission not only have the power to give the South its proper share of stations, wave lengths, and power but the present law makes it the duty of the Radio Commission to do that very thing.

Mr. MAYFIELD. Then is any amendment of the law in that respect necessary?

Mr. DILL. None at all.

CALL OF THE ROLL

Mr. BLEASE. Mr. President, I renew my suggestion of the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Ashurst	Fess	McNary	Smith
Barkley	Fletcher	Mayfield	Smoot
Bayard	Frazier	Neely	Steck
Black	George	Norbeck	Steiwer
Blaine	Gerry	Norris	Stephens
Blease	Gooding	Nye	Swanson
Borah	Gould	Oddie	Thomas
Bratton	Hale	Pine	Tydings
Brookhart	Harris	Pittman	Tyson
Broussard	Harrison	Ransdell	Wagner
Bruce	Heflin	Reed, Pa.	Walsh, Mass.
Capper	Johnson	Robinson, Ark.	Walsh, Mont.
Caraway	Jones	Sackett	Warren
Curtis	Keyes	Schall	Willis
Cutting	La Follette	Sheppard	
Deneen	McKellar	Shipstead	
Dill	McMaster	Simmons	

Mr. CURTIS. I wish to announce that the Senator from Wyoming [Mr. KENDRICK] and the Senator from Utah [Mr. KING] are detained in the Committee on Appropriations.

The PRESIDING OFFICER. Sixty-five Senators having answered to their names, a quorum is present.

MUSCLE SHOALS

The Senate, as in Committee of the Whole, resumed the consideration of the joint resolution (S. J. Res. 46) providing for the completion of Dam No. 2 and the steam plant at nitrate plant No. 2 in the vicinity of Muscle Shoals for the manufacture and distribution of fertilizer, and for other purposes.

Mr. HEFLIN. Mr. President, most of the Senators present have heard the Muscle Shoals matter discussed time and time again. My colleague [Mr. BLACK] on yesterday and the day before very ably presented this question to the Senate from our viewpoint. He stressed a point that I have always stressed and that I propose to stress to-day, namely, that Congress should keep faith with the American farmer.

Before me upon this desk is the original law providing for this project at Muscle Shoals. It specifically sets out that it is to be devoted to making nitrates for the Government in time of war, and fertilizer for the farmer in time of peace. That is the solemn obligation and covenant that we made when we singled out Muscle Shoals for development by the Government. No one can deny that.

Mr. President, some of the Senators here know what happened at Muscle Shoals after the World War. Work on Dam No. 2 at Muscle Shoals was stopped. Nothing was done to complete the project. The cofferdams in the river were washing away. Work that already had been done was deteriorating. The money already invested was about to be lost. A commission from the House went down to view the situation and to make recommendations as to what disposition should be made of it. That commission returned, and a majority of its members recommended that the project be abandoned and the property junked. It was then that Henry Ford appeared upon the scene, having gone to Muscle Shoals with Mr. Edison. While there he determined to make a bid in keeping with the declared purpose of a law enacted by Congress. He did make a bid, and he obligated himself to make 40,000 tons of fixed nitrogen every year for the use of the farmers of America and to sell it to them at 8 per cent profit, and to keep that plant in good condition to be turned over to the Government when the Government should need it for nitrate purposes in time of war.

Some of the Senators here know how long-drawn-out the battle on the Ford bid was. They know what happened. Mr. Ford's bid was here with us, I believe, for about three or four years. For one reason or another Congress delayed action. Nothing was done, and finally Mr. Ford, weary of waiting and sick of delay, became disgusted and withdrew his bid. He withdrew his bid because Congress refused to act and carry out the provisions of the original act and devote Muscle Shoals to the making of fertilizer for the farmers in time of peace.

Then a concurrent resolution was passed by Congress providing for a joint committee of three Senators and three Members of the House to solicit bids for Muscle Shoals. A few bids were received. One was submitted by the American Cyanamid Co. and one by the Southern Power Co. that were considered as the best bids. There were three or four other bids, but the committee did not consider them favorably. These two bids first mentioned were the ones that were debated by the special committee of the House and Senate, composed of three Senators—the Senator from Illinois [Mr. DENEEN], the Senator from Kentucky [Mr. SACKETT], and myself from Alabama, and Congressman JAMES, of Michigan, Congressman QUIN, of Mississippi, and Congressman MORIN, of Pennsylvania.

We considered these bids and took testimony concerning them for several weeks. The committee finally reported to the Senate and the House. We differed as to which one of these bids should be accepted, the Senator from Illinois [Mr. DENEEN] and the Senator from Kentucky [Mr. SACKETT] favoring one proposition, and I favored another.

No action at all was taken on the matter in the Senate or in the House and Congress again adjourned without anything being done with Muscle Shoals. I was for the Cyanamid bid because I thought it meant fertilizer for the farmer. There was no difference between the Senator from Kentucky and the Senator from Illinois and myself, as I understood it, that this project should be kept out of the hands of the Government and leased to some private individual. We were divided in opinion as to which one of these bidders would best carry out the original purpose of the law. We differed honesty as to that; but there is no difference between us, as I understand, upon the question of keeping the Government at Muscle Shoals out of business in competition with the private citizens of America.

At the outset Mr. Mayo, in his testimony before the Senate Committee on Agriculture supporting the Ford bid, told us what Mr. Ford intended to do at Muscle Shoals. Much has been said here in one way and another as to whether or not fertilizer could be made at Muscle Shoals. That is no longer a debatable question. It is an accomplished fact. Fertilizer made at Muscle Shoals has been used on soil around Muscle Shoals. It has been used mixed with other fertilizers and it has been used directly when applied by itself, and it has been a success in both instances.

Mr. Mayo, Mr. Ford's chief engineer, testified before the Committee on Agriculture and Forestry, and he said:

> As I started to say, Mr. Ford in framing up this offer tried to so make it that it covered all the original intentions of the Government to keep it in proper order as a national emergency protection, also to do what the Government had planned in having the plant there in peace times so as to make fertilizer at the lowest possible cost.

Senator HEFLIN. Mr. Mayo, you set out in your contract, I believe, that you are going to use about 100,000 horsepower in making fertilizer?

Mr. MAYO. That is what we figure it will take; yes, sir.

Senator HEFLIN. But I understand Mr. Ford really intends to use more than that.

Mr. MAYO. That is his intention; yes.

Senator HEFLIN. And he expects to manufacture fertilizer on a large scale?

Mr. MAYO. Yes, sir.

Mr. President, that has been my position from the outset. I did everything in my power to have the Ford bid accepted. I have never favored using a small portion of this power to carry on an experimental plant at Muscle Shoals, or to raise funds to carry on these plants elsewhere. I have favored using this power at Muscle Shoals, all that it requires to make 40,000 tons of fixed nitrogen and to make twice that amount if the farmers wanted it made.

I want to state to the Senate in the outset that I would favor using every horsepower at Dam No. 2 and every horsepower that we can develop at plant No. 2 to make the amount of fertilizer necessary to bring down the price of fertilizer to the farmers of the country. The farmers of America are in the clutches of the Fertilizer Trust, and here is an opportunity, and the only opportunity we have, to deliver the farmers of the country from the merciless clutches of the Fertilizer Trust. That opportunity is before us right now. We have it in our power to relieve the farmers of America of a great burden and by our votes to enable him to save several dollars on every ton of fertilizer that he buys.

To show that Mr. Ford intended to make fertilizer on a large scale, continuing, Mr. Mayo said:

Mr. Ford will have to install the necessary apparatus to make the phosphoric acid and potash elements of the fertilizer, so as to make a complete fertilizer.

So, Mr. President, at one time we from the South were united in the main upon this question. Most of the southern Senators supported the Ford offer; and we seemed to be determined, so far as it was in our power, to see to it that the Muscle Shoals project was used to make cheap fertilizer at Muscle Shoals.

Some Senators from the South seem to have gotten away from that idea. Other interests have been busy and they are now seeking to have this Muscle Shoals power sold to power companies to be used for other purposes. The effort is being made here, I am sorry to say, to abandon making fertilizer at Muscle Shoals. Let us not attempt to deceive ourselves. The proposition now before the Senate, the Norris resolution, does not provide that the power at Muscle Shoals shall be used for the benefit of the farmers of America. It is a power proposition, pure and simple. There is no fertilizer in it for the farmer.

We had this matter up before the special committee of Congress of which I was a member, and we discussed every phase of it there. Senators talk about it still being a matter of experiment as to whether fertilizer can be made cheaply at Muscle Shoals. Men who are in the business testify that it can be done. Men who have made a thorough investigation of the subject stated to us that it can be done. Not only that, but Mr. Mayo, Mr. Ford's chief engineer, said, "We believe that we can cut the price of fertilizer in half."

He was considering the fact that they were not going to have to pay such a large price for power, and that plant No. 2 was already in existence, and they would get that at a reasonable figure. I am willing for anybody to get it at a reasonable figure, and I am willing to sell them power to make fertilizer cheaper than I would sell the power to anybody else; for if there is a class of people in this country now that is entitled to special consideration at the hands of Congress it is the farming class of our people.

Special favors are being shown to other classes. Here is an opportunity at Muscle Shoals to bless and benefit the farmer; and you are not showing him any special favor, either. You are not going out of your way to do him a kindness. You are simply living up to the requirements of an act of Congress. It is right here in this big book in front of me. I am calling on Senators to keep the promise that we made to the farmers of the country. We must not break faith with the farmers of America.

Now let us see what it would amount to if we could get started to making fertilizer down there in earnest.

Representative QUIN, of Mississippi, interrogated Major Burns as follows:

You understand I am a farmer. I do not want to confuse the two. I am speaking now of fixed nitrogen. You call this nitrogen by itself. That is what the bill said Mr. Ford was to make—fixed nitrogen. You say according to your idea it would cost $110 a ton to have it in liquid form.

Major BURNS. That is right; in the form of liquid ammonia.

Representative QUIN. Now transform it into power. How much is it?

Major BURNS. My memory is that it would be 7 cents a pound. I think the transformation cost for changing it was a little over 4 cents a pound, so that it would bring the total up to approximately 10 cents a pound. That would be $200 a ton of fixed nitrogen.

Representative QUIN. Then 2,000 pounds of pure fixed nitrogen would cost what?

Major BURNS. It would cost you $200.

Representative QUIN. Well, what does Chilean nitrogen cost—Chilean nitrate?

Major BURNS. It is in excess of $300 a ton.

Representative QUIN. It costs that much now?

Major BURNS. Yes; it costs in excess of $300. It is six and a half times $55, which would be in excess of $350 a ton right now.

Mr. President, Major Burns is the man upon whom the able Senator from Nebraska relies so much, and the nitrogen that the Cyanamid Co. in America can produce as against this constitutes a saving of practically $150 a ton on this ingredient, according to Major Burns's own testimony.

We have never had an opportunity to compete in earnest with the Chilean nitrate. We have nobody really competing with Chilean nitrate. The American manufacturers of fertilizer, the larger ones, are in with them. They get ingredients from Chilean nitrate concerns. There is now the biggest fertilizer combination the world has ever known. Just recently they have formed a world nitrogen trust.

I want to read and place in the RECORD a news item from Paris, printed in the New York Times of December 17, 1927. This followed an announcement in the United States Department of Commerce Finance Bulletin, dated October 24, 1927, as follows:

It is reported that a more far-reaching international entente has been proposed which would include the Chilean producers with the major European synthetic producers and would divide the world's nitrogen markets, fix prices, and regulate sales and production.

Here is another quotation from the Industrial Bulletin of December, 1927:

One hundred companies are listed as being merged or affiliated with the I. G.

That is a big chemical combination in Germany.

Thirteen of these are designated as founders or chief members. Among the 87 others are included fertilizer and agricultural chemical companies; chemical, electrochemical, and metallurgical works; makers of celluloid, artificial silk, and explosives; handlers of compressed gases, and 11 unclassified firms.

I want to call attention to the newspaper account of this trust that was recently formed:

NITRATES PARLEY TO BE HELD AT SEA—GERMANS INVITE NITROGEN INDUSTRY LEADERS FROM FIVE COUNTRIES ON A MEDITERRANEAN CRUISE—HOPE TO PERFECT ENTENTE—AMERICANS, FRENCH, ENGLISH, NORWEGIANS, AND PROBABLY ITALIANS WILL DISCUSS COOPERATION

[Copyright, 1927, by the New York Times Co.]

PARIS, December 16.—The first international trade conference ever held upon the high seas will get under way within the next 10 days when the leaders of the nitrogen industries of the United States, Great Britain, France, Germany, Norway, and Italy leave Marseille aboard a luxurious private yacht for a three weeks' cruise on the Mediterranean. Heads of the German nitrogen trust, who are promoting the unique meeting, hope that an international nitrogen entente will have taken definite form by the time the ship returns to the French port.

The yacht his just been chartered. Orders have been given to stock it with the finest wines, champagnes, and all the delicacies of the season. Nothing will be left undone to make the voyage a happy one. Although a considerable portion of each day will be spent in going over the outstanding issues between the various national groups, frequent stops will be made at attractive Mediterranean places to relieve the strain of the daily sessions.

It is understood that representatives from all nations mentioned above have accepted with the exception of Italy, which is expected to join the others in a few days. According to very reliable information the American synthetic-nitrogen industry will join the cruise, although efforts are being made to give the impression that Americans are not participating, since American laws prohibit industries from becoming parties to international trade agreements.

If any additional evidence of Germany's eagerness to create a nitrogen trust were lacking, the international ocean meeting supplies that lack. The originality of the invitation so intrigued the national groups, it is said, that acceptance was almost immediately assured.

As has been pointed out in previous dispatches, a nitrogen entente is part 2 of the much-discussed billion-dollar Chemical Trust now in operation. Part 1 consists of the dyestuffs agreement signed three weeks ago at Frankfort between the delegates of France, Germany, and Great Britain. Part 3, covering artificial silk, remains the subject of negotiations.

From the German standpoint the nitrogen entente is even more important than the dyestuffs compact, because Germany has superseded her dyestuff manufacturing by the production of artificial nitrates. Several hundred million dollars in capital is involved in the impending Nitrates Trust, and if the Americans join the figure will be substantially increased.

All but half a dozen points have been agreed upon between the respective members, but several of these are causing a delay which is irritating the Germans. Hence the idea of transporting all concerned to the salubrious atmosphere of the Mediterranean away from interruptions and routine life.

If the unprecedented voyage results in a success, a new method of advancing international relations may have been established.

Mr. President, it were enough if I should stop right there to cause every Senator in this body who really cares for the American farmer and his problem to vote to use the power at Muscle Shoals to make cheap fertilizer for the farmer. The Government has this property. A combination has been formed by the great chemical concerns of the earth not only to control the price in three or four or five nations, but in all the nations, to farm out the territory that each one shall supply, and to absolutely dictate the price, to name the amount that shall go to each territory. This trip of the big manufacturers of fertilizer was made in a fine yacht out upon the Mediterranean, and fine wines were furnished, the newspapers tell us, and no doubt they had a glorious time on that yacht upon the sea, discussing ways and means to rob the farmer of America more successfully than they are robbing him now, and God knows they are doing a good job of it now. They are taking in exorbitant fertilizer prices large portions of the fruits of his toil. They have created conditions that make the burden of farming more difficult and disagreeable every year. The farmer is having a harder time now to get fertilizer sufficient to meet his demands than he has ever had before. Something must be done to enable the farmer to get away from the conditions that oppress and rob him.

Senators, before I leave that point, I want to call this to the attention of the Senate. Recently, since Congress met, the Fertilizer Trust has increased the price of the fertilizer that the farmer must use to make his crop this year. The price of agricultural products did not warrant such a raise. Why did they do that? They did that because the big Fertilizer Trust recently formed wanted it done. Will Congress permit the great fertilizer manufacturers of this country and of the world to get together, dictate the price, and hold up and rob the American farmer when we have this Government project at our disposal and it is within our power in the plan that I am suggesting here to-day, to meet this competition, and throw this large amount of fertilizer on the market at a greatly reduced price, which is bound to bring price levels down in the whole fertilizer business in the United States?

Let us see what Mr. Hoover's idea was about this matter. He appeared before the special committee of the Senate and House selected to receive bids for Muscle Shoals, and among other things he said:

A few minutes before I came here I started to dictate something which I would not want to let out, but in order to get these ideas stated, I have set down the general headlines under which the bids should be formulated, to be circulated to these bidders.

First. A 50-year lease upon the property.

Second. The minimum amount of fixed nitrogen to be produced annually.

Third. Undertaking to limit profits on the sale of nitrogen or fertilizer.

Fourth. Minimum annual sum to be paid to the Government for the lease of the properties as they now stand.

Fifth. Maintenance of the plant for national defense, in addition at all times to producing the minimum amount of fixed nitrogen.

Sixth. Method of distribution of power which is not required for fertilizer manufacturing.

And in spite of our purpose and understanding about what the Senate and House wanted us to do, we are confronted with a proposition to take all that power and sell it to people and power companies and take the money that is received and establish a fertilizer plant at Muscle Shoals—the Senator from Nebraska included that in his resolution at my suggestion—and fertilizer plants at a few other places over the country, here and yonder. I am afraid they would not amount to anything. I say that with all kindness to my good friend, the able Senator from Nebraska. We are to sell the power, dole it out to power companies and people who want it for various purposes, and get the money back second hand—that is, if there is any money left for that purpose—and turn it into an experiment station to see whether or not we can make fertilizer for the farmer. The suggestion is simply ridiculous. That is not in keeping with the original act. It is not in keeping with the purpose of Congress, it is not in keeping with our pledge to the farmer, and it ought not to be approved by the Senate.

What else did Secretary Hoover say?

I was asking him some questions before the committee.

Senator HEFLIN. I think they can if they want to, according to my position, bid for Dam No. 2 regardless of any other improvement that is to be made.

Secretary HOOVER. I think it ought to be set out to them that they can bid both ways.

Senator HEFLIN. Yes.

So Mr. President I am now confining my argument as nearly as I can to Senator NORRIS'S resolution, which relates to Dam No. 2, plant No. 2, and the property at Muscle Shoals.

Now, let us see what was in our minds all the time. I asked the question:

What I want to get at if I can, and I think the other members of the committee also, is one bidder who will agree to do all of this. He will first use the power to make fertilizer.

Chairman DENEEN. I think Mr. JAMES refers to line 10 on the first page, which reads, "But no lease or leases shall be recommended which do not guarantee and safeguard the production of nitrates."

And Mr. President that is not guaranteed in the resolution of the Senator from Nebraska. It gets us away from that. We are departing from it entirely. His resolution takes us off on a power proposition.

Again Secretary Hoover testifies:

Senator SACKETT. What does that figure per kilowatt-hour?

Secretary HOOVER. About $20 per horsepower year. Now, we have got a property here that is worth anywhere between two and three million dollars a year to the Government as it stands. I take it everybody is prepared to give that total sum to the manufacture of fertilizers if that is what is wanted, but I do think we ought to get it definite, in some fashion, if we can, so that we can give as little as we have to to get the fertilizer made. I do not think we ought to throw the money away.

Senator HEFLIN. You think that the property down there should pay $2,500,000 a year?

Secretary HOOVER. I think you will get a bid for it to-morrow of around $2,500,000 a year for the power itself.

Senator HEFLIN. You mean for plant No. 2 and Dam No. 2?

Secretary HOOVER. Yes, sir.

Mr. President, the Secretary of Commerce knew what we were driving at and what we had stated our purpose to be to all bidders that they must make fertilizer at Muscle Shoals, and he stated that it should be set out in the contract.

Then the head of the Agricultural Department, Secretary Jardine, appeared before our committee, and he was asked about the same thing:

Secretary JARDINE. You mean that the Government would be able to take this back whenever it desired?

Representative JAMES. Yes, sir.

Secretary JARDINE. Of course, that would be to the advantage of the Government, and it would seem to me it probably would not be to the advantage of Mr. Ford.

Secretary HOOVER. It would be a question of what the terms of recapture were. If a man wanted $25,000,000 to take it back, it would not be much of a bid.

Senator HEFLIN. The lease itself will have a proviso in it that we can cancel it if the lessee fails to carry out his part of the contract.

There is nothing of that character in the resolution of the Senator from Nebraska. There is no provision in it to compel them to make fertilizer. The provisions of his resolution refer in the main to the disposition of power at Muscle Shoals.

Mr. Hooker, a very capable man now engaged in the fertilizer business in the State of New York and who is making money in the business, testified before our special committee. Listen to what he said:

The point of that is that economies can be effected in the manufacture of fertilizer by introducing chemistry into an industry which is now largely a mechanical mixing industry, but those improvements due to modern chemistry and due to things that have superseded cyanamide plant No. 2 can only reduce the cost of fertilizer, in dollars, a few dollars from its present price of $27, $28, or $30 a ton, whereas there is a tremendous saving to the farmer that can be made by cutting that

price completely in two, and that can be done by concentrated fertilizer. Anybody can make concentrated fertilizer. Anybody who is going to bid here can make it. We think we can do it perhaps a little better than somebody else. Perhaps they think they can do it a little better than we can. It is immaterial. We can all do it.

There is no longer any use of experimentation. There is no longer any use of playing with this project of Muscle Shoals to get money to build experiment stations and put chemical professors in them to experiment with the proposition, and all that sort of thing, and prolonging the matter and keeping it from being disposed of as it was intended to be disposed of for the purpose of manufacturing cheap fertilizer for our farmers. Continuing, Mr. Hooker said:

We can make it.

Senator HEFLIN. And cut the price to $14 [a ton]?

Mr. HOOKER. And cut the price down to $15, $14, or $13 [a ton]. That is the thing the farmer has to have, and that is what he can have, but there is only one way in which he can get it.

And, Mr. President, he made it plain to us that the way to get it was to devote that plant down there to making fertilizer, and he was very anxious to get it for that purpose. That was his testimony. It is undisputed. Nobody challenged his statement and he was not the only witness who appeared before us who talked about cutting the price of fertilizer half in two at Muscle Shoals.

Mr. NORRIS. Mr. President, will the Senator yield?

Mr. HEFLIN. Certainly.

Mr. NORRIS. Mr. Hooker was one of the bidders, was he not?

Mr. HEFLIN. Yes; he was.

Mr. NORRIS. He had made a bid there himself?

Mr. HEFLIN. He had.

Mr. NORRIS. He thought he could produce fertilizer in that way. The Senator, however, would not advise the acceptance of his bid, would he?

Mr. HEFLIN. No; but there were some good features in it.

Mr. NORRIS. I think so, too. There were some good features. I had a great deal of respect for a great many of the ideas of Mr. Hooker.

Mr. HEFLIN. So did I.

Mr. NORRIS. But I think the Senator will agree with me in saying that Mr. Hooker was opposed to the cyanamide bid which the Senator himself is favoring.

Mr. HEFLIN. He was opposed to it; he wanted Muscle Shoals and said he hoped we would accept his bid.

Mr. NORRIS. Yes; and the way he thought he could reduce the price of fertilizer was to have us accept his bid, was it not, which the Senator himself and, as I understand it, no other member of the committee was in favor of doing.

Mr. HEFLIN. We really did not reach the point of accepting his bid, because he wanted the Government to put up too much money in addition to the property already in existence at Muscle Shoals.

Mr. NORRIS. Of course, as the Senator probably knows, I have been all over his bid, because he had the same bid before the Committee on Agriculture and Forestry; and we listened to his testimony there at great length. I do not know of anyone now a member of the Committee on Agriculture and Forestry who was in favor of accepting his bid.

Mr. HEFLIN. I am not arguing that they were in favor of it or that it should have been accepted. I am saying what a man who was already in the fertilizer business and who has passed the experimental stage and who is accomplishing what he set out to accomplish said he could do if he could get Muscle Shoals, and that is that he could cut the price of fertilizer in half; that he would enable the farmer to buy a ton of fertilizer for half the price he now pays.

Mr. NORRIS. But the way he was going to get it was so objectionable that nobody who was giving it any consideration on either committee was at all favorable to it. He wanted, as the Senator said, the Government to put up too much money. He wanted the Government to furnish too much capital. He wanted to get too much power at Government expense. Therefore his bid was rejected by everybody.

Mr. HEFLIN. It was not seriously considered by the special committee, but I come back to the proposition that Mr. Hooker is in the fertilizer business, and that he has passed the experimental stage in it and is making money out of it. He told the committee he was making money out of it and expected to continue to do so. He testified that if he could get Muscle Shoals with the equipment we have there, he could cut that price in half, and he said "All of us can do it."

Mr. NORRIS. I think the Senator was a little bit in error when he said that if he could get the equipment there he would take it.

Mr. HEFLIN. Of course, he wanted the Government to furnish the capital.

Mr. NORRIS. He asked a whole lot more. I do not suppose he would give a second thought to accepting nitrate plant No. 2 free of rent and operating it himself and making exclusively fertilizer. He would not do it under those circumstances, or at least, he never has offered to do that.

Mr. HEFLIN. I do not know. He said he did not have enough capital himself and that he wanted the Government to supply it.

Doctor Curtis, of Boston, was on the President's special committee to make inquiry as to Muscle Shoals. He testified before our committee, and I asked him:

Doctor, how much do you think the price can be reduced by manufacturing fertilizer at Muscle Shoals?

Doctor CURTIS. I do not believe a quantitative answer can be given at this time. Certainly, in the long run, you can reduce it very much below the present price, and possibly reduce it more than half.

And yet some Senators are saying here that fertilizer can not be made down there at all, but that it will be a losing business, when everybody who has been before us has said to the contrary. As I have already said, Mr. Mayo, in the outset, representing Mr. Ford as his chief engineer, stated that he believed we could cut the price of fertilizer in half. Mr. Hooker, who is in the fertilizer business, said:

I can cut the price in half, and all of us can cut it in half.

Doctor Curtis said:

In the long run we will cut it more than half.

This is such a plain case that I do not see how anybody is going to be excused by the folks at home if they refuse to use the Muscle Shoals project in behalf of the American farmer and bring him relief from the Fertilizer Trust and enable him to buy fertilizer more cheaply than he is getting it to-day.

The able Senator from Georgia [Mr. GEORGE] and I were talking about fertilizer prices one day last spring, and he told me he had to buy some fertilizer and that the fertilizer people had raised the price to $5 a ton. I want to tell the Senator from Georgia and all the Senators that they have recently raised the fertilizer price again. They raise it whenever they get ready. But the farmer's cotton is bringing a poor price and it is going down and the gamblers on the exchanges are beating the life out of it, and the farmer has to stand off amazed, stunned, dumbfounded, and look on at the cruel oppression of the gamblers on the exchange beating down the price of that which he produces, and on the other hand seeing the Fertilizer Trust, by a nod of the head and stroke of the pen putting up the price of that which he has to have to produce the crop to supply food and raiment for his family.

Mr. President, I submit that we ran well afford to have this one plant set aside for the benefit of the sorely oppressed farmers of our country.

Here are some questions and answers on another important phase of this question. We were talking about the cyanamide patents and royalties which the Cyanamid Co. if it gets Muscle Shoals would waive:

Senator HEFLIN. If we add $125,000,000 for royalties——

Senator SACKETT. They are not going to use that process, though.

Senator HEFLIN. The Cyanamid Co. will use that process.

Senator SACKETT. Yes; but the power company will not use the cyanamide process.

Senator HEFLIN. But the power company does not waive its royalties.

Major FLEMING. No, sir.

Then, what is the additional cost for royalties? It is $1,500,000 to $2,000,000 a year. What is it if the Cyanamid bid should be accepted—and we are not discussing that here except by way of comparison. They would waive their royalties, and that would not be counted in the cost of fertilizer production. That is an item to be considered by Senators who really want to do something for the American farmer. We would cut out of the cost of fertilizer production between a million and a half and two millions a year. There is so much of this testimony that I can only refer to the more pertinent points as I pass along.

Mr. Bell, of New York, is president of the American Cyanamid Co., and I asked him:

Mr. Bell, if you could follow Mr. JAMES'S suggestion, and call in Mr. Bowers and Mr. Gray, who represent the farm bureau people, it might be worked out. Mr. Bowers, you know, is connected with the President's inquiry. They are very able men, both of them.

Mr. BELL. They are.

Senator HEFLIN. If you, together with General Hull, could rewrite that provision in a way so that we could tell the Senate and the House that this provision is approved by the farm bureau people, I think they would approve a fair proposition.

Mr. BELL. I think they would approve a fair proposition, and I will be delighted to sit down and revamp this in such shape as they think is fair.

I believe I can meet their view and the views of General Hull, but I do not want to promise that it can be done in a great deal less space. There is half a page, and no firm of accountants can possibly know what to do with that provision unless it is set forth.

There was Mr. Bell; he was willing to comply with whatever we wanted done with regard to making a certain amount of fertilizer.

I have suggested all along, and I still occupy that position, that whoever may get this Muscle Shoals property, we should provide in the lease that he is to make fertilizer or forfeit the lease; that the minute he begins to "throw off" on his contract to make fertilizer for the purpose of using the power for other purposes he forfeits his lease and we take the property away from him. That is what we would do with any other business. Why not take that step and safeguard the situation in behalf of the farmers of the country? Listen to his testimony about the royalties:

Mr. HEFLIN. You agree to waive your own royalties?

Mr. BELL. Yes.

Mr. HEFLIN. That would amount in 50 years to $62,500,000?

Mr. BELL. On the basis of the royalties established, Senator, it would amount to that, and, in addition to that, we are waiving royalties on ammo-phos and anything else that we might use there, so that it amounts to a great deal more than that.

That tremendous saving in the cost of producing fertilizer is one of the things that we should consider. I do not know on what we shall be able to agree, but I want to say to the Senators from Georgia, from Arkansas, from Texas, from Florida, and Senators from other States that I trust that we may get together on something, that we may write a contract and submit it to the Cyanamid Co. or to any other company that will make fertilizer at Muscle Shoals and then use the power that is left for other purposes. Let us get together and see if we can not do that. I am ready to do everything that I can to that end.

There is nothing in the resolution of the Senator from Nebraska [Mr. NORRIS] for the farmer, and therefore I want his joint resolution voted down. I do not want to put this Government into business in competition with the private citizen, and I want no subterfuge put upon the Senate and the country. I repeat, there is nothing in the joint resolution for the farmer; the farmer would not get anything out of it. As my colleague [Mr. BLACK] stated on yesterday, it is a power proposition, pure and simple.

What else? We had some testimony before the Committee on Agriculture and Forestry recently and the distinguished Senator from Nebraska had present one of his able expert witnesses, Doctor Howe.

Doctor Howe was not friendly to any proposition except the proposition of the Senator from Nebraska. I want to say just here that one can get experts on any side of every question that may be brought up in this body. It is like trying a man for insanity in a courthouse. It is easy to get doctors—and each one thinks he is right—who will come and swear that he is insane or that he is not insane. So, I repeat, one may get testimony on either side; and, Congress having taken testimony on this subject for eight years, I have seen dozens of witnesses contradict themselves time and time again. While Doctor Howe was testifying I knew that some of the Senators did not understand the cyanamide business, and I interrogated him after this fashion:

Mr. HEFLIN. The American Cyanamid Co. is doing a flourishing business, is it not?

Doctor HOWE. To the best of my information it is. * * *

Mr. HEFLIN. Is this American Cyanamid fertilizer a good fertilizer?

Doctor HOWE. It certainly is. * * *

Mr. HEFLIN. Is it a fine plant food?

Doctor HOWE. Yes; unquestionably. * * *

Senators, that is the testimony of a witness who was unfriendly to the Cyanamid Co.'s proposition. I repeat, we are not urging the American Cyanamid Co. bid at this time; but I want to show some of the things that would not be counted in the cost of the production of fertilizer if we should accept that bid later on.

I quote from the so-called Madden-Willis bill, which contains the American Cyanamid Co.'s bid for the use of Muscle Shoals for making cheap fertilizer for our farmers:

There shall not be included in the cost of such concentrated fertilizer any royalties paid or payable on any processes utilized in the manufacture of such concentrated fertilizer, which are now owned or which may hereafter be acquired by said American Cyanamid Co. and/or by any subsidiary and/or allied corporation of said American Cyanamid Co.; nor shall there be included in the cost of such concentrated fertilizer any royalties upon inventions or discoveries made through and in the course of research provided for in subdivision (4) of this article.

Now, listen to this, Senators:

There shall not be included in the cost of such concentrated fertilizer any compensation paid to any person holding the office of president, vice president, secretary, or treasurer or any other corporate office in said American Cyanamid Co., nor any compensation paid to any person holding like office in any subsidiary or allied corporation of said company; but this provision shall not be deemed to exclude from such cost compensation paid to any officer employed by a corporation engaged exclusively in the manufacture of such concentrated fertilizer under this lease.

Mr. President, have you considered the joint resolution of the Senator from Nebraska? This is what is provides:

The Secretary of War is authorized to enter into contracts for such sale—

The sale of power—

for a term of not exceeding 10 years from the 1st day of January, 1929; and the sale of such current by the Secretary of War shall give preference to States, counties, or municipalities purchasing said current for distribution to citizens and customers.

Senators, do you see any fertilizer in that provision? Where is the plan for fertilizer for the farmer? It is a piecemeal proposition, involving 10 years more delay, withholding this giant machine from the farmers of America, when they are struggling year after year and going down to defeat and financial failure in that struggle. Here is an opportunity to stretch forth a helping hand and deliver them and put them on their feet again, and yet we hear some of our southern Senators talking about voting for the distribution of power to the States around about Muscle Shoals.

What else does the joint resolution provide? Listen to the reading of section 5.

The money received by the Secretary of War for the sale of such current (hydroelectric power) after deducting the cost of operation—

Get these statements, Senators—

maintenance, depreciation, and the cost of constructing transmission lines, if any, shall be paid—

Do you get that? If there is any money left, it shall be paid—

into the Treasury of the United States, and the same shall be segregated and set aside as a special fund for developing, manufacturing, and introducing improved fertilizers and fertilizer practices for the purpose of reducing the cost and increasing the efficiency and use of fertilizers on American soils.

Senators, I am going to draw you a picture with which you will probably be confronted. If some smart man should get up before an audience in the South and read that section, and should be asked how he voted on the question of providing fertilizer for the farmer, and should say, "I voted for the Norris joint resolution as it now stands," there would be wailing and gnashing of teeth in that settlement politically. I repeat there is no fertilizer in that resolution for the farmer. We have delayed making disposition of Muscle Shoals until 2,000,000 farmers have been driven from their farms during the last six years; 2,000,000 farmers have gone down in the struggle, whipped and broken; they have gone into the city to start life over again under new conditions, strangers among strangers, to eke out a miserable existence in quarters such as they have never been acquainted with, and under circumstances and surroundings with which they have never heretofore contended. Here is an opportunity to do something for them; here is an opportunity to give employment to 10,000 American patriots who will be able to provide for their families at Muscle Shoals, down in Alabama, in the glorious southland. But you are talking about parceling out power that you want divided up at Muscle Shoals. One State wants some and another State wants some, and still another wants some. When it is asked, Where does the farmer come in, the reply is, "Oh, well, there is a provision in the joint resolution of the Senator from Nebraska that the money from the sale of all this power, if there is any left for that purpose, is to go toward establishing an experiment station and to carry on the practice of the application of fertilizer somewhere at some time at some experiment station a way out yonder in the future." "Well, what has become of the original act which provided that Muscle Shoals should be used in time of peace to manufacture fertilizer for the farmer?" "Oh, we have forgotten that." "What has become of the plan that Ford laid down to make for the farmer 40,000 tons of fixed nitrogen, which would be used in making nearly 2,000,000 tons of complete fertilizer?

What have you done with that?" "Well, Ford withdrew his bid." "Well, why did he do it?" "Because we dallied along with it and delayed action until he got disgusted and quit, and because he was told that the power companies were never going to let the farmer get it." That is what the farmers are going to say.

We know what has been done so far. Congress has come and gone. How fares the farmer? Well, the Fertilizer Trust is still robbing him, and he is still losing his battle. How fares the farmer? He is still leaving the farm and going into the towns and cities.

Mr. CARAWAY. Mr. President, may I interrupt the Senator?

Mr. HEFLIN. Yes.

Mr. CARAWAY. According to the Senator from Utah [Mr. SMOOT] the farmer is more prosperous now than he has ever been, is he not?

Mr. HEFLIN. Yes; but I could not agree with the Senator from Utah.

Mr. CARAWAY. The Senator from Utah said when the farmer was broke it was a sign of his being prosperous.

Mr. HEFLIN. I could not agree with the Senator from Utah, but the farmer, being broke year in and year out, will ask, "What did Congress do with Muscle Shoals?" "The same thing as before." "What is that?" "Nothing." "Did they dispose of Muscle Shoals so that the farmer could obtain fertilizer?" "No." "Did the southern Senators stand together and battle for the deliverance of the farmers of the South from the Fertilizer Trust?" "No." "What did they do?" "Why, some Senators talked about distributing power in equitable fashion—whatever that is."

But that does not get cheap fertilizer for the farmer. It reminded me of the two fellows that met on the public road. One of them had a sick mule. The other one said, "What is the matter with your mule?" The owner said, "He's sick. He's got the colic. Do you know of anything to give a mule that has the colic?" The other man said, "I had one that had the colic last week." "Well, what did you give him?" He said, "I gave him a quart of turpentine"; and he drove on.

The other fellow got a quart of turpentine and gave it to his mule; and the men met again the next week. Bill said, "How d'ye do, Sam?" Sam said, "How d'ye do, Bill?" Bill said, "Didn't you tell me you gave your mule a quart of turpentine?" "Yes." "How did it affect him?" "It killed him. Did you give it to yours?" "Yes." "How did it affect him?" "It killed mine, too." [Laughter.] Sam said, "Good-by, Bill." Bill said, "Good-by, Sam"; and each went his way.

If something is not done to put Muscle Shoals to work making fertilizer for our farmers, large numbers of voters will be telling "good-by" to Senators who are against using Muscle Shoals for our farmers. [Laughter.]

We ask the farmers:

"Have you got any cheap fertilizer at Muscle Shoals yet?"

"No."

"How long have they had this measure up in Congress?"

"Eight years—nearly nine."

"Have they ever disposed of it yet?"

"No."

"What is the trouble?"

"They have got two factions in Congress."

"What are they fighting for?"

"One is fighting to have fertilizer for our farmers made at Muscle Shoals and the other is fighting to turn it over to the Power Trust."

There is no escape from that conclusion. I do not care how much camouflage may be employed; there is no escape from that naked fact. It stands up in front of you like Pikes Peak. You can not keep from seeing it, Senators; and I hope that we will be able to get together and work out something, instead of standing here splitting hairs and quibbling about whether the synthetic process, the cyanamide process, steam power, or water power is the best. I do not care what process you use. The American Cyanamid Co. says it will use either or both. I do not care whether you use water power or steam power; I want fertilizer for the farmer, and I want this plant leased to an American citizen, and have it specified in the contract what he has got to do, and make him do it. We certainly have the opportunity and authority to do that.

Mr. CARAWAY. Mr. President——

Mr. HEFLIN. I yield to my friend from Arkansas.

Mr. CARAWAY. If it will not interrupt the Senator's argument, I was about to say that I propose to submit an amendment to the joint resolution that the Senator had in his hand just then, the Norris joint resolution. I should like to read it to the Senator and see if he approves it.

Mr. HEFLIN. I should like to hear it read.

Mr. CARAWAY. I propose to add a new section, to be known as 9 (a), and to read as follows:

The Secretary of Agriculture is authorized and directed to utilize nitrate plant numbered 2 for experiments in the production of fertilizers by the use of the cyanamide process, to determine whether it is or is not commercially feasible to produce fertilizers by such process. If the Secretary of Agriculture determines that it is commercially feasible to produce fertilizers by the cyanamide process, then such plant shall be used for the production of fertilizers by such process in the largest quantities practicable, and the fertilizers so produced shall be disposed of at the lowest prices practicable, to meet the agricultural demands therefore and effectuate the purposes of this resolution. In the utilization of nitrate plant No. 2 the Secretary of Agriculture shall avail himself of power in the same manner as provided in section 8.

I want, Mr. President, to offer that as an amendment to the joint resolution, and have it printed and lie on the table.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CARAWAY. I should like to have the views of the Senator from Alabama on that amendment.

Mr. HEFLIN. Mr. President, we might be able to work out something that would include some of the views the Senator from Arkansas has expressed in his amendment; but I want us to write it in the law that we shall make at Muscle Shoals at least 40,000 tons, and the Cyanamid Co. agrees to make 50,000 tons of fixed nitrogen, and I want us to compel them to go to making fertilizer and to make the amount we want made, because Mr. Hooker testified that they can all make it at Muscle Shoals; and there is no use of experimenting any longer or leaving it with the Secretary of Agriculture to say whether or not he thinks fertilizer can be made at Muscle Shoals. We already know that it can be done. Then we want to use the power that we have down there and compel them to make it.

I know that the Senator from Arkansas is perfectly earnest and sincere in his proposal; but I am afraid that if you put that power in their hands, and leave it optional with the Secretary as to what he will do, this mighty influence that has kept Muscle Shoals from being disposed of for the purpose of making fertilizer for the farmer will continue to keep it from being used for that purpose.

Mr. TYSON. Mr. President——

Mr. HEFLIN. I yield to the Senator from Tennessee.

Mr. TYSON. I should like to ask the Senator if he has seen the amendment I have offered, which would compel the production ultimately of 40,000 tons of fertilizer?

Mr. HEFLIN. I have not seen it. What is the Senator's amendment?

Mr. TYSON. My amendment provides that the Secretary of Agriculture is to be required not later than 1931 to commence by the best method he has found to produce fertilizer, and that he is to produce at least 5,000 tons each year until he goes on up to 40,000 tons, if it can be sold to the farmers.

My amendment is lying on the table. It was offered day before yesterday, and was published in the RECORD.

Mr. HEFLIN. Both the amendment of the Senator from Tennessee and that of the Senator from Arkansas are better than the proposal of the Senator from Nebraska; but I do not want any Government in it at all. I do not want to leave this matter in the discretion of any governmental department.

Mr. TYSON. My amendment provides for a lease in the first place, if one can be had; and, failing to get a lease, then the Secretary of Agriculture is to operate the plant.

Mr. HEFLIN. We can certainly get a lease if we can ever reach the point where we are willing to turn somebody loose there and say, "Now you have all the power you want to make fertilizer, go ahead and make it." The American Cyanamid Co., for one, stands ready to go to doing business there, and others will come in; but if we leave it to the Secretary of Agriculture to find somebody and carry on his experiments, Senators, this thing of delaying is going to continue. That is what I am afraid of.

Mr. CARAWAY. Is the Senator now discussing the so-called Willis-Madden bill?

Mr. HEFLIN. Yes.

Mr. CARAWAY. As the Senator knows, it contemplates the expenditure of about $300,000,000.

Mr. HEFLIN. I do not think it is that much; but it does contemplate expending in all about $76,000,000. But a part of that is to be charged to flood control and navigation.

Mr. CARAWAY. I thought the better engineering judgment was that it would cost about $300,000,000.

It struck me, if I may be permitted to say this in the Senator's time, that it is perfectly idle to discuss that bill. There

is not any more hope that it will be passed than there was a chance to have the Henry Ford offer—which was the best one ever submitted to the Senate—accepted. I think the Senator from Alabama will find out that he is up against the fact that some modified form of manufacture of nitrates at Muscle Shoals will have to be accepted.

I have been in perfect accord with the Senator from Alabama in wanting the Senate to accept a lease. I have not yet been able to convince myself that the Government is able to run a private business more advantageously than private interests can run the business.

Private enterprise built the country, and if it had sense enough to build it, I think it has sense enough to run its business; but I do not think the contract the Senator is discussing has a ghost of a chance to pass, and it is now a question of accepting some proposition that will give the farmers some relief.

I am just expressing my opinion on the matter. Of course, there are some Senators who think nothing is well done unless the Government does it. I am just reminded of the Government's way of doing business.

The other day I had occasion to send down to the Immigration Bureau. I sent a messenger down there with an appointment for half after 1. He stayed until 15 minutes past 3, and not a single individual had gotten back from his lunch at that time. What time he did arrive, if he got back at all that day, I do not know. Possibly the lunch lasted all day that day, and he may have been at his office the next day.

I know, and the Senator from Alabama knows, that that is the way the Government does business; and all the private business so conducted would be in a high state of prosperity, according to the Senator from Utah [Mr. SMOOT], because it would be broke, which he says is always evidence of extreme prosperity. In other words, when you fail it is only an evidence that you have succeeded; and if private business were to conduct itself as the Government conducts business it would be highly prosperous, according to the standard of the Senator from Utah.

We come back, however, to the fact that we have got to get something here or else we are going to perpetuate this farce that has gone on for eight years.

Mr. HEFLIN. I am glad to have the suggestion of my friend from Arkansas. We are not going to be in such a hopeless condition as he suggests, however.

Mr. CARAWAY. We are if we try to pass the Willis-Madden bill.

Mr. HEFLIN. No; I am not advocating now the Willis-Madden bill, and I think the Senator is correct in saying that the Senate would not pass that bill just as it now stands at this session. Dam No. 3 ought to be built——

Mr. CARAWAY. King Tut is a very live individual compared to the Willis-Madden bill.

Mr. FLETCHER. Mr. President, will the Senator yield?

Mr. HEFLIN. I yield to the Senator from Florida.

Mr. FLETCHER. Without advocating any particular bill or committing myself to the Willis-Madden bill, I think it fair to say that the Senator from Arkansas is evidently under some misapprehension regarding the expenditures required by the Government under that bill.

Mr. CARAWAY. I read the bill, Mr. President. It was before the committee. It was explained before the committee. I do not think there is very much danger that I am under a misapprehension regarding it.

Mr. FLETCHER. I may be entirely wrong. I should like to be set right if I am.

I understand that one thing contemplated under the bill as an expenditure by the Government is to build Dam No. 3, and that that is estimated to cost about $20,000,000. Another expenditure is to build Cove Creek Dam, which it is estimated will cost about $32,000,000, as I understand. That is $52,000,000. The other things are provided in this joint resolution, to complete Dam No. 2, put in the necessary units there, and complete nitrate plant No. 2. That is provided for in this joint resolution.

Mr. CARAWAY. Oh, no. The joint resolution, if the Senator will pardon me, seeks to abandon nitrate plant No. 2. It proposes to put it in a "stand-by condition," whatever that may mean, but to make absolutely no use of it at all. I should be very much more pleased with this joint resolution if it undertook to make some use of plant No. 2.

Mr. FLETCHER. No; it says:

The Secretary of War is hereby empowered and directed to complete Dam No. 2 at Muscle Shoals——

Mr. CARAWAY. I am talking about plant No. 2.

Mr. FLETCHER. I know—

and the steam plant at nitrate plant No. 2.

Mr. CARAWAY. Nitrate plant No. 2 is not to be used at all under this joint resolution. It is to be put in a "stand-by condition," whatever that may mean; and then all the power is to be sold, and experimental plants to try to make nitrates by the synthetic method are to be started.

Mr. FLETCHER. That is just what I am saying:

to complete Dam No. 2 at Muscle Shoals, Ala., and the steam plant at nitrate plant No. 2, in the vicinity of Muscle Shoals, by installing in Dam No. 2 the additional power units according to the plans and specifications of said dam, and the additional power unit in the steam plant at nitrate plant No. 2.

That is contemplated in this joint resolution.

Mr. CARAWAY. Yes; but they make no use of it.

Mr. FLETCHER. I presume that will be done under the Willis-Madden bill.

Mr. CARAWAY. That is true, but that does not change the fact that the Willis-Madden bill would eventually involve an expenditure of nearly $300,000,000.

Mr. FLETCHER. Where would that be spent and for what purpose?

Mr. CARAWAY. To start in with, the people who pretend to know something about it contend that the estimated cost of the two new dams was entirely inadequate.

Mr. FLETCHER. Dam No. 3, at Cove Creek?

Mr. CARAWAY. Yes; that it was totally inadequate.

Mr. FLETCHER. I simply wanted to mention that, and then I understand all benefit of this plant would be lost to those people specified in the list and set out in the measure. I do not see how it could possibly cost anything approaching $300,000,000.

Mr. HEFLIN. The estimated amount is $76,000,000, and, of course, if the Cyanamid Co. ever got it, it would pay the Government interest on its investment.

Mr. FLETCHER. Then, I understand that the lessees under the lease set out fully in the measure would at their own expense add the necessary parts and equipment for nitrate plant No. 2 in order to make ammonium phosphate. They would do that at a cost of thirty to thirty-five million dollars, and that was not to be done by the Government.

Mr. McKELLAR. Mr. President, may I ask the Senator if he approves of the project to include, as is included in the Willis-Madden bill, a provision to build the plant at Cove Creek?

Mr. HEFLIN. Not just now. Mr. President, I want to say to the Senator from Arkansas, in reference to the Willis-Madden bill, that we are not offering that bill here now, and I do not think myself that it would pass at this session of Congress just as it is written. But I have taken out of that bill a part of it that I have had here ready to offer as a substitute for the power company's bid which was made before our special committee, and I have had extracted from that bill that portion which refers only to Dam No. 2 and plant No. 2 at Muscle Shoals. I did that for the purpose of having on hand a substitute covering exactly the property covered by the resolution of the Senator from Nebraska. If adopted it would not cost an extra dollar. The resolution of the Senator from Nebraska provides that $2,000,000 shall be appropriated outright for the Secretary of Agriculture to use, I presume, in constructing transmission lines, and I want to say to Senators, in addition to that, that it is estimated that the transmission lines running in every direction, to be constructed by the Government under the resolution of the Senator from Nebraska, would cost over a hundred million dollars. That is more money than it would cost to complete the other dams up the river and make that river navigable all the way and have this additional power for fertilizer purposes and for other purposes, and all of that would be owned by the Government.

Mr. McKELLAR. Mr. President, the Senator said that he had used the pruning knife on the Willis-Madden bill. I want to say to the Senator that I approve of his cutting everything out of that bill that he has cut out of it.

Mr. HEFLIN. That means the using of all that we have at Muscle Shoals to make fertilizer for the farmers. I am glad to hear my friend from Tennessee say that he agrees with me on that proposition.

I believe the Senate is with me on the question of not putting the Government into business at Muscle Shoals. I want to see the Senate vote down the Norris resolution, and then let us get together and see if we can not agree on a measure that will require the making of forty or fifty thousand tons of fixed nitrogen at Muscle Shoals, and then provide for the disposition

of the power that is left. We want to do what is fair and right about this matter, but keeping before us all the time the proposition of using all the power necessary to make the fertilizer required to meet the needs of our farmers.

That was the understanding before Congress spent a dollar at Muscle Shoals. I do not want to intrude into the State of the Senators from Tennessee and cut off projects that they feel they should have some say about and tie them into a project in my State. I want us to have an understanding and agree upon these matters. Muscle Shoals is a different proposition. It has been set apart for this purpose under the original act and we have promised to deliver it to the farmers, and the question is, Are we going to do it?

Do Senators know the possibilities of power on the Tennessee River? The power possibilities on the Tennessee River alone are 4,000,000 horsepower, and here is the small amount of 80,000 horsepower at Dam No. 2. We are fighting over and quarreling over who shall get a little power here and there, and the farmer is about to be left out in the cold. Why not dedicate this plant to his use? Why not let him have it and make fertilizer, and let us get power at the other points on the Tennessee River and on the Tallapoosa River and on the Coosa River? We have millions of horsepower in my State undeveloped, and in the State of Tennessee and in Georgia, the States round about, and why are you all pouncing down upon this one project, that has no business being tied into the power projects of the country? The Government has set it apart by statute and put it upon the mountain, out of the reach of the power concerns, and some of you are undertaking to pull it down and tie it into the chain of power companies, to be peddled about the country.

Mr. McKELLAR. Mr. President, I want to say to the Senator that I agree with him entirely, that whatever amount of horsepower can be generated at Muscle Shoals, whether it be 40,000 horsepower or whether it be every particle that can be generated, should be used for the farmer. I agree with the Senator about his interpretation of the original act. I think that next to the war purposes, for which the plant was created, it was intended to be helpful to the farmers in time of peace. The only difference between the Senator and myself—and I would like to have him address himself to this question—is that I am not convinced that turning this over to the Cyanamid Co. is equivalent to turning it over to the farmer.

Mr. HEFLIN. That is not up for consideration now. I will say to my friend from Tennessee that I think the Norris resolution ought to be defeated, and I am hoping it will be defeated; I do not believe a majority of Senators in this body are ready to vote to put this Government into business in competition with private citizens, and a vote to pass the Norris resolution is a vote to desert the original act and to break faith with the farmer and to put the Government in business.

Mr. HARRIS. Mr. President, will the Senator yield?

Mr. HEFLIN. I yield.

Mr. HARRIS. The Senator speaks about putting the Government into business. The Government is spending every year a number of millions of dollars doing exactly, in the manufacture of powder and arms and other things, what they would do there at Muscle Shoals if they manufactured munitions.

Mr. HEFLIN. I understand that; the Government has a powder plant, and I think it ought to have one, because it uses that to see how much it costs to produce powder, and it could make powder in an emergency. I think the Government ought to have that plant. But the Government has no business operating a fertilizer plant in competition with the fertilizer plants of the country, unless we can not get a private individual or a company to do it. In that case, I would favor the Government operating the Muscle Shoals plant in order to carry out the purpose of the original Muscle Shoals act and compel the production of cheap fertilizer at Muscle Shoals.

Mr. FLETCHER. Mr. President, it does not bother me very much about whether the Government performs this work or private parties do it. I never lost much sleep over the question of whether private individuals are conducting a business or the Government is conducting it. The Government's business is to serve the people. If the Government can serve them best and only when private enterprise fails to do it, then let the Government do it. But the Government does not propose to manufacture fertilizer here.

Mr. HEFLIN. No.

Mr. FLETCHER. There is no proposition before the Senate or anywhere else that the Government shall undertake to carry out that purpose of the original act, the manufacture of fertilizer for the benefit of agriculture. If such a proposition were before us, I would not hesitate one minute on a question of the Government doing it instead of private enterprise doing it. But there is no such proposition before us. Now, the Senator from Tennessee says turning it over or leasing it to the Cyanamid Co. is equivalent to the Government doing this business. If the Cyanamid Co. is a responsible concern, and I do not know whether it is or not, but I assume it is, as I have never heard anybody question that it had financial strength and ability to carry out its contracts; if the other lessee named in this bill that has been mentioned, known as the Willis-Madden bill, is a responsible concern, and I understand it is, if they will enter into a contract, a covenant binding and enforceable, good in every way, to manufacture fertilizer for the benefit of agriculture upon reasonable terms; and, as I understand, one of the terms is that they can not charge to the consumer a price which will exceed the actual cost of production plus 8 per cent of that cost——

Mr. HEFLIN. That is true.

Mr. FLETCHER. If a responsible concern will undertake to do that, and nobody else will undertake to do anything in the way of making fertilizer for the benefit of agriculture, I am not going to hesitate about where I will stand on the proposition, because I agree with the Senator that the primary purpose of Congress, and the feeling and the sentiment is and ought to be, that this great natural resource at Muscle Shoals should be devoted to what we have said in the law it should be devoted to, making nitrates for explosives in time of war and fertilizer in time of peace. That is the thing we ought to strive for. If anybody has any other proposition better than the Willis-Madden bill, or equal to it, let him come forward with it. If any individual is willing to undertake to carry out this plan and this purpose originally intended by Congress, to utilize the power at Muscle Shoals and the facilities and the plants there, that great investment that we have already made there, which is yielding nothing, costing us $5,000,000 a year to care for, I say, let us have some proposition like that, and we will get somewhere with this business. But there is not a proposal in this resolution, there is not a step in this resolution, in my judgment, that leads to that end.

Mr. HEFLIN. The Senator from Florida is right.

Mr. McKELLAR. Mr. President, I just want to give some information to the Senator from Florida. While the original resolution does not provide for the manufacture of fertilizer, as was contemplated in the original act, in my judgment, still I want to say to the Senator that I have introduced an amendment to this Norris proposal to let the Government carry out the intent and purpose of the original act in that regard; in other words, for the manufacture of fertilizer by the Government in accordance with the original act of Congress.

Mr. HEFLIN. Mr. President, the Senator from Florida is right; the farmer is not even suggested in this resolution until it is provided "for the sale of such current"—at Muscle Shoals—and "after deducting the cost of operation"; listen to that; that has to be done by the Government; "maintenance, depreciation, and the cost of constructing transmission lines." If there is anything left after that, it "shall be paid into the Treasury of the United States, and the same shall be segregated and set aside as special fund for developing, manufacturing, and introducing improved fertilizers and fertilizer practices for the purpose of reducing the cost and increasing the efficiency and use of fertilizers on American soils."

How much would be left after you had had expended at the hands of the Government $100,000,000 to construct transmission lines? It is estimated that it will cost that to build them in every direction, and the Senator from Nebraska provides for that. Depreciation, upkeep of property, all expenses, are to come out of the sale of the current, none of it being used to make fertilizer, and whatever is left, if there is anything, is to be used ultimately, at some far-off time, for the benefit of the farmer.

Mr. President, if we are going to do that, the farmer will not care whether the Muscle Shoals project was ever started. It reminds me of Private John Allen's story about the boys who were discussing the old man's estates. He had died, and they were sitting up quarreling about who would have this and who would have that property. Finally, about 11 o'clock one night, one of the younger boys yawned and said, "You all quarrel so much and fuss so much about what pa left that sometimes I almost wish he hadn't died." [Laughter.]

So we will have the farmers wishing sometime that we did not have any Muscle Shoals project. Some Senators are always talking about what we are going to do for the farmer, and yet we are not doing anything with this project to aid him in the least.

Perhaps some Senators have heard the story that illustrates the point: Rastus said to his friend, "I don't know what I am going to do with my wife." His friend said, "What's the mat-

ter?" Rastus said, "She is all the time after me for money. It's money in the morning, money at noon, money at night. The last thing I hear before I go to sleep is money, money, money." Sam said, "Well, Rastus, what does she do with it all?" Rastus said, "I don't know; I ain't never give her none yet." [Laughter.]

That is exactly what has happened to the farmer. He has asked and asked that you keep faith with him and let him have fertilizer at Muscle Shoals, but you have not done it yet. The question is, Are we going to do anything for him now? We have the opportunity here. This plant is located in my State, the greatest State in the Union, in the heart of Dixie. It would do your soul good to go down there and hear that water roar on the Tennessee River and in the springtime to see the flowers bloom and inhale the rich perfume and hear the birds sing. Those birds have been singing down there for a long time. They have been singing for eight years and the flowers have bloomed and withered and died eight times since Muscle Shoals has been up for consideration in this body and we have not disposed of it yet. Now, we are about to wind up "the old man's estate" and we are quarreling about who shall get this and who shall get that and whether we are going to have an equitable distribution of power, while the farmers are standing out there listening and looking and asking "Where do we come in? What about us and our fertilizer problem?"

Mr. President, the project looking to a lease of this property for the purpose of making fertilizer, compelling the making of fertilizer, is indorsed by every farm organization in the country. Not one of them indorses the project of the Senator from Nebraska. The farmers are not for his measure. They ought to know what they want. They know that there is no fertilizer for them under his measure.

Chester Gray, the head of the Farm Bureau people, is here in Washington. He is a very able, clever, fine gentleman. The Senator from Nebraska has criticized him. I have not found any fault with him. He has taken issue with the able and conscientious Senator from Nebraska. He has shot a number of holes in the Senator's resolution, and he has told why the farmers are opposed to it. He has suggested what the farmers want. He has stood, in season and out of season, demanding that fertilizer be made at Muscle Shoals and that the project be not turned into a power proposition. That has been the cry of Mr. Gray. He has done what the farmers have asked him to do and has been carrying on his propaganda throughout the country. I have not been able to find where he has done anything wrong in trying to get all the information he could as to how the farmers stand on the question. I like Mr. Gray, and I think the farmers have a right to have some one here looking out for matters which pertain to them and their interests. This man Gray is one of the brightest and best that they have ever had here.

My good friend from Nebraska took a little fling at Ed. O'Neil, a farmer friend of mine in Alabama. He has a farm down there close to Muscle Shoals. It was even intimated that he wanted to dispose of it in order that he could get a good price for it, impugning the motives of this able and distinguished citizen of my State, this very successful farmer of north Alabama. He is against the resolution of the Senator from Nebraska. He is in favor of some bid that will require the making of fertilizer at Muscle Shoals. He wants a lease that will compel the manufacture of fertilizer. He wants a bill passed that will forfeit the lease if they do not make it. Is there anything to be questioned in that position? It would seem to me that he is right, that he ought to be that way, and that he and the other representatives of the farmers ought to contend for that proposition. I have contended for it, and I am going to continue to contend for it.

Senators, I would dismiss Muscle Shoals from the power projects all over the country, and I would say, as Paul said, "This one thing I do." We have dedicated this project to the use of the farmer for fertilizer purposes in time of peace, and now we are going to make it over to him. We are going to do it by a solemn statute enacted by the Congress. We are going to require that that power be used to make fertilizer for the farmer, to cheapen fertilizer for the farmer, to lessen his farm burden. We have it in our power to do it.

Mr. BLACK. Mr. President, will my colleague yield?

Mr. HEFLIN. I am glad to yield to my colleague.

Mr. BLACK. Before the Senator leaves the subject of Mr. O'Neil, who was somewhat criticized by the Senator from Nebraska [Mr. NORRIS], I would like to state that along about 1816 General Jackson made a trip down to Alabama fighting Indians. His constant companion was General Coffey on practically every step he made. General Jackson saw the great utility and the great value of Muscle Shoals and prevailed upon numbers of citizens to go down there and cast their lot with the idea of getting the benefit of that great national resource. General Coffey was one of them. General Coffey settled some land there at that time. The farm which the Senator says Mr. O'Neil desires to see enhanced in value is the exact farm which was settled by General Coffey, the grandfather of Mr. O'Neil.

Mr. HEFLIN. I thank my colleague for that statement.

Mr. President, I have a vast number of telegrams on my desk, and I am going to read just one of them from the farmers of Alabama.

Norris Government-operation proposal for Muscle Shoals promises no fertilizer for Alabama farmers. We urge you to fight for Cyanamid offer.

They know that it is a good proposition to make fertilizer and that we can compel fertilizer to be made at Muscle Shoals. What I want to make plain is that I do not want to leave it in the discretion of the Secretary of Agriculture or the Secretary of War as to what we are going to do at Muscle Shoals. I want to name it in the bond. I want us to put it in the law. I want them to be instructed and directed to make fertilizer, so many tons a year, year in and year out. We can and we should do that.

Let me bring another matter to the attention of Senators. The American Cyanamid Co. is owned and officered by American citizens. In 1907 I had a bill passed through the House granting them the privilege of constructing a dam across the Coosa River in my congressional district, and they agreed to make fertilizer there as far back as 1907. They had not then located a plant in Canada. What do you suppose happened to them? President Taft vetoed the measure after it had passed both Houses of Congress. What did the American Cyanamid Co. do? They were driven out of America—think of that—a great company like that wanting to do business in our country but driven out, so they located in Canada, just over the line.

They started business there and from that point they made the cyanamide fertilizer ingredient and shipped it little by little until they are doing business all over the world. They shipped out in the first year of their business a little over 600 tons. Then they went up to 12,000, then to 25,000, and now they have reached 75,000 tons a year, and they have done that since 1916, in a little over 10 years.

So, Mr. President, there is no longer need of experimenting. We have already experimented. We know what we can do. I said to Mr. Hooker, who testified before our committee, "You say you can cut the expense on fertilizer down from $28 a ton to $15?" "Yes; $14 or $13. We can all do it." He testified that before our committee and nobody disputed his statement. "Why do you say you can do that?" He had in mind the cheap power there and the equipment already established. He said, "The old companies have their old machinery, they have their old processes, they have their heavy overhead charges, and they will not take on new propositions; they do not want to be disturbed in the old rut where they are working; and we, with new life and new processes and new machinery and new equipment can cut the cost in half." Here is an opportunity to use a project that we have, which was dedicated to that purpose in the outset. Why not use it?

I do not want to turn this proposition over to the Secretary of Agriculture to do one thing and another with it, and, if he has any money left, to experiment with the fertilizer proposition, and leave it to him as to how many tons he will have made. I want us to direct in the law exactly what shall be done, to prescribe the amount he shall make, the price at which he shall sell it. It is the only opportunity in the world where we have a chance to help fix a reasonable price to the farmer. Let us have it understood, because the Cyanamid Co.'s bid proposes to make only 8 per cent above the cost of production.

What is Mr. Bell doing with his Cyanamid Co. now? He is employing the cyanamide process. It is said here that that process is obsolete. It is said that it is old and out of date. Germany has the cyanamide process and the Haber process, too. She is using both and making money out of both, and by the combined power of the two has driven Chile, with her nitrates, out of German territory. What is the Cyanamid Co. doing with the cyanamide process? It is selling the nitrogen at 7.6 cents per pound and the synthetic process is selling it at 10 cents a pound and has had to go out of business. If Germany can compete with the synthetic process, their price being nearly 3 cents above the cyanamide process, and the people using the synthetic process have to quit, why should we be driven to the synthetic process and abolish the cyanamide process, when those people are making money out of it and their business has gone in 10 years from 653 tons to 75,000 tons?

Mr. SHEPPARD. Mr. President, may I ask the Senator a question?

Mr. HEFLIN. I am glad to yield to my friend from Texas.

Mr. SHEPPARD. Does the Cyanamid Co. make a finished fertilizer product?

Mr. HEFLIN. Yes; they make a finished fertilizer called ammo-phos, and that has in it phosphoric acid and nitrogen. They can put potash in it, and they sell just worlds of it. They ship ammo-phos around the world.

Mr. SHEPPARD. Then they make both nitrogen as an element of fertilizer and ammo-phos as a finished fertilizer?

Mr. HEFLIN. They do.

Mr. TYSON. Mr. President, may I ask the Senator a question?

Mr. HEFLIN. Certainly.

Mr. TYSON. How much does the Cyanamid Co. sell in this country that is used by the farmers of the country?

Mr. HEFLIN. About 52,000 tons, I understand.

Mr. TYSON. Do they use that amount in this country?

Mr. HEFLIN. Oh, yes.

Mr. FLETCHER. It is sold to the fertilizer factories and not to the farmers.

Mr. HEFLIN. Yes; it is sold to the fertilizer factories.

Mr. FLETCHER. It is not sold to the farmers directly.

Mr. HEFLIN. It is used by the farmers but sold through the factories. I had a talk with Mr. Bell, and what he wants is to be delivered from selling this product through the factories so that he can go into open competition with them and let the farmer get the benefit of the reduction in price. He is handicapped now, and he will waive his royalties and go into the business in competition with those people.

Mr. SHEPPARD. Mr. President——

Mr. HEFLIN. I yield to the Senator from Texas.

Mr. SHEPPARD. Does the Cyanamid Co. propose to make finished fertilizer at Muscle Shoals and sell it to individual farmers?

Mr. HEFLIN. They propose to sell it to anybody at the cost of production, plus 8 per cent profit.

Mr. FLETCHER. They propose to sell it to the consumers; and cyanamide combined with phosphate makes ammonium phosphate, which contains from 62 to 63 per cent of plant food.

Mr. SHEPPARD. Do I understand that the fertilizer product which the Cyanamid Co. makes contains no potash?

Mr. HEFLIN. Ammo-phos contains no potash; it is a good fertilizer without potash; but they can use potash with it. I will remind the Senator from Texas that I think we have prospects of getting a good potash supply from his State; I hope so. I remember the Senator from Texas secured the passage of a very important measure giving the Government the opportunity to experiment with potash in his State, and I understand they are making some headway.

Mr. SHEPPARD. Mr. President, they are making substantial headway. The exploration which the Government was authorized to make by the measure to which the Senator from Alabama refers is now in its second year, and the Bureau of Mines and the Geological Survey are of the opinion that there is a definite and encouraging prospect for the discovery of a bed of natural phosphate in the southwestern portion of the United States equal to the existing beds in Germany and France. At the present time, however, Germany and France have a monopoly.

Mr. HEFLIN. I am glad to have that information from the Senator from Texas.

Now, I wish to make another suggestion. When the World War was over, and France secured control of some of the potash beds of Germany, it looked for a time as though we were going to get cheaper potash, but with all the bitterness and hatred that existed between those two countries the interested parties got together, formed a combination, and put up the price of potash in Germany and in France. There is no competition between them. Recently I informed the Senate about a world trust to control the price of nitrogen. Out on the Mediterranean Sea, companies in the United States with the foreign companies agreed as to how much should be produced, what territory should be supplied by this group or that, and the price that should be paid. I wish to say in this connection, Mr. President, that the Cyanamid Co. refused to have anything to do with it, and, so far as I can ascertain, it is the only big company in the United States that is free and independent of the combines that are operating all around us.

Now, as I said a moment ago, we have passed the experimental stage.

Mr. SIMMONS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from North Carolina?

Mr. HEFLIN. I yield to the Senator from North Carolina.

Mr. SIMMONS. The Senator from Alabama knows that in all the fights we have had in this body regarding Muscle Shoals, I have always insisted upon the right of the farmer to have that great power down there dedicated to the manufacture of fertilizer.

Mr. HEFLIN. That is very true.

Mr. SIMMONS. The only difficulty I have about the Senator's proposition is that I do not see how that result will be accomplished through the contract to which he has just referred.

I understood the Senator to say that under the Madden measure, if Muscle Shoals were leased to the Cyanamid Co. they would be under contract to produce 10,000 tons of fertilizer the first year?

Mr. HEFLIN. I think the amount is 10,000 tons.

Mr. SIMMONS. And then, in subsequent years, they would increase that amount to 40,000 tons.

Mr. HEFLIN. As to the subsequent years that is correct, but I am not clear as to the first amount. I think I am right, however.

Mr. SIMMONS. Now, I want to ask the Senator what would the Cyanamid Co. do with the surplus power during the first period, and what would they do with the surplus that was left at the end of the period when they were to produce 40,000 tons? I want every ounce of that power devoted to making explosives in time of war and fertilizer in time of peace. If for the first year the company under their contract is to be required to produce only 10,000 tons, I want to ascertain from the Senator from Alabama, what are they going to do with the surplus power during that year.

Mr. HEFLIN. Use it for other purposes, I suppose. The Senator from North Carolina and I are in accord on some of the principles involved. We want to use every ounce of horsepower there for making fertilizer and that company is now willing to agree to make 50,000 tons of concentrated fertilizer.

Mr. SIMMONS. But let us see about that. The first year they are going to make only 10,000 tons. What are they going to do with the surplus power? If they make arrangements during that year to utilize the surplus power for some other purposes——

Mr. HEFLIN. But we must see to it that they do not do that.

Mr. SIMMONS. They are not going down there and take charge of this great plant merely for the purpose of making 10,000 tons of nitrogen.

Mr. HEFLIN. The Senator was not in the Chamber a moment ago, I think, when I discussed portions of the Cyanamid bid. I have taken out of the Madden-Willis bill certain provisions, which were embodied in a bill that I introduced as a substitute for the power company's bid, coming from the special committee of the House and Senate, and I have confined my proposal to plant No. 2 and Dam No. 2 and the power properties around Muscle Shoals.

Mr. SIMMONS. What is the developed power now?

Mr. HEFLIN. The primary power at Dam No. 2 is about 80,000; that is, it is capable of producing 80,000 primary power continuously.

Mr. SIMMONS. The Cyanamid Co. propose the first year, under their bid, to produce only 10,000 tons of nitrogen.

Mr. HEFLIN. Yes.

Mr. SIMMONS. What I am curious to know is what they are going to do with the surplus power not required for that production.

Mr. HEFLIN. I want the Senator to help me say what they are going to do with it.

Mr. SIMMONS. I am willing to help the Senator say that. If the Senator will bring a measure before this body that will bind the contractor to use as much of that power as is necessary to furnish all the fertilizer the American farmer needs, I will vote for it very quickly.

Mr. HEFLIN. I will be glad to do that. The Senator and I can get together on that.

Mr. SIMMONS. But I am afraid that this proposition does not do that. Suppose we follow that up. The Senator does not believe they are going to lease this plant and the power there for the purpose merely of making 10,000 tons or even for the purpose of making 40,000 tons. They are going to lease it for some other purpose; and they will not obligate themselves to produce more than 50,000 tons. I believe the Senator said that they are willing to agree to make 50,000 tons.

Mr. HEFLIN. They say they will do that; they have raised the maximum 10,000 tons, making it 50,000 tons, and I think we can make them raise it more.

Mr. SIMMONS. But if they raise it to 50,000 tons that will still leave surplus power, will it not? And what are they going to do with that power?

Mr. HEFLIN. I do not know how much power it will take to make 50,000 tons of fixed nitrogen.

Mr. SIMMONS. I understood the Senator to say that there is sufficient horsepower to make 80,000 tons.

Mr. HEFLIN. No; I said the plant has a capacity of 80,000 horsepower; the dam will produce 80,000 horsepower. The Senator misunderstood me. I did not mean that they could take 10,000 horsepower and make 40,000 tons of fixed nitrogen; I do not know how many horsepower will be required to enable them to fill their contract of 50,000 tons. I think it will take about all that is produced at Dam No. 2, and maybe more.

Mr. SIMMONS. It will take about all of it to fill their contract of 50,000 tons?

Mr. HEFLIN. I think it will take about all the horsepower from Dam No. 2.

Mr. SIMMONS. Then, it will take only one-fifth of it to produce 10,000 tons, which they are to produce the first year, and not quite one-half of it to produce the 20,000 tons they are to produce the second year. The question is what they are going to do with the surplus power. Are they going to let it lie idle?

Mr. HEFLIN. No.

Mr. SIMMONS. If they are not going to use it for fertilizer purposes, then they are going to use it for power purposes, are they not?

Mr. HEFLIN. Of course, what they do not use for fertilizer purposes they will use for some other purpose, but what I am suggesting now is that we defeat the joint resolution of the Senator from Nebraska and then see if we can not get together and provide a bill to do exactly what we want done. I believe that Mr. Bell will make us an offer on plant No. 2 and Dam No. 2 and take the property that is there and use it all if necessary in making fertilizer.

Mr. SIMMONS. I will be very glad to join the Senator and others who agree with him and me with a view of seeing if we can not draft a bill that will secure a contract from somebody—I do not care whether it be the Cyanamid Co. or some other company—who will devote as much of that energy as is necessary to supply the American farmer with a cheap fertilizer. I am not going to say, however, that I would be willing to agree that it should be cyanamide, because I am not quite certain that cyanamide is the best form of nitrogen that can be produced there artificially.

Mr. HEFLIN. Mr. Bell agrees to use either the Haber process or the cyanamide process.

Mr. SIMMONS. That is a great advance upon the position taken by the Senator's colleague [Mr. BLACK] on yesterday, as I understood him.

Mr. HEFLIN. My colleague said the same thing on yesterday; the Senator did not hear all of his speech. He said that they would make it under either process, the one that is cheapest and best. They said that they would employ whatever process will make it cheapest.

Mr. SIMMONS. Who is to determine what process they will employ?

Mr. HEFLIN. We can determine that question in the law that we pass if we want to.

Mr. SIMMONS. Then, as I understand, the Senator is not here advocating the Madden bill?

Mr. HEFLIN. Not at this time. It is not now before the Senate.

Mr. SIMMONS. He is not advocating the joint resolution of the Senator from Nebraska?

Mr. HEFLIN. No. I am opposing it as it stands.

Mr. SIMMONS. He is not advocating any bill that is before Congress, but is advocating a principle.

Mr. HEFLIN. As the matter stands just now, that is true. The bill that I support must make it absolutely certain that Muscle Shoals is going to be used to make fertilizer.

Mr. SIMMONS. I agree with him in the principle that he is advocating, and I should be glad if we could prepare a bill and secure a contract which would carry out that principle.

Mr. HEFLIN. That is exactly what I want; and I am glad to have that statement from the able Senator from North Carolina. I have said this outside, and I say it here: I regard him as the ablest legislator in either branch of Congress; and I want him to give us the benefit of his great talent in helping to work out something. I want the Senators from Georgia and Mississippi and Florida and Texas—all of us—to get together with some of our western friends on the other side and see if we can not frame a measure that will do what we promised to do in the outset, and keep faith with the farmer, and fight the Fertilizer Trust with this project that was dedicated for that purpose, and not permit anybody—I do not care who they are—to take that project away from the purpose for which it was intended at the beginning.

The thing to do is this: The Senator from Nebraska has a joint resolution to which the farmers are opposed. The telegrams that I have received, and that my colleague has received, denounce it. They say there is no fertilizer in it for the farmer; and every farm organization in the country is against it. They are for a private lease, specifically setting out that they will make this fertilizer under the direction of Congress. Now, it looks to me as though we might get together on that, and I believe we can, and that is the purpose of the speech I am making—and to show that I am not quibbling over what sort of disposition shall be made of this plant. I am not wedded to any particular theory. I do not care whether it is the cyanamide theory or some other theory. I do not care whether Mr. Bell gets it or somebody else; but, whoever gets it, I want us specifically to set out in the law that they have got to devote it to making fertilizer for the farmers or cancel the lease.

I agree with the able Senator from North Carolina. I will use every horsepower there, Dam No. 2, plant No. 2, water power and steam power, to make fertilizer in competition with the Fertilizer Trust, and try to enable the farmers, who produce that which feeds and clothes the world, to produce their farm products at the lowest cost possible.

Mr. SIMMONS. Mr. President——

Mr. HEFLIN. I yield to the Senator from North Carolina.

Mr. SIMMONS. In discussing this matter yesterday, I so nearly despaired of getting any company to agree to lease this power and devote it to the manufacture of fertilizer, except to a limited extent—and we do not want a limited extent; we want it broad enough and big enough to supply the farmers of the country, and I think very nearly enough could be made down there to supply the farming requirements of the country—despairing of getting a private contractor to do that, my mind was running in the direction of a proposition that, failing in that, the Government should continue to own the property, and, if necessary, lease the power and devote the income to the manufacture of fertilizer. I would infinitely prefer, however, leasing it to some private company that would guarantee satisfactorily to devote the energy developed down there and devote plant No. 2, which is run now, I believe, by steam, to the manufacture of fertilizer, not only of ammonia but converting it into usable fertilizer by adding phosphates and potash. I think that would be a very much better proposition; but I have not understood, and I do not understand yet, that there is any bill before Congress at the present time that would accomplish that result.

Mr. HEFLIN. The Senator and I are in agreement on the principle involved. As I stated a little while ago, most of that bill is a bill that I had here to offer as a substitute for the power company's bid, and in its present form it is not as complete as I would have it, but it is the basis for a working agreement on this matter.

I am certain that we will get one bid under it, at least, from Mr. Bell, who represents the Cyanamid people. After we have done that, if we do not get the right kind of a bid, let us get up another measure of some sort, and if we have to resort to Government operation, let us set out a way in which we will do it so that practically all of this power will then be used to make fertilizer for the farmer.

Under the plan of the Senator from Nebraska, I submit to the Senator from North Carolina, the transmission lines are to be constructed by the Government, and they are to be paid for with the money that they take in from selling power, and if there is any money left after doing that and paying interest on the investment, and so forth, they will experiment with fertilizer. I submit to the Senator that it is variously estimated that the transmission lines running out from Muscle Shoals in every direction will cost from $100,000,000 to $150,000,000. The cost of them is simply tremendous.

Mr. SHEPPARD. Mr. President——

Mr. HEFLIN. I yield to the Senator from Texas.

Mr. SHEPPARD. Am I correct in inferring that if a satisfactory private contract with a private corporation can not be secured the Senator then would be willing to consider the use of all this horsepower by the Government under the supervision of the Government for making fertilizer?

Mr. HEFLIN. I would. I think that is fair enough. I want to exhaust every means at my command to lease that power to a private individual. I believe in that; but if we can not do that, then there is nothing else to do but to have the Government operate it. Then I would want to direct, in the joint resolution we passed, that all of that power shall be used to make fertilizer for the farmer, and do away with this peddling out of power that is provided for in the measure of the Senator from Nebraska, and taking the money gathered in to build more transmission lines. After you get those transmission lines established they will come up and say, "Why, those transmission lines cost $150,000,000. They belong to the Government.

The whole business belongs to the Government. Your fertilizer proposition is out of the question. You can not make fertilizer there now. You must have that power to send over these lines, or all that expenditure is lost."

Senators, I know what is going to happen there. It is another way of getting away from our pledge to make fertilizer at Muscle Shoals; another way of losing the farmer in the shuffle.

The Senator from Nebraska is conscientious. He does not believe that this Muscle Shoals project can be made into a fertilizer proposition. We disagree. I conscientiously believe that it can. I know that we have already produced cyanamide in abundance there. I know that farmers around there have used it on their soil. I know that one farmer, as I said yesterday, used it and produced 2,300 pounds of seed cotton on 1 acre, and that is going some; and the acres cultivated alongside of it, those who did not use it, which did not use any fertilizer, produced on an average 100 pounds of seed cotton to the acre.

Senators, I will state again what Doctor Howe, Senator NORRIS's witness, testified before our committee. I asked him the question:

> Doctor, is the Cyanamid Co. doing a flourishing business?
> It certainly is.
> Is cyanamide fertilizer good?
> It most certainly is.
> Is it a good plant food?
> Certainly.

Senators, I repeat, Mr. Hooker, a successful fertilizer maker, testified that he could cut the price of fertilizer in half at Muscle Shoals, and he said to the other gentlemen who were bidding for Muscle Shoals, "We can all do it," and nobody disputed his statement. Doctor Curtis says the price of fertilizer can be cut in half there. Ford's chief engineer, Mr. Mayo, said:

> It is our purpose, and we believe we can cut it in half there.

So here we are, with all this testimony from expert men telling us what we can do; and yet we are figuring on voting for a joint resolution that seeks to put up power lines, transmission lines, and use the money that was intended to make fertilizer in establishing more transmission lines, until we have a perfect network of them, and then it will be said, "You can not make fertilizer now. If you make fertilizer now, you will lose all the investment you have in these transmission lines."

I beg Senators to help defeat that joint resolution, and let us wipe the slate clean, and frame this measure, and say to Mr. Bell and Mr. Hooker and the others, "Who of you will come now and make us a bid on that? Put up or shut up." And then, if we can not do anything, we will write one that really has fertilizer in it and let the Government operate it.

The farmers of my State are wiring me, they are wiring my able colleague, to vote against the Norris proposition. They say that it has no fertilizer in it for the farmer. The farm bureau agents, the farm association presidents, all around, are wiring us to oppose that measure. Senators, we have it in our power to wipe the slate clean of the plan to make this a power proposition and turn it over to the manufacture of fertilizer for the benefit of the farmers. That is what it was intended should be done in the outset.

Mr. SIMMONS. Mr. President——

Mr. HEFLIN. I yield.

Mr. SIMMONS. I do not want to get into any controversy with the Senator from Alabama about this matter, and it is probably foreign to the line of argument that he is pursuing; but I think some people have imposed very much upon the Senator when they have led him to believe that it would cost $150,000,000 to provide transmission lines for the amount of energy that can be produced at Muscle Shoals, unless it is very much greater than I think it is.

We have developed in North Carolina nearly 700,000 hydroelectric horsepower. Not a single one of those plants makes any cyanamide. There is no plant in the United States to-day making any cyanamide, as I understand, although that process has been in operation now for probably 20 or 25 years, or maybe longer; I do not know how long.

I do not quite agree with the Senator that we ought to bind ourselves down to a contract that provides for cyanamide or the Haber process, or the synthetic process. It might be that all of them would prove inadequate. It might be that none of them would furnish a fertilizer that was as satisfactory as the nitrogen we are now getting from Chile. I would want them to agree that they would employ their plant in experimentation, notwithstanding the fact that the Senator's colleague seems to object to any experimentation at all by the Government or by individuals.

Mr. BLACK. Mr. President, will the Senator yield there?

Mr. SIMMONS. I said that facetiously.

Mr. BLACK. I do not object to experiments. I just object to limiting it to experiments. We can not live on experiments.

Mr. SIMMONS. I said that only facetiously. They ought to experiment. I will agree to that. They ought to experiment until they find that they can manufacture a fertilizer that will be satisfactory and will accomplish the purpose we have in view and can be sold at a price less than that for which we are now buying our nitrogen.

I have heard a great deal about cyanamide. I have heard some very experienced producers of fertilizer decry it. Some of them condemn it. I do not doubt that it may be used safely upon certain soils and in the production of certain crops, provided you are very particular in mixing it with the other elements of fertilizer and do not get too much. If you get too much, you are certain to produce bad results.

Mr. McKELLAR. You will kill the plant.

Mr. SIMMONS. Yes; you will kill the plant.

Mr. HEFLIN. You will do that with any of them if improperly used.

Mr. SIMMONS. That was done in my State several years ago to a very considerable extent.

Mr. HEFLIN. You can burn up a plant with any fertilizer if you put in too much of it. I was reared on the farm and I have put it in the furrow myself.

Mr. SIMMONS. You would have to put on a good deal of the ordinary nitrate of soda to burn up a plant.

I do not know whether that is altogether feasible or not. I do not know whether it can be produced as cheaply as the Senator thinks it can be. I do not know whether it will be safe, except for certain soils. I want a fertilizer that is adapted to all kinds of soils. The Senator says it is good in his State. It may be good in the western part of my State, where there is a clay subsoil, but in my section, where we have sandy and alluvial soil, I do not think it is, from what I have heard from the dealers in fertilizer in my town and in my section of the State, and there are a great many of them. So that I am not enamored of the cyanamide process. If these gentlemen will not agree, probably somebody else will. I do not think we ought to confine ourselves to Mr. Bell's proposition.

Mr. HEFLIN. I do not, either.

Mr. SIMMONS. I do not think we ought to pass a bill that will be in the interest of Mr. Bell's offer.

Mr. HEFLIN. I do not think we should, unless his bid does what we want done and takes care of the farmers' interest in the matter.

Mr. SIMMONS. I think we ought to write a proposition based on principle.

Mr. HEFLIN. I agree with the Senator.

Mr. SIMMONS. And then, if Mr. Bell can come up with a satisfactory proposition and comply with the requirements to accomplish the purposes of that principle, as laid down in the bill, let Mr. Bell have it, if we do not let somebody else have it.

Mr. HEFLIN. The Senator and I are entirely agreed on that.

Mr. SIMMONS. I just rose to say that I was not certain about the cyanamide process, and I do not think it would be safe for us to proceed upon the idea that cyanamide will produce the results the Senator and his colleague seem to think will be produced.

I think, with all the horsepower that has been developed in this country in recent years, including most of the 7,000 hydroelectric horsepower that has been developed in my State, the fact that none of the companies have undertaken to manufacture this product would indicate to my mind that it was not in very great demand in this country. I will say further to the Senator that last year I did hear a fertilizer man in whom I have great confidence, and with whom I was discussing the cyanamide proposition, say that there was no trouble about getting all the cyanamide you wanted, that you could get plenty of it, that it was a drug on the market, but that the dealers did not want it, except to a limited extent.

Mr. HEFLIN. He certainly was mistaken.

Mr. SIMMONS. He said to a limited extent they use it for making fertilizer for certain crops. I do not recall exactly the crops, but my impression is that one was the potato crop.

Mr. HEFLIN. He was dealing in fertilizer for another concern.

Mr. SIMMONS. No; he was not; he was mixing fertilizer. That is what they all do; they all mix fertilizer. That is what this man would do who rents this power down there; he would make part of the ingredients, nitrate, but he would have to buy

his phosphate and his potash from somebody else, and then he would assemble and mix them, just as Ford assembles the parts of his automobile and has a complete car.

Mr. HEFLIN. And he would have a complete fertilizer.

Mr. SIMMONS. He would have a complete fertilizer.

Mr. FLETCHER. May I remind the Senator from North Carolina, the ranking member of the great Committe on Finance, that it is well to bear in mind a fact which I am sure the Senator has not realized yet; that is, that there is a duty of 5 per cent on cyanamide under the present law. The tariff duty on ammonium phosphate, which contains about 60 per cent of plant food, is $30 a ton. If you want to help the farmers of this country you can begin right there. Thirty dollars a ton on this material is the tariff imposed under our present law.

Mr. SIMMONS. I want to say to the Senator that I would imagine, with everybody now pretending to be anxious to help the farmer, that whenever we can get another tariff bill before the Congress of the United States—and that seems to be a rather remote possibility, because our friends on the other side will not permit the subject to come to a vote in either House——

Mr. FLETCHER. Let us get a change in administration.

Mr. SIMMONS. Whenever we can bring about a condition where the Democrats can control legislation in both Houses, I have no doubt that those duties will be repealed, if brought to the attention of the committee.

Mr. BRUCE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Maryland?

Mr. HEFLIN. I yield.

Mr. BRUCE. Perhaps it may be of a little help to the Senator from Alabama in dealing with all the phases of this question to realize how my constituents in Baltimore, which is a great center for the manufacture of fertilizer, feel about this question.

If the Muscle Shoals plant is to be leased to some private corporation, and my constituents do not care to what corporation it may be leased, provided it is strong enough to meet its obligations under the lease, and provided that the rentals are just and proper rentals, which the Government has a right to expect.

Of course, the Muscle Shoals plant would then come into competition with the private enterprises in Baltimore, but that is a matter of which they would have no right to complain. It would simply be one great private enterprise competing with other private enterprises. But my people do object, and object most strenuously, to the idea of the Government taking over the operation of this great plant at Muscle Shoals and entering into competition with its own citizens, a competition which, as far as they are concerned, would not be a fair competition at all, because everybody knows that when the Government enters into any business operation of that kind it is perfectly regardless of deficits at the end of the year. In other words, under such conditions as this all the resources of the Federal Government would be at the disposal of the Government itself for the purpose of making anything in the nature of private competition utterly impractical. That point of view has probably been brought to the attention of the Senator from other sources.

Mr. HEFLIN. No; the Senator is the first one who has suggested that.

Mr. BRUCE. I am speaking for a city in which the fertilizer business is one of the important lines of business.

Mr. HEFLIN. I am glad to have the Senator's suggestion.

Mr. HARRISON. Mr. President, will the Senator yield?

Mr. HEFLIN. I yield.

Mr. HARRISON. The Senator from Florida just called the attention of the Senate to the tariff on ammonium nitrate, and suggested that we could help the farmer by getting a reduction on that item. I desire to state that at the time the present tariff law was up for consideration in the Senate, a Republican Senator, a member then of the Finance Committee, offered the amendment to place a duty of 1 cent a pound on ammonium nitrate, and, on a record vote on this question, every Republican, with the exception of the distinguished Senator from Wisconsin [Mr. LA FOLLETTE], according to this list, and the Senator from Nebraska [Mr. NORRIS] voted with the Democrats against the increase.

Mr. NORRIS. Where did the Senator place the Senator from Nebraska? I want to know where I am.

Mr. HARRISON. The Senator voted against the increase.

Mr. FLETCHER. That is 1 cent on ammonium nitrate, but the tariff on ammonium phosphate is 1½ cents a pound, I think the Senator will find, which makes it about $30 a ton.

Mr. HARRISON. The Senator from Idaho also voted with the Democrats. Three Republicans voted with the Democrats.

Mr. NORRIS. That is a demonstration that the Democrats were in mighty good company.

Mr. SIMMONS. We always feel that the Senator from Nebraska over there is in fine company when he votes with us, as he has been doing frequently in recent years.

I now recall that controversy. Of course, the friends of the Fordney-McCumber bill pretended at that time that they were friendly to the farmer and wanted to relieve all of the products that he had to buy of a duty; but it seems that in this particular they did not carry out that promise.

I think now that there is such an anxiety on the part of the other side of the Chamber to court the farmer that if we could get a tariff bill up during this Congress they would probably consent to a repeal of that provision in the law; and I had hoped we might get one up during this Congress, and I still entertain hopes that we will get it up during this Congress, while the Republicans are in a good humor to do something for the farmer, because they want the farmer to do something for them next November.

Mr. SACKETT. Mr. President, will the Senator from Alabama yield?

Mr. HEFLIN. I yield.

Mr. SACKETT. I would like to ask whether there is anybody who makes ammonium phosphate in this country except the Cyanamid Co. Does the Senator know? I have not heard of anybody else who does.

Mr. HEFLIN. I am not informed as to that.

Mr. SACKETT. I wonder what would become of their bid on Muscle Shoals if we took off that duty of $30 a ton on ammonium phosphate, if they are the only beneficiaries. Does the Senator think they would continue to bid?

Mr. McKELLAR. They are a Canadian company.

Mr. HEFLIN. They are doing business in Canada, but the company is owned and officered by American citizens.

Mr. SACKETT. But they make ammonium phosphate at Warners, N. J.

Mr. HEFLIN. They make some there.

Mr. SACKETT. That is all they make; the rest is cyanamide that is sent down there and mixed with phosphate. If you take off this duty of $30 a ton, is it the Senator's definite information that they will continue this bid for Muscle Shoals?

Mr. HEFLIN. Oh, yes; I am satisfied they would. They are having to pay now to get their stuff in here, and if they come in to do business they will be relieved of that tariff.

Mr. NORRIS. They make it here; they do not pay any tariff on it.

Mr. SIMMONS. They make it in this country.

Mr. HEFLIN. They make some of it in this country. I do not agree that they make it all here.

Mr. McKELLAR. The Senator is speaking of a desire to aid. I am wondering if the Senator expects to offer an amendment of any kind to this resolution. The Senator has talked about our getting together as far as possible and ironing out our differences. I am wondering if the Senator would not prepare such an amendment as he expected to offer to this resolution so that we can understand just what he desires to do.

Mr. HEFLIN. I am not now advocating the Willis-Madden bill. I am saying what must be in the bill that I support.

Mr. McKELLAR. Then the Senator is just opposed to the Norris resolution?

Mr. HEFLIN. I have a plan, but I have not worked it out in all its particulars as I would like to have it. I am not advocating the Willis-Madden bill now, but I am saying to the Senator, who has some good suggestions himself, that from what the Senator from North Carolina has said I believe we can go ahead and improve that bill or draft a bill that will cause somebody to come in and offer a bid, and then, if they will not bid, let us fix up a Government proposition and require that all that power, as the Senator from North Carolina has said, be devoted to making fertilizer at Muscle Shoals.

Mr. McKELLAR. Mr. President, I offered an amendment to the Senator's resolution which provides that, should it be determined by the Secretary of Agriculture that fertilizer can be manufactured feasibly and economically, the plant should be run to capacity performance. That is along the line the Senator has suggested.

As the Senator from Nebraska knows, he and I have not agreed on the question of experimentation. I agree with him as far as he goes, but I do not think he goes far enough in that respect.

Mr. HEFLIN. One of the reasons why I object to the Senator's proposition is that it leaves it to the Secretary of Agriculture, and the present Secretary of Agriculture caused to be permitted a statement to go out from the Agricultural Department on the 15th of September last that broke the price of cotton $40 a bale, 8 cents a pound, and cost the farmers of the South on a twelve and a half million bale crop, $400,000,000. I do not want to leave anything to the discretion of the

Secretary of Agriculture, and let him say whether or not he will make any fertilizer at all, and how the experiments shall be carried on.

Mr. McKELLAR. I know the Senator does not think I am defending the Secretary of Agriculture in that respect or in any other respect.

Mr. HEFLIN. I know that.

Mr. McKELLAR. I think he is the poorest Secretary of Agriculture we have ever had in this country, beyond any question.

Mr. HEFLIN. I do not doubt that at all.

Mr. McKELLAR. I think his actions in reference to the matter the Senator refers to, and in other matters, show that he is unfit for his office. But I do not anticipate that the present Secretary of Agriculture will be occupying that office for a great while. I hope not, at any rate.

Mr. HEFLIN. I agree with the Senator. I did not mean to leave any such impression as he suggests, because I know where the Senator's heart is. He is a friend of the farmer. I want to see if we can not get together and work out a proposition to lease the project to some private citizen, and if we can not make a satisfactory deal with him, then require the Government itself to do it and direct in the law what shall be done at Muscle Shoals. That is plain. That is simple, and we ought to be able to get together on such a proposition.

The resolution of the Senator from Nebraska provides for leaving it to the Secretary of War and the Secretary of Agriculture, and the various amendments, of course, have to dovetail in with the purpose of that resolution. That is what I meant in referring to the Senator from Tennessee, because that is all there is to it.

There was nothing else at this particular time to amend but the resolution. But I am now suggesting, in the interest of sound legislation and sound government and economic principles, to keep the Government out of competition with private citizens and to carry out our contract with the farmer, to defeat the resolution and to offer another proposition and see if we can get a bid; and if we can not get a bid, then let us name in the law what shall be done at Muscle Shoals for the farmer by the Government itself. I repeat that is a very simple and plain proposition.

Mr. NORRIS. Mr. President, will the Senator yield?

Mr. HEFLIN. Certainly.

Mr. NORRIS. I want to ask the Senator about the proposed substitute which he had printed the other day. Does not the Senator expect to offer that substitute?

Mr. HEFLIN. I expect to perfect it and offer it later, if I am convinced that that is the only way to get fertilizer for the farmer at Muscle Shoals. I am willing for the Senator from Tennessee [Mr. McKELLAR], and the Senator from North Carolina [Mr. SIMMONS], and the Senator from Georgia [Mr. GEORGE], and any other Senator to make suggestions relating to the substitute or any other measure. I am waiting to see if we can not dispose of the matter with that principle in view—that we are going to dedicate Muscle Shoals to the farmer and make fertilizer there.

Mr. NORRIS. Is the Senator's substitute, including the Cyanamid bid, the same as the bill offered by the Senator from Ohio [Mr. WILLIS]?

Mr. HEFLIN. Yes; that part of it which takes in Dam No. 2 and plant No. 2 and the other Government property at Muscle Shoals. It leaves out Dam No. 3 and Cove Creek Dam.

Mr. NORRIS. It leaves those out?

Mr. HEFLIN. Yes; for the reason that I stated a moment ago.

Mr. NORRIS. And has nothing to say about Cove Creek?

Mr. HEFLIN. No. It was intended to be offered as a substitute for the Senator's resolution if the Senate demanded a plan for a lease of Dam No. 2 and plant No. 2 separate and apart from other projects.

Mr. NORRIS. Does it provide for the building of Dam No. 3?

Mr. HEFLIN. No. The Senator's resolution does not provide for building Dam No. 3. I hope to see the Government build it.

Mr. NORRIS. That is a bid which the Cyanamid Co. has never yet made. Has the Senator an assurance that the Cyanamid Co. would accept it in that form?

Mr. HEFLIN. I am not absolutely certain; but they are interested in it, I have been told; but I do not care whether we accept the Cyanamid Co. bid or not. I want to stay with the issue, and I intend to stay with it, that we use that power to make fertilizer for the American farmer. There is no dodging that question. If we use it for the purpose set out in the resolution of the Senator from Nebraska, we do not do that. His is a power proposition. If we do what I am suggesting here, we are doing that which the farmer wants done, which we promised to do, and which will bless and benefit the farmer. That is what I am striving to have done, and I am going to continue to strive to have that done.

Mr. SACKETT. The Senator is interested, then, only in plant No. 2?

Mr. HEFLIN. No; in plant No. 1 and plant No. 2 and Dam No. 2. I would use all the power at Muscle Shoals. I want to say in that connection to the Senator from North Carolina [Mr. SIMMONS] that that dam produces about 80,000 primary horsepower and plant No. 2 will produce nearly 80,000.

Mr. McKELLAR. The Senator means the steam plant?

Mr. HEFLIN. Steam plant No. 2; so there is 160,000 horsepower to be distributed on those lines running out in every direction, and that is why the transmission lines would cost so much.

Mr. SIMMONS. That was why I objected to a bill which provided only that they should manufacture fertilizer only 10,000 tons the first year.

Mr. HEFLIN. The Senator and I are agreed. I am not wedded to any specific amount that has been set out. I want us to make them do whatever we desire to have them do, and make all the fertilizer that the power there will produce.

Mr. McKELLAR. Mr. President, will the Senator yield again?

Mr. HEFLIN. Certainly.

Mr. McKELLAR. The Senator talks about the cost of transmission lines. We had an investigation made in our State about a year or a year and a half ago as to the cost of transmission lines. My recollection is that those transmission lines were then estimated to cost about $2,000 a mile. If that is the cost, the Senator can see that transmission lines could be built very much more cheaply than he has estimated; in other words, from $12,000,000 to $20,000,000 would build all the transmission lines that might be necessary.

Mr. HEFLIN. I want to suggest to my friend that those little transmission lines he is talking about which cost $2,000 a mile are chinquapin lines.

Mr. McKELLAR. They are just the same size as are now used by the Alabama Power Co.

Mr. HEFLIN. No; I understand that the Alabama Power Co.'s lines cost about $12,000 a mile.

Mr. McKELLAR. The Senator may be mistaken. I am giving the estimates which, as I recall, were furnished to us about a year ago.

Mr. HEFLIN. It depends on the territory through which they run and the kind of lines constructed. There is a tremendous cost. I want to say again, so that Senators will get it firmly in their minds, that if we once construct these lines running out in every direction from Dam No. 2 and plant No. 2, there will be no fertilizer manufactured at Muscle Shoals. The fertilizer proposition would then be dead. They would say to us then, Why, you have already expended millions of money to put up the transmission lines. If you try to make fertilizer now you will be throwing that money away. So, Senators, now is the time to kill this measure and prevent that waste of money, prevent that perversion of this fertilizer project and hold it true to the purpose of its creation, the making of cheap fertilizer for the farmer.

Mr. SACKETT. Mr. President, will the Senator yield?

Mr. HEFLIN. Certainly.

Mr. SACKETT. The Senator will remember, I think, that at the last hearing when we had the matter of the cyanamide bid up for consideration, after the hearing was over a resolution was passed by the Senate to find out what contracts the Cyanamid Co. had made for the use of power at Muscle Shoals. The Senator will remember, too, that they had already entered into an agreement, if their bid came through, to sell 50,000 primary horsepower to the Union Carbide Co. That does not look as though they would use the power at Muscle Shoals to any great extent to make fertilizer.

Mr. HEFLIN. I am talking about us directing them what to do. Let us direct them to do it. I would not object to having enterprises and industries come into my State at Muscle Shoals. I would be glad to see them there and glad to see them go into Kentucky, Tennessee, North Carolina, and Texas, and all the other States.

Mr. SACKETT. That is all begging the question.

Mr. HEFLIN. Not at all. I see nothing wrong in that matter, if the Union Carbide Co. wants to come to Muscle Shoals. Let it come.

Mr. SACKETT. The Senator wants to have the power used to make cyanamide.

Mr. HEFLIN. I would use all the power at Dam No. 2 and plant No. 2 to make fertilizer, as I have already said. I am not

wedded to the cyanamide plan. We will require them to make it under any process that is the cheapest and best. I understand now that under the Willis-Madden bill they will agree to use any process that is necessary to cheapen it and make the required amount of it.

Mr. McKELLAR. I want to call the Senator's attention to one statement that he has made a number of times to-day, and that is that we must carry out the plan of the original act. In that I am heartily in accord with him. But the Senator will recall that the original act provides that the power shall never be used by and never be leased or transferred to any private company. Does the Senator recall that language of the act?

Mr. HEFLIN. I do not recall the exact language, the exact phraseology, but the Senator has come to my position. The law, under his construction of it, says in effect—and I agree with him—that we shall not use Muscle Shoals for any other purpose except to make nitrates for the Government in time of war and fertilizer for the farmers in time of peace. Is not that right?

Mr. McKELLAR. It specifically provides for it, and in that respect I am in hearty and perfect accord with the Senator.

Mr. HEFLIN. The Senator and I are agreed then. That is what I said in the outset. The act itself provides that this power must be used in peace times to make fertilizer for the farmer and in war times to make nitrates for the Government, and that it shall not be used for any other purpose. And I want Congress to live up to its provisions.

Mr. NORRIS. It specifically provides also that it shall never be leased by the Government to a private party. That is in the law. The Senator is advocating the abrogation of that part of the law when he says we should lease it to the Cyanamid Co. or to any other private person or corporation.

Mr. HEFLIN. The minute Congress enacts a law accepting a lease, that part of the old law is repealed.

Mr. NORRIS. Exactly. There is no doubt about that, but the *minute* Congress enacts a law which provides for other use, either in war or in peace, then we have repealed that provision, too. I am not asking for a repeal in either case, but the position that the Senator takes, it seems to me, is inconsistent, because he said we must make fertilizer with this power, even though we make it at a financial loss, because the original act says so, and in the next breath he says, "I want to lease this power to a private corporation," when the original act says it shall not be so leased.

Mr. HEFLIN. I want to lease it to some one to make fertilizer, because we have no proposition before us to make the Government do it. The Senator's resolution does not do it. It turns it over to the power concerns.

Mr. NORRIS. No; it does not turn it over to the power concerns.

Mr. HEFLIN. If they sell the power, why does it not?

Mr. NORRIS. The resolution gives to every municipality within transmission distance a preference to get the electricity that they may find necessary to use.

Mr. HEFLIN. I understand. That is what I maintain, that it is turned over for power purposes. That may not mean that we are going to turn it over to any particular power company, but it leaves fertilizer out entirely and becomes a power proposition purely, and I do not intend that that shall happen if I can help it.

Mr. McKELLAR. Now let us get this matter of the law straightened out. The original act under which the plant was built contains this provision:

> The plant or plants provided for under the act shall be constructed and operated solely by the Government and not in conjunction with any other enterprise carried on by private capital.

Nothing can be stronger, nothing can be more explicit, nothing can be more certain than the terms of the act.

Mr. HEFLIN. I am glad my friend called my atttention to that language, because that brings out the proposition which I have made stronger than ever. Those who wrote that law were intending to protect our property and keep it from getting into the hands of the power companies. I believe that was the idea they had in mind.

Mr. McKELLAR. It was "private enterprise"; and I want to call the Senator's attention to the fact that while I agree with him that the proposition for the manufacture of fertilizer for experimentation in the pending resolution does not go far enough, I have intended to offer an amendment which will provide for capacity production of fertilizer as provided in the original act. I want him to give it that very careful consideration which I know he is capable of, because of his interest in the matter.

Mr. HEFLIN. I shall be glad to do that.

Mr. SHEPPARD. Mr. President, will the Senator yield?

Mr. HEFLIN. I am glad to yield to the Senator from Texas.

Mr. SHEPPARD. I want to call the Senator's attention to the fact also that the Norris resolution provides that the fertilizer plant shall be constructed at Muscle Shoals, that nitrate plant No. 2 shall be used in connection with that plant, and that finished fertilizer shall be made in that way.

Mr. HEFLIN. It merely says it is authorized. It authorizes the Secretary of Agriculture to construct the plants over the country and one of them at Muscle Shoals. That one the Senator from Nebraska included upon my suggestion.

Mr. SHEPPARD. It is provided that one shall be established at Muscle Shoals to make fertilizer.

Mr. HEFLIN. If we have plant No. 2 there, and if we are going to use the money that we sell the power for to construct transmission lines all over the country, as far as the power will reach, 160,000 horsepower, there will not be any money left for fertilizer. Do not be deceived about that, Senators.

Mr. McKELLAR. That is just the surplus power. There is another amendment which will be offered by the junior Senator from Arkansas [Mr. CARAWAY], in which it is provided, as I understand his amendment, that the cyanamide plant shall be used, and if feasible it shall be continued to be used.

Mr. HEFLIN. All of these resolutions and amendments leave something to the judgment and discretion of the Secretary of Agriculture and the Secretary of War, and I do not want them to have that power, and I do not want the Government to have to do this work if I can prevent it. We have tried to do something with Muscle Shoals. We have failed thus far to do anything. Now we have reached the time when we ought to do something, and the matter ought to be disposed of. The farmers themselves are not in favor of the Norris resolution. Every Senator who votes for it knows that, because I have stated it here, and my colleague, the junior Senator from Alabama [Mr. BLACK], read telegrams from the farmers showing that the farmers and the farm bureaus are against the resolution of the Senator from Nebraska.

No farm organization is for it; all the farmers are against it. They are against the principle involved in it. They want us to lease that power if we can to some private individual and compel him under the law to make cheap fertilizer for the farmer.

Mr. McKELLAR. Yes; but the Senator has admitted this afternoon that he himself has no proposal or bid which he is willing to support. In other words, as I understand him, the proposal in the Willis-Madden bill is not satisfactory to him.

Mr. HEFLIN. I should like to see it amended.

Mr. McKELLAR. The Senator proposes to amend it by elimination to a very large extent, but even the eliminated measure does not meet his views. So what proposal has the Senate before it that we could accept according to the Senator's view?

Mr. HEFLIN. I would support the substitute which I have culled from the Willis-Madden measure, confining its operations to plant No. 2 and Dam No. 2 and the property there. I would support that in preference to the joint resolution of the Senator from Nebraska.

Mr. McKELLAR. But the Senator is not satisfied with it.

Mr. HEFLIN. I am not offering it now, and I am not entirely satisfied with it. I should like to have some of the language changed and made stronger so as to make it absolutely certain that who ever gets the plant will make fertilizer or forfeit the lease. I will say to the Senator—and I think he will agree with me—that later on I would like to see the Government build Dam No. 3 and Cove Creek Dam, and some of the other dams there, so as to help navigation and flood control, but I fear that we can not pass such a measure at this session of Congress. The pending measure is the only proposition before us that we can dispose of. The joint resolution of the Senator from Nebraska is confined to plant No. 2 and Dam No. 2 and property there, and I framed the measure to which I have called attention for the purpose of meeting his proposition. I shall urge the building of Dam No. 3 and other dams later on. I am saying to my friend from Tennessee that if he could amend my substitute so that it would suit him and other Senators here I believe we could all support it. If we can not do that, let us get up another one. We do not have to vote for this measure merely because it is before us. We reject measures here frequently and defeat them outright. We do not have to vote for a measure because it is before us.

However, Mr. President, the suggestion I wish to make before I yield the floor, which I have occupied for nearly three hours, is that we vote down the joint resolution of the Senator from Nebraska and then see if we can not get together on a proposition that will dispose of Muscle Shoals and at the same time keep faith with the farmers and carry out the purpose of the original act which was to manufacture fertilizer for the farmers

in time of peace and nitrates for the Government in time of war.

Mr. CURTIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Kansas?

Mr. HEFLIN. I do.

Mr. CURTIS. I should like to inquire if the Senator can not complete his speech to-night. We are very anxious to reach a vote on the pending joint resolution as soon as we can, and, if the Senator could proceed for a little while and finish his speech to-night, I should like to have him to do so. There are other Senators ready to speak in the morning.

Mr. HEFLIN. On this measure?

Mr. CURTIS. Yes.

Mr. HEFLIN. Well, I am about through.

Mr. CURTIS. Then can not the Senator finish to-night if he proceeds?

Mr. HEFLIN. I have about finished for the present. I may want to say something in reply to other Senators, but I think I have about covered the ground.

Mr. CURTIS. If the Senator will yield the floor, I will move an executive session.

Mr. HEFLIN. I yield.

EXECUTIVE SESSION

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened.

RECESS

Mr. CURTIS. I move that the Senate take a recess until to-morrow at 12 o'clock noon.

The motion was agreed to; and (at 5 o'clock and 25 minutes p. m.) the Senate took a recess until to-morrow, Thursday, March 8, 1928, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate March 7 (legislative day of March 6), 1928

COLLECTORS OF CUSTOMS

George D. Hubbard, of Seattle, Wash., to be collector of customs for customs collection district No. 30, with headquarters at Seattle, Wash., in place of Millard T. Hartson, deceased.

Carey D. Ferguson, of Detroit, Mich., to be collector of customs for customs collection district No. 38, with headquarters at Detroit, Mich. (Reappointment.)

CONFIRMATIONS

Executive nominations confirmed by the Senate March 7 (legislative day of March 6), 1928

ENVOY EXTRAORDINARY AND MINISTER PLENIPOTENTIARY

David E. Kaufman to be envoy extraordinary and minister plenipotentiary to Bolivia.

UNITED STATES MARSHAL

Joseph Fritsch, jr., to be United States marshal, western district of New York.

POSTMASTERS

CALIFORNIA

Peter Garrick, Camino.
Lew E. Wickes, Castella.
Cassius C. Olmsted, San Rafael.
Walter M. Brown, Turlock.
Jennie E. Kirk, Waterford.

FLORIDA

Mary Joyner, Bagdad.

MAINE

Carl W. Mitchell, Union.

NEBRASKA

Edwin P. Clements, jr., Ord.

NORTH DAKOTA

Ole H. Opland, Mott.

OREGON

David S. Young, Dufur.
Don Ellis, Garibaldi.
Fred C. Holznagel, Hillsboro.
Thomas G. Hawley, Multnomah.

PENNSYLVANIA

Christian Jansen, Essington.
Michael A. Grubb, Liverpool.

PORTO RICO

Nicholas O. Lebron, Aibonito.
Jose E. Guenard, Mayaguez.
Roque Rodriguez, Ponce.
Juan V. Hernandez, San Sebastian.
L. Castro Gelpi, Vieques.

TEXAS

Louise Sackett, Bullard.
Walter E. Hall, Lufkin.
Willie M. Prouty, Wallis.
Fannie Dawson, Wilson.

UTAH

Agnes Turnbull, Scofield.

WEST VIRGINIA

Nina E. Welch, Camden on Gauley.

HOUSE OF REPRESENTATIVES

WEDNESDAY, *March 7, 1928*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

O Lord, our Lord, how excellent is Thy name in all the earth! who hast set Thy glory above the heavens. When I consider the heavens, the work of Thy fingers; the moon and the stars, which Thou hast ordained; what is man that Thou art mindful of him, and the son of man that Thou visitest him? For Thou hast made him a little lower than the angels, and hast crowned him with glory and honor. Thou madest him to have dominion over the works of Thy hands; Thou hast put all things under his feet. O Lord, our Lord, how excellent is Thy name in all the earth. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Craven, its principal clerk, announced that the Senate had passed with amendments the bill (H. R. 4702) entitled "An act to remove the charge of desertion from the record of Benjamin S. McHenry," in which the concurrence of the House of Representatives was requested.

The message also announced that the Senate disagrees to the amendments of the House of Representatives to the bill (S. 1498) entitled "An act to extend the time for the construction of a bridge across the Chesapeake Bay, and to fix the location of said bridge," and requests a conference with the House on the disagreeing votes of the two Houses thereon, and had appointed Mr. JONES, Mr. MCNARY, and Mr. FLETCHER to be the conferees on the part of the Senate.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 10286) entitled "An act making appropriations for the military and nonmilitary activities of the War Department for the fiscal year ending June 30, 1929, and for other purposes."

The message also announced that the Senate had passed without amendment bills of the House of the following titles:

H. R. 437. An act authorizing the Maysville Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Maysville, Ky.; and

H. R. 472. An act authorizing Dwight P. Robinson & Co. (Inc.), its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Maysville, Ky.

The message further announced that the Senate had passed a joint resolution and bills of the following titles, in which the concurrence of the House of Representatives was requested:

S. J. Res. 95. Joint resolution authorizing the Secretary of Agriculture to dispose of real property, located in Hernando County, Fla., known as the Brooksville Plant Introduction Garden, no longer required for plant introduction;

S. 150. An act for the relief of former officers of the United States Naval Reserve Force and the United States Marine Corps Reserve who were released from active duty and disenrolled at places other than their homes or places of enrollment;

S. 624. An act for the relief of the Van Dorn Iron Works Co.;

S. 656. An act to amend section 15a of the interstate commerce act, as amended;

S. 766. An act to fix the compensation of registers of local land offices, and for other purposes;

S. 1369. An act to authorize and direct the survey, construction, and maintenance of a memorial highway to connect Mount Vernon, in the State of Virginia, with the Arlington Memorial Bridge across the Potomac River at Washington;

S. 1678. An act for the relief of the estate of George B. Spearin, deceased;

S. 1823. An act to amend section 2 of the act approved June 6, 1924 (43 Stat. L. 470), entitled "An act to amend in certain particulars the national defense act of June 3, 1916, as amended, and for other purposes";

S. 1955. An act for the relief of Lieut. Charles Thomas Wooten, United States Navy;

S. 2126. An act to provide for compensation for Ona Harrington for injuries received in an airplane accident;

S. 2410. An act to amend section 1440 of the Revised Statutes of the United States;

S. 2442. An act for the relief of Lieut. Henry C. Weber, Medical Corps, United States Navy;

S. 2456. An act to establish game sanctuaries in the national forests;

S. 2660. An act to amend an act entitled "An act to provide for the examination and registration of architects and to regulate the practice of architecture in the District of Columbia," approved December 13, 1924, and for other purposes;

S. 2788. An act for the relief of Charlie McDonald;

S. 2855. An act for the relief of the estates of John Frazer, deceased, Zephaniah Kingsley, deceased, John Bunch, deceased, Jehu Underwood, deceased, and Stephen Vansandt, deceased;

S. 2966. An act for the relief of Oliver C. Sell;

S. 3194. An act to establish the Bear River migratory-bird refuge; and

S. 3198. An act to amend the act of March 3, 1915, granting double pension for disability from aviation duty, Navy or Marine Corps, by inserting the word "Army," so as to read: "Army, Navy, and Marine Corps."

SENATE BILL AND JOINT RESOLUTION REFERRED

A bill and a joint resolution of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred to the appropriate committees, as follows:

S. J. Res. 33. Joint resolution authorizing the selection of a site and the erection of a memorial monument to the pioneers of the Pacific Northwest in Washington City, District of Columbia; to the Committee on the Library.

S. 1218. An act for the relief of Lincoln County, Oreg.; to the Committee on War Claims.

SWEARING IN OF A MEMBER

Mr. LINTHICUM. Mr. Speaker, I take great pleasure in presenting to be sworn in my colleague WILLIAM P. COLE, duly elected from the second congressional district of Maryland.

Mr. COLE of Maryland appeared at the bar of the House and took the oath of office prescribed by law.

NAVAL CONSTRUCTION

Mr. SNELL. Mr. Speaker, I present a privileged report from the Committee on Rules for printing in the RECORD.

House Resolution 134

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of H. R. 11526, to authorize the construction of certain naval vessels, and for other purposes. That after general debate, which shall be confined to the bill and shall continue not to exceed six hours, to be equally divided and controlled by those favoring and opposing the bill, the bill shall be read for amendment under the five-minute rule. At the conclusion of the reading of the bill for amendment the committee shall arise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and the amendments thereto to final passage without intervening motion except one motion to recommit.

RADIO VESTED RIGHTS

Mr. CELLER. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by publishing a legal brief on the subject of vested rights in radio.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. CELLER. Mr. Speaker, if anyone has used the ether for a period of time, he has a vested right to continue that use, subject to regulation by the United States Government.

A study of the term "regulation" raises the question: Does the power to regulate include the power to prohibit? It is my opinion that it does not.

However, assuming that my opinion is incorrect and that the power to regulate does include the power to prohibit, my opinion, then, is that when the power to prohibit is enforced, just compensation must be given.

Congress for the first time assumed control of radio communication under its power to regulate interstate commerce by the act of 1912. (37 Stat. L. 302.)

Section 1 of this act required the obtaining of a Federal license before engaging in radio communication. The act of 1912 proved inadequate and unsatisfactory, as the following cases will show:

> Under the law of 1912, the duty imposed upon the Secretary of Commerce in issuing licenses to operate radio stations was a purely ministerial one—the only discretion reposed in him was in selecting a wave length within the limitation prescribed in the act, which in his judgment would result in the least possible interference. (Hoover *v.* Intercity Radio Co., 286 Fed. 1003.)

In response to a letter from the Secretary of Commerce asking for a definition of his powers and duties under the act of 1912, the Attorney General of the United States, on July 8, 1926, replied that the act of 1912 did not confer authority upon the Secretary of Commerce to refuse applications for licenses, assign wave lengths, or limit power or time of operation. (35 Opp. Atty. Gen. 126.)

The new legislation to supply the defects of the 1912 law was approved on February 23, 1927, and is known as the radio act of 1927. (Public, 632, 69th Cong.)

As was said at the beginning, Congress assumed control of radio communication under its power to regulate interstate commerce.

Quoting from Opinions of Attorney General, volume 35, page 128, we have the following:

> There is no doubt whatever that radio communication is a proper subject for Federal regulation under the commerce clause of the Constitution. (Pensacola Telegraph Co. *v.* Western Union, 98 U. S. 1, 9; 24 Opp. 100.)
>
> And it may be noticed in passing that even purely intrastate transmission of radio waves may fall within the scope of Federal power when it disturbs the air in such a manner as to interfere with interstate communication. (Minnesota rate cases, 230 U. S. 352.)

A very recent case holding that radio broadcasting is interstate commerce is that of Whitehurst *v.* Grimes, reported in Twenty-first Federal (second series), 787.

Section 1 of the act of 1927 made operation of a station unlawful without the obtaining of a new license, and this even though the station was operating under license granted under the 1912 act. Under the 1912 act licenses were indeterminate as to time and revocable for cause. The new act did not declare a cause in ending them. It merely made further operation under them unlawful.

Section 11 of the act of 1927 reads in part:

> If upon examination of any application for a station or for the renewal or modification of a station license the licensing authority shall determine the public interest, convenience, or necessity would be served by the granting thereof, it shall authorize the issuance, renewal, or modification thereof in accordance with such finding.

The commission thus grants or denies the application upon its determination as to whether or not public convenience, interest, or necessity will be served by the operation of the station.

The significance of these words when applied to the radio situation is rather vague. Not more so, however, I think, than when used in State statutes and applied to public utilities. They comprehend public welfare. (286 Ill. 582.)

There is one difference, however, between the radio act and State public utility laws: The radio act is directed in part against persons already engaged in commerce while the public utility laws of the States are mainly applied against persons preparing to enter commerce.

Taken by itself, requiring a license to engage in commerce is within the constitutional powers to regulate commerce. Colorado *v.* United States (271 U. S. 153).

Should the commission, however, refuse to issue a license to a station existing before the law, the question of vested rights of such owner arise.

It is the opinion of the writer that if anyone has used the ether for a period of time, he has a vested right to continue that use, subject to regulation by the United States Government.

This opinion is based upon a fair construction of the language of section 5 of the act of 1927, as deduced from a reading of that section together with a study of the history of this provision.

Section 5 provides that—

> No station license shall be granted by the commission or by the Secretary of Commerce until the applicant therefor shall have signed a waiver of any claim to the use of any particular frequency or wave

length or of the ether as against the regulatory power of the United States, because of the previous use of the same, whether by license or otherwise.

The history of this provision shows that on July 3, 1926, Congress passed Joint Resolution 125, which became law on December 8, 1926. This resolution provided that no license or renewal should be granted—

unless the applicant therefor shall execute in writing a waiver of any right or of any claim to any right, as against the United States, to any wave length or to the use of the ether in radio transmission because of previous license to use the same or because of the use thereof.

When the radio act of 1927 was enacted this resolution was specifically repealed by section 39 of the radio act, and the new language of section 5, quoted above, was substituted.

It will be noted that in the language of the joint resolution enforced prior to the radio act the applicant for a license had to sign a waiver of any right or claim to any right as against the United States, while in the new radio act now in force the waiver is as to any claim as against the regulatory power of the United States.

Under the language of the resolution it seems to the writer that the licensee would become a mere tenant at will of the Government, and that under the resolution the Government could at any time order him to desist; and if so, he would have no legal right to continue and would have no remedy other than his constitutional right to just compensation.

The language of the new radio act, however, modifies the provision of the resolution and merely says that the applicant for license must sign a waiver of right as against the regulatory powers of the United States.

I deem the language as modified by the act of 1927 to mean that the licensee is merely subject to "regulation" by the Government.

If a radio station has been established under the law of 1912, and its license has not been revoked "for cause" as provided for in that act, it would seem to the writer that he would have a vested right to continue to use the ether under the new 1927 act, subject only to the regulatory power of the United States.

I am of the opinion that Congress under section 5 can subject the station owners to any reasonable regulations deemed necessary for the public welfare, but that it can not arbitrarily abrogate all privileges.

The radio act of 1927 is intended to be a regulatory and not a prohibitory measure.

The title of the radio act reads:

An act for the regulation of radiocommunications, and for other purposes.

The constitutional authority vested in Congress under the commerce clause is to regulate interstate and foreign commerce (of which radio is a part), not to prohibit it.

The right of Congress to prohibit commerce absolutely as a phase of regulation has been before the Supreme Court in a number of cases. The court stated in several decisions that the power to regulate includes the power to prohibit entirely. In accordance with this principle, it upheld acts of Congress prohibiting the transportation of lottery tickets (the Lottery case, 188 U. S. 321) and the food and drugs act prohibiting the transportation of impure foods and drugs (Hipolite Egg Co. v. U. S., 220 U. S. 45).

It was this absolute power of prohibition which was relied upon to support the child labor law prohibiting the transportation in interstate commerce of certain classes of drugs manufactured by child labor.

But in its opinion declaring the child labor law unconstitutional (Hammer v. Dagenhart, 247 U. S. 251 and 271) the court differentiated the cases above referred to. The contention was made that they established the doctrine that the power to regulate includes the authority to prohibit the movement of ordinary commodities. The court, however, said that the contrary was the fact, since these cases rested upon the character of the particular subjects dealt with; that in each of them the use of interstate transportation was necessary to the accomplishment of harmful results; and that proper regulation of interstate commerce could be brought about only by prohibiting the use of its facility to effect the evil intended. The court proceeded to say that neither was such a purpose disclosed by the act under consideration, nor was the character of the article transported such as to make prohibition necessary.

There was a very strong dissent, based mainly upon argument that the power to regulate is absolute, the power to prohibit necessarily included within it, and that it is for Congress alone to determine the propriety of its exercise.

This decision is not a denial of the complete power of Congress to regulate interstate commerce. It is a holding that in the exercise of that power Congress must confine itself to regulation, and may not, under the cloak of regulation, grasp powers not delegated.

The above quotation is quoted from pages 72 and 73 of Mr. Stephen Davis's book on the Law of Radio Communication, 1927. Mr. Davis is Solicitor of the Department of Commerce.

Assuming, however, that the power to regulate does include the power to prohibit, the station owner can still stand upon his constitutional rights and maintain that the commission in revoking his license is taking private property without just compensation, in violation of the fifth amendment to the Federal Constitution.

If a license for an existing station is refused, the commission would not take the property of the owner, in the sense of an actual physical seizure. It would still remain in the possession of its owner, even though the value of the property would be practically destroyed—it might be thus contended that the constitutional provision against taking private property without due process has been avoided.

The only value of property lies in the use that may be made of it. It may be said generally that the forbidding of an individual to use his property is equivalent to a taking of it, and that deprivation of use violates the constitutional guaranty to the same extent as would an actual physical seizure or destruction of the property itself. The Supreme Court of the United States has expressed itself on the general subject as follows:

It would be a very curious and unsatisfactory result if in construing a provision of constitutional law, always understood to have been adopted for protection and security to the rights of individuals as against the Government, and which has received the commendation of jurists, statesmen, and commentators as placing the just principles of the common law on that subject beyond the power of ordinary legislation to change or control them, it shall be held that if the Government refrains from the absolute conversion of real property to the use of the public, it can destroy its value entirely, can inflict irreparable and permanent injury to any extent, can, in effect, subject it to total destruction without making any compensation, because in the narrow sense of that word, it is not taken for the public use. Such a construction would pervert the constitutional provision into a restriction upon the rights of the citizens, as these rights stood at the common law, instead of the Government, and make it an authority for invasion of private right under the pretext of the public good, which had no warrant in the laws or practices of our ancestors. (Pumpelli v. Green Bay Co., 13 Wall. 166, 177. See also Chicago Board of Trade v. Olsen, 262 U. S. 1; Village of Euclid v. Ambler Realty Co., 47 Sup. Ct. 115; Corneli v. Moore, 267 Fed. 456.)

The above quotation is quoted from page 68 of Mr. Stephen Davis's book on the law of radio communication, 1927.

The Supreme Court of the United States has declared the rule as to the necessity for compensation in the following language:

"If in the execution of any power, no matter what it is, the Government, Federal or State, finds it necessary to take private property for public use, it must obey the constitutional injunction to make or secure just compensation to the owner. (Cherokee Nation v. Southern Kansas Ry., 135 U. S. 641, 659; Sweet v. Rechel, 159 U. S. 380, 399, 402; Monongahela Navigation Co. v. United States, 148 U. S. 312, 336; United States v. Lynch, 188 U. S. 445) * * * Upon the general subject there is no real conflict among the adjudged cases. Whatever conflict there is arises upon the question whether there has been or will be in the particular case, within the true meaning of the Constitution, a taking of private property for public use. If the injury complained of is only incidental to the legitimate exercise of governmental powers for the public good, then there is no taking of property for public use, and a right to compensation, on account of such injury, does not attach under the Constitution." (Chicago, Burlington & Quincy Ry. Co. v. Drainage Commissioners, 200 U. S. 561, 593.)

The American Bar Association made an interim report on radio legislation in December, 1926. It discussed the bills then pending in Congress with particular reference to the constitutionality of refusing licenses to existing stations without affording compensation. It urged the inclusion of provisions which would compensate the owners of stations so closed, the money necessary to be derived from a tax on those licensed. In support of that suggestion the committee said:

* * * To close stations in which large sums of money have already been invested is obviously a drastic provision. We do not believe that the courts would uphold as constitutional legislation which permitted such closing, either directly or indirectly by way of declining to issue new licenses, unless just compensation were paid * * *. The committee believes its suggestion is sound in law for the following reasons:

"a. The 1912 statute permitted everyone to obtain a license. As we have stated before, the secretary had no discretionary power and he could be mandamused to compel the issuance of the license. The licenses were not for any stated term and could be revoked only for frauds. The companies with established business under such a situa-

tion had a right to believe that their investments could not be destroyed by the mere repeal of the 1912 law * * *."

"c. The obligation of the Federal Government to pay just compensation for closing an existing radio station was recognized in the joint resolution of July 16, 1918, which permitted the President to take over radio stations during the time of war, but only upon payment of just compensation. It is to be noted that even when this power was repealed, on July 11, 1919, the compensation provisions were specifically continued.

"d. The committee sees no newer constitutional authority for depriving the citizens of property rights under the pending legislation than was included under the 1912 legislation."

The above quotations are taken from pages 66, 70, and 74 of Mr. Stephen Davis's book on the Law of Radio Communication, 1927.

I therefore urge the Members of the House to give consideration to vested rights in radio, and that if such vested rights are to be taken away from station owners just compensation must be given, otherwise the statute is void, as violative of the fifth amendment of the Constitution.

CALENDAR WEDNESDAY

The SPEAKER. This is Calendar Wednesday, and the Clerk will call the committees.

The Clerk called the committees. When the Committee on Interstate and Foreign Commerce was reached—

Mr. PARKER. Mr. Speaker, I call up from the Union Calendar the bill H. R. 11026.

The SPEAKER. This bill is on the Union Calendar and the House automatically resolves itself into the Committee of the Whole House on the state of the Union. The gentleman from Oregon [Mr. HAWLEY] will take the chair.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union, with Mr. HAWLEY in the chair.

PUBLIC HEALTH

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 11026, which the Clerk will report.

The Clerk read the title to the bill, as follows:

A bill (H. R. 11026) to provide for the coordination of the public-health activities of the Government, and for other purposes.

Mr. PARKER. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. PARKER. Mr. Chairman, I yield one hour to the gentleman from Michigan [Mr. MAPES].

Mr. MAPES. Mr. Chairman, I wish to be notified when I have used 15 minutes.

Mr. Chairman and members of the committee, the committee in its report on this bill has aimed to discuss every feature of it, and for that reason I shall not attempt at this time to go into it in detail. The report discusses and gives the reason for every paragraph of the bill. In fact the mere reading of almost every paragraph gives the reason for it. The legislation was initiated in the Sixty-ninth Congress. The chairman of the Committee on Interstate and Foreign Commerce, the gentleman from New York [Mr. PARKER] introduced the original bill in the last Congress. It was referred to the department and recommended by the Secretary of the Treasury, and a subcommittee of the Committee on Interstate and Foreign Commerce was appointed late in the session of the last Congress to consider the legislation. That subcommittee held hearings on the bill in February of last year, but the legislation was referred to the subcommittee too late to take any further action before the adjournment of the last Congress other than to hold hearings. The gentleman from New York reintroduced the bill in this Congress and appointed the same subcommittee to consider it, and that subcommittee in order to give everyone who desired it an opportunity to be heard, held additional hearings in this Congress.

The bill was redrafted in certain particulars and presented to the full committee, and the full committee has recommended the legislation as it appears before you in the draft of H. R. 11026.

There were two sections in the original bill which the committee struck out entirely, and it changed the wording in certain minor particulars of other sections of the bill. The first section of the original bill provided that the President might by Executive order transfer to the Public Health Service any agency in the other departments engaged in public-health activities.

The second section of the original bill authorized the President to detail any of the personnel of the Public Health Service to other departments that were carrying on public-health work as an incident to the work of their department to supervise or cooperate in such work.

The committee considered it advisable to eliminate both of those sections of the original bill.

A strong argument can be advanced to the effect that such delegation of power to the President as these two sections propose would be an unwarranted and unconstitutional delegation of legislative power. Practically all the activities of the Government are created by statutory enactment, and some people doubt whether these statutory provisions can be abrogated or repealed by Executive order.

The committee, in striking out those provisions, was also influenced by this further consideration: The more one considers the administrative branches of the Government the more he is convinced that no such order in fact would ever be made by the President unless approved and consented to by the heads of the different departments affected.

As a practical proposition, it is believed that the President would not make such an order until the heads of the different departments had joined in a request for it. That being so, the committee believes that the provision in the bill as reported by the committee authorizing the Secretary of the Treasury to detail officers of the Public Health Service to any department carrying on public-health activities upon the request of the head of that department, will be for all practical purposes as beneficial and effective as the broader provisions in the original bill. There are some departments of the Government that carry on important public-health activities in connection with their major purpose, and others that have public-health activities of less importance. Some student of the Government says that there are altogether 40 different public-health activities of one kind or another carried on in different branches of the Government.

It seemed to the committee that it was desirable to give these different departments the benefit of the advice and experience of the more expert personnel of the Public Health Service if they desired it, and therefore the committee incorporated this permissive section in the bill as reported to the House.

Mr. COLE of Iowa. Mr. Chairman, will the gentleman yield?

Mr. MAPES. Yes.

Mr. COLE of Iowa. How does it affect the Child Welfare Division of the Department of Labor?

Mr. MAPES. It does not affect it at all unless the Secretary of Labor requests the Secretary of the Treasury to detail an officer from the Public Health Service to cooperate with the Child Welfare Bureau in its work.

Mr. COLE of Iowa. The bureau will remain under the Department of Labor?

Mr. MAPES. The bill does not attempt in any way to change the location of any bureau or activity.

The growth of the Public Health Service has been very interesting. It did not blossom forth full grown to its present proportions but had its origin in very simple beginnings. Its genesis goes back to 1798 with the passage of an act for the relief of disabled seamen, and it has grown from that simple provision of the law back in 1798 to its present proportions through the simple processes of evolution, taking on such work as was assigned to it by Congress from time to time. There has never been any broad, constructive, or all-embracing Public Health Service act. The work of the Public Health Service has been assigned to it from time to time by what might be termed piecemeal legislation as the necessities of the people and the requirements of the Government seemed to demand.

Mr. TILSON. Mr. Chairman, will the gentleman yield?

Mr. MAPES. Yes.

Mr. TILSON. Is it the purpose of this bill to make a sort of organic act for the Public Health Service, bringing together the different laws on the subject, or just what is the main object of the bill?

Mr. MAPES. It comes nearer being that than any other legislation that has ever been passed, although it does not attempt to codify the existing laws relating to the public health in detail. It attempts to coordinate the different public health activities, give the Public Health Service a little more concrete and definite statutory authority for some of its activities, and broaden others, and it also puts certain of the personnel of the Public Health Service on what is termed a commission basis so as to enable that personnel to make the Public Health Service more of a career service than is now possible.

Mr. OLDFIELD. Mr. Chairman, will the gentleman yield?

Mr. MAPES. Yes.

Mr. OLDFIELD. Will this increase the cost of the Public Health Service, and, if so, how much?

Mr. MAPES. The bill will increase the cost of the service to a limited extent. It is estimated that the increase in cost will be $17,185, although it is difficult to estimate it with exactness.

Mr. OLDFIELD. Per year?

Mr. MAPES. Per year.

Mr. OLDFIELD. How many additional men are provided for?

Mr. MAPES. It will not require any additional men. The estimated increase in the expense, it is expected, will be more than offset by the increased efficiency and economies which can be brought about by the legislation. For example, in making these details of the personnel from the Public Health Service to the other departments carrying on Public Health activities, it will do away with the necessity for calling in outside experts at considerable expense.

Mr. OLDFIELD. Does it have the unanimous indorsement of the Interstate and Foreign Commerce Committee?

Mr. MAPES. I can not say that it has. One member of the committee voted against the legislation in the committee. It has the indorsement of the five members of the subcommittee who studied it in the last Congress and who studied it faithfully in this Congress.

Mr. JONES. Does it provide for cooperation with the State health agencies?

Mr. MAPES. The existing law provides for cooperation between the Public Health Service and the State health officers. The law now provides for an annual meeting of the public-health officials of the different States in Washington, and that meeting is presided over by the Surgeon General of the Public Health Service. The cooperation between the Federal Public Health Service and the State public-health officials is something that is working in very excellent shape. There is no lack of harmony between the Federal service and the State service.

Mr. JONES. It would not interfere with it in any way?

Mr. MAPES. This does not interfere with that in any way, and this bill is indorsed by the public-health officials of all of the States. They are very anxious to have it passed.

Mr. LINTHICUM. I notice on page 4 of the bill it is provided that—

> The Surgeon General of the Public Health Service shall hereafter be entitled to the same pay and allowances as the Surgeon General of the Army.

What change does that make in the pay of the public-health officials?

Mr. MAPES. The pay of the Surgeon General of the Public Health Service at present is the same as that of a brigadier general in the Army. This would raise his pay to that of a major general in the Army, the same as the Surgeon General of the Army and the Surgeon General of the Navy now receive.

It makes a difference in dollars and cents in the pay of the Surgeon General of the Public Health Service of $2,200 per year. He now receives, including his base pay and allowances, $7,500, and this would raise his pay and allowances to $9,700 per year.

Mr. LINTHICUM. Are any other salaries increased by virtue of this bill? Does the gentleman know?

Mr. MAPES. There are no other salaries increased directly by the bill.

The CHAIRMAN. The Chair will notify the gentleman that he has consumed 15 minutes.

Mr. MAPES. I will take a little more time.

In the transfer of the noncommissioned officers in the Public Health Service to a commission basis, such as the sanitary engineers, scientists, and so forth, there will necessarily be a little readjustment of the pay, because they may not now be receiving in all cases the pay corresponding to the different pay periods in the Army. For example, a man might now be receiving $3,300 per year. That may not be an actual case, as a matter of fact, but it will serve as an illustration. A man may be receiving $3,300 now per year. There may not be in the Army pay law any schedule that corresponds exactly to that amount. There may be a $3,000 or a $3,600 salary. So that in the adjustment of this man's pay he would receive either $3,000 or $3,600. In that way some of the officers may receive an increase, but no substantial increase.

Mr. LINTHICUM. I notice this seems to be pretty much on the same basis as the Medical Corps of the Army. Is that correct?

Mr. MAPES. Yes.

Mr. LINTHICUM. And that would give some of them an increase of pay, and some not so much?

Mr. MAPES. Yes.

Mr. LINTHICUM. I am in favor of increasing the pay of the heads of this bureau in particular, with a corresponding increase also in the pay of the men. I think we ought to do it.

Mr. HOWARD of Oklahoma. Mr. Chairman, will the gentleman yield?

Mr. MAPES. Yes.

Mr. HOWARD of Oklahoma. I think the salary of the employees in this department ought all to be increased. But in what general way does it broaden the work of this bureau and give them an opportunity for actually going out and giving the people the benefit of this work? Does this in any way broaden the scope of their duties or broaden their power to render good service to the people?

Mr. MAPES. Yes. One of the purposes of the bill is to authorize the officers of the Public Health Service to go into institutions conducted under private endowment that do research work, and it gives the officers of the institutions the reciprocal right to come to the hygienic laboratory to do research work. The students of the subject think this is a very desirable and important provision of the bill.

Mr. HOWARD of Oklahoma. As I understand, the gentleman thinks that the passage of this bill will make this bureau much more valuable and useful to the people?

Mr. MAPES. Yes; very much more. The more one studies the work of the Public Health Service, the more it seems to me he is bound to respect what they are doing for the health and welfare of the people. That has been my own experience, at least, and I think the more one studies this legislation and studies what is to be accomplished by it, the more he will approve of it, and the more he will see the necessity for it. Take any one individual provision or paragraph in the bill alone, and it may not impress one as being of great importance; but taking it as a whole, it is considered by the public-health workers and health students in the country to be of very great importance.

Mr. HOWARD of Oklahoma. What to-day is the salary of the Surgeon General of the Public Health Service in dollars and cents?

Mr. MAPES. It is now $7,500, and this bill raises it to $9,700.

Now, as I said at the beginning, I am not going to attempt to go into a detailed explanation of the different provisions of the bill, because the committee report does that as well as I could do it, and I do not want to repeat what is in the report. I only want to take enough additional time to call attention to some of the indorsements of the proposed legislation.

Mr. BANKHEAD. Before the gentleman goes into that will he permit a question, for information?

Mr. MAPES. Yes.

Mr. BANKHEAD. I see in the report here that there are 129 dentists in the regular establishment of the Public Health Service.

Mr. MAPES. Yes.

Mr. BANKHEAD. What in the main are the assignments of those dentists? What do they do?

Mr. MAPES. They take care of the men in the Coast Guard Service and the seamen. They have a very limited number, it is claimed, for the work which they have to perform. I do not know that I can answer the gentleman much more in detail on that.

Mr. BANKHEAD. As I understand it, they devote most of their time and attention to departmental service, not work on the outside, as, for example, the public-school system.

Mr. MAPES. No; nothing of that kind.

Mr. HILL of Alabama. What is the function of the nurses in the service?

Mr. MAPES. There are United States marine hospitals and other relief stations under the jurisdiction of the Public Health Service, amounting to over 150.

Mr. HILL of Alabama. Different hospitals?

Mr. MAPES. Hospitals and relief stations. The nurses are employed in these different hospitals and stations and are employed or used in cases of epidemic and plague, such as there was in New Orleans. They are required in such cases.

Mr. HILL of Alabama. Do I understand this reduces the pay of the Public Health nurses?

Mr. MAPES. To a limited extent. It puts them on the same basis as the nurses of the Army, and it has the hearty indorsement, as I understand it, of the nurses in the Public Health Service. They are put on a more permanent basis and the nurses in the Public Health Service feel that they would be more assured of a career service with the passage of this bill than they are now. The Surgeon General says that because of the lack of security as to a career service the turnover among

the employees in the nurse corps is greater than it would otherwise be.

Mr. HILL of Alabama. Will they be promoted in grades just like those in the Army Nurse Corps?

Mr. MAPES. Yes.

Mr. HILL of Alabama. And will have the same rights of retirement?

Mr. MAPES. Yes.

Mr. LINTHICUM. I note on the first page of the first section it provides that—

> The Secretary of the Treasury is authorized to detail officers or employees of the Public Health Service to such department or independent establishment in order to cooperate in such work.

The same feature follows on page 2, section 2. Does he have the right to detail them to these places without their request?

Mr. MAPES. No. That was such a provision in the original bill, but the committee struck out that provision and authorized the *detail only* in case the head of the department to which they are to be detailed requests it.

Mr. LINTHICUM. There is no such provision in this bill. He might detail some of the men to go over into my State for the purpose of cooperating or investigating without a request or he might detail them to some independent organization without a request.

Mr. MAPES. I beg the gentleman's pardon. I did not understand his question. I thought it related only to the Federal Government.

Mr. LINTHICUM. I am speaking about the Federal Government. The Secretary of the Treasury is authorized to detail officers or employees of the Public Health Service to such department or independent establishment in order to cooperate in such work. I want to ask the gentleman whether he does not think there ought to be an amendment inserted in the bill providing that that shall be done upon their request?

Mr. MAPES. The gentleman has overlooked the first line of the section:

> That upon the request of the head of an executive department or an independent establishment—

That may be done.

Mr. LINTHICUM. Which is carrying on a public-health activity?

Mr. MAPES. Yes.

Mr. LINTHICUM. But does not that seem to be limited by the latter part of the clause?

Mr. MAPES. Oh, no.

Mr. HOWARD of Oklahoma. What is meant by "independent establishment"? Would that include the Red Cross or the Salvation Army?

Mr. MAPES. No; nothing except an independent establishment of the Government. An independent establishment has a well-defined meaning as applied to the Government service, such as the Interstate Commerce Commission, the United States Veterans' Bureau, and others of that nature that do not come under any Secretary of the Cabinet.

Mr. HOWARD of Oklahoma. Then it has to be a Government activity?

Mr. MAPES. Yes; it has to be a Government activity. I just want to call attention to the fact before I conclude that this bill did not have its inception with the Public Health Service. It was, rather, conceived by the students and workers in public-health work. It is indorsed by practically every public-health organization; in fact, every public-health organization that I know of in the country has indorsed it, and it is indorsed by industrial concerns as well. One of the principal witnesses before the committee was Doctor Armstrong, of the Metropolitan Life Insurance Co., who participated in the meetings that agreed upon the principles of the legislation.

Mr. MOORE of Virginia. May I ask the gentleman a question?

Mr. MAPES. Yes.

Mr. MOORE of Virginia. Did you not find in the hearings that the work that is being carried on under the direction of Surgeon General Cumming is universally commended?

Mr. MAPES. Practically universally. There is here and there a person who objects to some particular regulation or specific activity of the department, but the committee did not think that any of the objections went to the real merits of the legislation.

Mr. MOORE of Virginia. But as a rule I understand that the authorities in all of the States applaud the way in which the work is being carried on under the present organization.

Mr. MAPES. I think it is safe to say that without any exception the authorities in the States, with emphasis on the word "authorities," approve of the legislation and of the activities of the service.

Mr. HUDSON. Will the gentleman yield?

Mr. MAPES. Yes.

Mr. HUDSON. Is there any laboratory established where this national department can carry on research work?

Mr. MAPES. The Hygienic Laboratory is one of the leading research laboratories of the country.

Mr. HUDSON. And that is under the direction of this staff?

Mr. MAPES. It is under the direction of the Surgeon General of the Public Health Service.

Mr. DENISON. Will the gentleman yield?

Mr. MAPES. I yield to the gentleman.

Mr. DENISON. I do not know whether the gentleman has discussed it or not, but is not all of the quarantine service under the Public Health Service?

Mr. MAPES. All of it.

Mr. DENISON. That is a very important and responsible service, of course.

Mr. MAPES. It is. I intended, I will say to my colleague, to explain a little more in detail the work of the Public Health Service, but I have been diverted by the questions that have been asked. It does this quarantine work; it is authorized to prevent the spread of contagious diseases between the States and foreign countries; it conducts research work; it goes out, at the request of the public-health officials of the different States, to investigate any particular epidemic or any particular disease that the State authorities have not been able to cope with. In short, it is given the broad authority by statute to investigate the diseases of man and the causes thereof, including the pollution of streams. Among its other work it issues a public-health bulletin every week. Until one makes a special study of the work of the service he does not realize the importance of it and the good it is doing.

Mr. DENISON. They do a good deal of splendid work in connection with municipal sanitation all over the country.

Mr. MAPES. All over the country; yes. It must be a matter of great gratification to the Public Health Service to get the indorsement and the approval it did get from the public-health officials of the States before the committee in the hearings which the committee held.

Mr. LAGUARDIA. Will the gentleman yield?

Mr. MAPES. I will yield to the gentleman.

Mr. LAGUARDIA. Officers of the Public Health Service are now detailed to foreign ports, are they not, in connection with immigration inspection work?

Mr. MAPES. Officers are detailed to foreign ports; they are detailed to consulates in foreign countries to examine prospective immigrants, and the service examined between nine hundred thousand and one million prospective immigrants in foreign countries in the year 1927.

Mr. LAGUARDIA. What is the custom or the policy about transferring these officers so as not to keep any one group of medical inspectors in a particular foreign country too long?

Mr. MAPES. I can not answer the gentleman.

Mr. LAGUARDIA. That is a matter of policy of the bureau that is not provided for here.

Mr. MAPES. We did not go into that. That is a matter of policy.

Doctor Armstrong, of the Metropolitan Life Insurance Co., who is in charge of the public-health work of that company, testified before the committee as to the inception of this legislation and the people who have indorsed it. He stated that such men as Doctor Welch, of Johns Hopkins University; Doctor Williams, of the National Tuberculosis Association; Doctor Crumbine, of the American Child Health Association; Doctor Park, of the New York City department of health; Doctor Farrand, the president of Cornell University; and representatives of similar groups of outside agencies, outside of Government circles, came to Mr. Fiske and Doctor Frankel, of the Metropolitan Co., and asked them to cooperate in the passing of legislation along the line that is presented in this bill.

Doctor Welch, State health officer of Alabama, states that—

> the bill represents the compromise opinion, crystallized into a bill, of the National Tuberculosis Association, the Red Cross, the New York Academy of Medicine, the International Health Board, the American Public Health Association, American Medical Association, and the Association of State Health Officers of the United States.

In fact, as I answered the question of the gentleman from Virginia [Mr. MOORE], I do not know of any organized group, I do not know of any outstanding public-health worker, who is not in favor of this legislation and when I say that, to be sure I am not misunderstood, I want to say that all of the witnesses before the committee did not indorse the legislation, but

those witnesses who opposed it did not represent any organized public-health group, and they did not, the committee thought, go to the merits of the legislation, but rather complained because of some individual activity, some specific finding of the Public Health Service which in no way affected the general merits of the legislation, or the broad scope of the work of the Public Health Service. It is really surprising that there are so few people who are dissatisfied with the work of the service.

Mr. LOWREY. Will the gentleman yield?

Mr. MAPES. I yield.

Mr. LOWREY. I have not had an opportunity to read the report. What is the estimate on the question of cost or what is the situation when viewed from an economic standpoint?

Mr. MAPES. I will say to the gentleman from Mississippi I have gone into that already in response to a question from another Member, and I am sure the gentleman would not want me to go over it again.

Mr. ANDREW. Will the gentleman yield?

Mr. MAPES. I yield to the gentleman from Massachusetts.

Mr. ANDREW. There are public-health activities in a good many of the divisions and bureaus of the different departments of the Government. Has any consideration been given to the possibility of amalgamating the work of such bureaus with the work of the Public Health Service?

Mr. MAPES. That question was given a good deal of consideration and a good deal of attention, I will state to the gentleman from Massachusetts. I have also discussed that question already; but, briefly, I will say the original Parker bill authorized the President upon Executive order to transfer any public-health activity in any other department of the Government to the Public Health Service upon his discretion, and it also authorized the detail from the Public Health Service of any of the personnel of the Public Health Service to any bureau conducting public-health activities in any of the departments.

Mr. ANDREW. Is that provision in the bill?

Mr. MAPES. The committee decided to eliminate both of those provisions of the original bill. Some witnesses considered them important and some did not. The committee felt that inasmuch as there was opposition to them in the House by a substantial number of the Members, it was not desirable to jeopardize the passage of the entire legislation by keeping those two provisions in the bill.

Mr. ANDREW. So there is no provision now to allow the President to reduce or amalgamate any other bureaus?

Mr. MAPES. As a practical proposition some of the members of the committee feel that the existing provision will accomplish to all intents and purposes the same thing as the original provisions. One who studies the operations of the Government will come to the conclusion, I think, that as a practical proposition no bureau is going to be transferred unless it is transferred upon the consent of the head of the department in which it is located. The heads of the departments affected have got to unite in a request to the President for the transfer before the President will ever issue the order; and the committee also felt that there is weight to be given to the argument which is made that these agencies in the different departments having been created and assigned to the departments by statutory authority can not be picked up bodily by an Executive order and put into another department from that to which they were assigned by statute.

Mr. ANDREW. If I understand the gentleman correctly there, there is no such provision in the bill as would allow the President to take, for example, the Children's Bureau and incorporate it in the Public Health Service?

Mr. MAPES. The gentleman's understanding is correct. [Applause.]

I ask unanimous consent to extend my remarks by including therein the report of the committee on the bill.

There was no objection.

Mr. MAPES, from the Committee on Interstate and Foreign Commerce, submitted the following report to accompany H. R. 11026:

The Committee on Interstate and Foreign Commerce, to whom was referred the bill (H. R. 11026) to provide for the coordination of the public-health activities of the Government, and for other purposes, having considered the same, report thereon with a recommendation that the bill be amended as follows:

Page 2, line 24, correct the spelling of the word "health."

Page 4, line 11, insert after the word "officers" a comma.

Page 4, line 16, insert after the word "Service" a comma.

And as thus amended that the bill pass.

The bill aims better to coordinate the public-health activities of the Government, especially of the Public Health Service; to give more specific statutory authority for certain activities of the Public Health Service and, to a limited extent, to broaden others; to improve its administrative procedure; to establish a nurse corps in the service; to change the name, increase the personnel, and enlarge the functions of the Hygienic Laboratory Board and to authorize the establishment of new divisions in the Hygienic Laboratory; to increase the pay of the Surgeon General of the Public Health Service; and to place the dental and certain other scientific and technical personnel of the service upon the same permanent and commissioned basis as the medical officers in it now are.

Public-health work is carried on, and necessarily so, to a greater or less extent by a great many different branches of the Government as an incident to their major activities. It is often found desirable for the other departments, in establishing or reorganizing their health activities or in doing advanced research work, to have the assistance and advice of the Public Health Service. In certain cases the law now authorizes the detail of personnel from that service to other departments for such purposes, as, for example, to the Bureau of Mines, the Bureau of Fisheries, the Bureau of Immigration, the Consular Service, and in connection with the pure food and drug activities in the Department of Agriculture.

The first section of the bill would authorize such detail of personnel to any department or independent establishment of the Government carrying on public-health activities, upon the request of the head of such department or independent establishment. It would simply extend the policy already adopted by Congress in certain cases and followed in others without express authority of law. If enacted into law, it is believed that it would tend to bring about a better correlation of health activities of the Government and to produce economies. It seems the part of wisdom to give the other branches of the Government the opportunity, if desired, to take advantage of the superior knowledge and experience of the personnel of the Public Health Service.

Section 2 (a) would authorize the detail of public-health personnel to educational and research institutions for the purpose of making special studies of scientific problems relating to public health and for the dissemination of information relating to the same. The paragraph would also give the reciprocal right to public-health officials and scientists engaged in special studies outside of the Public Health Service to use the facilities of the Hygienic Laboratory. As scientific research is perhaps the most important public-health function of the Federal Government, the desirability of this provision seems apparent.

Section 2 (b) would authorize the establishment of new divisions in the Hygienic Laboratory. The act of 1902 reorganizing the Hygienic Laboratory established three divisions in it, namely, chemistry, zoology, and pharmacology, in addition to the division of bacteriology and pathology, the only division in the laboratory up to that time. No new divisions have been established since that date. There is need for additional divisions to permit of greater specialization in research. Problems arising since the passage of the act of 1902 require new divisions, such as industrial hygiene, sanitary engineering, physiology, and the like. As stated by one of the witnesses before the committee, "As knowledge grows, various branches of scientific study are developed." The service would, of course, be controlled and limited as to the number of divisions established by the appropriation, as it is in all other respects.

Section 3 provides that the administrative offices and bureau divisions in the District of Columbia shall be administered as a part of the departmental organization, and the scientific offices and research laboratories, including the Hygienic Laboratory, whether in the District of Columbia or not, as a part of the field service. That is the present practice, but there is fear that the Comptroller General may hold that the practice can not be continued under existing law. This section would make certain the continuance of the present practice and is deemed necessary to insure the most efficient administration by enabling the ready transfer of personnel between the central and field laboratories as occasion requires.

Sections 4 (a), (b), and (c) would put dentists, sanitary engineers, pharmacists engaged on comparable duties, and other scientific personnel on the same basis as to appointment, pay, promotion, disability privileges, etc., as medical officers. This is one of the major objects of the bill. Public-health work is, or should be, a career service. It has come to be quite as dependent upon these other professions for its success as upon the medical profession. For the good of the service and to encourage members of these other professions to engage in it, it is considered necessary that they should be put upon the same basis as the doctors. Surgeon General Cumming testified (p. 14 of the hearings):

"The greatest single administrative need of the Public Health Service is uniformity of method of appointment and status of this scientific personnel."

Other witnesses before the committee expressed the same thought. Such appears to be the general opinion of those familiar with the service.

The Public Health Service now has 224 regular medical officers in the regular corps. In addition, there are 24 sanitary engineers, 29 dentists, 150 physicians, and 23 scientists, all of whom are on full-time duty and available for general service. The sanitary engineers and other scientific and technical officers, other than the medical officers of the regular corps, as well as certain medical officers of the

reserve corps, are on civil-service status and are not commissioned, while the dental officers have temporary reserve commissions. Under the provisions of this section these other officers as well as the medical officers may be transferred to the regular corps after examination and with due regard to their present salaries.

Section 4 (c) would also increase the pay of the Surgeon General of the Public Health Service. It would give him the pay and allowances of a major general of the Army, the same as the Surgeon General of the Army receives, instead of that of a brigadier general which he now receives. In dollars and cents this would raise his total pay and allowances from $7,500 to $9,700 per year, or an increase of $2,200 per year. The present Surgeon General of the Public Health Service, Dr. Hugh S. Cumming, is an outstanding figure in public-health work. He has been in the service over 33 years and has an international reputation. Your committee believes that he should receive the same compensation as the Surgeon General of the Army. He has a responsibility not exceeded by any other bureau chief in the Government.

The provision for commissioning of a former Surgeon General is similar to existing laws relating to persons who have served as Commandant of the Coast Guard and Surgeon General of the Army and of the Navy.

Section 4 (a), paragraph 3, would authorize the appointment of specialists in scientific research, in case of special need, to grades higher than that of assistant surgeon.

The appointment of persons to the regular corps is limited by law now to the minimum grade. Occasions often arise when it seems necessary to engage persons with special training in scientific research at salaries more nearly commensurate with their attainments than the minimum salary. The method of appointment under this provision is the same as that now provided by law for entrance into the regular corps, except that it authorizes appointments to be made to grades above the minimum. Under existing law the employment of such persons has to be in accordance with the civil-service laws, which makes their appointment necessarily temporary and without any prospect of a career service.

Section 4 (c) provides for the promotion of officers, after due examination, according to the same length of service as officers of corresponding grade of the Medical Corps of the Army. In order to be promoted to the next higher grade, an officer must have given satisfactory service, must have passed a mental and physical examination, and must have served as follows: Three years as assistant surgeon, nine years as passed assistant surgeon, eight years as surgeon, and six years as senior surgeon.

Section 4 (d) would make effective the provisions of section 4 (c) by repealing existing law which limits the number of senior surgeons to 10, outside of two authorized by special act of Congress because of distinguished service during the construction of the Panama Canal. There are now 12 senior surgeons in the service on active duty, including the two just mentioned.

There are altogether 22 doctors, 10 besides the 12 already commissioned, in the service eligible to take the examination for the grade of senior surgeon and who, if found qualified, might be appointed senior surgeons if the present limitation is removed. A medical officer must have served at least 20 years in the service before being eligible for appointment as senior surgeon and 26 years before being eligible for appointment as Assistant Surgeon General. All original appointments in the service must be made under existing law to the lowest grade, namely, assistant surgeon. An assistant surgeon receives the same pay and allowances as a first lieutenant in the Army. To be eligible for such appointment a person must be a graduate of a regular medical college and must have had at least one year in hospital work or two years in the general practice of his profession.

Section 4 (e), as a matter of convenience and brevity, would change the designation of Assistant Surgeon General on field service, now called "Assistant Surgeon General at large," to "medical director."

Section 5 would correct an administrative difficulty. Under a recent ruling of the Comptroller General a field officer must await the official approval of the Secretary of the Treasury before placing a laborer, nurse, doctor, or any other employee on duty. In cases of emergency, such as the recent outbreak of plague in New Orleans, it is necessary under that ruling to await telegraphic or other instructions from the Secretary of the Treasury before emergency employees can be put to work. The section would make the appointment of such employees effective as of the day on which they go on duty. It is obvious that the delay caused under such conditions seriously handicaps efficient administration and causes unnecessary expense, especially at stations abroad and other distant stations. The necessity for this corrective provision is evident.

Section 6 would establish a nurse corps in the Public Health Service with the same pay and allowances as the members of the Nurse Corps of the Army receive.

There are 354 nurses in the Public Health Service. The Surgeon General and others in the service say that it is necessary now to pay the Public Health Service nurses somewhat more than members of the Nurse Corps of the Army receive and that the labor turnover in that service is great because of the uncertainty of being able to make it a career service. The nurses favor this provision of the bill and it is believed that it would give a more efficient nursing service. It is estimated that it would actually result in an economy of $8,990 per year in the pay and allowances of the nurses now engaged in the service.

Section 7 would change the name of the advisory board for the Hygienic Laboratory to that of national advisory health council and would authorize the appointment by the Surgeon General of five additional members. It would also broaden the functions of that board, authorizing it to advise the Surgeon General in respect of public-health activities generally, in addition to the strictly laboratory problems to which it is now limited.

It is considered desirable to have the board enlarged so as to include a greater number of specialists. The board has always had among its membership some of the most distinguished men in the profession, and it undoubtedly will continue to have the benefit of the advice of men of the same standing. The members receive $10 per day and expenses for attending the meetings of the board. The meetings of the board have not averaged one per year for many years past.

It is the opinion of the officials of the Public Health Service that the increase in cost that this legislation will entail, if any, will be more than offset by resulting economies and efficiencies. It is difficult to estimate with exactness just what the increase in salaries and allowances under the bill will be. The best estimate of the Treasury Department is that it will be $17,185.

The public-health agencies of the country are practically unanimous in their support of the legislation. It is indorsed by the Association of State Health Officers of the United States, the American Medical Association, the American Dental Association, the American Engineering Council, the American Public Health Association, the National Tuberculosis Association, the National Health Council, which includes in its membership all of the national volunteer health agencies, the New York Academy of Medicine, the United States Chamber of Commerce, and the American Federation of Labor.

Health officers, public-health workers, and others, from different sections of the country, appeared before the committee to urge its passage.

A few individuals appeared before the committee in opposition to the legislation. The committee felt, however, that their objections did not go to the real merits of the legislation but rather to certain activities or regulations of the Public Health Service which are not in any way affected by the legislation.

Among others who appeared before the committee in advocacy of the bill were:

Dr. H. N. Bundensen, commissioner of health, Chicago, Ill., vice president American Public Health Association.

Dr. William H. Welch, director emeritus of the School of Hygiene and Public Health of Johns Hopkins University, Baltimore, Md.

Dr. E. H. Lewinski-Corwin, executive secretary public health relations committee, New York Academy of Medicine, New York City.

Dr. S. W. Welch, State health officer of Alabama.

Dr. M. J. Rosenau, former director of the hygienic laboratory, now a member of the Harvard Medical School, occupying the chair of preventive medicine and hygiene.

Dr. William C. Woodward, formerly health officer of the District of Columbia and Boston, Mass., now of Chicago, Ill., who represents the American Medical Association.

Dr. F. D. Patterson, of Philadelphia, Pa.

Dr. James A. Tobey, New York City, representing the American Public Health Association.

Mr. Edgar Wallace, Washington, D. C., representing the American Federation of Labor.

Mr. George W. Fuller, New York, a civil engineer, representing the American Society of Civil Engineers and the American Public Health Association.

Dr. Homer C. Brown, New York, chairman legislative committee, American Dental Association.

Dr. Arthur T. McCormack, State health officer of Kentucky.

Mr. RAYBURN. Mr. Chairman, I am not opposed to this bill. If anyone on the committee claims the time on account of being opposed to the bill, of course, I would be compelled to yield to him.

Mr. HUDDLESTON. Mr. Chairman, I am opposed to the bill. I have no disposition to claim the time, although I may be entitled to it technically, provided I can get the time I need to oppose the bill.

Mr. RAYBURN. If the gentleman claims the time, of course, he is entitled to it.

Mr. HUDDLESTON. If the gentleman is willing to yield me enough time to oppose the bill——

Mr. RAYBURN. How much time does the gentleman want?

The CHAIRMAN. The gentleman from Alabama would be entitled to one hour if he claims it.

Mr. HUDDLESTON. Mr. Chairman, at the suggestion of the gentleman from Texas [Mr. RAYBURN] I claim the time in opposition.

The CHAIRMAN. The gentleman is recognized for one hour.

Mr. HUDDLESTON. Mr. Chairman, I really know very little about this bill. Perhaps there are those who will say that is why I am opposing it. It may be that they are right, but I prefer to believe that I oppose it out of my natural conservatism and my hidebound distrust of new things. [Laughter.] Not long ago I remarked to a fellow member of my committee, who is also an ironclad conservative, that the reason why he and myself were not oftener together in our views was that he threw back to 1890, whereas I threw back to about 1820. [Laughter.]

Being a natural-born conservative, I view with some misgivings the extension of bureaucracy and the activities of government into new fields, and to the consolidation of powers which the Federal Government has previously laid violent hands upon.

The purpose of this bill is stated with some degree of fairness in the committee's report, by which it is said that—

> The bill aims better to coordinate the public health activities of the Government, especially of the Public Health Service; to give more specific statutory authority for certain activities of the Public Health Service, and, to a limited extent, to broaden others; to improve its administrative procedure; to establish a nurse corps in the service; to change the name, increase the personnel, and enlarge the functions of the Hygienic Laboratory board and to authorize the establishment of new divisions in the Hygienic Laboratory; to increase the pay of the Surgeon General of the Public Health Service; and to place the dental and certain other scientific and technical personnel of the service upon the same permanent and commissioned basis as the medical officers in it now are.

That is a very favorable and moderate statement. I think that its purposes might perhaps be better stated from the standpoint of the opposition as being, to use a military expression, to "consolidate" the powers and authority which the Public Health Service has succeeded in gaining for itself during the past 100 years.

Bureaus never consent to reduce their powers and never to reduce their prerogatives or their emoluments. They always work only one way, like a ratchet, toward more dignity, more stability, more power, and more pay. This bill is ideal from that standpoint.

Probably I ought to try to excuse myself for knowing so little about the bill. The truth is, that the committee held no hearings on the bill. It was sent into a corner for consideration by a subcommittee, a subcommittee which was altogether friendly to it. There was no opposition in the subcommittee. Everything went along smoothly and harmoniously toward what was desired by those who appeared before it. The bill was not tested by adverse criticism or by hostile consideration.

All that our committee knows about the bill is what the partial subcommittee chose to tell us.

We held no hearings, we had no opportunity to see witnesses or to ask them questions. We had no opportunity to test them on the provisions of the bill. The subcommittee contented themselves with confining the hearing to the particulars of the bill before it.

If you choose to read the report of the committee, you will get very little idea of the Public Health Service or what really is going to be accomplished by the bill. You have no opportunity by reading the bill and the report on it to know what the effect of it is going to be.

The subcommittee apparently was not interested; they did not develop what existing law is; they did not bring out in the hearings what powers the Public Health Service already had. The report of the committee gives no light whatsoever upon these points.

So you see why I know so little about the bill. My only excuse for speaking upon the bill at all in my state of ignorance is that I suspect that there are others who know even less about the bill than I do.

I feel like an opposition ought to oppose, and that every measure of any real importance that comes before the House ought to be tested by a real opposition. I feel that it is the duty of the opposition members of a committee when a bill of importance comes out, unless it is clear beyond doubt that it is advantageous, to turn the other side of the picture and give the House an opportunity to see the seamy side of the garment.

The gentleman from Michigan [Mr. MAPES] tells us that the bill did not originate with the Public Health Service. Mr. MAPES is an "honorable man." I would accept his word to any extent that he might choose to go. But let me say to you that if he is correct, and this bill did not originate with the Public Health Service, some one who knew the minds of the Public Health Service, knew their desires, knew what they wanted, and was anxious to give it to them wrote this bill.

This is a typical bureau bill. It is just such a bill as all these governmental bureaus put out. Prizing for a little more power, reaching for a little more dignity, trying to strengthen themselves, and always with an exaggerated idea of their importance and the function which they perform, grasping for more authority, and, incidentally, for more pay. The one thing that is dearer to the heart of a bureaucrat than more dignity and more power is more pay, and do not you be made to believe that, along with increased power and dignity, this bill does not carry an increase in material emoluments of a financial nature. If you vote for this bill with the idea that it will promote economy and that there will be more money in the Treasury with this bill in operation than there would be without it, let me say that you will soon be undeceived.

One thing about the bill makes me laugh. It comes from the same committee that reported the maternity bill. Many of the members of that committee supported that bill with misgiving and extreme reluctance. Because it had a partisan political import which they did not dare to ignore, we were finally able to bring them up and get them to "lick the log." But they did it most unwillingly, and they found it a most distasteful duty.

In principle certain provisions of this bill are identical with the maternity bill, yet these same gentlemen who gagged when they swallowed the other dose, take this one down with a smile. [Laughter.] Of course, I do not think that they have changed their principles. I think they still hold that the Federal Government ought not to meddle with such things. I think they are just as devoted to that principle as they ever were. They just simply do not know just what this bill does. They are like me, merely ignorant, and that is the trouble. [Laughter.]

Now, I voted for the maternity bill. Those features are not exceedingly distasteful to me. I felt that if the Government could afford to spend money and attention on the raising of colts and pigs, it could certainly afford to put in a little something on babies, and I have never apologized for my support of the maternity bill. But I ask gentlemen who opposed the maternity bill, with tears streaming down their faces in their devotion to principle, how they are going to defend similar provisions of this bill.

The chief purpose in what I am now saying is to take away from the gentlemen who opposed the maternity bill, yet are for this bill, the plea of incompetency which they otherwise might make. I point out that section 2 of the bill provides:

> SEC. 2. (a) The Surgeon General of the Public Health Service is authorized to detail personnel of the Public Health Service to educational and research institutions for special studies of scientific problems relating to public health, and for the dissemination of information relating to public health.

"For the dissemination of information relating to public health." That means that an officer of the Public Health Service can be detailed, we will say, to a woman's college for the purpose of teaching its students the functions of motherhood and how to care for babies. If that clause is not for such purposes, what is it for? Of course, the health officers may teach many other things and probably very proper things. But can any man distinguish in principle between sending an agent of the Public Health Service into a college to teach its students about matters of health and sending another agent to teach individual women here and there things relating to their health as mothers and how to care for their babies?

Of course, with my natural conservatism, I believe in organized medicine. I believe in the prevailing school of the regular doctors. I believe in the same system and philosophy of health and treatment of disease that are adhered to by the Public Health Service. Therefore, I have no qualms about their spreading and propagandizing their particular system of healing, although they may do it at the expense of all other forms of healing and at the expense of those who do not believe in their systems.

I believe in vaccination and in injecting decaying animal matter into the veins of a man in order to protect him against smallpox and typhoid and whooping cough and diphtheria and every other ailment—in short, in all that the medical profession has gone mad on. All you have to do nowadays is to find out just exactly the right kind of poison, only it must be rotting animal matter, because nothing else will answer the purpose; find just exactly the right kind of a calf to get it out of, and then take some of this decaying animal matter and inject it into the veins of a man, and behold, health comes!

It is the modern miracle! It is the new religion. The miracle works and lepers rise and their skins are clean! And

those lying at the point of death with tuberculosis and fevers and all other ills are cured when the magic hand reaches out and thrusts them with the hypodermic. They spring up cured and whole. It is no longer necessary to believe in Jesus—it is no longer necessary to have your faith in a God. All you need to do is to have faith in some little, fat-faced, empty-headed doctor and let him squirt a lot of filth into your system and be made whole.

When my children get sick, I send for the doctor and I have him squirt his stuff into the poor, little helpless things and they yell and the fever rises in them and I fear they are going to die. But I will say to you that when they are saved it is not through my faith in the doctor, because I can not produce the faith. Of course, I know that I am ignorant, and I am just doing the best I can. I hope the doctor may know a little more than I do, and he has had more experience and, therefore, in my anxiety, I put some of my burden and responsibility on him. If there is one thing that the modern world has gone crazy about, it is medicine, and in particular the immunization of human beings from almost every kind of disease by the injection of poison into their veins.

The chief protagonist of the modern madness of immunization is the Public Health Service of the United States. To those who believe in all that sort of thing of course this bill is water on their wheel. But to those who do not there is not much for them, for not only will their children in colleges be taught, but the communities around them will be taught, that healing comes only by the methods they prescribe. The system is an immense success. It is perfect; but occasionally the patient dies. [Laughter.]

How many ex-soldiers have written to each of the Members of the House present here to this effect: "I have never had a well day since I had the injection of some serum or some other kind of poison injected into my system when I entered the service." I have the suspicion that our veterans' hospitals, in a large measure, are filled with patients as the result of the ignorance and superstition of the medical profession.

Now, not only were the members of the subcommittee friendly to this bill, but all those who appeared and spoke with any degree of authority were also in favor of it. Perhaps I should qualify my statement that this is just exactly the kind of bill that the Surgeon General would have written by saying that it is just the kind of bill he would have written having in mind the requirement that he must put into it only what he could get by with. He realized that he can not pass against the opposition of the American Medical Association, or of the dental organization, or of the pharmacists' organization; or with anything that is going to operate against the dairy interests, and the butter and cheese interests, and one selfish interest and another.

All these interests had agreed upon the bill; it was a compromise between their views. But at the hearing nobody represented the common welfare.

Only men representing selfish interests were there. I do not question that they are entirely honest. Doctors have all the faith in the efficacy of their remedies that they desire others to have, because one of the first qualifications of a doctor is to believe in his own remedy. His patients believe in it only because he believes it himself. But the gentlemen connected with this business of healing enormously magnify their own importance and the importance of their functions. When they write a bill and submit it to us, and there is nobody on the other side, nobody to criticize, and nobody to say "no," how can you expect that the bill will be the right kind of a bill?

I am bound to oppose a bill presented under such conditions, even though I am forced to rely merely on a "hunch"; I know that such a bill must be wrong. One of my sayings is that practically everything that Congress does is wrong. It is wrong because we do it at the demand of selfish interests; the public welfare is not consulted or heard before committees, and arguments representing the public welfare are not presented. If a Member should choose to come into this House at roll calls and vote "No," "No," "No," on every roll call, he would bat at least 900, possibly even 999, out of 1,000. If ever there is anything that has been done in Congress which was altogether right, I do not know what it was. Certainly nothing of the kind has occurred since the Republican side went into power. [Laughter.] I do not even mean to say that they are trying to do right.

That is the way all bills are passed. Old man Vox Populi is busy at home trying to make a living—Sans-Culotte is driving nails or holding the plow—they are not organized, no high-priced lobbyist speaks for them. But the organized interests are heard through their lobbyists, and those who want to aggrandize and dignify their callings are here through their organizations. If you allow the organized doctors to write the laws of this country, I will tell you that the practice of medicine will be the finest and most profitable occupation that a man ever followed since the beginning of time. The same thing applies to lawyers, and to teachers, and to every other calling and class. They are not fit to decide what is right as between themselves and the general public.

Mr. DENISON. Mr. Chairman, will the gentleman yield?

Mr. HUDDLESTON. Yes.

Mr. DENISON. The gentleman speaks of all that has been done since he has been in Congress as having been done wrong.

Mr. HUDDLESTON. I qualified that by saying "since our friends on the Republican side came into power." [Laughter.]

Mr. DENISON. Does the gentleman think anything right was done by Congress before he came?

Mr. HUDDLESTON. Seriously, since I have been here and have seen the influences that are at work and the pressure of selfish interests which is brought to bear upon Congress and have seen how helpless Congress is in the face of this coercion, I doubt very much that anything is ever done with an eye single to the general welfare of the people of the United States. I can but wonder how long our Government can stand up under such conditions. What we do is wrong, of course, because we do it under either the influence of party spirit, in order to win at the next election, or under the influence of some organized interest that promises to make our future secure as Members of the House. How could it be otherwise?

Mr. DENISON. Does not the gentleman think some of these influences are organized for the public good? For instance, take the American Federation of Labor.

Mr. HUDDLESTON. The American Federation of Labor is organized to protect the interests of wage earners.

Mr. DENISON. Is not that a good purpose?

Mr. HUDDLESTON. Not more so, perhaps, than an organization of employers of labor. Those organizations do not represent the public. How is it possible for a man of the gentleman's intelligence to ask such a question? [Laughter.]

Mr. DENISON. I think the wage earners are organized naturally for their own good, and that in the long run that will be for the good of the whole country, for the good of the people generally.

Mr. HUDDLESTON. I have had entirely too much experience and have too much knowledge of life and of human nature to be willing to intrust the common good to any particular class or calling, much less any organization formed to promote the interest of any group. It is true that sometimes the labor unions do defend the public welfare and that the interests of their members are identical with the public interest, but primarily a labor union is organized to care for its members and to promote their economic and class interests.

Now, then, take subsection (b) of section 2 of the bill:

> The Secretary of the Treasury is authorized to establish such additional divisions in the Hygienic Laboratory as he deems necessary to provide agencies for the solution of public-health problems, and facilities for the coordination of research by public-health and pharmaceutical officials and scientists, and for demonstrations of sanitary methods and appliances.

Now, we have "demonstrations of sanitary methods and appliances" added to the powers of the Public Health Service. The "demonstration of sanitary methods and appliances." What is to hinder the Public Health Service from sending an agent into the home of any citizen to demonstrate to his wife, who is about to become a mother, "sanitary methods and appliances" whereby she can safeguard her health and that of the child? Far be it from me to say that is an improper activity, but you gentlemen who "gagged" on the "maternity bill," let me invite you to gag again.

The trouble about this is that there is no limitation on these agencies. There is no limitation upon how far the bureau may go. There is no limitation on the number of its personnel. They can have an unlimited number of agents, nurses, doctors, cooks, dishwashers, or whatever they choose to have, and send them throughout the length and breadth of this country, teaching the people how to live.

There is no limit upon them, except the power of the Committee on Appropriations, and if the appropriation should be passed, giving the Public Health Service $100,000,000, they could, if they could organize quickly enough to get the benefit of it, absorb the whole of it. Do you want to vote for that kind of a bill? Well, you financiers may do it. I have not any money myself, so I do not mind the cost. It is going to do good, so just let the good work go on. [Laughter.]

Let me go on further. These public-health officials are to be of the rank similar to Army and Navy rank. They are to be of the same pay. They are to have the same dignity; they are to have the stability; their nominations are to be confirmed by the Senate; they are to be officers of the United

States. Nobody can turn them out without a court-martial or something. I do not know what. Yet the gentlemen have the boldness to tell us that the bill does not mean an increase in expenditures.

It means an increase not only in expense to the Government in the ways I have mentioned, but it means an increase in prestige and influence to the Public Health Service and to its teachings and methods. It means that they will come back here again next Congress and the Congress after and ask for new powers and for new activities as well as for increased pay. They will come back time and again; who ever saw a bureau that thought it had received enough? No one has ever seen it around Washington, and I doubt whether it was ever seen in any other capital.

One other point. Section 6 of the bill provides that:

> There is hereby established in the Public Health Service a nurse corps, which shall consist of a superintendent and such nurses as the Secretary of the Treasury may deem necessary.

How many? One hundred, one thousand, or one million? There is no limit. It is wide open. Give us a Secretary of the Treasury who thinks the country needs the nurses, and give him an appropriation and let him go to it. And that is the bill you gentlemen are asked to support. [Applause.]

Mr. MAPES. Mr. Chairman, on behalf of the gentleman from New York, the chairman of the committee, I yield 10 minutes to the gentleman from California [Mr. LEA].

Mr. LEA. Mr. Chairman and gentlemen, I admit the soft impeachment that I was a member of the subcommittee which considered this bill. I will go further and cheerfully admit that I approached the consideration of this bill with a friendliness toward the purposes of the Public Health Service.

The hearings of the subcommittee that are being distributed about the House are not the complete hearings. At the last session of Congress the committee went into great detail in its hearings with members of the Public Health Service and with representatives of the public health services of various States. The subcommittee also spent considerable time in listening to the objections of those opposed to this bill.

I concur with the gentleman from Alabama when he states it is the common practice for bureaus to come here in seeking more power, more money, and more salaries. As a member of the committee, when the representatives of these bureaus came before us, I naturally am inclined to weigh their statements. I want to say in fairness to this particular subcommittee that we were willing to properly discount statements made in behalf of the Public Health Service. In a number of instances we refused to place in the bill the things requested in behalf of the Public Health Service. So while we were friendly to this great service of the Government I hope we were not unduly unfriendly. The subcommittee did not fail in its duty to the House of Representatives or in its duty to use diligence to protect the public interests.

The gentleman from Alabama makes some critical references to the application of the germ theory of disease. I find no reason for reflecting upon the Public Health Service for any experiments it may make in reference to the germ theory of disease. The germ theory of disease is still a matter of experimentation in the medical profession. The combatting of germ diseases is one of the greatest studies of medical scientists, one of the most important duties of the medical profession.

The discovery of germs as the origin of most diseases from which men suffer was one of the great discoveries of modern times. So far as I am concerned, the money of the United States Treasury will be devoted to no purpose that I approve more heartily than that of investigation and research for the purpose of discovering better methods of treating, alleviating, and terminating the diseases that come from germs.

The gentleman refers specifically to the case of lepers and, in a light and half-joking way, to the disease of the leper. The United States in the last 15 years or so has developed a remedy for leprosy. That disease has been one of the most awful curses of humanity from the beginning of time. For many centuries past the poor leper by the law of the land was required to raise his hand and cry out "unclean" whenever he was approached by a fellow being. After all these ages of that hopeless human suffering, the United States has made this great contribution to the medical science of the world.

I rejoice. I rejoice that this great Nation has the wealth, the will, the charity, and the intelligence to devote its money to accomplishing such purposes. Many centuries ago in the old pagan days some philisopher said that in nothing do men so resemble the gods as when doing good to their fellow men. Here is a great service of this Government devoted to such purposes. In no aspect of all the activities of Uncle Sam does he appeal more to me than when engaged in this service of doing good to afflicted humanity, not only of our own country, but of the world.

The gentleman refers to the number of nurses. This bill removes no bar to the appointment of nurses. There is no limit to-day that is not there after this bill is enacted. We have a few hundred nurses in the service of the Federal Government. Suppose some great calamity like an epidemic comes, would it be wise to have in this bill a limitation that the total number of nurses in the United States should be 300 or 400, where to-day we have 354? That would not be a wise thing to do. The only practical limit that can be placed in a service of this kind is such as the bill prescribes and the limitation is with the Appropriations Committee.

The gentleman from Michigan [Mr. MAPES] has made a good presentation of the details of this bill. I will not attempt to impose upon you by repeating the substance of what he has said.

But, generally speaking, this bill does what was done by the Coast Guard bill in the last Congress. It legalizes services that have been going on for several decades, and in some instances with questionable authority.

It gives a grade to certain personnel of the Health Service by which they acquire a permanent status and a permanent rating. This is true, for instance, in the case of the nurses.

The information furnished the committee tended to show that the nurses in the Public Health Service to-day are being paid more than in some other services of the Government. The reason for this discrimination is that the Public Health Service is unable to give nurses any assurance of a career in their profession. This bill makes it possible for that to be done.

Mr. ABERNETHY. Will the gentleman yield for a question?

Mr. LEA. I yield.

Mr. ABERNETHY. I understand the gentleman favors this legislation?

Mr. LEA. Yes; I do.

Mr. ABERNETHY. I understand the legislation seeks to aid the various States and to cooperate with the health officers of the various States of the Union?

Mr. LEA. Yes; but that is in line with what is already being done. There is nothing particularly new in that respect.

Mr. ABERNETHY. What other benefits does the bill give the various States?

Mr. LEA. The service cooperates with the local health authorities in its research and investigational work and in the control of epidemics, and in its educational work. Its work is more or less scattered through the States. It conducts hospitals in connection with the marine service. The United States Public Health Service has hospitals at main ports. It gives a service to the public in taking care of American sailors.

Mr. ABERNETHY. I may say to the gentleman that our State health department is very much in favor of the bill, and I assume other States have been heard from in the same way.

Mr. LEA. So far as I recall, the authorities of every State that expressed any opinion about it favor this bill.

There is only one feature of the bill that makes a distinct raise from a financial standpoint and that is the salary of the Surgeon General. The raise, as I recall, is about $2,200 per year. It places the Surgeon General of the Public Health Service in the same status as the Surgeon General of the Army.

The men in the Public Health Service who have commissions are subject to longevity rules. They must serve a long time before they get their promotions. The subcommittee went into that pretty thoroughly. We became satisfied that if the personnel perform the duties assigned them they will earn their salaries. In fact, the increases in this bill are comparatively small. With probably six or seven hundred employees the total estimated increase is only about $17,000 or $18,000 a year.

Mr. BYRNS. Will the gentleman yield?

Mr. LEA. Certainly.

Mr. BYRNS. I notice in the bill there is a provision which would seem to indicate it is expected that possibly the President might go outside of the regular health corps to appoint a Surgeon General.

Mr. LEA. Yes.

Mr. BYRNS. Personally, I feel, and I am sure the gentleman feels the same way, the Surgeon General ought to be chosen from the personnel of the service. Has the gentleman ever considered——

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. MAPES. I yield the gentleman two minutes more.

Mr. BYRNS. Has the gentleman considered whether a provision in the bill directing the appointment of a Surgeon General from the regular health corps would be valid?

Mr. LEA. We did not particularly consider the legality of doing so, but we did consider the policy. It was the unanimous judgment of our committee that the appointment should

not be confined to the service. It frequently happens that in the civilian population disconnected from the Government, men of high type, with unusual executive as well as scientific ability, will be developed. We thought it would be a bad policy to limit the appointment to the service. Sometimes it is good to bring in new blood and a new viewpoint, with perhaps a broader experience which may come from outside.

Mr. BYRNS. My own idea was that it would not only be an element of justice to those who have given their life to the service, but it would operate as a sort of encouragement to those if they had the possibility of becoming a head of the service in view.

Mr. LEA. To a degree that is true, but that incentive applies to those outside as well as those in. Personally I am not inclined to favor making Government employment a closed corporation. There is a tendency in Government to create too much of an official or employee class. The importation of new blood and broader views is sometimes helpful to the public service.

Mr. MAPES. Mr. Chairman, I yield to the gentleman from Virginia [Mr. BLAND] five minutes.

Mr. BLAND. Mr. Chairman, my friend from Alabama says he does not know very much about this bill. I have not asked for time in order to discuss the provisions of the bill. I think it is rather gratifying that any measure shall be opposed by one who is honestly in a position to do so, so that both sides may be presented.

I have asked for this time for another purpose. There has been something said about the effort on the part of the bureaus to increase their powers. I presume I have known the Surgeon General of the Public Health Service longer than any man on this floor. I met him 35 or 40 years ago. I have known him fairly well—I might say intimately—and a close personal friendship existed between the Surgeon General and his brother and myself. That friendship has continued from that time to this. It is my solemn conviction that there is no man in the service of the Government who is more impelled with patriotic desire to render honest and efficient public service than the present Surgeon General of the Public Health Service. There has been in all his career no effort, so far as I have ever been able to discover, to promote or push himself, no personal aggrandizement, or anything of that character.

Mr. LEA. Will the gentleman yield?

Mr. BLAND. I will.

Mr. LEA. I hope the gentleman did not construe my remarks as any personal criticism of Surgeon General Cumming.

Mr. BLAND. I heard no word from the gentleman from California that reflected on the Surgeon General. My remarks are directed more particularly to the criticism which our good friend from Alabama made on the part of bureaus to increase their powers, and I desired simply to add this testimonial to my friend of many years' standing. I feel that I should be untrue to our personal friendship if I were not to give this testimonial in his behalf, and it comes from one who claims to know him well. [Applause.]

The CHAIRMAN (Mr. FAUST). All debate has expired, and the Clerk will read.

The Clerk read as follows:

SEC. 4 (a) Hereafter sanitary engineers, medical, dental, and other scientific officers, including pharmacists engaged on comparable duties of the Public Health Service, selected for general service and subject to change of station, shall be appointed by the President, by and with the advice and consent of the Senate, subject to the same conditions and limitations as commissioned medical officers of the regular corps of the Public Health Service, except that—

(1) Examinations shall be in the several branches of the profession of the person to be appointed;

(2) Any sanitary engineer, medical, dental, or other scientific officer, or pharmacist engaged on comparable duties, in the Public Health Service upon the date of passage of this act, except commissioned officers of the regular corps, after examination by a board of officers convened by the Surgeon General of the Public Health Service, and upon the recommendation of such board and the Surgeon General, may be appointed to any grade specified by such board and approved by the Surgeon General, having due regard to the salary received by such officer at the time of such appointment; and in computing longevity pay and pay period the service of any officer appointed under the provisions of this paragraph who was in the Public Health Service on June 30, 1922, shall be counted in the same manner as provided for regular commissioned officers in the Public Health Service on that date;

(3) Whenever in the opinion of the Surgeon General of the Public Health Service commissioned officers are not available for the performance of permanent duties requiring highly specialized training and experience in scientific research, including the duties of chiefs of divisions of the Hygienic Laboratory, any person, after examination by a board of officers convened by the Surgeon General of the Public Health Service and upon the recommendation of such board and the Surgeon General, may be appointed to any grade specified by such board and approved by the Surgeon General.

(b) The Surgeon General of the Public Health Service shall designate the grades of commissioned officers of the Public Health Service other than medical officers corresponding to the grades of medical officers.

(c) Hereafter commissioned officers of the Public Health Service shall be promoted, after examination as now provided by law for commissioned medical officers of the Public Health Service, according to the same length of service as officers of corresponding grades of the Medical Corps of the Army; except that for purposes of future promotion any person whose original appointment in the regular corps is in a grade above that of assistant surgeon shall be considered as having had on the date of appointment service equal to that of the junior officer of the grade to which appointed. The Surgeon General of the Public Health Service shall hereafter be entitled to the same pay and allowances as the Surgeon General of the Army; and, if selected from the commissioned officers of the regular corps, he shall, upon the expiration of his commission, if not reappointed as Surgeon General, revert to the grade and number in the regular corps that he would have occupied had he not served as Surgeon General.

(d) The limitation now imposed by law upon the number of senior surgeons of the Public Health Service on active duty is hereby repealed.

(e) Hereafter officers of the Public Health Service in the grade of assistant surgeon general on field service shall be designated and known as medical directors.

Mr. NEWTON. Mr. Chairman, I move to strike out the last word for the purpose of asking the chairman of the subcommittee a question as to page 2, line 23, the phrase "including pharmacists engaged on comparable duties." As I understand it is the intention to commission only certain pharmacists. What is the thought back of that phraseology?

Mr. MAPES. There are in the Public Health Service some pharmacists who have important administrative responsibilities. They are not engaged in research work, and those interested in the service felt that their administrative responsibilities were of sufficient importance to warrant giving them the same status as some of the scientists and sanitary engineers and others engaged in research work. Such an administrative official is the pharmacist in charge of the supplies at Perryville, who handles all of the drugs and supplies of the Public Health Service, and whose position is permanent. He has been there a great many years. The service feels that he is entitled to a commission. It is not, however, the intent of the legislation to give a commissioned status to the pharmacist who is engaged in clerical work. That would be left to the examining board and the Surgeon General to determine. That board and the Surgeon General will determine who shall receive commissions and who shall not.

Mr. NEWTON. And the positions of the pharmacists doing what is ordinarily termed mere clerical work will be the same as it is now?

Mr. MAPES. Yes.

Mr. NEWTON. And later if some of them should be promoted to the same status such as is intended within this phrase a commission could be granted to them.

Mr. MAPES. That is correct.

Mr. NEWTON. But not otherwise.

Mr. MAPES. No.

Mr. McLAUGHLIN. Mr. Chairman, I move to strike out the last word for the purpose of asking the gentleman from Michigan a question. On page 3, in line 24, I find that whenever in the opinion of the Surgeon General there are not officials available, then the selection may be made in the way provided. There is nothing, however, to indicate whether men so appointed shall be officials permanently employed or only temporarily to meet an emergency. It would be very easy, it seems to me, and occasions might arise where men upon whom certain duties devolved and of whom certain things were expected are not available for the time being, and somebody, of course, should be assigned to do the work. That might create new and additional officials, and a number of them might be appointed, more than are necessary and more than are proper. It struck me that something should be put in the bill here to indicate that this provision is to take care of emergencies, and that it provides for temporary appointments only. I ask the gentleman from Michigan [Mr. MAPES] for his opinion on that matter, if he feels that it deserves consideration.

Mr. MAPES. Mr. Chairman, it is not the purpose of that paragraph to provide for temporary emergencies. That is taken care of as I understand it under the general authority of the Public Health Service now. The purpose of the paragraph to

which the gentleman calls attention is to provide for situations that arise like this. The Public Health Service may be engaged in a line of research work or investigation that requires the services of some specialist along a certain line, skilled in some particular line of research or investigation. Under existing law the service employs such an individual where it can, in cases of necessity, under the regular civil-service provisions of the law. Under existing law the service is not able to offer such a man a permanent career service with the Public Health Service, and it makes it doubly difficult to get such an expert to give up his profession or private work to do this particular work for the Public Health Service. The service feels that if it could assure such a man a permanent commission with pay commensurate with his qualifications, it would be easier to employ him, and really in many cases that he could be engaged at a less salary and that it would be to the advantage of the service. It is not thought that it will take in very many people, but in cases of necessity it is considered to be very desirable.

Mr. McLAUGHLIN. I may say I think that is all right, and there should be such a provision.

Mr. MAPES. And let me say in further explanation that under existing law all medical officers who are taken into the commissioned service must come in at the lowest grade as an assistant surgeon, and receive the compensation corresponding to that of a first lieutenant of the Army. They must be graduates of a regular medical institution. They must have had either two years' general practice in the profession or have had one year's hospital experience. So that if they need men of advanced standing in the profession there is no way to employ them at present except to employ them as regular civil-service employees.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. McLAUGHLIN. Mr. Chairman, I ask for three minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. McLAUGHLIN. Mr. Chairman, I am entirely satisfied with what the gentleman from Michigan [Mr. MAPES] says about it, but it struck me that if it is intended that these men should be taken in to hold permanently, there might very well be something to indicate that; and it also seemed to me that as it is it might open the door to permanent appointments, whereas a regular place is vacant only temporarily or perhaps because some official is absent or at the time incapacitated. This, as it now reads, might authorize the Surgeon General or others whose authority it is to make the selection to appoint additional officers who would continue permanently and the roll might in that way be loaded up and a lot of unnecessary men employed. But the statement of the gentleman satisfies me, and officials whose duty it will be to apply and interpret this law will be governed in this matter by that statement.

Mr. MAPES. Mr. Chairman, of course, we must leave something to the administrative head of this department. I think it is a violent assumption to assume that the department will take on some one for temporary work and give him a permanent position after his temporary work has ceased. As the gentleman knows, all of these matters are limited by the appropriation and by the Committee on Appropriations, and that committee requires a showing of necessity before it grants the appropriation every year.

The Clerk read as follows:

SEC. 7. Hereafter the Advisory Board for the Hygienic Laboratory shall be known as the National Advisory Health Council, and the Surgeon General of the Public Health Service, with the approval of the Secretary of the Treasury, is authorized to appoint, from representatives of the public-health profession, five additional members of such council. The terms of service, compensation, and allowances of such additional members shall be the same as the other members of such council not in the regular employment of the Government, except that the terms of service of the members first appointed shall be so arranged that the terms of not more than two members shall expire each year. Such council, in addition to its other functions, shall advise the Surgeon General of the Public Health Service in respect of public-health activities.

Mr. BLACK of New York. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from New York offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. BLACK of New York: Page 6, line 4, after the word "council," insert the words "at least one of whom shall be a specialist in mental hygiene."

The CHAIRMAN. The gentleman from New York is recognized for five minutes.

Mr. BLACK of New York. Mr. Chairman and gentlemen of the committee, I am generally in favor of this legislation, but I rather think that the scope of the activities provided by this bill is too limited. It seems to consider only physical health. It is my idea and it has been so for some time, that the Federal Government, after its lessons in the draft and since the war, could give a little of its thought to the subject of mental health.

Desiring to induce the Government to take a substantial interest in mental hygiene, I have introduced the bill H. R. 7936, to create the United States board of alienists, which reads as follows:

Be it enacted, etc., That there is hereby created the United States board of alienists, to be composed of 20 physicians of 10 years' experience in the study and care of mental diseases, to be appointed by the President for terms of five years. Each member of the board shall receive a salary of $25,000 per annum. The board shall select from its number a chairman and shall draw such regulations as to it may seem necessary for the purposes of this act. The board shall employ all necessary help, clerical and professional.

SEC. 2. The board shall diagnose and prescribe treatment for all mentally deranged veterans in the care of the United States and all other veterans of the United States who will submit their cases to the United States board of alienists. The Veterans' Bureau shall cooperate with the board.

SEC. 3. The board shall make a comprehensive study of mental diseases and treatments for the same and shall prepare and have printed a complete treatise on the same with its recommendations.

SEC. 4. The board may consult with nonmembers of the board and pay such nonmembers so consulted reasonable fees for their services.

SEC. 5. The board shall recommend to the commissioners for the promotion of uniformity in legislation a code of ethics to govern the appearance of alienists as expert witnesses in litigations.

SEC. 6. The board shall inquire as to methods for the chartering of insurance companies against insanity with a view to drafting a policy of insurance that will provide treatment for the insured who becomes mentally diseased and compensation for his dependents.

SEC. 7. The board shall annually report to Congress.

SEC. 8. There is hereby authorized to be appropriated, out of moneys in the Treasury not otherwise appropriated, the sum of $5,000,000 for the purposes of this act.

SEC. 9. This act shall take effect immediately.

The word "alienists" has been used because that is the common expression denoting scientists skilled in the study of mental diseases. I do not insist on a retention of the title. These scientists have divided themselves into many classes, but as my purpose is broadly remedial, I do not care to adopt any special viewpoint subject to controversy. I would have the cooperation of all anxious to reduce mental disease.

The general motive for the bill lies in the great expense to the public caused by mental diseases, with the humanitarian purpose of devoting portions of our governmental resources to the relief of the affected and threatened.

The Department of Commerce has published a preliminary report of the results of the census of State hospitals for mental disease and feeble-minded and epileptics for 1926. From it I read:

CENSUS OF INSTITUTIONS, 1926—HOSPITALS FOR MENTAL DISEASE—30 STATES MAKE PRELIMINARY REPORT

* * * * * * *

Complete returns have been received from 30 States, covering 105 hospitals out of a total of 165 State hospitals for mental diseases which are included in the census. These 105 hospitals had a total of 36,936 first admissions during the year 1926, as compared with 34,362 in 1922, or an increase of 7.5 per cent. These first admissions represent patients received during the year, who had not previously been under treatment in any hospital for mental disease.

For the 30 States represented, there were 47.3 first admissions per 100,000 of the general population, as compared with 46.8 first admissions per 100,000 in 1922. In other words, the number of first admissions in these States has increased only a little more rapidly than the general population.

* * * * * * *

The extent to which public provision has been made for the treatment of mental diseases is, perhaps, best indicated by the number of patients present in the hospitals on a given date. In the 30 States covered by this statement the number of mental patients under institutional care shows a steady increase, as indicated by the figures for the dates at the beginning and the end of the two most recent years for which data are available, which are as follows: January 1, 1922, 156,454; January 1, 1923, 161,566; January 1, 1926, 173,602; and

January 1, 1927, 178,353. The number of such patients under care per 100,000 of the general population increased from 218.5 on January 1, 1923, to 226.9 on January 1, 1927. For the most part, also, the figures for the individual States show increases.

* * * * * * *

CENSUS OF INSTITUTIONS, 1926—INSTITUTIONS FOR FEEBLE-MINDED AND EPILEPTICS—36 STATES MAKE PRELIMINARY REPORT

* * * * * * *

Complete returns have been received from 36 States, covering 60 institutions out of a total of 75 State institutions for feeble-minded and epileptics which were in operation in 1926. These 60 institutions had a total of 7,203 first admissions during the year 1926, as compared with 6,633 in 1922, or an increase of 8.6 per cent. These first admissions represent patients received during the year who had not previously been under treatment in any institution for feeble-minded and epileptics.

For the 36 States represented, there were 7.6 first admissions per 100,000 of the general population, as compared with 7.4 first admissions per 100,000 in 1922; in other words, the number of first admissions has increased only a little more rapidly than the general population.

In comparing the figures for first admissions in individual States, which are given on pages 2 and 3, it should be noted that the number of admissions for a given State is affected not only by the number of feeble-minded and epileptic persons in the State, but also by such factors as the capacity of the institutions in the State and the effectiveness of the local machinery for bringing mental defectives under the care of the institutions. Where a State shows a large increase in the number of first admissions, or in the number under care at a given time, the increase usually represents an expansion of the capacity or facilities of the institutions.

The extent to which provision has been made for the institutional care of feeble-minded and epileptics is perhaps best indicated by the number of patients in the institutions on a given date. In the 36 States covered by this statement the number of feeble-minded and epileptic patients under institutional care shows a steady increase, as indicated by the figures for the dates at the beginning and the end of the two most recent years for which data are available, which are as follows: January 1, 1922, 39,596; January 1, 1923, 42,164; January 1, 1926, 49,788; and January 1, 1927, 52,043. The number of such patients under care per 100,000 of the general population increased from 47 on January 1, 1923, to 54.7 on January 1, 1927. For the most part the figures for the individual States show similar increases.

Both the number of first admissions to institutions for feeble-minded and epileptics and the number of patients present in the institutions are shown for the 36 States separately in the tables presented on pages 2 and 3 of this statement. The figures are based on reports furnished to the Bureau of the Census by the institutions, through the cooperation of the State agencies in charge of such institutions. The figures for 1926 are preliminary and subject to correction.

Similar preliminary statements covering State hospitals for mental disease—"insane hospitals"—and State penal institutions will be issued shortly. Upon the completion of the canvass final statements will be issued covering all institutions in each of the three classes.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. BLACK of New York. I ask unanimous consent, Mr. Chairman, to proceed for 10 minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. BLACK of New York. In round numbers there are at the present time in institutions for the insane in the United States about 300,000 patients, and the Department of the Census in the preliminary report of institutions for the feeble-minded and epileptics presents the figures I have just read.

So I think when we are considering a public health bill, we should consider it with a view to seeing what the National Government can do to alleviate this very serious condition.

I have here a pamphlet by Dr. H. Douglas Singer, professor of psychiatry, University of Illinois, alienist, department of public welfare, State of Illinois, in which he says:

Yet this problem, which I believe to be larger than that of tuberculosis, has received little or no consideration from any Government agency, central or local, until now, when it has compelled attention from the Army and the agencies dealing with disabilities of ex-service men and women.

In the New York State hospitals for the year ending September, 1927, there were over 47,000 patients, an increase of 2,600 in the course of a year. It has also been pointed out by experts that over 80 per cent of those mentally afflicted are unable to take care of themselves or have no relatives to take care of them, and they become public charges.

I can not gather the figures of the real-estate values and the personal-property values of the institutions that are devoted by the various States to the care of the insane, but they are growing every year. They represent a very substantial amount, and I think that the United States should take into consideration the fact that some of the States are finding it hard to bear this load and that the Federal Government should devote some of its resources to assist them to procure scientific help.

The Society for Mental Hygiene reports that the economic loss to the country, due to mental disease in the course of a year, is about $300,000,000, a sum sufficient to make it a great and serious national problem which might be considered in this bill. So much is required in the way of real and personal property, food and attendants, that the States have not been in a position to properly compensate science under the existing conditions. In other words, the Federal Government is in a position to pay scientists skilled in this study a sufficient sum of money to attract alienists to this service. They could disseminate their ideas and communicate them to the States.

The Federal board would be of aid as a central consultant in this problem of mental diseases, which some claim to be greater than tuberculosis and which affects the great motive power of progress, the human mind. This board would conduce toward economy in their work, for it would serve as an accessible exchange for scientific views and discoveries.

The Federal board would furnish a reliable incentive to specialization in the cure of mental disorders, and as William L. Russell, M. D., superintendent of the Bloomingdale Hospital, said:

In no class of case is the necessity for specialists more pressing.

The sensational murder cases which have presented a ghastly clash of alienists demand that a code of ethics be provided for experts. They have discouraged by their contradictions the confidence of the public in their profession, yet it is very necessary that there should be a popular faith in mental-disease experts if they expect patients to submit to preventive treatments.

Massachusetts has a law requiring those charged with homicide and second offenders in felony cases to submit to a State board of alienists, and by that method they do away with this clash of alienists that has brought so much disrepute to the medical profession engaged in the line of the treatment of mental diseases. A Federal board which would specialize in that line of work would be available in the Federal courts, and they could be called upon as well by the States, in order to get the most recent data in neurological situations.

The Federal board might advise a proper code of ethics, or it might encourage the States to adopt the Massachusetts system of State experts, who report to the court on the mental condition of those charged with capital offenses. This does away with the grotesque debates between alienists.

I was attracted to this problem by some veteran situations that were presented to me, and at this point I want to digress for just a second to pay my respects to General Hines, the present head of the Veterans' Bureau. I have seldom come in contact with any man at the head of a bureau who has put such real heart and sympathy in his work and who has given such real personal attention to the cases which come before his bureau. [Applause.] I have a letter from General Hines, dated February 8, 1928, which would be interesting at this point:

UNITED STATES VETERANS' BUREAU,
OFFICE OF THE DIRECTOR,
Washington February 8, 1928.

Hon. LORING M. BLACK, Jr.,
House of Representatives, Washington, D. C.

MY DEAR MR. BLACK: With reference to your letter of February 1, 1928, requesting information in regard to mental diseases among veterans under the supervision of the Veterans' Bureau, you are advised that the data furnished herewith are as of December 31, 1927.

There were on this date 53,808 veterans receiving compensation for neuropsychiatric disabilities, which is 21.52 per cent of the total compensable cases.

The neuropsychiatric figure includes veterans suffering from diseases of the nervous system, as well as those definitely psychotic or insane. This latter group numbers 24,493, of which on this date 11,101 were under treatment in hospitals by the Veterans' Bureau.

Of further interest to you might be the fact that there were approximately 7,120 veterans of the World War from New York State drawing compensation for neuropsychiatric disabilities, while approximately 1,544 were hospitalized.

Every effort is made by the Veterans' Bureau to hospitalize a veteran in his home State, and this has been very successful in the case of New York veterans, where approximately 94 per cent of those psychotic or insane are hospitalized in the home State.

Very truly yours,

FRANK T. HINES, *Director.*

The CHAIRMAN (Mr. HAWLEY). The time of the gentleman from New York has again expired.

Mr. BLACK of New York. Mr. Chairman, I ask unanimous consent to proceed for three additional minutes.

The CHAIRMAN. The gentleman from New York asks unanimous consent to proceed for three additional minutes. Is there objection?

There was no objection.

Mr. BLACK of New York. I am very proud to say that this letter from the Veterans' Bureau is a commentary on the situation in my own State. After the war our governor, Governor Smith, with the help of our legislature, on a nonpartisan basis and without any thought of politics saw to it that there were large institutions, modern, up-to-date, and having the approval of scientists, in the State of New York for the care of neurological veterans, and this had its result as shown by this letter from the Director of the Veterans' Bureau.

I do not know whether you gentlemen care to adopt my amendment because it has not been considered in committee, but I suggest that something should be done.

Mr. SHALLENBERGER. Will the gentleman yield?

Mr. BLACK of New York. I yield.

Mr. SHALLENBERGER. I would like to ask the gentleman whether his amendment proposes the creation of a separate board?

Mr. BLACK of New York. My amendment calls for the appointment of at least one member on this advisory board skilled in the study of mental diseases.

Mr. SHALLENBERGER. But the statements made by the gentleman seemed to suggest that he was in favor of a separate board.

Mr. BLACK of New York. I was referring to my own bill. The amendment would be the foundation for the larger thing that the Federal Government ought to do. The Federal Government has a tremendous problem of its own in this situation, and I think this should be done as the first step so that this new public health council might advise the Congress as to whether the Government should go into this scientific work on a broad scale or not.

Mr. LAGUARDIA. Will the gentleman yield?

Mr. BLACK of New York. Yes.

Mr. LAGUARDIA. The gentleman would be in favor of placing a Federal health bureau there?

Mr. BLACK of New York. No; the gentleman is in favor of the creation of a board of advisers to study the question of mental diseases, getting the latest data available on this subject, disseminating it to the States, and informing the States on the care and cure of the insane.

Mr. LAGUARDIA. You would made this a permanent institution, would you not?

Mr. BLACK of New York. They would have no direct contact but would simply act in an advisory capacity. That is my proposition.

I have offered the amendment, as the committee must realize, largely for the purpose of discussing the general topic, and if the committee does not care to adopt it or if it interferes with the committee's plan I will be glad to withdraw it.

Mr. PARKER. I suggest that the gentleman withdraw his amendment.

Mr. BLACK of New York. Mr. Chairman, I ask unanimous consent to withdraw the amendment.

The CHAIRMAN. The gentleman from New York asks unanimous consent to withdraw the amendment. Is there objection?

There was no objection.

Mr. BANKHEAD. Mr. Chairman, I move to strike out the last word. Gentlemen of the committee, I desire to take up but a very little time because I know the committee is anxious to vote on this bill. I simply rise for the purpose of saying I am very heartily in favor of the passage of this bill. My main purpose in rising, however, is to pay a short tribute to what I regard as the inestimable value to the people of America of the activities of the United States Public Health Service. I have taken occasion to say upon this floor at other times that in my opinion the very best of money spent for any purpose out of the Treasury of the United States from the standpoint of humanity and the public welfare is that which is appropriated for the maintenance of the United States Public Health Service. [Applause.]

My attention to the value of this work was first attracted by an experience in my home county in Alabama some 10 or 12 years ago. At that time we had in that county what might be called an epidemic of typhoid fever that had been going on for several years. The Public Health Service appointed a delegation of some four or five young physicians, detailed from that service, to go to Walker County, Ala., and to make a survey of the situation, with the idea of undertaking to eradicate that dread disease. The year before those young doctors made their survey of that county there were 35 deaths from typhoid fever in that one county alone. They came into the county; they made a house-to-house survey of every home in that county, both white and colored; they made recommendations as to sanitation, the water supply, the screening of houses, and so forth, and the year after they were there and made their recommendations for health preservation there was not a single death in that whole county from typhoid fever, and there has not been any typhoid fever to any appreciable extent since that time.

As I understand this bill it in nowise undertakes to interfere with the present structure of this great organization. It merely undertakes to coordinate its activities and in some particulars to extend them so as to make their investigations and their surveys more valuable to the American people. And, gentlemen, I want to say to you there is no subject, economic or otherwise, that ought to be of more importance and that ought more to engage the solicitude of the Congress of the United States than the preservation of the public health.

I took occasion a few years ago to make some investigation as to the economic loss to the country in dollars and cents caused by absolutely preventable human disease and those figures were astounding. As a matter of fact, I think one of the very great achievements of our modern times has been the advance in the preservation of the health of our people by the investigations of the Public Health Service and allied agencies.

Alabama, my home State, is, of course, very proud of the achievements of that great humanitarian, General Gorgas, who was one of the leaders along the line I am now indicating, and so greatly am I impressed and have I been impressed by actual observation of the value of the work of the Public Health Service that if I had my way about it I would increase by ten times the existing appropriation for the activities of the United States Public Health Service, particularly along the lines of rural sanitation.

Gentlemen, do you know that for a long period of time the actual appropriation made for rural sanitation in the whole Government of the United States was only $50,000 a year?

I am glad this bill is before the committee for its consideration, and I am very pleased to have had an opportunity to pay this short tribute to the great service of the United States Public Health Service.

Mr. MONTAGUE. Mr. Chairman, I move to strike out the last three words.

I simply wish to ask the gentleman from Michigan [Mr. MAPES], in charge of the bill, whether this bill in any way affects the pure food bureau of the Agricultural Department?

Mr. MAPES. Not in any way.

Mr. MONTAGUE. It does not touch that matter at all?

Mr. MAPES. It does not touch it. The Department of Agriculture was a little fearful about the original bill, which contained a provision authorizing the President to transfer public-health activities from departments outside of the Public Health Service to the Public Health Service. The committee considered it wise to eliminate that provision from the bill entirely, and now the bill simply authorizes the Secretary of the Treasury, upon the request of the head of any department, to detail personnel from the Public Health Service to any other department that is carrying on public-health work, as an incident of the major purpose of the department to cooperate in such work, but such detail is made only in case of a request by the head of such department.

Mr. MONTAGUE. So, therefore, it would be competent for the Secretary of Agriculture to ask a detail from this bureau to deal with some matter arising within the bureau?

Mr. MAPES. Yes; to cooperate and advise with the men in the pure-food bureau only. The committee thought other branches of the Government should be given the privilege, if desired, of having the advice and opinion and benefit of the experience of the Public Health Service.

Mr. MONTAGUE. As I understand the gentleman, then, his first statement that it had nothing whatever to do with the pure-food bureau is modified to the extent that they can have something to do with that bureau if it prefers the request.

Mr. MAPES. Only upon the request of the pure-food bureau itself or the Secretary of Agriculture.

Mr. Chairman, I move that the committee do now rise and report the bill back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. HAWLEY, Chairman of the Committee of the Whole House on the state of the Union, reported that

that committee having had under consideration the bill (H. R. 11026) to provide for the coordination of the public-health activities of the Government, and for other purposes, had directed him to report the same back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

Mr. MAPES. Mr. Speaker, I move the previous question on the bill and all amendments thereto to final passage.

The previous question was ordered.

The SPEAKER. Is a separate vote demanded on any amendment? If not, the Chair will put the amendments in gross.

The amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. MAPES, a motion to reconsider the vote by which the bill was passed was laid on the table.

FORMER SPEAKER CHAMP CLARK

Mr. HASTINGS. Mr. Speaker, I ask unanimous consent to proceed for two minutes.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. HASTINGS. Mr. Speaker, this is March 7, the birthday of ex-Speaker Champ Clark, who served his district, State, Nation, and the House so ably, faithfully, honestly, and conscientiously for a long period of years. His career was a notable one.

We may well pause a moment to pay tribute both in thought and word to his memory. He was a strong character and a ready debater. His views on all public questions were well known. He was an able, conscientious presiding officer. He was a loving father, devoted husband, loyal friend, and an honest, patriotic public servant. He was a close student of the lives of public men who have served the Nation from its foundation. No man was better equipped to give advice as to the qualities necessary for leadership here or in the Nation. He loved his work here in the House and was beloved by every Member. He defended the House on all occasions against unjust criticism.

In the mature years of his life, in the twilight of reflection, on March 16, 1916, he made a notable address to the new Members of Congress, of whom I was one, at the Press Club, emphasizing the value of experience of Members of Congress to themselves, the House, their district, and the Nation. [Applause.]

The address is as follows:

[Printed in CONGRESSIONAL RECORD, March 17, 1916]

THE MAKING OF A REPRESENTATIVE

REMARKS OF CHAMP CLARK AT THE WASHINGTON PRESS CLUB RECEPTION, THURSDAY, MARCH 16, 1916

It is a high honor to be a Representative in Congress, if for only one term, and with the number of terms the honor increases in geometrical rather than in arithmetical proportion. A Member's usefulness to his country should increase in the same proportion. A man has to learn to be a Representative just as he must learn to be a blacksmith, a carpenter, a farmer, an engineer, a lawyer, or a doctor.

"Poeta nascitur non fit"—a poet is born, not made—says Horace; but Congressmen—that is, useful and influential Congressmen—are made largely by experience and practice.

The old Charlotte district in Virginia knew this and kept John Randolph of Roanoke in the House till he became a great national figure. Then the Old Dominion sent him to the Senate and General Jackson sent him to St. Petersburg. There are sporadic cases of similar action in other districts.

It is an unwise performance for any district to change Representatives at short intervals. A new Congressman must begin at the foot of the class and spell up. Of course, the more brains, tact, energy, courage, and industry he has the quicker he will get up. If he possesses these qualities, and if his constituents will keep him in the House, he is as certain to rise as the sparks are to fly upward. No human power can keep him down. It is only fair and rational to assume that every Representative's constituents desire to see him among the "top-notchers."

Let us take the present House and see how long the men who hold the high places have served. I can not name all, but will cite a few as samples.

Mr. Speaker Cannon is serving his fortieth year. He holds the record, or, in pugilistic parlance, "he holds the belt," for length of service in the House in our entire history. In several Congresses he was chairman of the great Committee on Appropriations and then was Speaker eight years, only one man, Henry Clay, having been Speaker longer.

I am serving my twenty-second year; Minority Leader Mann is serving his twentieth year; Mr. Kitchin, chairman of Ways and Means, his sixteenth; Mr. Fitzgerald, chairman of Appropriations, his eighteenth; Mr. Moon, chairman of the Post Office and Post Roads, his twentieth; Mr. Jones, chairman of Insular Affairs and "father of the House," his twenty-sixth; Mr. Flood, chairman of Foreign Affairs, his sixteenth; Mr. Hay, chairman of Military Affairs, his twentieth; Mr. Glass, chairman of Banking and Currency, his sixteenth; Mr. Adamson, chairman of Interstate and Foreign Commerce, his twentieth; Mr. Stephens, chairman of Indian Affairs, his twentieth; Mr. Slayden, chairman of the Library, his twentieth; Mr. Henry, chairman of Rules, his twentieth; Mr. Lever, chairman of Agriculture, his sixteenth; Mr. Padgett, chairman of the Navy, his sixteenth; Mr. Lloyd, chairman of Accounts, his twentieth; and Mr. Sparkman, chairman of Rivers and Harbors, his twenty-second. There are other big chairmanships, but these will suffice to show that as a rule the big places go to old and experienced Members, for most of the men who rank close to the chairmen are old-timers. The same thing holds good with reference to members of the minority. As an illustration, Messrs. Gillett and Cooper, who are serving their twenty-fourth year, are the ranking Republicans on Appropriations and Foreign Affairs, almost certain to be chairmen thereof should the Republicans ever again have a majority in the House, as in that event, in all probability, Mr. Mann will be Speaker, unless he is nominated for President next June.

Go through the whole list and you will find, with few exceptions, that the men of long service have the high places.

New England and the cities of Philadelphia and Pittsburgh have understood the value of long service all along, and having elected a fairly good man to Congress they keep him in the harness.

The Member of longest consecutive service is called "the father of the House." Five Philadelphians in immediate succession bore that honorable title—Randall, Kelly, O'Neil, Harmer, and Bingham. Then it went to Mr. Dalzell, of Pittsburgh. When General Bingham announced the death of General Harmer, his immediate predecessor as "father of the House," he stated that the five Philadelphia "fathers of the House" had served a total of 147 years, and he served 8 or 10 years after making that interesting statement.

In the second and third Congresses in which I served, Maine, with only four Members, had the Speakership and the chairmanship of the great Committees on Ways and Means, Navy, and Public Buildings and Grounds—a most remarkable circumstance, giving the Pine Tree State an influence in the House and the country out of all proportion to her population and wealth. These four men—Reed, Dingley, Boutelle, and Millikin—each served in the House 20 years or more. Other States might profit by her example.

No man should be elected to the House simply to gratify his ambition. All Members should be elected for the good of the country.

The best rule, it seems to me, is for a district to select a man with at least fair capacity, industrious, honest, energetic, sober, and courageous, and keep him here so long as he discharges his duties faithfully and well. Such a man will gradually rise to high position and influence in the House. His wide acquaintance with Members helps him amazingly in doing things.

I can speak freely on this subject without violating the proprieties, for my constituents have kept me here 22 years, and for 20 years have given me nominations without opposition, for all of which favors I thank them from the bottom of my heart. Their generous action and unwavering friendship have enabled me to devote all my time to the public service. I have not been compelled to spend any portion of my time in "mending my fences." My constituents have attended to that. God bless them!

One other thing. I do not know what committee assignments you new Members secured. If they are good, you are to be congratulated. If bad, do not be cast down. No congressional tenderfoot ever had poorer assignments than I had—Claims and Old Pensions—but I never complained or kicked. I went to work as though those committees suited me exactly. Here is an illustration of what may happen and how luck plays an important part: I was next to top Democrat on both Foreign Affairs and Patents for eight years—never advanced a peg so far as committees went. Just when, at the beginning of the ninth year on those two committees, I was about to become top Democrat on Foreign Affairs, Hon. John Sharp Williams, then minority leader, assigned me to the foot of Ways and Means, and at the end of four years through the happenings of politics in five different States I jumped from the foot to the head of the Democratic minority on Ways and Means. So it may be with you. Events over which you have no control may advance you more rapidly than you dreamed of or hoped for. My advice is this: "Whatever your hand finds to do, do it with your might."

BRIDGE ACROSS POTOMAC RIVER AT OR NEAR GREAT FALLS

Mr. PARKER. Mr. Speaker, I call up the bill (H. R. 9830) authorizing the Great Falls Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Potomac River at or near Great Falls.

The SPEAKER. The Clerk will report the bill.

The bill is as follows:

Be it enacted, etc., That in order to facilitate interstate commerce, improve the Postal Service, and provide for military and other purposes, the Great Falls Bridge Co., its successors and assigns, be, and is hereby, authorized to construct, maintain, and operate a bridge and approaches thereto across the Potomac River at a point suitable to the interests of navigation from a point at or within 1 mile above or below Great Falls, in the county of Fairfax, in the State of Virginia, to a point at or within 1 mile above or below the Great Falls, in the county of Montgomery, in the State of Maryland, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906, and subject to the conditions and limitations contained in this act: *Provided*, That in addition to the authority vested in the Secretary of War, the location and design of said bridge shall be subject to the approval of the National Capital Park and Planning Commission: *And provided further*, That no railway shall be operated on and over said bridge.

SEC. 2. There is hereby conferred upon the Great Falls Bridge Co., its successors and assigns, all such rights and powers to enter upon lands and to acquire, condemn, occupy, possess, and use real estate and other property needed for the location, construction, operation, and maintenance of such bridge and its approaches as are possessed by railroad corporations for railroad purposes or by bridge corporations for bridge purposes in the States in which such real estate or other property is situated, upon making just compensation therefor, to be ascertained and paid according to the laws of such States, and the proceedings therefor shall be the same as in the condemnation or expropriation of property for public purposes in such States.

SEC. 3. The said Great Falls Bridge Co., its successors and assigns, is hereby authorized to fix and charge tolls for transit over such bridge, and the rates of toll so fixed shall be the legal rates until changed by the Secretary of War under the authority contained in the act of March 23, 1906.

SEC. 4. After the completion of such bridge, as determined by the Secretary of War, either the State of Virginia, the State of Maryland, any public agency or political subdivision of either of such States within or adjoining which any part of such bridge is located, or any two or more of them jointly, may at any time acquire and take over all right, title, and interest in such bridge and its approaches and any interest in real property necessary therefor by purchase or by condemnation or expropriation in accordance with the laws of either of such States governing the acquisition of private property for public purposes by condemnation or expropriation. If at any time after the expiration of 20 years after the completion of such bridge the same is acquired by condemnation or expropriation, the amount of damages or compensation to be allowed shall not include good will, going value, or prospective revenues or profits, but shall be limited to the sum of (1) the actual cost of constructing such bridge and its approaches, less a reasonable deduction for actual depreciation in value, (2) the actual cost of acquiring such interests in real property, (3) actual financing and promotion costs, not to exceed 10 per cent of the sum of the cost of constructing the bridge and its approaches and acquiring such interest in real property, and (4) actual expenditures for necessary improvements.

SEC. 5. If such bridge shall be taken over or acquired by the States or public agencies or political subdivisions thereof, or by either of them, as provided in section 4 of this act, and if tolls are thereafter charged for the use thereof, the rates of toll shall be so adjusted as to provide a fund sufficient to pay for the reasonable cost of maintaining, repairing, and operating the bridge and its approaches under economical management, and to provide a sinking fund sufficient to amortize the amount paid therefor, including reasonable interest and financing cost, as soon as possible under reasonable charges, but within a period of not to exceed 20 years from the date of acquiring the same. After a sinking fund sufficient for such amortization shall have been so provided, such bridge shall thereafter be maintained and operated free of tolls, or the rates of toll shall thereafter be so adjusted as to provide a fund of not to exceed the amount necessary for the proper maintenance, repair, and operation of the bridge and its approaches under economical management. An accurate record of the amount paid for acquiring the bridge and its approaches, the actual expenditures for maintaining, repairing, and operating the same, and of the daily tolls collected shall be kept and shall be available for the information of all persons interested.

SEC. 6. The Great Falls Bridge Co., its successors and assigns, shall within 90 days after the completion of such bridge file with the Secretary of War and with the Highway Departments of the States of Virginia and Maryland a sworn itemized statement showing the actual original cost of constructing the bridge and its approaches, the actual cost of acquiring any interest in real property necessary therefor, and the actual financing and promotion costs. The Secretary of War may, and upon request of the highway department of either of such States shall, at any time within three years after the completion of such bridge, investigate such costs and determine the accuracy and the reasonableness of the costs alleged in the statement of costs so filed, and shall make a finding of the actual and reasonable costs of constructing, financing, and promoting such bridge; for the purpose of such investigation the said Great Falls Bridge Co., its successors and assigns, shall make available all of its records in connection with the construction, financing, and promotion thereof. The findings of the Secretary of War as to the reasonable costs of the construction, financing, and promotion of the bridge shall be conclusive for the purposes mentioned in section 4 of this act, subject only to review in a court of equity for fraud or gross mistake.

SEC. 7. The right to sell, assign, transfer, and mortgage all the rights, powers, and privileges conferred by this act is hereby granted to the Great Falls Bridge Co., its successors and assigns, and any corporation to which or any person to whom such rights, powers, and privileges may be sold, assigned, or transferred, or who shall acquire the same by mortgage foreclosure or otherwise, is hereby authorized and empowered to exercise the same as fully as though conferred herein directly upon such corporation or person.

SEC. 8. The right to alter, amend, or repeal this act is hereby expressly reserved.

During the reading of the bill the following took place:

Mr. DENISON. Mr. Speaker, I ask unanimous consent to dispense with the further reading of the bill.

The SPEAKER. The gentleman from Illinois asks unanimous consent to dispense with further reading of the bill. Is there objection?

There was no objection.

Mr. DENISON. In this connection I want to call attention to the provisions in the bill—that there are not only the usual provisions that we place in these bills, that plans, specifications, and location of the bridge must be approved by the Chief Engineer and the Secretary of War, as provided in general bridge law—but there is a special provision that the plans and locations of the bridge must be approved by the National Park and Planning Commission, and a further provision that the location and design of the bridge shall be such as not to interfere with any power development of the Potomac River under specific authorization of Congress or under the provisions of the Federal water power act. These special provisions have been put in to meet any possible objection that might be urged to a bridge at that location.

Mr. ZIHLMAN. Will the gentleman yield?

Mr. DENISON. Yes.

Mr. ZIHLMAN. I would like to ask the gentleman, the chairman of the subcommittee, as to the amendment on page 2 of the bill, in which the committee have stricken out the language, "*And provided further*, That no railway shall be operated on and over said bridge," and substituted for its language, as I understand, which inserts the word "highway."

As the gentleman well knows there has been an attempt made during recent years to construct a railroad bridge across the Potomac at or near Great Falls for the purpose of building a belt line through Arlington County, Va., and Montgomery County, Md. The residents of that section who have built beautiful homes have been opposed to that proposition. The federation of citizens of Montgomery County have stated that they have no objection to this bill provided their rights as to maintaining a residential zone are protected. I would like to know whether this language will protect them and prohibit the use of the bridge for railroad purposes?

Mr. DENISON. I wish to state on behalf of the committee that the committee has adopted certain forms for various bridge bills. We have a special form for all railroad bridge bills and a form for highway bridge bills. The committee thought that in conformity to the custom adopted by the committee and the forms adopted by the committee we would make this bill conform to our usual custom. Therefore we struck out the language and inserted "highway," so that the bill reads "construct, maintain, and operate a highway bridge and approaches thereto." Certainly the permittees would not under any law be allowed to use the highway bridge for railroad purposes, or to construct a railroad bridge under a bill to authorize them to construct a "highway" bridge. Therefore, I think I can assure the gentleman that the bridge could not be used or constructed for any purpose but a "highway" bridge, and could not be used for any purpose except highway purposes. I will say that I am in entire accord with the views of the gentleman from Maryland in regard to the advisability of constructing a railroad bridge across the river in that vicinity, and the committee that reported the bill was not in favor of the construction of such a bridge there.

Mr. LINTHICUM. Will the gentleman yield?

Mr. DENISON. Yes.

Mr. LINTHICUM. Has the gentleman looked up the definition of highway to see whether it includes trains and trolley cars?

Mr. DENISON. I do not have to look up the definition of highway. I think I understand what it means.

Mr. LINTHICUM. May it not include trains?

Mr. DENISON. No; a highway means a highway for vehicular traffic, and a railroad bridge means a bridge for railroad purposes only.

Mr. LINTHICUM. We speak of railroad highway. I was going to ask the gentleman whether it would be out of order to place after the word "highway" the words "for pedestrians and vehicular traffic"?

Mr. ZIHLMAN. I want to call attention to the fact that the present Highway Bridge is used by the Virginia & Old Dominion Railroad Co. for electric trains.

Mr. DENISON. Yes. And you will find that the franchise for this bridge either grants them the right to build a railroad bridge, or merely authorize a general bridge without any limitation as to its use. Certainly, consent to build a "highway" bridge would not include consent to build a railroad bridge.

Mr. MOORE of Virginia. Mr. Speaker, will the gentleman yield?

Mr. DENISON. Yes.

Mr. MOORE of Virginia. Mr. Speaker, I am as much opposed to a railroad bridge at that point as anyone else. The question has been brought up here as to the construction of the term "highway." Suppose that question should come before a court. The court would look to the report of the committee, which makes clear that the committee intended the word "highway" to be construed as excluding the construction of a railroad bridge. The court would go further and consider the statements made on the floor here now on behalf of the committee to show that that is the intent. I have not the slightest doubt as a lawyer that an injunction would be granted on that basis to prevent the use of the bridge for railway purposes.

Mr. BURTNESS. And supplementing what the gentleman from Virginia has said, let me make this suggestion: So far as the legislative intent is concerned, it seems to me that that would be very easily shown by the fact that there has been provided before by the Congress in acts specifically passed language showing exactly what has been used where we intended to have the construction of a railroad bridge; and where we intend to approve a bridge for vehicular and pedestrian uses we have used particular language, so that there would be no difficulty in ascertaining the legislative intent.

Mr. ZIHLMAN. Mr. Speaker, I ask the gentleman if the committee would have any objection to retaining the language prohibiting the use of this bridge as a railroad bridge?

Mr. DENISON. The committee considered this bill as it did every other bridge bill. I know of no reason why we should give any special treatment in this case different from any other bill, except where there are certain conditions which require special treatment, and we merely amended this bill to conform to the accepted custom of the committees of the House and the Senate.

Mr. ZIHLMAN. The sponsor of the bill inserted in it a provision that the bridge should not be used for railroad purposes. Therefore, the opponents of the bill withdrew their opposition. I can not see any reason why that language should not be retained now.

Mr. HERSEY. How could it possibly be used as a railroad bridge when you are asking toll?

Mr. ZIHLMAN. Oh, the railroad companies could make a contract with the bridge company that would not prohibit them from doing that.

Mr. HERSEY. But a railroad train crossing over a bridge can not stop to pay toll.

Mr. ZIHLMAN. But the railroad company could make a contract with the bridge company. I am relying upon the language of the bill to protect the interests of the people of Montgomery County, Md., who are opposed to this if it is to be used for a railroad bridge. I ask that the language of the gentleman from Virginia [Mr. MOORE] as originally proposed in the bill be accepted by the committee.

Mr. DENISON. Personally, I have no objection to leaving the language in there, except that it makes it different from other bills.

The SPEAKER. The Clerk will report the committee amendments.

The Clerk read as follows:

Page 1, line 7, after the article "a" insert the word "highway."

Mr. DENISON. Mr. Speaker, in respect to the request made by the gentleman from Maryland, on behalf of the committee and with the approval of the chairman of the committee, we ask leave to withdraw that committee amendment.

The SPEAKER. Without objection the committee amendment just read will be withdrawn.

There was no objection.

The SPEAKER. The Clerk will report the other committee amendments.

The Clerk read as follows:

Page 2, line 1, after the word "point," strike out the words "at or," and after the word "mile" strike out the words "above or," and in line 3, after the word "point," strike out the words "at or," and after the word "mile" strike out the words "above or."

Page 2, line 8, after the word "act," strike out the semicolon and the words "Provided that," and insert a colon and the words "Provided that."

Page 2, line 12, after the word "commission" strike out the comma and the words "and provided further that no railway shall be operated on and over said bridge."

Mr. DENISON. Mr. Speaker, to carry out the agreement or suggestion, on behalf of the committee I ask unanimous consent to withdraw the last amendment, striking out that language.

The SPEAKER. Without objection, the committee amendment just read will be withdrawn. The Clerk will continue the reading of the committee amendments.

The Clerk read as follows:

After the word "bridge," in line 13, on page 2, insert a colon and the words: "*Provided further*, That the location and design of said bridge shall be such as not to interfere with any power development of said Potomac River that, under specific authorization of Congress or under the provisions of the Federal water power act, may be made in accordance with the project set forth in Senate Document 403, Sixty-sixth Congress, third session, or appropriate modification thereof."

The SPEAKER. The question is on agreeing to the committee amendments.

Mr. SCHAFER. Mr. Speaker, I rise in opposition to the last committee amendment. I would like to get some information.

Mr. PARKER. Mr. Speaker, I think the gentleman is not entitled to the floor in opposition to any amendment. If the gentleman desires time, I yield him five minutes.

Mr. SCHAFER. Mr. Speaker, am I not entitled to recognition in opposition to the amendment?

Mr. SNELL. Not in the House.

The SPEAKER. Of course, the gentleman from New York [Mr. PARKER] would be entitled to recognition by the Chair at any time to move the previous question. Therefore, in effect, the gentleman from New York is in charge.

Mr. PARKER. Mr. Speaker, I yield the gentleman five minutes.

Mr. SCHAFER. Mr. Speaker, I shall vote for this amendment, but rise in opposition to same in order to obtain information. I notice that the pending bill, H. R. 9830, grants to the Great Falls Bridge Co., its successors and assigns, the right to operate and construct a toll bridge at Great Falls. I also note that the committee report indicates that the Acting Secretary of the Department of Agriculture recommends against favorable action on the bill. No printed hearings on this bill are available and I do not find a report from the Federal Power Commission incorporated in the committee report. Can the gentleman from Maryland inform me just what people constitute the Great Falls Bridge Co.?

Mr. ZIHLMAN. I do not sponsor the bill. The gentleman from Virginia [Mr. MOORE] can probably give you the information.

Mr. MOORE of Virginia. The corporation was organized under the laws of the State of Delaware. I can not inform the gentleman who the directors or stockholders are.

Mr. SCHAFER. Then it is possible that the stockholders and incorporators may be related to the power interests who are opposing the development of the Great Falls power site by the Government.

Mr. MOORE of Virginia. On that point the information which I have obtained and on which I rely with a great deal of confidence is that there is no such thought in the mind of anybody connected with this project.

Mr. SCHAFER. The great power interests seem to be getting their fingers on every water-power site in the country. In view of the fact that the power interests are opposing the development by the Government of the power site at Great Falls, I shall oppose this bill. We should at least know who are behind it and who are interested in the Great Falls Bridge Co.

Mr. MOORE of Virginia. The gentleman need have no apprehension on that point. No power interest is sponsoring this bill or in any way connected with it.

Mr. SCHAFER. Mr. Speaker, I feel constrained to vote against this bill. I am opposed to granting to private corporations right to construct toll bridges, especially when the bridge to be constructed has a connection with the proposed Great Falls power development site.

Mr. DENISON. The committee did not want that amendment put in, but some members of the committee who had given attention to this matter, particularly the gentleman from Alabama [Mr. HUDDLESTON], asked that it go in, and we put it in out of respect to his judgment.

Mr. SCHAFER. I am opposed to the entire bill, even though the pending amendment is incorporated. I shall vote for the amendment however. There has been under consideration for some time the proposed development of the power site at Great Falls, and a great deal of opposition to the development by the Federal Government has been created by those closely allied with the great power monopoly of this country. I therefore do not believe that we should grant a private corporation the right to construct a toll bridge on the power site, especially since we know not who or what are the financial interests in the corporation. I am opposed to this bill, and if it is within my power, under the parliamentary situation, I will obtain a record vote.

Mr. PARKER. Mr. Speaker, I move the previous question on the bill and all amendments to final passage.

The previous question was ordered.

The SPEAKER. The question is on agreeing to the amendments.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER. The question is, Shall the bill pass?

The question was taken, and the Speaker announced that the ayes seem to have it.

Mr. SCHAFER. A division, Mr. Speaker.

The SPEAKER. A division is demanded.

The House divided; and there were—ayes 112, noes 4.

Mr. SCHAFER. I object to the vote on the ground that there is no quorum.

The SPEAKER. Evidently there is no quorum present. The Doorkeeper will close the doors, the Sergeant at Arms will bring in the absentees, and the Clerk will call the roll. The question is on the passage of the bill. As many as are in favor of the passage of the bill will, when their names are called, answer "yea"; those opposed will answer "nay."

The question was taken; and there were—yeas 321, nays 12, answered "present" 1, not voting 100, as follows:

Mr. Eaton with Mr. Quayle.
Mr. Foss with Mr. Igoe.
Mr. Graham with Mr. Oliver of New York.
Mr. Johnson of Washington with Mr. Carss.
Mr. Strong of Pennsylvania with Mr. Stedman.
Mr. Moore of Ohio with Mr. Ayres.
Mr. King with Mr. White of Colorado.
Mr. Wainwright with Mr. Sears of Florida.
Mr. Reed of New York with Mr. Douglas of Arizona.
Mr. Michaelson with Mr. Sabath.
Mr. Knutson with Mr. Howard of Oklahoma.
Mr. Allen with Mr. Oliver of Alabama.
Mrs. Langley with Mrs. Norton.
Mr. Brand of Ohio with Mr. Kunz.
Mr. Cochran of Pennsylvania with Mr. Jacobstein.

Mr. James with Mr. Douglass of Massachusetts.
Mr. Wurzbach with Mr. Combs.
Mr. Strother with Mr. De Rouen.
Mr. Britten with Mr. Berger.

The result of the vote was announced as above recorded.

On motion of Mr. PARKER, a motion to reconsider the vote by which the bill was passed was laid on the table.

CONFERENCE REPORT—ARMY APPROPRIATION BILL

Mr. BARBOUR. Mr. Speaker, I present a conference report on the bill (H. R. 10286) making appropriations for the military and nonmilitary activities of the War Department for the fiscal year ending June 30, 1929, and for other purposes, for printing under the rule.

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

A message in writing from the President of the United States was presented to the House of Representatives, by Mr. Latta, one of his secretaries, who also announced that on the following dates the President had approved bills of the House of the following titles:

On March 2, 1928:

H. R. 83. An act to approve Act No. 24 of the Session Laws of 1927 of the Territory of Hawaii, entitled "An act to authorize and provide for the manufacture, maintenance, distribution, and supply of electric current for light and power within Hanapepe, in the district of Waimea, island and county of Kauai"; and

H. R. 3144. An act for the relief of Augustus C. Turner.

On March 3, 1928:

H. R. 48. An act to erect a tablet or marker to the memory of the Federal soldiers who were killed at the Battle of Perryville, and for other purposes;

H. R. 8282. An act to provide for the permanent withdrawal of certain lands bordering on and adjacent to Summit Lake, Nev., for the Paiute, Shoshone, and other Indians;

H. R. 8281. An act to provide for the withdrawal of certain described lands in the State of Nevada for the use and benefit of the Indians of the Walker River Reservation;

H. R. 8291. An act to amend section 1 of the act of June 25, 1910 (36 Stat. L. 855), "An act to provide for determining the heirs of deceased Indians, for the disposition and sale of allotments of deceased Indians, for the leasing of allotments, and for other purposes";

H. R. 8292. An act to reserve 120 acres on the public domain for the use and benefit of the Koosharem Band of Indians residing in the vicinity of Koosharem, Utah;

H. R. 8527. An act for the relief of the International Petroleum Co. (Ltd.), of Toronto, Canada; and

H. R. 9037. An act to provide for the permanent withdrawal of certain lands in Inyo County, Calif., for Indian use.

On March 5, 1928:

H. R. 9994. An act to reimburse certain Indians of the Fort Belknap Reservation, Mont., for part or full value of an allotment of land to which they were individually entitled;

H. R. 10635. An act making appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1929, and for other purposes;

H. R. 482. An act to provide relief for the victims of the airplane accident at Langin Field, Moundsville, W. Va.; and

H. R. 5925. An act for the relief of the Fidelity & Deposit Co. of Maryland.

On March 6, 1928:

H. R. 10298. An act to extend the times for commencing and completing the construction of a bridge across the Mississippi River at or near New Orleans, La.;

H. R. 121. An act authorizing the Cairo Association of Commerce, its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Cairo, Ill.;

H. R. 5679. An act authorizing the Nebraska-Iowa Bridge Corporation, a Delaware corporation, its successors and assigns, to construct, maintain, and operate a bridge across the Missouri River between Washington County, Nebr., and Harrison County, Iowa; and

H. R. 9036. An act to increase the salary of the Librarian of Congress.

ORDER OF BUSINESS

Mr. PARKER. Mr. Speaker, I ask unanimous consent that the balance of the day be yielded to the Committee on Agriculture without the Committee on Interstate and Foreign Commerce losing the call; in other words, that next week, or on the next Calendar Wednesday, the Committee on Interstate and Foreign Commerce have the call.

The SPEAKER. The gentleman from New York asks unanimous consent that the balance of the day may be occupied by the Committee on Agriculture, without prejudice to the Committee on Interstate and Foreign Commerce. Is there objection?

Mr. GARRETT of Tennessee. Mr. Speaker, I think there will be no objection, but let us get the matter clear. The Committee on Agriculture will have the rest of the afternoon, amounting to something like 1 hour and 40 minutes, if we adjourn around the usual time. Is it the purpose to give the Committee on Agriculture this extra time and then let that committee have its regular day?

Mr. PARKER. Yes.

Mr. GARRETT of Tennessee. And the Committee on Interstate and Foreign Commerce will only ask for one other day?

Mr. PARKER. Yes.

Mr. TILSON. In other words, the Committee on Interstate and Foreign Commerce simply yields the remainder of the time to-day to the Committee on Agriculture.

Mr. GARRETT of Tennessee. Mr. Speaker, let us have this perfectly clear. If the Committee on Agriculture were to take the floor in its own right to-day, it would have only one other day, but I understand it is the purpose to permit that committee to have this time and two other days. Is that the understanding?

Mr. TILSON. The only purpose is that the Committee on Agriculture may use the remainder of the afternoon without prejudice either as to the two days due that committee or as to another day for the Committee on Interstate and Foreign Commerce.

The SPEAKER. Is there objection?

There was no objection.

PERMANENT PROVISIONS OF LAW NOT IN NEW CODE

Mr. RAMSEYER. Mr. Speaker, I ask unanimous consent to extend my remarks by inserting in the RECORD a list which I have just received from the legislative reference service, prepared by Mr. McClenon, showing the number of permanent provisions of law not in the new code. I have spoken on the subject of the code several times and a few Members have complained that there were quite a number of omissions. Mr. McClenon has made a thorough search of such omitted provisions and has furnished me with a list of them. I think it would be of value to the Members and also to others on the outside interested in the code to have this list in the CONGRESSIONAL RECORD. I will say that this list has already been furnished to the Committee on the Revision of the Laws, and that committee with its expert helpers is going over and checking this list, with the idea of using whatever there is of value in this list in the further codification of our laws and to free the code in so far as that is possible of all errors.

Mr. CHINDBLOM. Will the gentleman yield?

Mr. RAMSEYER. Yes.

Mr. CHINDBLOM. Does not the gentleman think it would be very valuable to have that printed as a House document, in order that it might furnish a sort of supplement to the code, pending the revision of the code?

Mr. RAMSEYER. I thought I would first have it inserted in the RECORD, so that gentlemen can go over it in the RECORD, and then if they deem it of sufficient importance to have it printed as a House document, that can be attended to later.

The SPEAKER. The gentleman from Iowa asks unanimous consent to extend his remarks in the RECORD by inserting the list just referred to. Is there objection?

There was no objection.

Mr. RAMSEYER. Mr. Speaker, under the leave to extend my remarks in the RECORD I include the following list prepared by Mr. McClenon, of the legislative reference service of the Library of Congress, showing the number of permanent provisions of law not in the new code:

LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, March 7, 1928.

Hon. C. WILLIAM RAMSEYER,
House of Representatives, Washington, D. C.

DEAR MR. RAMSEYER: Mr. McClenon tells me that some time ago you asked him if he had made any list of permanent provisions not in the code. He has just completed such a list. I am sending you a copy, herewith inclosed.

Very respectfully,

H. H. B. MEYER,
Director Legislative Reference Service.

LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE.

PERMANENT PROVISIONS NOT IN THE CODE

NOTE: The above list does not include references to provisions which have been added or noted in the galley proofs of the "Code Supplement." Explanations as to most of the provisions listed are contained in my statements of November 18 and December 28, 1926, and November 22, 1927. [W. H. McClenon, February 24, 1928.]

MESSAGE FROM THE PRESIDENT—MINISTER RESIDENT AND CONSUL GENERAL TO LIBERIA

The SPEAKER laid before the House the following message from the President, which was read and, with the accompanying papers, referred to the Committee on Foreign Affairs:

To the Congress of the United States:

I transmit herewith a report by the Secretary of State recommending legislation authorizing an increase in the salary of the minister resident and consul general to Liberia from $5,000 to $10,000 per annum.

I am in full accord with the reasons advanced by the Secretary of State why the increase should be allowed, and I strongly urge upon the Congress the enactment of legislation authorizing it.

CALVIN COOLIDGE.

THE WHITE HOUSE, *March 7, 1928.*

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to—

Mr. CRAMTON (at the request of Mr. MAPES), for one day, on account of illness.

Mr. W. T. FITZGERALD, indefinitely, on account of illness.

Mr. EDWARDS, for one day, on account of illness.

ADDRESS OF HON. FINIS J. GARRETT

Mr. GARNER of Texas. Mr. Speaker, last evening the minority leader, the gentleman from Tennessee [Mr. GARRETT], spoke over the radio for about eight minutes. I would like the permission of the House to insert his remarks in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. GARNER of Texas. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address made over the radio by Hon. FINIS J. GARRETT, minority leader of the House, on Tuesday evening, March 6, 1928:

THE LEGISLATIVE SITUATION IN CONGRESS

When the Seventieth Congress convened for its first session on December 5, 1927, the general belief seemed to be that a constructive program of legislation of a major character was not only possible but highly probable.

This program embraced:

First. A reduction of internal revenue taxes, the chief feature of this being revision downward of the corporation income tax, which practically all familiar with the subject knew to be just and proper.

Second. Some character of legislation relative to agriculture which would, in so far as legislation can, alleviate the distress of this basic industry, whose suffering has been cumulative over a period of several years, since the Republican Party took charge of all branches of the Government on March 4, 1921.

Third. Legislation for the control of flood waters of the Mississippi River Valley, recognizing the national obligation in this particular.

Fourth. A disposition, in some proper way, of the Muscle Shoals power and nitrate properties, in the State of Alabama.

No one of these questions legitimately involved any factor of partisan politics, but, as is well known to all familiar with congressional procedure, the obligation and responsibility of initiating the measures to deal with them rested upon the majority party. Our Republican friends organized both branches of Congress, electing their officers and naming their committees. At no time has the minority approached the program in any save a constructive spirit.

We have been in session now three months, and it can not be said that any proposal as to any one of these matters has reached a stage which encourages the slightest hope of final enactment.

True, a tax reduction bill passed the House in December, but it was put to rest in the Senate Committee on Finance. Just what the exact state of mind of those of the inner circle of the majority party's organization is on this subject has not been fully disclosed to the public, but the belief very generally obtains that the bill is permanently shelved, so far as the present session of Congress is concerned.

For some reason which has never been explained the House Committee on Agriculture did not even begin hearings on agricultural legislation until six weeks of the session had elapsed, and they have been having hearings almost all the time since. Very little that was new has been presented at these hearings, and the best information now obtainable appears to be that that committee of the House, following the example of the Senate committee, will report a bill which there is every reason to feel assured will, if it passes Congress, meet an Executive veto.

That Republican presidential politics has entered as a chief factor into the consideration of this question is so manifest as to admit of no doubt.

An informed and discriminating people who remember the President's veto of the so-called McNary-Haugen bill at last Congress and the

fundamental economic and constitutional grounds upon which he based it will readily understand that any bill containing the equalization-fee principle must meet with similar action at his hands. There has never been from any source even an intimation that his convictions upon the subject have undergone any change. No one believes that there is a remote chance of passing the measure over a veto and, to some of us at least, it seems worse than childish to trifle with this most serious interest, as it now appears to be the purpose to do.

Differences between the executive and legislative branches over the question of local participation in future flood-control work have placed that legislation in a precarious situation, and Muscle Shoals seems destined to continue a thing idle, with its consequent byplay of local and national politics.

The appropriation bills are, of course, being passed as rapidly as necessity dictates, but these are the only measures of consequence that are being passed or that now seem likely to be enacted.

Speaking circumspectly and respectfully, and basing my words upon known existing cross currents of thought in the Congress, I feel fully justified in saying that the present outlook is that this session of Congress is to pass into history as well-nigh a blank page.

Should these brief remarks have a tendency to bring about anything different, I shall feel that they have not been vainly uttered.

INTERPARLIAMENTARY UNION

Mr. HOWARD of Nebraska. Without objection, Mr. Speaker, I would like to speak about 5 or 10 minutes on the subject of the participation of the American group in the Interparliamentary Union conference in Paris last year.

The SPEAKER. The gentleman from Nebraska asks unanimous consent to address the House for 5 or 10 minutes. Is there objection?

There was no objection.

Mr. HOWARD of Nebraska. Mr. Speaker, my primary purpose in appearing here now is to get permission to insert in the RECORD correspondence indulged by some of my colleagues who attended the Interparliamentary Union's conference in Paris last year. I shall not attempt now to make anything in the nature of an official report of our doings over there, preferring to leave that to the distinguished gentleman from Ohio, who was the president of our group; and I dare say that soon or late he will make an extended report of our participation therein.

The fact of the matter is that we did not participate very much. [Laughter.] They have a queer system over there. We met in the Senate Chamber in the Palace of Luxembourg, and we worked under the rules of the French Senate.

It may be interesting to you gentlemen to understand, or at least to hear, a comparison between the rules of the French chamber and our own rules. You know all of you, and some of you particularly, that I have never been overly in love with our own House gag rules, and yet I much prefer them to the French system. [Laughter.]

In the French chamber, if it be true that the rules they gave us for our guidance were really the rules of the French Senate, no gentleman is permitted to so much as rise on the floor and say, "Mr. President." He must first walk around behind the throne and get the ear of the president, and then get his name on the president's slate. I did not like that. [Laughter.] The fact of the matter is I did not ask for it. I did not speak but once in the conference at large, and then I spoke, having forgotten to get my name on the slate.

I did speak another—just a little bit at another—time. You know they had 22 interpreters and stenographers over there, said to have ability to interpret every language spoken. Many, many times our American delegation asked for the privilege of having the addresses of other gentlemen employing foreign tongues interpreted to us in our American language—and there is an American language, gentlemen. Many times we heard gentlemen speak representing the British Parliament, and if they spoke in the English language, then I do not know it. [Laughter.]

But oftentimes we were denied our request for interpretations, and once I became angered. I am ashamed of it. A Quaker should never become angry. But I was angry for a moment, and so I spoke in the Santee Indian language for another minute, and immediately after I had spoken all of those interpreters and stenographers gathered around me and said, "The copy, monsieur?" I told them to find it. [Laughter.]

Everything is very queer over there from our standpoint. I want every one of you to understand, if I shall speak this afternoon in a tone or in illustration of seeming criticism of anything that we saw in France, I do not mean it. I am speaking now from the standpoint of a diplomat, and I want you to know and I want my French friends to know that I speak criticizingly not at all, but thanking every one of them for all of the courtesies conferred upon us.

Mr. MADDEN. Will the gentleman allow me to interrupt him?

Mr. HOWARD of Nebraska. Surely.

Mr. MADDEN. And I suppose a diplomat is a man who uses words to conceal thought; is that the purpose of the gentleman this afternoon?

Mr. HOWARD of Nebraska. Not exactly. I trust my language from this time on will be so clear that my ordinarily alert friend from Illinois may have no trouble at all in understanding it. [Laughter.]

There are some queer conditions over there. I saw one habit the French people have, and I wish to direct it to the attention of all my American folks, because it was a beautiful habit.

During the month of August last, 150 people were killed by automobiles on the streets of Paris, and yet no child among them all. When you see a person start across the street in Paris carrying or leading a little child, all the traffic stops as if by magic. Little children are scarce in Paris. They do not have as many of them as they used to. I marveled at so many of the ladies I saw carrying poodles, but they tell me that it is due to the lack of other pets. [Laughter.]

I like that sweet consideration for little children as I saw it, but I did not always like the consideration they gave the dogs. With one of my colleagues I was at breakfast one morning in a prominent café, and near our table were two French ladies, and each had a dog. One of the ladies had a little chair, like the baby chair in American homes. Her pet dog was in the baby chair and she was feeding the dog. She would take one morsel from the fork and the dog would take another. The other lady held her dog in her lap. One of the dogs got sick, and I want to tell you that a sick dog in Paris does just like a sick dog in our country. [Laughter.] I never had any particular understanding of certain queer words in our American tongue, but when I saw that sick poodle at the breakfast table I pronounced vociferously that word "wow," and disappeared. [Laughter.]

Mr. Speaker, as I said in the beginning, my primary purpose was to get permission to incorporate in the RECORD in connection with my remarks some correspondence that had been carried on between two members of the American group of delegates to the Interparliamentary League, and I ask unanimous consent that I may insert that correspondence.

Mr. MADDEN. Have the letters been interpreted into English language?

Mr. HOWARD of Nebraska. Not wholly. But the gentleman from Ohio [Mr. ROY G. FITZGERALD] interpreted the Czechoslovakian note to me, and I think his interpretation is reasonably perfect.

The SPEAKER. Is there objection to the request of the gentleman from Nebraska?

There was no objection.

Mr. HOWARD of Nebraska. Mr. Speaker, under the leave to extend my remarks in the RECORD I include the following correspondence between two members of the American group of delegates to the Interparliamentary League:

UNION INTERPARLEMENTAIRE,
BUREAU INTERPARLEMENTAIRE,
Geneve, le, September 14, 1927.

Congressman FITZGERALD,
Hotel de la Bourdonnais, Paris.

DEAR MR. FITZGERALD: Your observations in the debate in Paris on codification of international law, and the talk we had afterwards, have been constantly in my mind and I am anxious to clear up what I think is a misunderstanding as to the interpretation you put on the Zaleski report and the resolution voted by the council of the league in June last. I have read it very carefully and I do not find any trace of that intention of "limitation" which you had found there. The word "limitation" only occurs in one connection, on page 5, where M. Zaleski discusses the possibility of restricting the program of the first conference on codification. He is anxious, it seems, that this program should not be too ambitious and therefore tries to limit the agenda to three points only, instead of five, as the committee had suggested. I am sending you by the same mail a copy of the minutes of the council and I think that you will agree that there is no intention on M. Zaleski's part, or on the part of the council, as a whole, to set themselves up as the masters of the work of the conference with power to limit the program. The fact is that the conception of the work of codification has been considerably developed through the work of the experts committee. Everybody who has gone into this problem at all realizes that it would be a most foolish undertaking to think that the whole field of international law can be codified by one or even two or three successive conferences. The method must be a far more modest one and the work will really extend over generations. Chapters of international law must be studied one after the other. The problem is to find which chapters are most mature and that is the work the committee and also the council of the league have had in

view. This does not at all mean, as far as I can see, that the conference for the codification of public international law, even if called by the league (it will probably, I take it, sit at The Hague), would be under the supervision of the league. Like all international conferences it would be sovereign as to its method of work and any State asked to participate would be free to suggest additions to the agenda, or omissions. As a matter of fact, the preparatory work would, to a very large extent, decide the agenda, but even here I take it for granted that States outside the league would be invited and most welcome to participate.

I discussed these matters with Senator BURTON while he was here and mentioned your remarks to him. It is at his suggestion that I am writing these lines in order to explain how I look at the matter.

Hoping that you have only pleasant memories of our meetings in Paris,

I remain, dear Mr. Fitzgerald,

CH. L. LANGE.

COMMITTEE ON REVISION OF THE LAWS,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 23, 1928.

Dr. CHARLES L. LANGE,
Secretary General Union Interparliamentaire,
Geneva, Switzerland.

DEAR DOCTOR LANGE: I have before me a copy of your letter of September 14, 1927, addressed to me at Paris, and I regret that travel and press of affairs have prevented my replying earlier. I note that you talked with Hon. THEODORE E. BURTON, chairman of our American group of delegates to the Interparliamentary Union Conference, and wrote me at his suggestion.

I also note that you do not regard the Zaleski report of the committee of experts on international law of the League of Nations as advocating a limitation or restriction on the propositions of international law to be considered by the proposed conference of representatives of nations interested in the preparation and adoption of a code of international law.

I have shared with some of my associates the impression that it was the advice of the committee to limit the conference to action upon the seven subjects which it deemed ripe for consideration.

Your long and intelligent interest in the promotion of international law is well known and appreciated, and the work of the Committee of Experts of the League of Nations is recognized as valuable and, of course, we do not expect a complete code of international law from a single or even from a few international conferences.

What the delegates from the United States had in mind was the establishment of periodic conferences of all the nations for the constant and scientific promotion of the principles of international law, persistently working toward the formation of a complete code and earnestly pressing for acceptance by the nations.

We can not be insensible to the possibility that much can be accomplished in a short time; witness, the convention which prepared the Constitution of this country, the two Hague conferences, and the Covenant of the League of Nations.

We can not understand from the Zaleski report that these ideas were considered.

We recognize that no desirable or permanent peace can rest upon any foundation but that of justice—that justice between nations and their peoples can be defined only in terms of international law; that the peace and security of nations and the well-being of their peoples require the extension of the empire of international law; that such an extension requires restatements, amendments, reconciliations of and additions to existing rules of international law; that in recent years new relations between nations have developed and new problems have arisen not now adequately regulated by international law; that for these, the interests of international justice require that rules of law shall be declared and accepted; that learned societies in various parts of the world are rendering marked service to the understanding and development of international law, notably:

The Institute of International Law.
The American Institute of International Law.
The Union Juridique Internationale.
The Iberian Institute of Comparative Law.
The American Society of International Law.
The International Maritime Society.
The Société de Législation Comparée.

that an international conference of American states, meeting in Brazil in 1906, advocated establishing an international commission of jurists for the purpose of preparing a draft of codes of both private and public international law; that the advisory committee of jurists at The Hague in 1920 recommended a conference of the nations in continuance of the first two conferences at The Hague for the following purposes:

1. To restate 'the established rules of international law especially and, in the first instance, in the fields affected by the events of the recent war;

2. To formulate and agree upon the amendments and additions, if any, to the rules of international law shown to be necessary or useful by the events of the war and the changes in the conditions of international life and intercourse which have followed the war;

3. To endeavor to reconcile divergent views and secure agreement upon the rules which have been in dispute heretofore;

4. To consider the subjects not now adequately regulated by international law, but as to which the interest of international justice require that rules of law shall be declared and accepted;

And that such progress has been made toward codes of both private and pubic international law by conferences of representatives of the 21 American republics, as to make it expedient to urge the immediate necessity for action lest the very success of the American codes obstruct and defer the adoption of general codes of international law.

The Sixth Pan American Conference is now in session at Habana, Cuba, organized to act upon the 12 projects of public international law and the complete code of 439 articles of private international law prepared by the International Commission of Jurists.

You will note that the questionnaire concerning a limited number of subjects of public international law deemed by the committee of experts of the League of Nations as ripe for such a conference submitted to our Department of State invited and provoked differences which would have been avoided had a selection of subjects not been made.

In view of the above, it seems that a series of general conferences of all nations should be arranged, and in no way limited or restricted, and among other benefits to accrue would be a code of international law.

We are delighted to learn that the league has decided to call such a conference at The Hague in the near future.

A serious obstacle to the adherence of the United States to the Court of International Justice and to the extension of the usefulness of that court is the lack of a code of international law. This lack excites apprehension among some people that the court's decisions may be based upon political expediency and compromise rather than upon those principles of justice and equity which control courts in settling the disputes between individuals.

There are many of us in the United States who will always cherish the hope that by persistent efforts a way may yet be found whereby all the nations, including our own, may participate collectively and effectively toward the maintenance of peace and well-being in the world.

With kindest personal regards, I am,

Sincerely yours,

ROY G. FITZGERALD.

Mr. HOWARD of Nebraska. At a later day I am told that the president, Mr. BURTON, of Ohio, will make a splendid report of our doings over there. I want to say to you that I feel that the interparliamentary conferences might be made of vast value to our country and to the world. It is true that they carry no weight at all, only the weight of recommendation. The object of the conference is to see if we can not agree upon some measures for presentment to our own parliamentary bodies over the world in an effort to get the consent of all countries to unite in a common cause for the welfare of the world.

The American delegates went there with the sincere desire in our hearts to do what we could to promote the cause of peace among nations. [Applause.] We earnestly endeavored to promote that desire while we served in the conference. On the day of our departure I tried to convey to those delegates from the parliaments of the world about such sentiment as I felt that my colleagues here in our Congress might wish me to convey. Bidding good-by to our friends, I addressed them in substance as follows: "I ask permission to speak to you a bit of American sentiment, as I understand it, in the ever-so-earnest hope that when we shall have returned to our America you will be thinking kindly of us and of our spirit in behalf of disarmament and peace. We came here hoping earnestly that we might hear more frequently than any other voice the soft cooing of the dove of peace. We do not complain because that sweet voice so often gave way to the raucous voice of the red rooster of war. But, even so, we are going back to our homes to tread again our own avenues of peace, and I am pleading with each of you to often cast your mental eyes westward to discover our devotion to our American ideals in affairs of government. We of America have many ideals, and we are particularly proud of one of our ideals, and that one is our ideal American soldier of peace. Always his feet are incased in the sandals of humility; always upon his head is the helmet of truth; always upon his bosom the breastplate of a righteous cause; always in his good right hand the gleaming sword of justice, tipped with the diamond of mercy; in his heart one dear desire—the steadfast service of the living God and all God's children on the earth."

ADDRESS OF HON. JOHN Q. TILSON

Mr. HAWLEY. Mr. Speaker, I ask unanimous consent that the remarks made over the radio last evening by the majority leader [Mr. TILSON] may be incorporated in the RECORD.

The SPEAKER. The gentleman from Oregon asks unanimous consent to extend his remarks in the RECORD in the manner indicated. Is there objection?

There was no objection.

Mr. HAWLEY. Mr. Speaker, under the leave to extend my remarks in the RECORD I include the following address delivered over the radio from station WRC last evening by the majority leader of the House, the Hon. JOHN Q. TILSON, of Connecticut:

POLITICAL ISSUES

In order to avoid confusion of ideas in speaking of political issues, let us for a moment consider what is an issue in a controversy. The common acceptation of an issue in law is the point or points upon which the controversy hinges or upon which the contending parties divide, each party taking an opposing position. Apply this test to the present stage of the political controversy, and what do we find to be the situation? Candidates will try to push into the foreground such issues as each may think most advantageous to his own candidacy. Political parties may be expected to emphasize or minimize proffered issues according to the anticipated effect upon party success.

In a free country like ours, where everyone has at least the privilege of doing his own thinking, and where in the last analysis public opinion controls, the people have a way of deciding for themselves what shall be the issues in a great presidential election, party platforms, candidates' promises, and campaign orators to the contrary notwithstanding. It will be so in the coming campaign. It may be taken for granted that the coming contest will be between the two time-honored major parties, because there is no serious talk of a third party injecting itself into the equation, and the history of third-party movements during the last 60 years is not such as to encourage their undertaking, so that any concerted defection from either of the great parties will be, in fact, an effort to aid the other party. It is, therefore, quite certain that either the Republican Party or the Democratic Party will be charged with the responsibility for conducting governmental affairs during the next four years. What will be the issue or the issues upon which will turn the verdict of the electorate as between these two contestants?

The one question most universally talked about is prohibition. There is no other public question about which the public generally feel more deeply or talk more vehemently. But what are the probabilities of prohibition becoming the deciding issue between the two great parties? Everyone knows that a very sharp division on this subject exists in both parties, and it is almost a certainty that neither party will make adherence or opposition to the cause of prohibition the test of party loyalty, or that either party will disregard other issues, and, by accepting support only upon this ground, alienate all those former members of the party who do not agree to this program. The chance of either party taking this course is probably nil, and yet, unless one party or the other does just this, what is to be gained, so far as the practical solution of this problem is concerned, by a victory at the polls?

It is contended by many that if Governor Smith is nominated at Houston a religious issue will enter into the campaign, which is, of course, the most difficult and disturbing of all issues to deal with. Doubtless there are bigots among both Catholics and Protestants whose political judgment may be warped by the fact that a candidate professes one religion rather than another, but it is hard to believe that with all our professions of religious liberty and tolerance the American people will permit such an issue to be controlling on either side.

If these two interesting subjects be eliminated as party issues, the superficial may inquire what is left upon which to base a campaign. Quite enough to call forth the best thought and judgment of the electorate. In my judgment the people of the country will demand something that is, in fact, an issue between the two contending parties, something upon which the successful party may be called to make good, and something which affects directly their well-being. The Republican Party should win handsomely upon its record since it came into power in all branches of the Government in 1921, for I think it can be readily demonstrated that the Republican administration of public affairs for the last seven years supported by a Republican Congress has been such as to command the confidence and approval of the people.

In 1921 we had but recently emerged from a great war. Our foreign affairs were in an unsettled state and headed straight for world entanglements that would have proved irksome and dangerous for the future. The country has been saved from this embarrassment, and we have been brought into a state of peace with honor with all the nations of the world.

Our domestic situation was in no respects better. In 1921 the public debt amounted to twenty-five billions. More than a billion a year was required to pay the interest alone on the public debt. Even credit was impaired to the extent that Liberty bonds were selling for 85 cents on the dollar. Two years after the war had closed governmental expenditures amounted to five billions a year, and a tax burden sufficient to pay this enormous expenditure was upon the shoulders of the people. We have since paid nearly eight billions of the debt, reduced the annual interest charge to three-quarters of a billion, and restored the credit of the Government until Liberty bonds are now selling above par. We have adopted a budget system that has brought greater efficiency as well as economy. We have reduced governmental expenses by more than two billions annually, and by three successive acts have reduced the annual tax burden in the aggregate by two billions of dollars.

In 1921 the Republican Party found a low tariff act on the statute books, and under it foreign-made goods were pouring into American markets, with the result that 5,000,000 men and women were walking the streets seeking employment. An emergency tariff law for agricultural products was passed in 1921, and a general tariff act, protective in principle, was passed early in 1922, the effect of which has been to eliminate in large measure unemployment, and restore general prosperity.

In short, the Republican Party in 1921 took up the great and difficult task of reconstruction after a demoralizing, as well as destructive, war, and has persistently continued in the performance of that task in the face of opposition, with great credit to those who have carried the burden of responsibility, and with the continued approbation of the American people.

In making the record thus briefly sketched, both the legislative and executive branches of the Government have worked together, but the task could not have been accomplished without the consistent, persistent firmness, and courage of the man in the White House constantly insisting upon a program of efficiency and economy.

Under his leadership a record for governmental efficiency and economy has been and is being written that merits the approval and commendation of thinking men everywhere. It is a record calculated to inspire such confidence as should make certain the continuance in power during the next four years of the party that will carry on the policies of the Coolidge administration.

What do our Democratic friends offer as an alternative? First—and they are in earnest about this—they would like very much to return to power, so that this, at any rate, may be set down as a bona fide issue. Further than this, what do they propose? Some of their spokesmen have begun to inform us in doleful speeches that things are not what they seem, and that prosperity is not quite so great or so universal as everyone would like to have it. Conceding that we have not yet reached the millennium, and that there is always room for improvement, what do our time-honored opponents propose to do about it? The only remedy thus far advanced is the old familiar one of destroying the protective tariff, and lowering duties to a tariff-for-revenue-only basis. If only those who believe this to be the proper remedy, with those who believe that the Democratic Party will more wisely and efficiently administer the affairs of the Government than the Republican Party, will vote the Democratic ticket in November, the result of the election can be now predicted with a considerable degree of certainty. The American people are not yet ready to turn their backs upon the principle of protection to American industry and labor, nor are they ready, in the light of recent past experience, to again entrust the reins of government to Democratic control. The approaching contest will be an interesting one fought out along familiar lines between the two time-honored parties and as usual the Republicans will win because they deserve to win.

FULL EQUALITY FOR THE NEGRO

Mr. TARVER. Mr. Speaker, I ask unanimous consent to speak for five minutes.

The SPEAKER. The gentleman from Georgia asks unanimous consent to address the House for five minutes. Is there objection?

There was no objection.

Mr. TARVER. Mr. Speaker and gentlemen of the House, I hold in my hand a newspaper which is called the Afro-American, published in the city of Baltimore. This particular issue was published on March 3. I desire to read to you from an article appearing on the front page which declares for African equality. It is as follows:

HOWARD PREXY DECLARES FOR FULL EQUALITY—SCIENTISTS AGREE, HE SAYS, THAT NO HARM CAN COME FROM INTERMARRIAGE

WASHINGTON, D. C.—Dr. Mordecai W. Johnson, president of Howard University, stands for full race equality, including amalgamation and social equality.

Doctor Johnson expressed his views before the Community Church in New York recently.

Speaking in New York, Doctor Johnson said he did not believe in intermarriage just for the sake of a negro marrying a white woman, but he thought that when two sane persons wanted to marry, there should be no law to prevent them, and that while he could not stop amalgamation of the races, he did not believe that negroes should wait for amalgamation to give him full manhood rights.

It is too long a process, he said. He wanted his rights black, just as he is, which included social equality without equivocation or retreating a single inch, which, in turn, included intermarriage.

Doctor Johnson emphasized the fact that anthropologists and other scientists are agreed that no harm can come from intermarriage.

This damnable doctrine which I have read is that promulgated by the man at the head of Howard University, to which

a few days ago you appropriated the sum of $390,000. He is going around about the country spreading among the members of the Negro race, and, of course, among the students of Howard University, this rotten, indecent doctrine on marriage between the white and African races.

On the 28th of February, in this Hall, 253 Members of this House voted for an appropriation of $390,000 to the institution, of which this negro is the head, and it goes without saying that every dollar of that appropriation which directly or indirectly goes to the furtherance of the propaganda that I have referred to is an injury to the Negro race instead of a benefit.

On the front page of this paper, almost side by side with the article that I have read, appears the news that southern Members of Congress voted for that appropriation. May God have mercy on them! [Applause.] In a short while the House will be called upon to vote upon H. R. 279, which provides for the legalizing of appropriations of this character in the future, they having been heretofore made in violation of the law. I call attention to this fact in order that every fair-minded man may study the situation and determine for himself whether or not he wants to vote in favor of a law legalizing appropriations to a university whose head is engaged in teaching among the members of the Negro race the damnable doctrine of social equality and of intermarriage with the white people.

Mr. CLARKE. Mr. Speaker, will the gentleman yield?

Mr. TARVER. Yes.

Mr. CLARKE. Did the gentleman make any effort to check up and find out whether the doctor is correctly quoted or not?

Mr. TARVER. I have not; but he is quoted in an organ published by a member of his own race, and certainly I do not conceive it to be my duty to confer with the alleged doctor with reference to whether or not he made the statement attributed to him. Personally, in using the word "doctor" in connection with his name, I wish it to be understood it is because it is used in that connection in the news article, and I say that, in my judgment, any almost-white negro, as he is, who is going about the country advocating the intermarriage of the races and the alleged right of negroes to marriage with white women, should not be designated by any decent white man with the term "doctor" in connection with his name.

GIFTS OF LAND IN CLAYTON COUNTY, IOWA, FOR WILD-LIFE PURPOSES

Mr. HAUGEN. Mr. Speaker, I call up House Joint Resolution 215, to authorize the Secretary of Agriculture to accept a gift of certain lands in Clayton County, Iowa, for the purposes of the upper Mississippi River wild-life and fish refuge act.

The Clerk reported the title of the resolution.

The SPEAKER. This is on the Union Calendar.

Mr. HAUGEN. Mr. Speaker, I ask unanimous consent to consider the resolution in the House as in Committee of the Whole.

The SPEAKER. Is there objection?

There was no objection.

The Clerk read the joint resolution, as follows:

Resolved, etc., That the Secretary of Agriculture be, and hereby is, authorized to accept on behalf of the United States from James B. Munn, of New York City, N. Y., a gift of certain lands in Clayton County, Iowa, described as Government lot 1, section 23, township 94 north, range 3 west, fifth principal meridian, 58.50 acres; north half Government lot 2, section 23, township 94 north, range 3 west, fifth principal meridian, 24.30 acres; part of Government lot 1, section 11, township 94 north, range 3 west, fifth principal meridian, 11 acres; Government lot 4, section 11, township 94 north, range 3 west, fifth principal meridian, 45.45 acres; Government lot 3, section 35, township 95 north, range 3 west, fifth principal meridian, 68.40 acres; Government lot 4, section 35, township 95 north, range 3 west, fifth principal meridian, 35 acres; south part Government lot 2, section 35, township 95 north, range 3 west, fifth principal meridian, 28 acres; part of north half, section 27, township 95 north, range 3 west, fifth principal meridian, 136.76 acres; part of southwest quarter, section 22, township 95 north, range 3 west, fifth principal meridian, 49 acres; part of east half, section 22, township 95 north, range 3 west, fifth principal meridian, 31.59 acres. Total area, 488 acres, including all the buildings and improvements thereon and all rights, easements, and appurtenances thereunto appertaining; and upon acceptance of said lands by the Secretary of Agriculture they shall become a part of the upper Mississippi River wild-life and fish refuge established pursuant to the authority contained in the upper Mississippi river wild-life and fish refuge act approved June 7, 1924.

The SPEAKER. The question is on the engrossment and third reading of the joint resolution.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider the vote by which the joint resolution was passed was laid on the table.

WOOL STANDARDS

Mr. HAUGEN. Mr. Speaker, I call up H. R. 7459, to authorize the appropriation for use by the Secretary of Agriculture of certain funds for wool standards, and for other purposes, which I send to the desk.

The Clerk reported the title of the bill.

Mr. HAUGEN. Mr. Speaker, I might say in this connection that the purpose this afternoon is to call up only bills that have been considered by the House. I believe nearly all these bills have been unanimously approved by the House in a former Congress. Also to call up bills which do not carry appropriations.

Mr. ASWELL. Mr. Speaker, will the gentleman yield?

Mr. HAUGEN. Yes.

Mr. ASWELL. The gentleman said that these bills have already been approved by the House?

Mr. HAUGEN. The bill that I am offering now was approved by the House at the last session of Congress. It is my purpose only to bring up bills that have been considered by the House and passed by the House, and bills of small importance carrying no appropriation.

Mr. ASWELL. Is it the purpose of the gentleman to bring up the farm extension bill this afternoon?

Mr. HAUGEN. No. I do not want to bring up any controverted matters.

Mr. ASWELL. That is not controverted. Is the gentleman going to bring up the Capper-Ketcham bill?

Mr. HAUGEN. I do not have that in mind.

The SPEAKER. The Clerk will report the bill.

The Clerk read the bill, as follows:

Be it enacted, etc., That there is hereby authorized to be appropriated for expenditure by the Secretary of Agriculture, for the purposes hereinafter stated, all funds heretofore or hereafter collected by suit, or otherwise, pursuant to appropriations for the completion of the work of the domestic-wool section of the War Industries Board, and for enforcing Government regulations for handling the wool clip of 1918 as established by the wool division of said board, pursuant to the Executive order dated December 31, 1918, transferring such work to the Bureau of Markets, now a part of the Bureau of Agricultural Economics of the Department of Agriculture, and for continuing as far as practicable the distribution among the growers of the wool clip of 1918 of all sums heretofore or hereafter collected or recovered with or without suit by the Government from all persons, firms, or corporations which handled any part of the wool clip of 1918, which he finds it impracticable to distribute among said growers, provided that not to exceed $50,000 may be expended in any fiscal year.

SEC. 2. Said funds may be used for the purpose of acquiring and diffusing among the people of the United States useful information relative to the standardization, grading, preparation for market, marketing, utilization, transportation, handling, and distribution of wool, and of approved methods and practices relative thereto, including the demonstration and promotion of the use of grades for wool in accordance with standards therefor which the Secretary of Agriculture is hereby authorized to establish. Said funds may be used for the grading of wool, and for such grading or other service rendered hereunder reasonable fees may be charged, and provided further that hereafter reasonable charges may be made for practical forms of grades for wool.

SEC. 3. The Secretary of Agriculture may make such rules and regulations as he deems advisable for carrying out any of the provisions of this act. All receipts hereunder shall be deposited in the Treasury to the credit of miscellaneous receipts.

The SPEAKER. This is on the Union Calendar.

Mr. HAUGEN. Mr. Speaker, I ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. Is there objection?

There was no objection.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. HAUGEN, a motion to reconsider the vote whereby the bill was passed was laid on the table.

WOOL

Mr. MORGAN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection?

Mr. MORGAN. Mr. Speaker, the bill being considered authorizes the Secretary of Agriculture to standardize grades of wool, and appropriates a part of the undistributed excess profits of the 1918 wool clip for the purpose of acquiring and diffusing among the growers and the wool trades in general useful information relative to grading, preparing for

market, and educational activities in connection with marketing, utilization, transportation, handling, and distribution of wool, including the demonstration and promotion of the use of wool, in accordance with standards to be established. The funds proposed to be appropriated are due in small amounts to growers on the Government-commandeered clip of 1918, who can not be located.

The Agriculture Department, through the Bureau of Markets, and later through the Bureau of Agricultural Economics, has been working for some time on the development of standard grades for wool. The original request to establish standard grades for wool came in the form of a resolution passed by the National Wool Growers' Association in 1914. The department advises that the first attempts at standardization were to try to set up a group of grades that corresponded with the then American terminology.

These standards were prepared and distributed throughout the country.

Their commercial practicability was tested out and in every case where any investigation was conducted and where the graded lots were followed through the market centers there was complete satisfaction with regard to grades. When those grades were presented at the final hearing in Washington for the consideration of the entire industry, it was suggested by members of the industry, including, of course, manufacturers and wool producers, that some consideration be given the development of standards and the correlation of the existing standards to the numerical standards generally used by the trade in England. The necessity for the adoption of such standards is due to the established standard grades of imported wool according to numbers, which were confusing, concerning the value of the scoured product, to not only country dealers but to the producers. The grades established in the United States are according to terms that can not be specifically compared by the majority of country dealers and producers to the grades imported.

It was therefore deemed essential, from the standpoint particularly of the producer, to have grades established that would give him not only the information as to the value of the grade he produces in competition with foreign grades but more nearly the true market value of his product.

Under the present system of marketing in many cases the producer does not secure the full value of his clip because in the main there is a general average price for fine, one-half blood, three-eighths blood, one-fourth blood, and so forth, whereby the farmer who has a clip that may grade 90 per cent of delaine may not receive much if any more for his clip than the producer whose clip does not contain over 50 per cent or 60 per cent delaine, and, according to present market quotations, delaine is quoted at 8 cents per pound more than clothing. Therefore a clip containing 90 per cent delaine, based on present market prices, is worth 2.7 cents per grease pound more than a clip containing 60 per cent delaine. The benefit of definite information to the producer as to not only the true market value but the influence of the higher prices he received in encouraging the production of a higher-grade product is apparent.

The grades of our domestic clip are designated as delaine, clothing, one-half blood, three-eighths blood, one-fourth blood, and so forth, while the imported numerical designated grades refer to the amount of yarn that can be spun from the scoured product.

In order that I may illustrate the difference between the designation of domestic grades and imported grades, I will state that our "fine" corresponds with the imported "64s to 80s"; our "one-fourth blood" corresponds with imported "58s to 60s"; our "three-eighths blood" with "50s to 56s"; our "one-fourth blood" with "46s to 50s"; our "low one-fourth blood" with "40s to 46s"; and our "low cross-breds" with "36s to 40s."

The spinning numbers indicate the number of hanks of yarn of 560 yards each that can be spun from a pound of scoured wool; therefore, in the case of 64s there could be spun 64 hanks of yarn from a pound of the cleaned product.

The only designation that a producer, as a rule, can give his clip is that it is either "fine" or "crossbred"—more generally called "medium."

It perhaps will be of interest to those who do not have the information to learn the amounts and percentages of the different classes of wool produced in the United States; also the amounts and percentages of the different grades imported, and our total domestic consumption. They are approximately as follows:

Grade	Domestic		Foreign		Total	
	Pounds	Per cent	Pounds	Per cent	Pounds	Per cent
Fine	91,866,425	35.7	28,286,192	31.1	120,152,617	34.5
One-half blood	45,670,210	17.8	10,597,412	11.6	56,267,622	16.2
Three-eighths blood	56,371,471	21.9	10,950,942	12.0	67,322,413	19.3
One-fourth blood	52,618,021	20.5	15,329,619	16.8	67,947,640	19.5

The additions to domestic-wool prices in the grease pound, according to the existing tariff rate of 31 cents on the scoured pound, are as follows:

Fine: Losing 60 per cent in scouring, 40 per cent clean wool; tariff, 31 cents; 12.8 cents increase.

One-half blood: Losing 56 per cent in scouring; 44 per cent clean wool; tariff, 31 cents; 13.64 cents increase.

Three-eighths blood: Losing 50 per cent in scouring, 50 per cent clean wool; tariff, 31 cents; 15.5 cents increase.

One-fourth blood: Losing 44 per cent in scouring, 56 per cent clean wool; tariff, 31 cents; 18.36 cents increase.

The approximate average increase is 14 cents.

The actual increase cost per suit of clothes in case the full amount of the tariff on wool is added would be $1.03½ on a 14-ounce winter weight and 74 cents on a 10-ounce summer weight.

The average suit of clothes contains 3½ yards of cloth.

It requires 3½ pounds of clean wool to make 3½ yards of 14-ounce cloth. Tariff at 31 cents per pound would amount to $1.08½; less 5 cents, the approximate salvage value of card waste, would be $1.03½ net. A 10-ounce cloth would require 2½ pounds of wool; tariff 31 cents would amount to 77½ cents per pound, less 3 cents, approximate value of card waste, would be 74 cents net.

In a study made by the National Bank of Commerce in New York of the 10 great commodities which occupy an important place in the economic life of the United States and in the international trade of the world wool was included in this group. According to alphabetical order the commodities in this study were:

Coal, cotton, iron and steel, lumber, petroleum and products, rubber, silk, sugar, wheat, and wool.

While wool was named last in this alphabetical order, from the standpoint of importance to humanity it would doubtless command a relatively high position in the list. It is probable that substitutes for practically all of these commodities can be found, but in the case of wool nothing has been discovered which takes its place as the raw material for the manufacture of clothing for the warmth and comfort of the people.

Wool has played the most important part in the advancement of civilization and in extending the frontiers suitable for habitation to the farthest points. It is one of the greatest national assets to our country from the standpoint of revenue to agriculture. The pockets of the wool producers are enriched by approximately $150,000,000 annually. It is also one of the most important and essential products in the successful conduct of war.

Some world-noted economists state that the distribution of wool supplies during the war was largely responsible for the course and final results. All kinds of commodities have received Government attention, and much has been done for those engaged in industries, agriculture, and commerce, but so far very little attention has been given to any of the important work which this bill may have for its object, namely, instructing woolgrowers in the production of the best kinds and qualities of wool, the proper marketable preparation of the clip, and the establishment of standard grades for wool in order to place the woolgrower on an equality basis with producers in the more important wool-producing countries of the world.

There is in the division of livestock, meats, and wool of the Bureau of Agricultural Economics a small section devoting its attention primarily to work on the standardization of wool and the preparation of physical representations of the standards that have thus far been established. I understand that only $15,000 to $16,000 has been set aside annually for work on this important agricultural product.

When the work of establishing standards for farm products was first actively taken up by the bureau it was realized that, as in the case of other farm products, it was highly important that wool be marketed according to definite, uniform grade descriptions. The use of definite standards is particularly applicable for wool because wool does not change its form from the time it leaves the producer until it reaches the manufacturer.

Grades were first formulated for American wools and according to the terminology used in the marketing of wool in this country. It was soon realized, however, that if grades were to be of maximum benefit to the wool industry they should be recognized in an international way. Accordingly, we have been working with representatives of the British wool trade, and a committee consisting of a representative of the Department of Commerce, a representative of the Associated Organizations of Wool Manufacturers in this country, and a representative of the Department of Agriculture, conferred with a committee composed of members of the British Wool Federation authorized to act for the several wool and wool textile organizations of England, carefully considering the matter of uniform standards for wool, with the result that agreement has been reached on 12 grades of wool expressed and defined according to the numerical count system. These grades were exhibited and discussed with the committee when it had before it in the last session H. R. 15476, which is identical with the bill now before you. The grades which have been worked out and agreed to by the industry in this country and in England are set forth in detail in Service and Regulatory Announcement 100 of the Department of Agriculture, which establishes these grades as the official standards of the United States for wool and recommends them for use in the marketing of the product.

After the research work necessary to the establishment of the grades had been completed, it was necessary to adopt means to make them of practical use. The bureau has therefore prepared and distributed more than 600 sets of the wool grades. These grades have been placed in the hands of growers, cooperative wool-marketing associations, wool dealers, manufacturers, agricultural colleges, county agents, etc. Considerable progress has been made in informing the grower as to the grades and how they may be applied so as to give him a return for the value he produces. A number of instances have been brought to our attention where the grades have increased the return to the grower on an average of several cents per pound without resulting in a higher price to the consumer.

The important thing now is to intensify this educational work so that the grower will have adequate knowledge of the qualities and value of the wool he produces. The bill before you would make it possible not only to increase the distribution of the wool sets but would enable us to increase the work done in demonstrating the grades to producers by holding schools which would be attended by producers for the purpose of teaching them to grade wool according to the grades. It would also make it possible for a definite grading service to be established similar to the grading services on some other important farm products. The bill also provides for the charging of fees for the grading of wool according to the official standards.

The wool standards so far established have been limited to diameter of fiber only. Much work remains to be done in the standardization of wool; and studies should be made of other grading factors, such as length of fiber, strength of fiber, and the presence of foreign material, all of which factors are important in determining the commercial value of wool. Studies should also be made with respect to questions of shrinkage, to determine the amount of moisture present in and absorptive qualities of wool under varying atmospheric conditions, as well as making tests in order to establish uniform formulas for scouring wool, so that these factors which enter into the value of the wool may be more uniformly applied.

As previously stated, thus far the Agriculture Department has been able only to work on the establishment of grades on the one factor of diameter of fiber, and therefore only a comparatively small amount of basic research in the marketing of wool has been possible up to the present time. More detailed studies should be made and information disseminated concerning the preparation, packing, shipping, storing, transporting, and utilizing of wool so that the marketing processes could be conducted according to more definite and scientific knowledge than now prevails and which would certainly result in a practical advantage to the producer.

In all of the standardization work the department has had splendid support from the entire industry, from the grower to the manufacturer, and I believe that the bill before us will enable the Agriculture Department to carry on this work and broaden it in a way that would result in the same advantages to wool producers and the wool trade in general that have resulted from the same kind of work done in a larger way on some of the other major agricultural products.

The purposes to be accomplished and the economic benefits to be derived from an educational program proceeding in an orderly manner and carrying directly to the wool producer by actual demonstrations and otherwise the value of standards, the proper methods of their use, and the interpretation of market quotations when the various standard factors which effect prices are known, are as follows:

It is proposed to establish wool standards into which the various kinds of wool produced in the United States can be included. Such standards will be—

First. Place at the command of the growers a knowledge of wool that will make for the greatest possible efficiency in the marketing of the commodity.

Second. Establish a basis for the payment to the producer according to quality, thereby creating an incentive to produce the best.

Third. Establish a basis for intelligible quotations.

Fourth. Make possible the manufacturers' buying direct from the producer.

Fifth. Make possible the employment of uniform methods and practices in the grading and in the preparation of the graded product.

Sixth. Minimize or eliminate the general practice of making a one-half to 1 cent a pound dockage.

Seventh. Place all manufacturers on an equitable basis in the manufacture of their goods.

Eighth. Create uniform understanding as to grade in order that loans on wool many intelligently and equitably be made by banking institutions.

Ninth. Insure definiteness in writing governmental and commercial specifications and contracts.

Tenth. Provide an intelligent basis for legislation.

Eleventh. Make possible the ascertaining of the trend of production.

Twelfth. Reduce transportation.

Thirteenth. Provide agricultural and textile colleges and extension workers with tangible means for giving instructions.

Fourteenth. Increase the returns to the producer through discouraging the production of inferior wools and rejects.

Fifteenth. Place the production and marketing of wool in the United States on a distinctly higher plane than obtains at the present time.

(a) Terminology, present and prospective; and

(b) Methods of representation of standards.

(a) Terminology follows closely the present commercial terms; however, the numerical classification is preferable, and its use is urged in connection with the present classification until such time as the numerical is associated with the present, and then to discontinue the use of the old term.

(b) The standards for grade and length will be represented by physical specimens, spinning property, and shrinkage in part by physical specimens and in part by description.

If the benefits of this bill are received it may be advisable to urge the establishment of conditioning or inspection points throughout the wool-producing areas to determine the average yields of wool from various sections of the United States as an index to producers of actual value. It is conceivable that specific yields of lines or consignments of wool may be determined prior to offering them to the market centers. Also such will serve as a local clearing house for information on the production of more uniform merchantable types of wool. Standardization would simplify the marketing of wool on a definite grade, where all the value-determining factors could be recognized and, made known, would result in benefits to everyone connected with the industry and to the ultimate consumer. The acquisition and dissemination of standard wool factors in the merchandising of wool will aid the wool producer in more intelligently disposing of his product, either through existing agencies or by the formation of new ones.

Advice and assistance could be given in sheep breeding in relation to wool production, correlating such work with that already being undertaken by some State extension departments. Standards will provide uniform educational assistance to all States instead of many States working along dissimilar lines. It is not only advisable but essential that demonstrations in the presence of woolgrowers of wool grading and classing should be carried on in all the leading wool-producing States similar to the work that is done in important foreign wool-producing countries. The classing of wool by definite standards would establish a percentage of offsorts and permit their relative valuation, and also emphasize the profitable advantages to be gained in offering such wools as the manufacturers may desire without forcing them to purchase and handle many offsorts, which in most cases must be resold.

A complete standardization classification by the wool-marketing department, United States Department of Agriculture, should be established and used comparable with that already being used with relation to diameter or fineness. This would provide for the procedure in an orderly manner of additional work in every phase of the industry along uniform lines, since grade remains constant from raw material to finished goods. Wool in this respect is very dissimilar to many other raw products, the identity of which is lost when processing begins.

It is a coincidence that almost at this very instant in Great Britain the attention of official bodies, trade organizations, and technical institutions is drawn to the subject of the standardization of quality in wool.

The question they are considering is the drawing into closer relationship and a better understanding the wool-growers and the worsted and woolen manufacturers in order that the former may have more precise and definite details of the requirements of the manufacturer.

An official of the Empire Marketing Board of England stated recently, as per January 4 issue of the Yorkshire Observer, published in Bradford, England, "that a grant of £9,000, or $45,000, was being made for the purpose of studying the factors in the standardization of wool qualities." We are informed that most of this grant will be used in the establishment of a suitable wool laboratory where this technical study may be made. It is pointed out that the main object of the grant is to establish a specific standard in the quality of wool based on scientific principles that will be common both to the manufacturers in England and the wool producers in the Dominions.

Suggestions have thus far been made in Great Britain that for research in wool and the costs of such investigations a levy of 1 pence, or 2 cents, per hundred pounds of all greasy wool imported into the country be made, the same to be set aside for this investigational work, the results of which will be highly beneficial to the industry. Before the full benefits of standardization of wool qualities can be fully realized the fixing of standards and specifications for fineness, diameter, staple length, crimp, elasticity, felting property, strength, presence of foreign material, and shrinkage by origin must be established.

For practical purposes standards may be established which may be used in commerce and also specifications may be written sufficiently descriptive to serve every purpose from a scientific and mechanical standpoint. It is evident that with standards of wool qualities receiving the serious consideration of so important a group as the wool-textile industry in Great Britain that this country should give more consideration to this important phase of research work in order that wool producers, merchants, and manufacturers may be in possession of such information as will enable them to breed, handle, and merchandise their wool in the most efficient and economical manner. This means that the masses of people throughout the country will reap the benefits of the savings which will accrue and the elimination of unnecessary expenses and costs of handling between the producer and the ultimate consumer. The importance of the wool industry in this country deserves the greatest consideration and attention, and any assistance we can give to the more orderly marketing of a standardized product with the benefits accruing therefrom is deserved in this industry.

As evidence of the value of the standardizing of the grades of wool are the indorsements that have been received from manufacturers and producers. Among others are the following:

Letter I received from the National Association of Worsted and Woolen Spinners:

The fact has been brought to our attention that your committee is to hold hearings on H. R. 15476, "A bill to authorize the appropriation for use by the Secretary of Agriculture of certain funds for wool standards, and for other purposes."

Unfortunately, other engagements prevent us from appearing in person to indicate to your committee the approval and indorsement of this measure by the National Association of Worsted and Woolen Spinners. We venture to hope, however, that you will record this indorsement along with other evidence submitted at the hearing.

Yours truly,

THOS. H. BALL, *President.*

Telegram from the California Wool Growers' Association to the American Farm Bureau Federation:

Authorize you represent California Wool Growers' Association in favor H. R. 15476 by Morgan.

Letter from W. P. Wing, secretary of the California Wool Growers' Association:

SAN FRANCISCO, CALIF., *January 3, 1927.*

Thank you for your letter of December 24, inclosing copy of the so-called "wool bill," about which you wrote me some weeks ago.

H. R. 15476, introduced by Mr. MORGAN, Congressman from Ohio, is entirely satisfactory to the California Wool Growers' Association. We will be prepared to appear in behalf of this bill whenever you advise us, by wire or otherwise, that hearings are to be held upon it.

Please keep us advised relative to the status of the bill, so that we can telegraph as you direct.

With best wishes for a prosperous and happy New Year.

W. P. WING, *Secretary.*

Telegram to Mr. Gray, Washington representative American Farm Bureau Federation:

Your message 14th relayed to me here account convention. No time prepare statement desired. Suggest you make statement for us.

Statement from the National Association of Wool Manufacturers:

The COMMITTEE ON AGRICULTURE,
House of Representatives.

GENTLEMEN: The National Association of Wool Manufacturers has willingly aided the United States Department of Agriculture in formulating the terms and definitions for the United States standard wool grades and their correlation with the Bradford count system. It believes the general use of the United States standard wool grades will be of benefit to both manufacturer and woolgrower.

It further believes that the proper use of funds for the purpose of acquiring information and facts and diffusing them among people of the United States relative to standardization, transportation, handling, and distribution of wool will be a public benefit.

It therefore recommends the enactment of the Morgan bill (H. R. 15476) providing ways and means for research and education along these lines.

WALTER HUMPHREYS, *Secretary.*

Letter from the above-named association:

Mr. CHESTER H. GRAY,
Washington Representative, American Farm Bureau Federation,
Washington, D. C.

MY DEAR MR. GRAY: It gives me pleasure to hand you herewith a brief outlining the position of the National Association of Wool Manufacturers in regard to the Morgan bill (H. R. 15476) now before the House of Representatives in the second session of the Sixty-ninth Congress.

Very truly yours, WALTER HUMPHREYS.

Letter from Mr. Thomas H. Ball, president of the National Association of Worsted and Woolen Spinners:

PHILADELPHIA, PA., *January 17, 1927.*

MR. CHESTER H. GRAY,
American Farm Bureau Federation,
Washington, D. C.

DEAR MR. GRAY: I duly received your letter of the 14th, and it will be impossible for me to be present in Washington on the 21st and find our secretary of the association, Mr. H. J. Nevins, will also be engaged that day, and he will send you a letter of indorsement as per the result of our last board meeting.

Wishing you every success, remain,

Yours very truly,

THOS. H. BALL,
President National Association of Worsted and Woolen Spinners.

L. B. Palmer, president of the Ohio Farm Bureau and Ohio Wool Growers' Association, and also a wool producer, and J. F. Walker, secretary of this association, both indorsed H. R. 15476. Many individual growers have expressed their interest in the passage of this bill.

The funds appropriated in this bill being due the growers, manifestly they should be used for their special benefit and will be so used in case the bill is enacted into law.

If the grades of the domestic wool clip are standardized and the purposes of the bill carried out, the producer can become educated to the true market value of his clip, as he can definitely compare it with the imported product and at the same time have the knowledge of its scoured market value, and, having this knowledge, will naturally be influenced to produce a higher-class product.

PUBLICATION OF STATISTICS OF TOBACCO

Mr. HAUGEN. Mr. Speaker, I call up the bill H. R. 53.

The SPEAKER. The gentleman from Iowa calls up the bill H. R. 53. The Clerk will report it by title.

The Clerk read as follows:

A bill (H. R. 53) to provide for the collection and publication of statistics of tobacco by the Department of Agriculture.

The SPEAKER. This bill is on the Union Calendar.

Mr. HAUGEN. Mr. Speaker, I ask unanimous consent that the bill be considered in the House as in Committee of the Whole.

The SPEAKER. The gentleman from Iowa asks unanimous consent that the bill be considered in the House as in Committee of the Whole. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of Agriculture be, and he is hereby, authorized and directed to collect and publish statistics of the quantity of leaf tobacco in all forms in the United States in the possession of dealers, manufacturers, growers' cooperative associations, warehousemen, brokers, holders, or owners, other than the original growers of tobacco. The statistics shall show the quantity of tobacco in such detail as to types and groups of grades as the Secretary of Agriculture shall deem to be practical and necessary for the purposes of this act, and said statistics shall show the stocks of tobacco of the last four crop years, including therein the production of the year of the report, which shall be known as new crops, separately from the stocks of previous years, which shall be known as old crops, and shall be summarized as of January 1, April 1, July 1, and October 1 of each year: *Provided,* That the Secretary of Agriculture shall not be required to collect statistics of leaf tobacco from any manufacturer of tobacco who in the preceding calendar year, according to the returns of the Commissioner of Internal Revenue, manufactured less than 50,000 pounds of tobacco, or from any manufacturer of cigars who during the preceding calendar year manufactured less than 250,000 cigars, or from any manufacturer of cigarettes who during the preceding calendar year manufactured less than 1,000,000 cigarettes, or from any dealer in leaf tobacco who, on the average, had less than 50,000 pounds in stock at the ends of the four quarters of the preceding calendar year.

SEC. 2. The Secretary of Agriculture shall establish standards for the classification of tobacco. He shall specify the types and groups of grades which shall be included in the returns required by this act. Such returns shall show the quantity of tobacco by such types and groups of grades for new and old crops separately. The Secretary of Agriculture shall prepare appropriate blanks upon which the returns shall be made, and shall, upon request, furnish copies to persons who are required by this act to make returns.

SEC. 3. It shall be the duty of every dealer, manufacturer, growers' cooperative association, warehouseman, broker, holder, or owner, other than the original grower, except such persons as are excluded by the proviso to section 1 of this act, to furnish within 10 days after January 1, April 1, July 1, and October 1 of each year, completely and correctly, to the best of his knowledge, a report of the quantity of leaf tobacco on hand, segregated in accordance with the blanks furnished by the Secretary of Agriculture. Any person, firm, association, or corporation required by this act to furnish a report, and any officer, agent, or employee thereof who shall refuse or willfully neglect to furnish any of the information required by this act, or shall willfully give answers that are false or misleading, shall be guilty of a misdemeanor, and upon conviction thereof shall be fined not less than $300 or more than $1,000 or imprisoned not more than one year, or both.

SEC. 4. The word "person" as used in this act shall be held to embrace also any partnership, corporation, association, or other legal entity.

SEC. 5. The Secretary of Agriculture shall have access to the tobacco records of the Commissioner of Internal Revenue and of the several collectors of internal revenue for the purpose of obtaining lists of the persons subject to this act and for the purpose of aiding the collection of the information herein required, and the Commissioner of Internal Revenue and the several collectors of internal revenue shall cooperate with the Secretary of Agriculture in effectuating the provisions of this act.

SEC. 6. The returns herein provided for shall be made under oath before a collector or deputy collector of internal revenue, a postmaster, assistant postmaster, or anyone authorized to administer oaths by State or Federal law.

SEC. 7. That the information furnished under the provisions of this act shall be used only for the statistical purposes for which it is supplied. No publication shall be made by the Secretary of Agriculture whereby the data furnished by any particular establishment can be identified, nor shall the Secretary of Agriculture permit anyone other than the sworn employees of the Department of Agriculture to examine the individual reports.

SEC. 8. The act approved April 30, 1912, providing for the collection of tobacco statistics by the Bureau of the Census is hereby repealed.

SEC. 9. If any provision of this act is declared unconstitutional or the applicability thereof to any person or circumstance is held invalid, the validity of the remainder of the act and the applicability of such provisions to other persons and circumstances shall not be affected thereby.

Mr. CHINDBLOM. Mr. Speaker, will the gentleman from Iowa yield for a question?

Mr. HAUGEN. Certainly.

Mr. CHINDBLOM. Is there any estimate as to what additional cost this legislation will place upon the Treasury? I observe in the report that it is stated the legislation is not in conflict with the financial program of the President, and I shall not raise an objection; but it will be interesting to know how much additional cost it will be to the country.

Mr. KINCHELOE. I will say to the gentleman that I do not think it will cost any more.

Mr. CHINDBLOM. I notice that you are repealing the present legislation on the subject and substituting this for it.

Mr. KINCHELOE. Yes. Under the present law the dealers had to report only the amount of pounds. This simply transfers this duty from the Census Bureau to the Department of Agriculture, and now it must report not only the number of pounds on hand, but the grade and group it embraces, so that the producers will know how much is on hand before they prepare for another crop.

This bill unanimously passed the House at the last session, and the Secretary of Agriculture has reported favorably upon it, and the Secretary of Commerce has no objection to the change of the activity from the Census Office to the Department of Agriculture.

Mr. McLAUGHLIN. Mr. Speaker, will the gentleman yield?

Mr. KINCHELOE. Yes.

Mr. McLAUGHLIN. I see a provision here to the effect that if one section of the bill is held to be unconstitutional it shall not make the rest of it unconstitutional. Have you put into the bill the usual provision to that effect? As I heard it read, it sounded to me as though it provides that if the court holds one provision in the bill to be unconstitutional, thereby all the other provisions in the bill become constitutional. It often happens that a case goes to the Supreme Court on one particular portion or feature of a law, and the court passes only upon that and does not express its opinion as to the constitutionality of the other provisions. If the other provisions were not at issue before the court it would not be right to say that because they are not attacked they are constitutional.

Mr. KINCHELOE. This bill provides:

If any provision of this act is declared unconstitutional or the applicability thereof to any person or circumstance is held invalid, the validity of the remainder of the act and the applicability of such provisions to other persons and circumstances shall not be affected thereby.

Mr. McLAUGHLIN. I think that is all right.

Mr. KINCHELOE. I think it is.

Mr. McLAUGHLIN. Usually we provide that the applicability to other circumstances shall not be affected by the decision of the Supreme Court. Usually the action of the Supreme Court relates to a paragraph or section of the law and holds that to be either constitutional or unconstitutional. Here you presume the constitutionality of the law when the other sections have not been taken before the court.

EXTENSION OF REMARKS—PUBLICATION OF STATISTICS OF TOBACCO

Mr. KINCHELOE. This information will be obtained under this bill from the tobacco dealers or purchasers or manufacturers of cigars and cigarettes. If it should become unconstitutional as to one of these agencies, I do not see why that should affect the others.

Mr. GILBERT. This is the usual language that is employed.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. HAUGEN, a motion to reconsider the vote whereby the bill was passed was laid on the table.

Mr. GILBERT. Mr. Speaker, since coming to Congress I have endeavored to secure relief for the tobacco growers by the passage of what is known as the Gilbert tobacco bill. At the last session this bill passed the House but did not pass the Senate.

There are hundreds of thousands of people in the United States engaged in raising tobacco and this bill for their relief will be a substantial help to a large class of farmers. The eighth district of Kentucky, which I have the honor to represent, is one of the largest tobacco-growing sections of the world.

The present law, known as the Cantrill law, provides for the collection of certain statistics, but without sufficient detail. For several years it served to help the grower, but now, under changed conditions, it operates to seriously hurt him. Under its provisions the total amount of tobacco on hand is shown. In the past when there were large crops of tobacco of poor quality the buyers purchased it often lower than 1 cent a pound. This tobacco has been stored away, and though it was unsuited for consumption it became valuable for statistical purposes. This vast quantity under the present law is reported with other tobacco in making up the amount on hand and helps to show a large surplus, and thereby unjustly depress the market price of the tobacco in the hands of the growers to be sold. Under my bill the manufacturers and dealers report not only the amount on hand but also the years in which it was grown.

This bill also requires the grades and groups of grades and families of tobacco on hand to be shown. Types of tobacco for market purposes differ greatly from one another. Corn and wheat compete with each other more than different types of tobacco compete one with another. Corn and wheat are both used for food, while one type of tobacco is used to smoke, another to chew, and another for snuff. Smoking tobacco is divided in its use—a type for cigarettes, a different type for cigars, still a different type for wrappers, and yet another type for fillers, and so forth. The information of the total amount of tobacco on hand, which alone is required under the present law, is of little value to any grower unless he knows the type and grade also. All of these details are required under my bill. If enacted into law, the grower of light burley, which is used mostly for cigarettes, can know just how much tobacco is on hand of that type which comes in competition with him. This bill will also prevent his price from being lowered by the showing of large stocks of tobacco in no wise competing with him and much of which is of no use or value at all.

James N. Kehoe, of the Burley Tobacco Growers' Cooperative Association, testified recently before the House Committee on Agriculture that if this bill had become a law before his association had disposed of its tobacco it would have saved its members $20,000,000.

The manufacturer and dealer know exactly how much tobacco there is on hand, the amount and quality in the hands of the grower, and this bill gives the grower that same information about the buyer's business that the buyer already has about the grower's business.

It should also be remembered that while the courts directed the manufacturers and dealers' monopoly in tobacco be dissolved, yet in practical application there is yet a monopoly, because there are only about five tobacco buyers to sell to. Although the courts have determined that these buyers are to act independently, anyone who observes their bidding on the breaks must agree that while they go through the pretense of bidding against one another, yet they have arranged just how much and what tobacco and what price will control. While this bill alone can not prevent that and the grower must sell to these buyers, yet by its provisions he will know whether or not he is being paid a price to which he is entitled under the law of supply and demand, and, if courts and grand juries protect him from an unlawful monopoly, this bill will otherwise protect him as to the knowledge of his rights.

Tobacco should be one of the most stable crops in price. Its different types, unlike general farm products, have a limited area of production. Its consumption has maintained a gradual increase. The increase in the consumption of cigarettes, for which light burley tobacco is used, has increased from five billion to sixty billion within the last 12 years.

This increase in consumption has been much greater than the increase in production, and yet prices have fluctuated solely at the will of the buyers under the pretense of enormous stocks on hand. In view of this situation, it is preposterous that the price of burley tobacco should have been twice as much in one year as it was in the succeeding year. When that occurs, the price is fixed wholly unrelated to the laws of supply and demand.

The tobacco grower has received on an average for his labor smaller pay than any other class of industry, while those engaged in its manufacture have enjoyed profits far in excess of other industries. Financial reports show that the great tobacco companies have even in the recent years of agricultural depression not only declared enormous dividends but have been the only industry able to anticipate its outstanding obligations and meet them before maturity.

Comparisons may not be agreeable, but they are peculiarly enlightening. From the press we learn that the great tobacco manufacturer, James B. Duke, after a very generous career, left an estate of $300,000,000. This princely fortune was wrung from the tobacco grower of mine and neighboring States, who will leave no property, not even for the wife who, with him, labored in the fields under the summer's sun, nor for children whose only portion in life has been poverty and toil.

Agriculture is in the greatest crisis of its history. My district contains land as fertile as the valley of the Nile, and yet it is plastered with mortgages heretofore unknown. In a country blessed as this, there should be prosperity for both the manufacturer and the farmer. Such there was before this and the preceding administration. The farmer can not benefit by a tariff. He would need no legislative help if others were not permitted by legislation to exploit him.

The party in power can not remove the advantages it gives the manufacturer to the prejudice of the farmer without its own destruction. So while the farmer is gradually being drawn into bankruptcy the party in power flounders in its effort to grant agriculture relief. As it can not take the props from under the manufacturer, it attempts by other props to lift up the farmer to the same level. This is the theory of the McNary-Haugen bill. Would it not be easier, simpler, and less expensive to remove the props from under the manufacturer and thus place them on an equality rather than to build other props at great expense and great complication under the farmer in order to arrive at the same purpose? And what assurance have we that after the farmer has been propped up that the same influence that first gave the manufacturer his props will not again assert itself to still maintain the manufacturers' advantage by still higher props, and where is the false foundation to end?

The Members of Congress from agricultural districts whose friends and neighbors and who ourselves are farmers would like to do something for the farmer, but what can we do with a majority against us who will not permit any real, constructive, far-reaching legislation to be enacted? We are presented with the alternative of seeing our neighbors, our friends, and ourselves suffer without an effort to help them or to vote for a type of legislation like the McNary-Haugen bill, which attemps to do the right thing in the wrong way. I shall vote for the McNary-Haugen bill not because it is the kind of relief I would offer, but because, with the party of manufacturers in control, it is this or nothing.

I am at least glad to offer to one class of farmers, the tobacco grower, this legislation, which is at least simple, constructive, just, and beneficial.

NEW USES OF COTTON

Mr. HAUGEN. Mr. Speaker, I call up the bill H. R. 11579.

The SPEAKER. The Clerk will report the bill by title.

The Clerk read as follows:

A bill (H. R. 11579) relating to investigation of new uses of cotton.

The SPEAKER. The Chair is informed that this bill is not on the calendar.

Mr. JONES. This bill was reported to-day. A unanimous report was made, and I have a favorable report from the de-

partment and from the Bureau of the Budget. I only ask to bring it up to-day, as I am anxious to secure early passage.

The same character of provision was included in a bill that was passed by the House at the last session, but which was caught in the Senate legislative jam. The bill was ordered reported a week ago, but I did not file the final report until I had the approval of the department and the Budget, which latter reached me to-day. The gentleman realizes the value of such approval before calling a measure up.

Mr. TILSON. Unless the bill is actually in the possession of the House, the House can not act on it.

Mr. JONES. The bill has been in the possession of the House for a week.

Mr. TILSON. There is only one bill so far as legislation is concerned, and that is the bill as reported by a committee. If that bill is not in the physical possession of the House, I do not see how the House can proceed.

Mr. JONES. The bill, together with the report, was dropped in the basket to-day—the actual bill. It is the same bill that was ordered reported by the House a week ago. It was simply dropped in the basket again with the report, and I do not see any reason why we can not proceed with the consideration of it unless there is objection.

Mr. TILSON. My only question is whether the bill is in the possession of the House.

Mr. JONES. It is and has been in the possession of the House for a week, but the report was filed only to-day. The bill was ordered reported a week ago; the bill is in the possession of the House and the Clerk has it.

Mr. CHINDBLOM. Mr. Speaker, I take it we are proceeding under the general rules which apply on Calendar Wednesday. Under those rules this bill could only come up by unanimous consent and not under the order already made.

Mr. JONES. The remainder of to-day has been yielded to the Committee on Agriculture for the consideration of bills unobjected to.

Mr. CHINDBLOM. No; consent was not granted for the consideration of bills unobjected to. Consent was granted to yield the remainder of this afternoon to the Committee on Agriculture for the consideration of bills under the rules applicable to Calendar Wednesday.

Mr. JONES. I do not think the latter was tied onto the consent.

Mr. TILSON. I think that was the understanding.

Mr. CHINDBLOM. At least that was the effect of it.

Mr. TILSON. It was the understanding that these bills were to be considered under the regular Calendar Wednesday rules.

Mr. JONES. I will state that the only reason I have brought up the bill now is because I am compelled to be away from the city Wednesday week, which, I understand, will be one of the regular days for the Committee on Agriculture. I am anxious to pass it, and I do not think there will be any controversy over the bill. As stated, a bill carrying similar provisions was passed through the House at the last session but failed in another body due to conditions prevailing there. It has the approval of the Department of Agriculture and the Bureau of the Budget. It was reported unanimously by the committee about a week ago, and I delayed filing the report until I had the approval of the Budget, and then reported it immediately.

Mr. CHINDBLOM. The bill could be read as well as the letter from the department, and the letter from the Bureau of the Budget, with the understanding that then the bill shall be subject to unanimous-consent consideration. If that is done I shall not object, if the documents referred to bear out the statements made by the gentleman from Texas, which I have no doubt they will.

Mr. JONES. I have a copy of the letter here.

The SPEAKER. Without objection, the Clerk will report the bill.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of Agriculture and the Secretary of Commerce are hereby authorized to engage in technical and scientific research in American-grown cotton and its by-products and their present and potential uses, including new and additional commercial and scientific uses for cotton and its by-products, and to diffuse such information among the people of the United States; and the Secretary of Agriculture and the Secretary of Commerce or their duly authorized representatives may cooperate with any department or agency of the Government, any State, Territory, District, or possession or department, agency, or political subdivision thereof, or any person in carrying out the purposes of this act in the District of Columbia and elsewhere.

The SPEAKER. This bill is on the Union Calendar.

Mr. JONES. Mr. Speaker, I ask unanimous consent that this bill may be considered in the House as in Committee of the Whole.

The SPEAKER. The gentleman from Texas asks unanimous consent that this bill may be considered in the House as in Committee of the Whole. Is there objection?

There was no objection.

The SPEAKER. The bill has been reported. Does the gentleman from Iowa yield to the gentleman from Texas?

Mr. HAUGEN. Yes.

Mr. JONES. Mr. Speaker, I ask that the letter from the department be read.

The SPEAKER. Without objection, the letter referred to will be read by the Clerk.

The Clerk read the letter, as follows:

Hon. G. N. HAUGEN,
House of Representatives.

DEAR MR. HAUGEN: Your letter of March 1, in which you request comment on the bill H. R. 11579, relating to the investigations of new uses for cotton, has been received. This bill would authorize the Secretary of Agriculture and the Secretary of Commerce to engage in technical and scientific research in American-grown cotton and its by-products and their present and potential uses, including new and additional commercial and scientific uses for cotton and its by-products, and to diffuse such information among the people of the United States.

Believing as we do that one of the greatest single opportunities for improving the economic position for our cotton growers is through the increased use of cotton, we are in sympathy with the purpose of this bill. Somewhat similar authority is carried in the current appropriations act for the Department of Agriculture and for the Department of Commerce, but we believe that specific legislation of this kind is desirable.

Sincerely yours,

W. M. JARDINE,
Secretary of Agriculture.
HERBERT HOOVER,
Secretary of Commerce.

(Submitted to the Bureau of the Budget, pursuant to Circular No. 49 of that bureau, and returned to the Department of Agriculture with the advice that the legislation proposed in H. R. 11579 is not in conflict with the financial program of the President.)

Mr. BLACK of Texas. Will the gentleman yield?

Mr. JONES. Yes.

Mr. BLACK of Texas. As I understand, the purpose of this bill is to somewhat broaden the authority that is now carried in the appropriation bill, which permits the Secretary of Agriculture to make these studies as to the new uses of cotton? If so, it seems to be a good bill and I am for it.

Mr. JONES. It not only provides for broadening the authority, but also provides for continuing the work that was begun last year. Last year the Committee on Agriculture held hearings upon a measure containing substantially the provisions of this bill. It was reported by the committee and while it was pending the Appropriations Committee included an item covering this work and this is to give legislative authority for a continuation of that work.

A measure which I introduced last year containing substantially the provisions of this bill passed the House during the last session, but died on the Senate Calendar. The pending bill has for its purpose the giving of legislative authority for the continuation of practical investigation into new uses for cotton and its by-products. While the measure last year was pending provision was made in the appropriation bill for the beginning of this work.

Under this provision much valuable work has been done. During recent years most of the attention has been paid to the problems of production. Too little attention has been paid to the problems of distribution. Just now the problem of distribution is a far more vital one. Every thinking man must admit this. The work contemplated by this measure applies to this phase of the problem.

My colleague [Mr. FULMER] has rendered valuable assistance in this matter. In fact, while a bill covering this and other matters was pending last session in the committee, he offered an amendment which materially added to the value of the bill.

Already much valuable work has been done. Experiments are being conducted in the making of brattice cloth for use instead of jute, in the use of cotton materials in conduit installation, in the better finishing of fabrics so as to make them more suitable for use, in the use of bagging for cotton, the making of sugar sacks and other wrappings, and the blending of cotton with other materials in the making of many useful

articles. Surely the House does not want this work discontinued.

In other words, it furthers the effort toward stimulating the consumption of cotton and its by-products. Anything that will do this will help to solve its marketing and disposition, and would, of course, be reflected in a better price for producers of the commodity.

I don't think this Congress could do a finer thing for this great industry. The work costs but little and means much to the cotton producers of the South.

The SPEAKER pro tempore (Mr. CHINDBLOM). The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. JONES, a motion to reconsider the vote by which the bill was passed was laid on the table.

Mr. FULMER. Mr. Speaker, I ask unanimous consent to extend my remarks on this bill.

The SPEAKER pro tempore. Is there objection?

There was no objection.

Mr. FULMER. Mr. Speaker and gentlemen of the House, at present I do not care to take much time in discussing H. R. 11579, a bill introduced by my good friend and colleague, Mr. JONES of Texas.

As stated by Mr. JONES, I offered last year an amendment to certain legislation before the Agricultural Committee authorizing the Department of Agriculture to do the line of work contemplated under the Jones bill. This amendment carried an authorization of $50,000. Under this bill Mr. JONES includes the Department of Commerce, which I think proper because they have done and are doing quite a lot of work along this line.

About four years ago I had the matter of trying to bring about uniform tare for cotton, and the use of cotton bagging as a substitute for jute now used in covering cotton up with Mr. Wallace, then Secretary of Agriculture. I want to say that since that time wonderful progress has been made, and I am hoping in the near future to be able to report favorably from the Agricultural Committee, of which I am a member, a bill (H. R. 10303) introduced by me bringing about the selling of cotton on net weight, uniform tare, and the substitution of cotton bagging for jute bagging.

It is my opinion that if our Government would spend considerable more money along the line of research work and less money in trying to bring about overproduction they would be working much more in the interest of the farmers of the country.

It is an easy matter to go to Congress for most any size appropriation to fight crop pests, and for appropriations to make two sprigs grow where one used to grow; but after all is said and done the farmer is left high and dry, without a proper and up-to-date marketing system. Very often he is left with a surplus that he is unable to handle, which fixes the price of the whole crop, usually under the cost of production.

Cotton bagging for cotton bales has been a recurrent subject of controversy for more than a quarter of a century. In the year 1889, I remember as a boy, the fight that my father, along with other farmers, made to substitute cotton bagging for jute. Southern papers carried headlines as, "The cotton-bagging fight," "The new cotton covering," "The cotton-bagging question," "Cotton or jute," "Let cotton cover cotton," and "Cotton bagging wins." We had at that time, as we have to-day, a Jute Trust, that not only put up a fight but put the cotton-bagging interest out of business, and immediately thereafter the price of jute advanced. This same fight has begun in opposition to my bill, which, if passed, will save the cotton farmers millions annually in freights and otherwise, and besides would consume a quarter of a million bales of low-grade cotton annually.

I quote here a part of a letter written by the manager of a jute-bagging company to his Senator asking that the Senator use his influence to prevent the passage of my bill:

> We have before us a copy of bill H. R. 10303, introduced into the House of Representatives by Mr. FULMER. This bill provides for the selling of cotton on net-weight basis and also gives the Secretary of Agriculture authority to specify the kind of weight of cotton-bale covering to be used. As the Department of Agriculture has already issued a preliminary statement on the use of cotton bagging for covering cotton, it is obvious that they will specify bagging made of cotton if given the authority.
>
> In regard to selling cotton on a net-weight basis, we see no reason for this, as practically all bagging (jute) is now being made on a 2-pound basis and prices are based on this amount of tare.
>
> We do not wish to burden you with this matter, but you can realize how important it is to us. We trust that after you have considered the matter you will use your influence to prevent the proposed legislation, which would be so destructive.

Under the amendment proposed by me last year the Department of Agriculture entered into this work by designing four weights of cotton bagging and one for patches for the purpose of comparing them with jute bagging in shipping and weather tests. Due to the fact that I am so much interested in this subject, I am glad to say that the cotton used in this test was manufactured in the cooperative testing laboratory at Clemson College, South Carolina, my State, and stood the test well.

As a shipping test, 120 bales of cotton were shipped from Henderson, N. C., to Portsmouth, Va., by rail and to Norfolk, Va., by barge. At Norfolk the cotton was weighed, sampled on both sides, compressed to high density, and shipped to Bremen, Germany. Twenty-four bales of this cotton was covered with 2-pound jute bagging and the balance was covered with the various types and weights of cotton bagging. This same cotton later was shipped back to the United States and is now on exhibition at the Department of Agriculture, where Members interested can call and inspect same. I will not take the time to go into details as to the test comparison of the cotton bagging with jute, but will say that in every way the bagging made of cotton won over the jute.

I will insert here a statement that will be very interesting in connection with this test:

TABLE 3.—*Condition on arrival of 120 bales of cotton shipped to Bremen, Germany, by kind of bagging used on the bales, and rank of bagging in the test.*

Kind of bagging	Condition of bale on arrival [1]			Rank [2]
	Excellent	Good	Fair	
2-pound jute	4	16	4	Normal.
No. 1 cotton	5	14	5	Do.
No. 2 cotton	8	11	5	15 above normal.
No. 3 cotton	13	8	3	50 above normal.
No. 4 cotton	15	9	-------	75 above normal.

[1] Excellent.—Bale must be neat in appearance with all bands and marks intact. Heads of bales must be completely covered. No large cuts or torn places permitted. Good.—Bales must be free from actual damage and fairly neat. Marks must be legible and bales must be in fair condition. Not more than 1 band may be missing. Reasonable number of small cuts or torn places permitted. Covering may be loose on one end only. Fair.—Covering is ragged or unattractive. Band may be off. Marks damaged. Bagging cut or torn or ends slightly hanging, but no actual damage to bale.

[2] A type of bagging is given a rank of normal if an equal number of bales are found to be above and below "good" condition upon arrival in Bremen, Germany. In determining the rank of other types of bagging, 5 points are scored above or below normal for each bale the condition of which was found to be above or below "good" upon arrival in Bremen.

If Members will call upon Hon. Lloyd S. Tenny, Chief Bureau of Economics, Department of Agriculture, he will be glad to furnish them with reports in detail in connection with what I am talking about.

I am inserting herewith statement contained in the report referred to showing the probable increase in price if we should consume only 200,000 bales of cotton for cotton bagging:

> It is estimated that something like 200,000 bales of low-grade cotton would be required, on the average, to cover the American cotton crop with a light-weight cotton bagging. It is thought that the consumption of 200,000 bales would have approximately the same effect upon the price level as a reduction of that amount in the available supply; that the rise in the price might amount to as much as one-half cent per pound, or $2.50 per bale.

The statement below will enumerate other savings:

ESTIMATED ADVANTAGES OF A LIGHT-WEIGHT STANDARDIZED BAGGING

Taking as typical the year 1913, when the production was approximately 13,700,000 bales of 500 pounds each, and when 8,800,000 bales were exported, the following is an estimate of the savings which might accrue from the use of a 6-yard pattern of cotton bagging weighing 5 pounds, and a cotton patch 30 inches wide and 36 inches long, weighing 1 pound per yard:

(a) Taring in Europe (say 80 per cent of cotton tared, at 15 cents per bale)	$1,056,000
(b) Inland freight (at, say, 85 cents per 100 pounds on difference between 24 pounds and 16 pounds per bale) on 8,800,000 bales	598,400
(c) Ocean freight (at, say, 65 cents per 100 pounds on difference between 26.5 pounds and 16 pounds per bale) on 8,800,000 bales, 265 pounds representing 9 pounds for bands and 3⅓ per cent for bagging	600,600
(d) Excess tare (i. e., excess over allowance of 16 pounds per bale) was also avoided by standardization saving, say, 1 pound per bale (say, 7 cents per pound on 8,800,000)	616,000
(e) Inland freight on 1 pound excess tare per bale, on 8,800,000 bales (say, 85 cents on 100 pounds)	74,800

(f) Ocean freight on 1 pound excess tare per bale, on 8,800,000 bales (say, 65 cents on 100 pounds)	$57,200
(g) Insurance commission, discounts, etc. (say, 2 per cent on 1 pound per bale saved on excess tare) on 8,800,000 bales, cotton selling at 20 cents	35,200
(h) Insurance commissions, discounts, etc. (say, 2 per cent on difference between 23.5 pounds and 16 pounds per bale), on 8,800,000 bales, cotton selling at 20 cents	369,600
(i) Domestic freight on 8 pounds per bale at an average rate of $1.10 per 100 pounds, on 4,900,000 bales	431,200
(j) Insurance, exchange, etc. (say, 1 per cent on 8 pounds per bale, cotton valued at 20 cents), on 4,900,000 bales	$78,400
Total estimated savings	3,917,400

Table 6, taken from Mr. Tenny's report estimating consumption of various types of jute bagging 1909–1920, 1919, 1920, and 1926 should be interesting. It is as follows:

Types of bagging	Consumption				Percentage of total			
	1909–1912[1]	1919[1]	1920	1926[1]	1909 to 1912	1919	1920	1926
	Running yards	*Running yards*	*Running yards*	*Running yards*	*P. ct.*	*P. ct.*	*P. ct.*	*P. ct.*
New bagging	254,398,354	51,427,000	46,869,000		69	61.07	48.29	
Imported bagging	32,906,574	[2]6,599,616	[3]5,446,428	62,288,000	9	7.83	5.61	58.94
Rewoven bagging	24,000,000	8,065,000	7,396,000	13,239,653	7	9.57	7.62	12.53
Sugar-bag cloth	7,000,000	12,056,000	9,706,000	24,001,420	2	14.31	10	22.70
Secondhand bagging	50,000,000	6,053,496	27,625,028	6,156,896	13	7.22	28.48	5.83
Total	368,304,928	84,201,112	97,042,456	105,685,969	100	100	100	100

[1] Data used are from Tariff Information Surveys, "Jute cloths," 1922, p. 21.
[2] Data compiled by means of questionnaire sent out in September, 1927.
[3] Imports for the calendar years 1919 and 1920 amounted to 8,799,488 square yards and 7,261,904 square yards, respectively. These totals have been converted into linear yards of 45 inches in widths, as have all figures in this column.
Based on actual sales and imports amounting in 1919 to 59,079,476 linear yards and in 1920 to 51,903,727 linear yards.

From the study of cotton bagging for covering cotton, Mr. Tenny gathers the following:

1. Cotton bagging may be manufactured from the lowest grades and staple lengths of cottons produced in the United States, and can be manufactured from high-grade waste.

2. Cotton bagging, as manufactured at present, makes a very suitable covering for cotton bales. It is reasonable to suppose that a better method of spinning yards and weaving the cotton-bagging fabric may be developed by experimentation and the cost of production consequently lowered.

3. Decided economies in transportation and insurance costs would result from the use of a lighter-weight bagging.

4. A strong, light-weight cotton bagging of standard construction and weight would tend to obviate the disagreeable and costly practice of challenging and taring American cotton in spinners' markets at home and abroad.

5. Cotton lint does not adhere to cotton bagging so tenaciously as it does to jute bagging.

6. The lightest weight of cotton bagging thus far tested is superior to 2-pound jute bagging and to the burlap covering commonly used on the Egyptian bale, which has the reputation of being the most attractive covering now entering the world's markets.

In connection with this line of work I have taken up with the Post Office Department the substituting of cotton twine for jute twine, and I have taken up with the Agricultural Department and Department of Commerce the use of cotton bags instead of jute bags for fertilizer and other merchandise.

Since this work has begun it is most interesting to note the activity on the part of the manufacturers of cotton bags and twine.

In the new uses for cotton the department of the Cotton Textile Institute (Inc.) of New York is doing great work along this line also.

I want to quote here some statements contained in a speech made by Hon. George A. Sloan, secretary of this institution, who addressed the thirty-fifth annual convention of the American Wholesale Grocers' Association, May 18, 1927:

Cotton is a basic American industry, and as such deserves the hearty support of the American people. We are a Nation of intense and enthusiastic patriots, and when sound economical buying is coupled with an appeal to our patriotism we may all feel sure that cotton shall be king again.

Have you ever stopped to analyze this commodity, cotton, on which a basic industry has been built up during the centuries? If you have not, let me sketch briefly some of its outstanding qualities which make it vital to our civilized comfort to-day.

Cotton is a good retainer of heat. Conversely, by the porous construction of many cotton fabrics it is one of the coolest materials. Hence its enormous use in tropical countries.

It is economical, in that it has a waste value and many uses beyond the initial use.

It is nature's whitest fiber.

It is nature's cleanest fiber.

It is capable of being spun into very soft and downy products and also into products sufficiently tough to wear down metal surfaces.

It possesses an excellent affinity for dyes and remarkable ability to retain them, and I could go on indefinitely.

Your secretary in his kind letter of invitation asked me to report to this meeting on the results of our investigation to date so far as they relate to the uses of cotton bagging. First of all, you may be interested to know that the following associations and industries have urged their members to use cotton containers in the shipment of their products:

National Coffee Roasters' Association.

National Fertilizer Association.

National Wholesale Grocers' Association.

American Wholesale Grocers' Association.

Rice Millers' Association.

The salt manufacturers have sent out letters to the trade expressing a willingness to ship in cotton when so requested.

Most of the starch manufacturers have advised their customers that they will ship in cotton if so asked.

The following is the status of cotton containers in the various industries as indicated by our studies which at best must be accepted as preliminary.

Eighty per cent of the cement is shipped in cotton sacks.

In the coffee industry Meyer Bros. Coffee & Spice Co., of St. Louis, Mo., have adopted cotton for their 25 and 50 pound sizes for roasted coffee beans with satisfactory results.

Cotton until recently has never been considered suitable for the shipment of cottonseed cake and meal. Yet one of the large companies tells us that they began using cotton bags last October with such satisfaction to their customers that their trade has appreciably increased and they now find it advisable to use cotton sacks entirely. They predict that the various other concerns in this business will soon be compelled to ship in cotton.

Flour is one of the great outstanding fields for the use of cotton, it being estimated that 50 per cent of the 700,000,000 cotton bags now used annually in the United States are used for this purpose.

In the shipment of certain vegetables, for example, potatoes, it has been suggested that cotton bags could be used to advantage on the returnable basis.

Grain is largely shipped in bulk, yet one large company uses from 600,000 to 750,000 cotton sacks, and has the empty bags returned. This has proven so satisfactory and economical that it has had no occasion to buy any new bags in 10 years.

One of the bag companies advises that there has been an increase of approximately 3,000,000 yards of cotton bagging cloth over the quantity used in 1925 for the shipment of chick feeds and staple foodstuffs, like bran and alfalfa meal.

With nuts, the practice has been to use burlap or wooden crates and half barrels. One of the largest peanut shippers is now carrying on extensive investigations into the bagging situation.

In the case of salt, it is common practice to use cotton in the packing of evaporated salt; rock salt is largely shipped in bulk.

For seeds, 7,500,000 cotton bags are needed to handle the commercial demand. In this respect, it is interesting to know that 85 per cent of all seed used in this country either remains on the farm where produced or is sold to neighbors.

Soap is a field in which cotton is coming to the front. In the last year and a half one of the largest companies has shipped over one-third of its product in cotton and states that its advantages are: Ease of handling, saving of floor space, convenience in making up the laundry solutions, and the bags can afterwards be used for collecting the soiled laundry or for returning the wet wash. In one city of Canada (Toronto), 90 per cent of the laundry owners prefer cotton bags. Arbuckle Bros. have

advised us that they are now packing all of their 100-pound packages of refined sugar in cotton.

The meat industry uses large quantities of cotton for the protection of its dressed meat.

Several of the large nurseries are now investigating the use of cotton sacking for the packing of their trees and shrubs.

The grocery trade is doing much toward increasing the use of cotton containers in the shipment of coffee, cottonseed meal, flour, grain, nuts, potatoes, rice, salt, seeds, soap, starch, sugar, and various other bulk commodities. If only 10 per cent of these products were carried in cotton, it would mean an increased use amounting to at least 50,000,000 cotton bags a year. But this percentage is not taken advisedly, and you will therefore see that our studies have only begun to indicate the possibilities.

We know and you know that there are instances where cotton goods may be substituted for other materials for the best interest of the ultimate consumer and consequently of the trades concerned. We both know equally well that there are other instances in which such substitution is not compatible with the public good.

My friends, if we could bring about the using of cotton as a substitute for jute along these lines we would consume not less than 1,000,000 bales of cotton. The National Fertilizer Association reports that during 1926, 7,347,700 tons of fertilizer were used. If all this fertilizer had been bagged in new 200-pound cotton bags made of 8-ounce Osnaburg, approximately 170,000 bales of that year's supply of low-grade cotton would have been consumed.

Think what it would mean to cotton farmers of the South, many of them broke to-day because of the present situation. Think what it would mean to American cotton mills and to thousands of their employees. Therefore, with these facts before the Congress, it seems to me that the Members would be willing to help us secure funds for this line of work.

In 1925 we imported nonmanufactured jute to the amount of $12,840,972 and manufactured jute fabrics to the amount of $95,196,263. Please think for a moment of this tremendous amount of money going out of the pockets of the Americans into a foreign country, and in the meantime we are stifled with a surplus of cotton that could be substituted for this foreign product. It is very clear to me that one of our greatest troubles is in not being able to compete with cheap labor in foreign countries.

Mr. Leavelle McCampbell, of Harding, Tilton & Co., New York, makes the following statement regarding wages paid at Bengal:

The jute mills in Bengal pay for carder, 89 cents per week; for rover, $1.75 per week; for the spinner, $1.40 per week; for the winder, $1.91 per week; for the beamer, $2.37 per week; for the weaver, $2.84 per week.

It is a strange thing to me that our Republican friends have overlooked the placing of a duty on the importation of jute products which would give our American mills protection so as to manufacture cotton to be substituted for jute.

I think the trouble about this is that the mills in foreign countries are largely owned and operated by Americans, and they seem to have more weight in having free shipments of their goods than mills and farmers in America in having a duty placed thereon.

I hope that the Members will give time and serious thought to this line of work and that they will call on the Department of Agriculture and the Department of Commerce for information and reports regarding same.

FARM LEGISLATION

Mr. ASWELL. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a letter from Mr. B. F. Yoakum on farm legislation.

The SPEAKER pro tempore. The gentleman from Louisiana asks unanimous consent to extend his remarks in the RECORD in the manner indicated. Is there objection?

There was no objection.

Mr. ASWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

FEBRUARY 29, 1928.

DEAR MR. PRESIDENT: I received, through Secretary Sanders, a copy of Secretary of Agriculture Jardine's letter to you dated February 14.

While the Secretary of Agriculture agrees partly with my views concerning farm marketing, he expresses himself as not favoring certain suggestions contained in my letter of February 8 to you, which objections I desire briefly to explain.

I appreciate his commendation of its purpose and objective, but apparently Mr. Jardine did not give my plan the full consideration to which it is entitled.

Regarding my estimate that $7,350,000,000, approximately one-half the price spread between the farmers and consumers, represents "unjustifiable and unnecessary commissions, profits, rake-offs, etc.," he says:

"This department is not acquainted with the basis for these figures. He [Yoakum] has no doubt compiled his data with great care, but our research has thus far failed to reveal such unjustifiable profits in distribution."

My data was carefully compiled. For more than 20 years (and intensely so for the past 7 years) I have concentrated my attention on farm marketing, spending time and money unstintedly in investigating the spread between the farmer and consumer. The Government, so far as I have been able to learn, has given but little attention to that phase of the problem. Therefore, I wish to reaffirm that my figures are dependable.

"The cost of processing [Mr. Jardine says] must also be taken into account."

All but two of the 17 standard farm products I cited (sold to consumers for $22,500,000,000, of which the farmers received only $7,500,000,000) go direct from the farmer to consumer. Processing, therefore, does not enter into the question.

Senator CAPPER, in his speech a few days ago at a dinner held under the auspices of Columbia University and the American Country Life Association in New York City, President Nicholas Murray Butler presiding, declared that last year from farm products farmers received $10,000,000,000, while consumers paid $30,000,000,000, the rest going to middlemen. In this the Senator included all products, while I confine myself to 17 standard food products.

In paragraph 4 Mr. Jardine says:

"More and better statistical information would help to bring about a reduction in the cost of middlemen services, to the benefit of both producer and consumer"; and that he is "strongly of the opinion that provision should be made for an adequate census of distribution, recommended by Secretary Hoover."

Such a census might be of some value. But it would cause long and useless delay. Why complicate the situation and becloud the issues? When the farmers are calling for action, why feed them statistics?

Mr. Jardine believes with me, that "mass marketing by strong business organizations of producers would reduce cost of marketing, give farmers greater bargaining power, and help stabilize farm prices and adjust production to demand," and that "these associations should be organized along commodity lines." He says:

"However, the enabling legislation proposed by Mr. Yoakum would not be necessary, since farmers already have broad authority under the Capper-Volstead Act to form cooperative marketing associations."

This is partly true, but misses the main point. The Capper-Volstead Act does not enable farmers to control and distribute their products and stabilize prices through a "marketing board of control" consisting of farmers. It does not permit them to direct interstate and foreign shipments, or give them the authority to make a uniform nation-wide marketing system effective.

If that act had given authority to stabilize profitable prices the farmers would not now be on the brink of bankruptcy with farm values reduced from $79,000,000,000 to $56,000,000,000 in seven years. There isn't a farmer or business man in the land who does not know that further legislation is necessary, and that it must be upon broader and more practical lines.

"Mr. Yoakum's proposal for a Federal loan for organization purposes should receive a great deal of support, especially among professional promoters." (Page 2, paragraph 3, of Mr. Jardine's letter.)

What does Mr. Jardine mean by that? My plan calls for the least expenditure, a very small loan not exceeding $1,000,000 to any one commodity marketing organization, and that for organization expenses only, to be reimbursed from the first crop. (Fourth paragraph, page 8, my statement before the Committee on Agriculture of the House of Representatives, February 15.) Its very basis is to take this matter out of the hands of promoters and politicians and place it under control of the farmers. The farmers are not promoters, professional or otherwise. In honesty and integrity they stand at the head of our citizenship. In business they are as capable as those engaged in any other lines of industry. Can't they be trusted to care for their own interests and fulfill their obligations to the Government? I am sure they can.

The farmers only stand in need of a simple act of Congress that will give them authority to organize under Federal charters, control distribution of interstate and foreign shipments of their commodities, stabilize prices, and establish a practical, effective nation-wide marketing system.

I agree with Mr. Jardine that "successful cooperation can not be built on the extravagant assertions of professional promoters." Neither can it be built on the extravagant claims of politicians or under professional or political control. It must be kept out of the hands of promoters or politicians, must be controlled by the farmers themselves, operated by them in their interest. That is the very heart of my plan.

I entertain the highest opinion of Mr. Jardine. We are both striving to bring about a better system of farm marketing. We may differ as to methods. I understand Mr. Jardine is favorable to Federal control, on which I strongly disagree. Marketing products of any character is a business proposition and should be operated by those who understand the business. Certainly no one understands the farming business and its requirements as well as the farmers. Therefore,

if the marketing of farm products is taken from under the control of the farmers, the marketing of farm products can not be made successful.

Having sincerely the same objects in view, Secretary Jardine and myself should be able to find a common ground upon which we can work in harmony in seeking a solution of this perplexing problem.

Thanking you, Mr. President, for your consideration of this matter.

Very sincerely yours,

B. F. YOAKUM.

Hon. CALVIN COOLIDGE,
The White House, Washington, D. C.

Mr. CLARKE. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on farm-relief legislation.

The SPEAKER pro tempore. Is there objection?

There was no objection.

Mr. CLARKE. Mr. Speaker, believing that the policies during, and the wicked deflation after, the World War have produced a profound depression and created grave inequalities as between agriculture and other industries, I set forth my reasons for opposing the so-called McNary-Haugen bill, as considered by the Agricultural Committee, that contains the dubious "equalization fee" and its false promises, according to its paid propagandists, of producing prosperity in perpetuity for the farmer.

Reason 1. I want farm legislation to assist agriculture now.

Reason 2. I promised, when a candidate, to support my President, Calvin Coolidge, and his policies. He vetoed the McNary-Haugen bill, and especially emphasized the equalization fee as one of its objectionable features. I think it naturally follows he will veto it again with the equalization fee in, therefore its passage means no farm legislation. I want farm legislation now.

Reason 3. The present McNary-Haugen bill contains this equalization fee, the Attorney General, as the legal advisor of the President, says that this fee is unconstitutional, therefore the McNary-Haugen bill may pass both the House and the Senate, but it can not pass either or both the House and Senate over the President's veto and that means no legislation.

Reason 4. Not a single paid propagandist, agitator, or lobbyist for the McNary-Haugen bill has presented one argument before the Agricultural Committee justifying the opinion that this equalization fee is constitutional. The following Members of Congress, irrespective of party and recognized as profound students of constitutional law, are of the opinion that the equalization fee is unconstitutional.

Hon. GEORGE GRAHAM, present chairman of the House Judiciary Committee.

Hon. HENRY ST. GEORGE TUCKER, a former president of the American Bar Association.

Hon. WALTON MOORE and the Hon. THEODORE BURTON and others; so even if it became a law, legal and constitutional questions would be raised, interminable litigation started, the "fee" would not be in operation for years, and what agriculture needs is an operative, full-functioning law now.

Reason 5. I believe the cooperative movement has done more and promises more than any other movement for agriculture, and supplementing it with the different agencies created by law and already existing in the Department of Agriculture, is having a tremendously beneficial effect upon agriculture.

Upon an emergency being declared under the McNary-Haugen bill on any commodity the producers thereof are all placed under the equalization fee; therefore if you impose another tax upon cooperative producers when no benefits accrue you greatly discourage and ultimately destroy those cooperatives.

Reason 6. The McNary-Haugen bill in its last analysis is fundamentally un-American, in that the producer's liberty is destroyed, his commodity in the emergency is placed under the equalization fee, and he is compelled thereby to have the production of his commodity taxed and the handling and administration thereof taken from his control; such processes reverse the fundamental theory of our Government, in that those who are "least governed are best governed," and goes contrary to the processes governing the evolution of civilization, that are not founded upon compulsion but rather upon love, education, and cooperation.

I have felt the uncompromising attitude of the proponents of the McNary-Haugen bill was absolutely wrong, and it has been utterly repulsive to me to hear threats of political annihilation uttered by some of these proponents against some of the members of the Agricultural Committee who honestly want farm legislation and honestly believe they will never get it if they expect the McNary-Haugen bill to become a law, in view of the strong opinion of the Attorney General against the equalization fee and the stronger language of President Coolidge's veto, for the President emphasized the fact that the equalization fee was especially obnoxious.

There seems to be prevalent a conception that by legislative enactment we can bring prosperity to the farmers. Hot-air artists, theoretical economists, and ingenuous organizers have led many of our farming people to believe that through legislative fiat miracles can be wrought, that through taxing all the people 30 per cent of the people can be made prosperous. They seem to ignore or forget the wrecks and tragedies that have followed the State ownership experiments in the Northwest; they seem to overlook the cold, hard experience of the States that guaranteed bank deposits and the troublesome times they went through that necessitated the wiping off from the laws of these States of this guaranty. Read and reread the story again of the experiences of some of our joint-stock land banks, where the uneconomic, unscientific, and dishonest practices led to the indictment of the officials of at least three of those banks and threatened to wreck the entire system.

Any law that encourages the growing of surpluses that must be sold in world markets and hopes to get around the law of supply and demand in the long run is predestined to failure, and any surplus of this year stored in any old place will bob up another year to help reduce prices and demonstrate that the laws of supply and demand finally obtain.

England just completed a great experiment in seeking to control the production and price of crude rubber. This has resulted disastrously, doing incalculable injury to the industry, so that the price of rubber has descended from around $1.20 to about 31 cents per pound. You may seek to "hamstring and halterbreak" the law of supply and demand, but ultimately she rules.

AGRICULTURAL EXTENSION WORK

Mr. HAUGEN. Mr. Speaker, I call up the bill (H. R. 9495) to provide for the further development of agricultural extension work between the agricultural colleges in the several States receiving the benefits of the act entitled "An act donating public lands to the several States and Territories which may provide colleges for the benefit of agriculture and the mechanic arts," approved July 2, 1862, and all acts supplementary thereto, and the United States Department of Agriculture.

The Clerk read the title of the bill.

The SPEAKER pro tempore. This bill is on the Union Calendar.

Mr. HAUGEN. Mr. Speaker, I ask unanimous consent that this bill may be considered in the House as in the Committee of the Whole.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. HAUGEN. Mr. Speaker, I would like to make a brief statement. I stated on the floor I would not call up any bill that carried an appropriation or any bill that had not been passed by the House before. I find we have a bill here that I believe has been materially changed from the way in which it passed the House the last time, and I am not sure but what this is in conflict with the agreement. I shall yield to the gentleman from Michigan to make a statement about it.

Mr. KETCHAM. Mr. Speaker and gentlemen of the House, in accordance with the suggestion of Chairman HAUGEN I want to state that a bill with this particular object and with the exact title that this bill bears, passed the House last spring by unanimous consent. The changes to which the chairman refers are two in number, first, the $480,000 item which the bill of last year carried has been changed to an item of $960,000; that is to say, the $10,000 provided for each State under the bill of last year has been increased to $20,000. This is the first difference.

The second difference is that the bill last year carried a two-year appropriation. The bill this year is a continuing appropriation, but continuing at the same total mentioned in the bill.

These are the only two changes in the bill. There are no particular changes in the phraseology.

By reason of the fact the bill passed by unanimous consent last year I do not propose to take the time of the House at any length this afternoon. I think probably of all the bills that have come before our committee, none has exceeded this bill in the number or enthusiasm of its indorsements. Very briefly, the bill does this.

Mr. Speaker, just a few words will serve to indicate the purpose and scope of this bill. It provides for the further development of the cooperative extension work in agriculture and home economics with men, women, boys, and girls, inaugu-

rated under the Smith-Lever Act, passed May 8, 1914. The bill is in conformity with the plans of the United States Department of Agriculture and the land-grant colleges for further expanding the cooperative extension system.

The first question that might naturally arise in the minds of those who have been supporters of the extension work set up under the Smith-Lever bill and successive acts, is whether or not the supplementary funds provided in this bill are necessary. In answer to this question it would be well to state the extension system is less than one-half completed at the present time. In order to complete the system and provide for extension agents in all the countries requiring them, there is a further need of the employment of 700 county agricultural agents; at least 1,500 county home demonstration agents; and approximately 1,650 agents and assistant agents to conduct boys' and girls' 4-H club work.

In the 2,800 agricultural counties of the United States there are at the present time 2,150 agricultural agents; 900 home demonstration agents and 135 boys' and girls' club agents. The additional appropriation provided in this bill will make it possible to add enough agents to take care of the more urgent calls now on file.

Earlier in my remarks I referred to the very wide indorsement given to this bill by organizations as well as individuals. I think perhaps the most direct, positive, and convincing evidence of the value of the work which is to be extended by the funds set up in this bill was offered by three witnesses directly connected with extension work, who appeared before the committee and spoke from their own experience.

I desire to quote very briefly from the testimony offered by each of these witnesses. The first was Mr. John Visny, of Newtown, Conn., a member of a 4-H club in his county. Mr. Visny first came in contact with the county club agent in connection with some experiments he and his brother were making with an improved variety of ensilage. From this he branched out into growing certified potatoes, and finally centered his interest on dairy work. His progress was so rapid that he finally wound up by taking a rather extensive course in dairy-cattle judging, and concluded so well that in the national dairy judging contest of 1923 he won first place. Mr. Visny's testimony as to the value of club work is summarized very nicely in one brief paragraph, which I quote:

> Our real interest and belief in farming as an occupation and knowledge of how farming may be made more profitable; a broader knowledge of the things in this world, as well as a wider circle of friends, contact of the people in the community with us; made dreams of a college education a reality; and strengthened our belief that there is a way out if you can only find it, and through club work we are finding ours. The privilege to take part in club work activities and to state what it has meant to me I must confess I appreciate. I am not sorry for the young farm folks with 4-H opportunities, but I do sympathize from the bottom of my heart with the thousands of young farm folks who are going through what was to me the most important part of my life unaided, because there are not enough county workers to carry club work to all farm boys and girls.

A representative of the girls' clubs appeared before the committee in the person of Miss Viola Yoder, of Cumberland, Md. Miss Yoder took up food, sewing, home improvement, and livestock projects. Her testimony was exceedingly interesting, both as to the practical and esthetic value of club work. Her summary of what it has meant to her and her family is very well stated in her own words:

> Then club work has been valuable to my folks, as it has brought me closer to my parents and the duties of my home. It has given me a larger circle of friends; it has given me self-confidence, and it has given me a moral responsibility, and I know the club work has been a benefit in my home, because it has brought the children closer to our parents, and it has brought cheer into our home more than it had before.

Mrs. D. B. Phillips, a local leader of girls' clubs of Forestville, Ohio, offered convincing testimony as to the value of home-demonstration and club work. She said:

> So the women's work is certainly not being neglected. But from the small amount that we have been able to receive, just as you might say getting a taste of what is in store for us, has created the desire in every county for the work of a home-demonstration agent. We want it, and the sooner we can get home-demonstration work into our county the better we will be pleased. But I am going to be frank to say this, that I would not prefer either an agricultural or home-demonstration agent in preference to the boys' and girls' club work.

The General Federation of Women's Clubs gave very cordial approval to the bill upon the adoption of an amendment providing for the appointment of men and women agents in just and fair proportions.

I think it would be a matter of interest to the Members of the House, who naturally have a particular interest in this measure in its application to their several States, just to show what the States are doing in raising and expending extension funds already provided. I present herewith a table showing the amount of funds appropriated under the Smith-Lever and supplemental appropriations from the Federal Treasury for extension work, and in a parallel column the amount similarly expended by State, county, and local agencies:

State	Present funds	
	Federal Smith-Lever and supplemental	Total State, county and local
Alabama	$203,201.83	$256,208.19
Arizona	32,761.23	68,591.23
Arkansas	163,576.10	268,060.00
California	125,061.46	601,186.87
Colorado	61,101.07	152,701.07
Connecticut	56,680.09	175,950.00
Delaware	20,741.56	11,541.56
Florida	74,368.33	272,648.33
Georgia	237,780.76	316,780.76
Idaho	42,867.74	133,409.52
Illinois	228,495.98	763,895.98
Indiana	162,087.09	361,385.00
Iowa	170,596.43	705,297.57
Kansas	130,962.06	424,555.17
Kentucky	197,342.23	222,342.23
Louisiana	132,963.83	229,811.43
Maine	59,217.76	81,017.76
Maryland	70,963.51	209,097.11
Massachusetts	31,234.75	357,728.50
Michigan	159,913.95	496,347.00
Minnesota	150,319.33	283,024.33
Mississippi	172,904.83	311,071.66
Missouri	200,921.32	248,671.32
Montana	49,597.13	211,217.00
Nebraska	103,620.98	187,378.20
Nevada	16,530.11	65,030.11
New Hampshire	27,159.69	127,820.00
New Jersey	80,773.81	253,650.00
New Mexico	41,035.53	112,544.01
New York	198,634.11	1,015,812.77
North Carolina	227,356.06	377,940.00
North Dakota	68,694.01	148,505.00
Ohio	228,775.06	529,520.00
Oklahoma	166,422.88	304,257.36
Oregon	51,224.89	235,398.38
Pennsylvania	336,987.38	326,987.38
Rhode Island	11,598.82	25,808.82
South Carolina	156,014.49	242,104.51
South Dakota	66,176.30	190,076.30
Tennessee	191,413.63	227,540.00
Texas	341,015.26	612,875.81
Utah	34,565.68	75,982.32
Vermont	35,473.53	85,261.68
Virginia	181,804.66	317,454.66
Washington	73,868.29	159,550.29
West Virginia	125,015.45	246,181.00
Wisconsin	155,779.27	291,930.00
Wyoming	24,399.74	98,812.54
Total	5,880,000.00	13,420,960.73

Taking the United States at large, we find that for every dollar that is voted by the Federal Government for the extension service the States and the local communities match that by $1.94. Several of the States go far beyond this ratio. It will be conceded that the State of Massachusetts is usually very conservative in matters of this sort. The ratio between the amount of extension funds supplied by the Federal Government and the amount voted by the State of Massachusetts and the local units of government in that State is as 1 to 11; that is to say, Massachusetts votes $11 out of its own State treasury and the treasuries of its local units against every dollar that is applied to that State out of the Federal Treasury. Taking the State of New York, from which my distinguished colleague on the Committee on Agriculture [Mr. CLARKE] comes, a member who has lent very valuable service in the framing of this bill, for every dollar that is appropriated by the Federal Government for extension work the State of New York appropriates $5. The State of North Dakota, from which my colleague on the committee [Mr. HALL] comes, apppropriates $2.50, and in the State of Connecticut, usually a very conservative State and the State from which our distinguished floor leader comes, the ratio is 3 to 1.

So, in general, we may say that the response on the part of the States of the Union to this very valuable service has been very fine, indeed, indicating that they do appreciate the work and that they are very anxious that it be extended. The dis-

tribution of funds under this bill will be $20,000 to each State of the Union the first year. Beginning with the second year, the total distribution by States, both cooperative and noncooperative, will be as follows:

State	Amount
Alabama	$37,889.06
Arizona	22,107.52
Arkansas	34,220.01
California	30,653.84
Colorado	24,731.58
Connecticut	24,322.23
Delaware	20,994.59
Florida	25,960.03
Georgia	41,090.81
Idaho	23,043.31
Illinois	40,231.11
Indiana	34,082.14
Iowa	34,870.04
Kansas	31,200.19
Kentucky	37,346.50
Louisiana	31,385.54
Maine	24,557.20
Maryland	25,644.77
Massachusetts	21,966.18
Michigan	33,880.92
Minnesota	32,992.53
Mississippi	35,083.78
Missouri	37,677.90
Montana	23,666.40
Nebraska	28,668.61
Nevada	20,604.64
New Hampshire	21,588.86
New Jersey	26,553.13
New Mexico	22,873.66
New York	37,466.12
North Carolina	40,125.56
North Dakota	25,434.63
Ohio	40,256.95
Oklahoma	34,483.60
Oregon	23,817.12
Pennsylvania	50,276.61
Rhode Island	20,148.04
South Carolina	33,519.86
South Dakota	25,201.51
Tennessee	36,797.56
Texas	50,649.56
Utah	22,274.60
Vermont	22,358.66
Virginia	35,907.84
Washington	25,913.73
West Virginia	30,649.58
Wisconsin	33,498.08
Wyoming	21,333.31
Total	1,460,000.00

Mr. Speaker, many additional things might be said as to the value of the work which it is proposed to continue and enlarge under the funds provided in this bill. Because of the fact, however, that no objection appeared to the passage of the bill last year and that the situation is practically the same this year, so far as my information goes, I do not want to trespass further upon the time of the House with a discussion of its merits.

The SPEAKER pro tempore. The time of the gentleman from Michigan has expired.

The Chair desires to say that the gentleman from Michigan has proceeded by unanimous consent.

Mr. TILSON. Leave has been given to consider the bill in the House as in Committee of the Whole, but the bill has not been read.

The SPEAKER pro tempore. The gentleman from Iowa called up the bill and immediately asked unanimous consent that the gentleman from Michigan [Mr. KETCHAM] make a statement. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That in order to further develop the cooperative extension system as inaugurated under the act entitled "An act to provide for cooperative agricultural extension work between the agricultural colleges in the several States receiving the benefits of the act of Congress approved July 2, 1862, and all acts supplementary thereto, and the United States Department of Agriculture," approved May 8, 1914, there is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, for the purpose of paying the expenses of the cooperative extension work in agriculture and home economics, and the necessary printing and distributing of information in connection with the same, the sum of $960,000 for each year, $20,000 of which shall be paid annually, in the manner hereinafter provided, to each State which shall by action of its legislature assent to the provisions of this act. The payment of such installments of the appropriations hereinbefore made as shall become due to any State before the adjournment of the regular session of the legislature meeting next after the passage of this act may, in the absence of prior legislative assent, be made upon the assent of the governor thereof, duly certified to the Secretary of the Treasury. There is hereby authorized to be appropriated for the fiscal year following that in which the foregoing appropriation first becomes available, and for each year thereafter, the sum of $500,000. The additional sums appropriated under the provisions of this act shall be subject to the same conditions and limitations as the additional sums appropriated under such act of May 8, 1914, except that (1) at least 80 per cent of all appropriations under this act shall be utilized for the payment of salaries of extension agents in counties of the several States to further develop the cooperative extension system in agriculture and home economics with men, women, boys, and girls; (2) funds available to the several States under the terms of this act shall be so expended that the extension agents appointed under its provisions shall be men and women in fair and just proportions; (3) the restriction on the use of these funds for the promotion of agricultural trains shall not apply.

Mr. ASWELL. Now, Mr. Speaker, may I make an inquiry? In view of the fact that this bill passed the House at the last session by unanimous consent, that it has the indorsement of the committee, that it has the approval of everybody else that has been before the committee, including the American Federation of Women, consisting of some 3,000,000 people, I wonder why it is necessary to debate it at all. How much time will be given to it?

The SPEAKER pro tempore. The bill is now being debated under the five-minute rule. The first section has been read and the gentleman from Michigan recognized.

Mr. McLAUGHLIN. Mr. Speaker, the Lever law—I do not call it the Smith-Lever law because I know how it originated, and Mr. Lever should have the credit of it—when the Lever law was passed it provided for $10,000 to each State and a proportionate share of a larger sum to be divided among the States in proportion to their population, but it gave the money only to the States. I believe an amendment has been made by which the Territories also get the benefit of it. Now, this bill, as it now reads, the bill now before us, proposes to give money only to the States. Should it not be so amended that the additional money will go to the Territories as well as to the States?

Mr. KETCHAM. Let me say that that point has been strongly urged by the Delegate from Hawaii who is present and able to present his own argument.

Mr. McLAUGHLIN. Very well. I did not see the Delegate. If I had known he was here, ready as he evidently is to take care of the matter, I would not have spoken.

Mr. BANKHEAD. And before the gentleman proceeds I would like to ask a question for information, because we have not had an opportunity to examine the bill. This does not make any change in the structure of the original act?

Mr. KETCHAM. No.

Mr. BANKHEAD. It merely increases the appropriation?

Mr. KETCHAM. It does not make any change in the structure of the original act, but it provides the way that the funds shall be expended; and the major portion of the money shall go to the men and women agents in a just and fair proportion.

Mr. HOUSTON of Hawaii. Mr. Speaker, I offer the following amendment.

The Clerk read as follows:

Page 2, line 9, strike out the figures "$960,000" and insert "$980,000."

Page 2, line 11, after the word "State," insert the words "and Territory of Hawaii."

On page 2, line 14, after the word "State," insert the words "the Territory."

Page 3, line 5, after the word "State," insert "and Territory of Hawaii."

Mr. HOUSTON of Hawaii. Mr. Speaker it will be recalled that the other day when the Agricultural Department appropriation bill was under consideration I asked for the inclusion of certain benefits for the Territory of Hawaii. At that time I was told, and it was so held, that such matters should come from the Legislative Committee. I have proposed at this time an amendment which will unequivocally take care of the needs of the Territory of Hawaii in connection with this particular bill.

Mr. BLACK of Texas. And if the gentleman's amendment is adopted I suppose the Legislature of Hawaii will have to make a matching appropriation, just the same as the legislature of a State?

Mr. HOUSTON of Hawaii. That is correct. They have heretofore taken care of all such benefits that they have been given the privilege of sharing in.

Mr. BLACK of Texas. And they have the power to do that under the organic act?

Mr. HOUSTON of Hawaii. They have that power under the organic act.

Mr. McLAUGHLIN. Has not this same privilege been extended to other of our outlying possessions?

Mr. HOUSTON of Hawaii. We are not an "outlying possession." We are a Territory, and as such occupy a position quite distinct from Porto Rico, the Philippines, and the Virgin Islands. By the terms of the organic act which was framed by the Congress we were accorded certain privileges which are not being met unless this particular amendment is agreed to.

Mr. McLAUGHLIN. I heartily approve the gentleman's amendment; but my impression is that the Lever Act had been extended to other possessions or Territories beside the Territory of Hawaii.

Mr. HOUSTON of Hawaii. No.

Mr. KETCHAM. Do not the provisions of the Purnell Act apply to Hawaii?

Mr. HOUSTON of Hawaii. To the "Territories," in the language of the bill; but by administrative decisions Hawaii does not yet benefit by reason of the Purnell Act.

Mr. KETCHAM. To what extent do any of these bills that have this feature in them apply to Hawaii?

Mr. HOUSTON of Hawaii. We feel they all apply, but by administrative decisions we have been denied the benefits.

Mr. KETCHAM. Does the gentleman happen to know whether any of them apply to Alaska?

Mr. HOUSTON of Hawaii. Only the second Morrell and the Nelson Acts, I believe.

The SPEAKER pro tempore. The question is on the amendment offered by the Delegate from Hawaii.

The amendment was agreed to.

The Clerk concluded the reading of the bill, as follows:

SEC. 2. The sums appropriated under the provisions of this act shall be in addition to, and not in substitution for, sums appropriated under such act of May 8, 1914, or sums otherwise annually appropriated for cooperative agricultural extension work.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider the vote by which the bill was passed was laid on the table.

DISPOSAL OF MOUNT WEATHER OBSERVATORY

Mr. HAUGEN. Mr. Speaker, I call up House Joint Resolution 89, authorizing the Secretary of Agriculture to dispose of real property, located in Loudoun and Clarke Counties, Va., known as Mount Weather, no longer required for observatory and laboratory purposes.

The SPEAKER pro tempore. The gentleman from Iowa calls up House Joint Resolution 89. This bill is on the Union Calendar.

Mr. HAUGEN. Mr. Speaker, I ask unanimous consent that S. 1531, authorizing the Secretary of Agriculture to sell the Weather Bureau station known as Mount Weather, in the counties of Loudoun and Clarke, in the State of Virginia, a similar bill, be substituted for the House joint resolution.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The SPEAKER pro tempore. The Chair calls attention to the fact that the Senate bill is on the Union Calendar.

Mr. HAUGEN. Mr. Speaker, I ask unanimous consent that it be considered in the House as in Committee of the Whole House on the state of the Union.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the Senate bill.

The Clerk read the Senate bill, as follows:

Be it enacted, etc., That the Secretary of Agriculture be, and he is hereby, authorized and directed to advertise for sale and to sell to the highest responsible bidder the premises known as Mount Weather, in the counties of Loudoun and Clarke, in the State of Virginia, and comprising 84.81 acres of land, more or less, together with the buildings and other improvements thereon, including laboratories, cottages, sheds, stables, shops, heating and power plant, kite shelter, and other buildings of whatever nature, together with all rights, easements, and appurtenances thereto belonging, at such time, in such manner, and upon such terms as he may deem for the best interests of the United States; to convey such property to the purchaser thereof by the usual quitclaim deed, and to deposit the proceeds of such sale in the Treasury of the United States as a miscellaneous receipt, after deducting the expenses incident to such sale, but the Secretary of Agriculture shall reserve the right to reject any and all bids if in his judgment it is in the public interest to do so; and in the event of a general rejection of bids, to readvertise the property under conditions provided herein as often as may be necessary to accomplish sale.

The SPEAKER pro tempore. The question is on the third reading of the Senate bill.

The Senate bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider the vote by which the bill was passed was laid on the table.

House Joint Resolution 89 was laid on the table.

EXPORT OF HORSES, SHEEP, ETC.

Mr. HAUGEN. Mr. Speaker, I call up House Joint Resolution 140, to amend sections 1 and 2 of the act of March 3, 1891, which I send to the desk.

The SPEAKER pro tempore. The gentleman from Iowa calls up House Joint Resolution 140, which the Clerk will report.

The Clerk read the House joint resolution, as follows:

Resolved, etc., That sections 1 and 2 of the act of March 3, 1891 (26. Stat. L. 833), be amended by adding, after the word "cattle," as it occurs in lines 4 and 6 of section 1 and in lines 2 and 5 of section 2, a comma followed by the words "horses, sheep, goats, or swine," so that said sections as hereby amended shall read as follows:

"That the Secretary of Agriculture is hereby authorized to examine all vessels which are to carry export cattle, horses, sheep, goats, or swine from the ports of the United States to foreign countries, and to prescribe by rules and regulations or orders the accommodations which said vessels shall provide for export cattle, horses, sheep, goats, or swine as to space, ventilation, fittings, food and water supply, and such other requirements as he may decide to be necessary for the safe and proper transportation and humane treatment of such animals.

"SEC. 2. That whenever the owner, owners, or master of any vessel carrying export cattle, horses, sheep, goats, or swine shall willfully violate or cause or permit to be violated any rule, regulation, or order made pursuant to the foregoing section the vessel in respect of which such violation shall occur may be prohibited from again carrying cattle, horses, sheep, goats, or swine from any port of the United States for such length of time, not exceeding one year, as the Secretary of Agriculture may direct, and such vessel shall be refused clearance from any port of the United States accordingly."

The SPEAKER pro tempore. The question is on the engrossment and third reading of the joint resolution.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed.

A motion to reconsider the vote by which the House joint resolution was passed was laid on the table.

MEDALS GRANTED BY CONGRESS

Mr. TILSON. Mr. Speaker, in connection with a bill which I introduced some time ago and which passed the House a few days ago, authorizing a medal to be awarded to Colonel Lindbergh, Mr. Harvey Thomas, the efficient clerk to the Committee on Coinage, Weights, and Measures, has prepared an article, including some statistics, in regard to medals that Congress has given. I think this article by Mr. Thomas would be very interesting to the membership of the House, and I therefore ask unanimous consent to extend my remarks in the RECORD by printing it.

The SPEAKER. The gentleman from Connecticut asks unanimous consent to extend his remarks in the RECORD by incorporating the statement referred to. Is there objection?

There was no objection.

Mr. TILSON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following statistics prepared by Mr. Harvey Thomas, clerk to the Committee on Coinage, Weights, and Measures of the House of Representatives, in regard to the granting of congressional medals:

THE MEDALS CONGRESS GIVES

By Harvey Thomas

Ninety-three instances, either of individuals or events, have been recognized by Congress through the presentations of gold, silver, or bronze medals since the formation of the United States. This enumeration does not include, of course, the formal congressional medals of honor awarded for exceptional valor. The proposal, however, to give Col. Charles A. Lindbergh another medal at the hands of Congress, as carried by the bill of Representative TILSON, of Connecticut, and already reported out of committee, would list this award in this category and would make the ninety-fourth such recognition since March 25, 1776, when the first medal was struck in honor of Washington before Boston.

Mr. TILSON has personally made a careful study of the records of the Treasury Department regarding these special medals and has reported the result to Chairman RANDOLPH PERKINS, of the House Committee on Coinage, Weights, and Measures, which has had the latest Lindbergh proposal in hand. In addition to the medals referred to above as "specials," Mr. TILSON's report shows that 29 other medals have been struck in bronze in honor of each of the Presidents on the dates of their inauguration. There have also been 11 medals in gold

and silver symbolical of some particular tie-up with George Washington, 10 others emblematical of the Secretaries of the Treasury, and 14 picturing various directors of the mint. None of these, however, was authorized by Congress.

The same report by Mr. TILSON discloses further and somewhat oddly that the rarest of all the medals ever issued by the Government, in so far as present-day value is concerned, was one awarded to Dr. Joseph Pancoast by congressional authorization in 1867. Doctor Pancoast was professor of anatomy at Jefferson Medical College, Philadelphia, and was considered one of the greatest of the early day surgeons. A replica of this medal is on exhibition in the National Museum at Washington. The Treasury holds this medal to-day as valued at $231.50 in gold. The nearest approach to it in value for a gold congressional award is the medal given in 1858 to Louis Agassiz, the naturalist, which has a present-day price of $105.50. Of those medals not authorized by Congress the one having the highest value was awarded to the third Director of the Mint, J. Ross Snowden. It is worth $221 in gold, the engraver having been Paquet.

The congressional authorized special medals as reported by Mr. TILSON to Congress have been catalogued as "28 to members of the Army, 32 to members of the Navy, and 33 miscellaneous." The Agassiz and Pancoast medals come under the latter head, of course. Other miscellaneous medal awards by Congress, all in gold, silver, or bronze began with recognition to James A. Garfield during the Civil War. In the order of subsequent cataloguing by the Treasury for Mr. TILSON the awards are mentioned as follows:

Lincoln and Grant, Pennsylvania Bicentennial, Valley Forge Centennial, Lincoln and Garfield, Lincoln (broken column), Japanese Embassy, Frederick Rose, Indian Peace Medal, Hosack, First Steam Coinage, Pacific Railroad, Emancipation Proclamation, Cyrus W. Field, Indian Peace (Grant), Indian Peace (Hayes), Indian Peace (Garfield), Indian Peace (Arthur), Indian Peace (Cleveland), Indian Peace (Harrison), Let Us Have Peace (Grant), Seward-Robinson, United States Diplomatic, Great Seal, Joseph Francis, Lincoln Centennial, Wright Brothers, Abraham Lincoln, Woodrow Wilson, Warren G. Harding, Calvin Coolidge.

The medals authorized by Congress for presentation to Army officials or in commemoration of military events, the first eight of which were executed in France have been enumerated by the Treasury, as follows:

Washington before Boston, Major General Gates for Saratoga, Brigadier General Morgan for Cowpens, Lieutenant Colonel Howard for Cowpens, Lieut. Col. W. A. Washington for Cowpens, Count de Fluery for Stony Point, Maj. Gen. Anthony Wayne for Stony Point, Maj. Henry Lee for Paulus Hook, Maj. Gen. Nathaniel Greene for Eutaw Springs, Major General Scott for Chippewa and Niagara, Major General Gaines for Fort Erie, Major General Porter for Chippewa, Niagara, and Erie; Major General Brown for same, Brigadier General Miller for same, Brigadier General Ripley for same, Major General Macomb, Battle of Plattsburgh; Maj. Gen. Andrew Jackson for Battle of New Orleans, Major General Harrison for Thames, Governor Isaac Shelby for Thames, Col. George Croghan for Sandusky, Major General Taylor for Palo Alto, Major General Taylor for Buena Vista, Major General Taylor for Monterey, Major General Scott for battles in Mexico, Major General Grant, Pennsylvania Volunteers, action on Lake Erie, Major General Scott at request of Commonwealth of Virginia, Colonel Armstrong for village of Kittanning.

On the Navy side the special congressional awards other than congressional medals of honor were given to John Paul Jones for *Serapis*, Capt. Thomas Truxtun for action with *La Vengeance*, Capt. Preble before Tripoli, Captain Hull for capture of *Guerriere*, Capt. Jacob Jones for capture of *Frolic*, Captain Decatur for capture of *Macedonian*, Captain Bainbridge for capture of *Java*, Captain Burrows for capture of *Boxer*, Lieutenant McCall for same, Captain Perry for Lake Erie, Captain Lawrence for capture of *Peacock*, Captain MacDonough for capture of British fleet on Lake Champlain, Captain Henley for same, Lieutenant Cassin for same, Captain Warrington for capture of *Epervier*, Captain Blakely for capture of *Reindeer*, Captain Biddle for capture of *Penguin*, Captain Stewart for capture of *Cyane* and *Levant*. Rescue of officers and crew of brig *Somers*, Captain Ingraham, Captain Perry at request of State of Pennsylvania, Cornelius Vanderbilt, Captains Creighton, Low, and Stopffer for work at wreck of steamer *San Francisco*; Commodore Perry, at request of merchants of Boston, Metis shipwreck medal; John Horn, for life saving, Lieut. Victor Blue, United States Coast Survey, for gallantry and humanity, departure of American Fleet.

The Washington medals are featured around these symbols, "Time increases his fame," "Cabinet medal," "Washington and Jackson," "Commencement of Washington coin cabinet," "Presidency relinquished," "Allegiance," "Washington and Lincoln," "Washington and Grant," "Washington wreath," "Washington before Boston," "Washington, President."

Those Secretaries of the Treasury who have been immortalized on medals, the last four being on bronze only, were William Windom, John G. Carlisle, Daniel Manning, Lyman J. Gage, Leslie M. Shaw, George B. Cortelyou, Franklin MacVeagh, William G. McAdoo, Carter Glass, and A. W. Mellon.

In addition to the medals Congress has also authorized and ordered the special coinage of 17 different pieces of money—gold dollars, silver dollars, and silver half dollars—each commemorative of some historic event in the Nation's progress.

The first of these was the Columbian half dollar coined in 1892, and the Isabella silver quarter struck in 1893 for the World's Fair in Chicago. The next was the Lafayette silver dollar struck in 1899. This was followed by special gold dollars for the Louisiana Purchase Exposition at St. Louis in 1903, two types being made, one showing the head of Thomas Jefferson and the other that of William McKinley. Then came the Lewis and Clark Exposition gold dollar in 1904, and the Pan Pacific Exposition coins. There were four of these—one 50-dollar gold piece, 2½-dollar gold pieces, 1-dollar gold pieces, and silver half dollars—all stamped in 1915. Also, there were two types of this 50-gold piece, one round and the other octagonal.

In 1916 the McKinley gold dollar was authorized in connection with the erection of a memorial building at Niles, Ohio, and this was followed in 1918 with the Illinois Centennial half dollar commemorative of the one hundredth anniversary of Illinois' admission to the Union. The Maine Centennial half dollar appeared in 1920, as did the Alabama Centennial half dollar and the Pilgrim Tercentenary half dollar. In 1921 Missouri celebrated its centennial by getting Congress to approve a special half dollar coin, and the next year the Grant Memorial coins, gold dollars and half dollars, came out in honor of the centenary of the birth of the Civil War general. In 1923 another half dollar was minted, known as the Monroe Doctrine Centennial coin, and a month afterward the Walloon-Huguenot half dollar appeared to commemorate the three hundredth anniversary of the settlement of the Middle States in 1624.

The last three special half dollars minted were known as the Vancouver half dollar, the Sesquicentennial half dollar, and the Oregon Trail half dollar.

None of this coinage has been profitable to the Government, according to a recent letter to Congress by Secretary Mellon. In fact, Mr. Mellon says the special coinages have been dangerously impractical. In this connection Mr. Mellon said:

"The issue of special coins for various commemorations has grown in recent years to the proportions of a distinct abuse of our coinage. As your committee is aware, I feel that the coinage should not be commercialized. The practice introduces confusion into our coinage system, is an unwarranted expense, and, as actual results have shown, special coins are not liked by the public. They are seldom absorbed for circulation, and there are instances of special coins having been refused in trade for the reason that the public is not familiar with them. The issue of special coins opens an easy way for counterfeiting and makes the protection of our coinage difficult. As already stated to your committee in commenting on other bills, aside from the dangerous and objectionable policy of diverting the coinage from its original use in trade, we are imposing upon the mints, and therefore, upon the Government, an unnecessary and wasteful practice. We are required to invest money in the precious metals for coinage not needed, to be sold at a profit for a particular enterprise, and we are entirely defeating the primary purpose of coinage."

FURTHER MESSAGES FROM THE SENATE

A further message from the Senate, by Mr. Craven, its principal clerk, announced that the Senate had passed without amendment bills of the following titles:

H. R. 9293. An act granting the consent of Congress to the Highway Department of the State of Tennessee to construct, maintain, and operate a bridge across the Clinch River on the Sneedville-Rogersville road in Hancock County, Tenn.; and

H. R. 9843. An act to extend the times for commencing and completing the construction of a bridge across the Kanawha River in or near Henderson, W. Va., to a point opposite thereto in or near Point Pleasant, W. Va.

The message also announced that the Senate had passed with amendments bills of the following titles, in which the concurrence of the House of Representatives was requested:

H. R. 9198. An act granting the consent of Congress to the Highway Department of the State of Tennessee to construct, maintain, and operate a bridge across the Tennessee River on the Paris-Dover road in Henry and Stewart Counties, Tenn.; and

H. R. 9199. An act granting the consent of Congress to the Highway Department of the State of Tennessee to construct, maintain, and operate a bridge across the Cumberland River on the Dover-Clarksville road in Stewart County, Tenn.

ENROLLED BILLS SIGNED

Mr. CAMPBELL, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bills of the following titles, when the Speaker signed the same:

H. R. 437. An act authorizing the Maysville Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Maysville, Ky.;

H. R. 472. An act authorizing the Dwight P. Robinson & Co. (Inc.), its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Maysville, Ky.;

H. R. 2809. An act for the relief of the heirs of Jacob Thomas;

H. R. 5476. An act to authorize the Secretary of War to sell to the Pennsylvania Railroad Co. a tract of land situate in the city of Philadelphia and State of Pennsylvania;

H. R. 6491. An act to amend section 8 of the act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914, as amended;

H. R. 6579. An act for the relief of James W. Kingon;

H. R. 6684. An act to amend section 2455 of the Revised Statutes of the United States, as amended, relating to isolated tracts of public land;

H. R. 7008. An act to authorize appropriations for the completion of the transfer of the experimental and testing plant of the Air Corps to a permanent site at Wright Field, Dayton, Ohio, and for other purposes;

H. R. 7553. An act for the relief of James Neal;

H. R. 8293. An act to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913;

H. R. 8899. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River at or near Epes, Ala.;

H. R. 8900. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River near Gainesville on the Gainesville-Eutaw road between Sumter and Green Counties, Ala.;

H. R. 9019 An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across the Ouachita River at or near Calion, Ark.;

H. R. 9063. An act to extend the times for commencing and completing the construction of a bridge across the Chattahoochee River at or near Alaga, Ala.;

H. R. 9202. An act to authorize construction at the United States Military Academy, West Point, N. Y.;

H. R. 9204. An act granting the consent of Congress to the Arkansas Highway Commission to construct, maintain, and operate a free highway bridge across the Current River at or near Success, Ark.;

H. R. 9339. An act granting the consent of Congress to the board of county commissioners of Trumbull County, Ohio, to construct, maintain, and operate a free highway bridge across the Mahoning River at or near Warren, Trumbull County, Ohio; and

H. R. 9484. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River at or near Aliceville on the Gainesville-Aliceville road in Pickens County, Ala.

The SPEAKER also announced his signature to enrolled bills of the Senate of the following titles:

S. 700. An act authorizing the Secretary of the Interior to execute an agreement with the middle Rio Grande conservancy district providing for conservation, irrigation, drainage, and flood control for the Pueblo Indian lands in the Rio Grande Valley, N. Mex., and for other purposes;

S. 771. An act providing for the gift of the U. S. S *Dispatch* to the State of Florida;

S. 1705. An act authorizing the Court of Claims to render judgment in favor of the administrator of or collector for the estate of Peter P. Pitchlynn, deceased, instead of the heirs of Peter P. Pitchlynn, and for other purposes;

S. 2902. An act authorizing the States of Wisconsin and Michigan to construct, maintain, and operate a free highway bridge across the Menominee River at or near Marinette, Wis.; and

S. 2342. An act providing for a per capita payment of $25 to each enrolled member of the Chippewa Tribe of Minnesota from the funds standing to their credit in the Treasury of the United States.

BILLS PRESENTED TO THE PRESIDENT

Mr. CAMPBELL, from the Committee on Enrolled Bills, reported that this day they presented to the President of the United States for his approval bills of the following titles:

H. J. Res. 176. House joint resolution granting the consent of Congress to an agreement or compact entered into between the State of Wisconsin and the State of Michigan for the construction, maintenance, and operation of a highway bridge across the Menominee River; and

H. R. 11197. An act to authorize the Secretary of War to grant rights of way to the Vicksburg Bridge & Terminal Co. upon, over, and across the Vicksburg National Military Park at Vicksburg, Warren County, Miss.

ADJOURNMENT

Mr. TILSON. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 35 minutes p. m.) the House adjourned until to-morrow, Thursday, March 8, 1928, at 12 o'clock noon.

COMMITTEE HEARINGS

Mr. TILSON submitted the following tentative list of committee hearings scheduled for Thursday, March 8, 1928, as reported to the floor leader by clerks of the several committees:

COMMITTEE ON THE JUDICIARY

(10 a. m.)

Proposing an amendment to the Constitution of the United States providing for national representation for the people of the District of Columbia (H. J. Res. 18).

COMMITTEE ON APPROPRIATIONS

(10.30 a. m.)

Navy Department appropriation bill.
Legislative appropriation bill.

COMMITTEE ON MILITARY AFFAIRS

(10.30 a. m.)

To safeguard national defense; to authorize, in the aid of agriculture, research, experiments, and demonstration in methods of manufacture and production of nitrates and ingredients comprising concentrated fertilizer and its use on farms (H. R. 10028).

COMMITTEE ON THE MERCHANT MARINE AND FISHERIES

(10 a. m.)

To further develop an American merchant marine, to assure its permanence in the transportation of the foreign trade of the United States (S. 744).

To promote, encourage, and develop an American merchant marine in connection with the agricultural and industrial commerce of the United States, provide for the national defense, the transportation of foreign mails, the establishment of a merchant marine training school, and for other purposes (H. R. 2).

To amend the merchant marine act, 1920, insure a permanent passenger and cargo service in the north Atlantic, and for other purposes (H. R. 8914).

To create, develop, and maintain a privately owned American merchant marine adequate to serve trade routes essential in the movement of the industrial and agricultural products of the United States and to meet the requirements of the commerce of the United States; to provide for the transportation of the foreign mails of the United States in vessels of the United States; to provide naval and military auxiliaries; and for other purposes (H. R. 10765).

COMMITTEE ON NAVAL AFFAIRS

(10.30 a. m.)

A hearing to consider private bills on the committee calendar.

COMMITTEE ON THE CIVIL SERVICE

(10.30 a. m.)

Providing that in all civil-service examinations for appointment to positions under the Federal Government or the District of Columbia honorably discharged soldiers, sailors, and marines shall have five points added, and all such soldiers, sailors, and marines who because of disability are entitled to pension under the pension laws or to compensation under the World War veterans' act, 1924, shall have 10 points added (H. J. Res. 212).

EXECUTIVE COMMUNICATIONS, ETC.

398. Under clause 2 of Rule XXIV, a communication from the President of the United States, transmitting supplemental estimate of appropriation under the legislative establishment, Library of Congress, for the fiscal year 1928, in the sum of $2,500 (H. Doc. No. 194), was taken from the Speaker's table and referred to the Committee on Appropriations and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. SNELL: Committee on Rules. H. Res. 134. A resolution providing for the consideration of H. R. 11526; a bill to

authorize the construction of certain naval vessels, and for other purposes; without amendment (Rept. No. 847). Referred to the House Calendar.

Mr. JONES: Committee on Agriculture. H. R. 11579. A bill relating to investigation of new uses of cotton; without amendment (Rept. No. 848). Referred to the Committee of the Whole House on the state of the Union.

Mr. EVANS of Montana: Committee on the Public Lands. H. R. 126. A bill to add certain lands to the Missoula National Forest, Mont.; with an amendment (Rept. No. 851). Referred to the Committee of the Whole House on the state of the Union.

Mr. ENGLEBRIGHT: Committee on the Public Lands. H. R. 11685. A bill to accept the cession by the State of California of exclusive jurisdiction over the lands embraced within the Lassen Volcanic National Park, and for other purposes; without amendment (Rept. No. 852). Referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of Rule XIII,

Mr. McSWAIN: Committee on Military Affairs. H. R. 7230. A bill for the relief of Charles L. Dewey; without amendment (Rept. No. 849). Referred to the Committee of the Whole House.

CHANGE OF REFERENCE

Under clause 2 of Rule XXII, the Committee on Claims was discharged from the consideration of the bill (H. R. 11819) for the relief of Richard L. Meares, administrator of Armand D. Young, deceased, and the same was referred to the Committee on War Claims.

PUBLIC BILLS AND RESOLUTIONS

Under clause 3 of Rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ARNOLD: A bill (H. R. 11846) authorizing the American Bridge & Ferry Co. (Inc.), its successors and assigns, to construct, maintain, and operate a bridge across the Wabash River; to the Committee on Interstate and Foreign Commerce.

By Mr. JAMES: A bill (H. R. 11847) to authorize the acquisition of the Queen Emma and Damon Estates, and the Halawa site in the vicinity of Fort Kamehameha, Hawaii; to the Committee on Military Affairs.

By Mr. LINTHICUM: A bill (H. R. 11848) to amend the definition of the words "manufacture of oleomargarine," and to amend the limitation upon oleomargarine taxable at one-fourth of 1 cent per pound, in the act entitled "An act defining butter; also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine," approved August 2, 1886, as amended; to the Committee on Agriculture.

By Mr. OLDFIELD: A bill (H. R. 11849) to amend the World War act of 1924, as amended; to the Committee on World War Veterans' Legislation.

By Mr. GRAHAM: A bill (H. R. 11850) to authorize the Attorney General to submit a report covering the establishment of an adequate penal system; to the Committee on the Judiciary.

By Mr. BYRNS: A bill (H. R. 11851) to amend an act entitled "An act for the relief of contractors and subcontractors for the post offices and other buildings and work under the supervision of the Treasury Department, and for other purposes"; to the Committee on Public Buildings and Grounds.

By Mr. KEMP: A bill (H. R. 11852) providing for the confirmation of grant of lands formerly the United States Barracks at Baton Rouge, La., to the board of supervisors of the Louisiana State University and Agriculture and Mechanical College; to the Committee on the Public Lands.

By Mr. LEAVITT: A bill (H. R. 11853) creating a commission on the electoral system of the United States and defining its duties; to the Committee on Rules.

By Mr. FISH: Joint resolution (H. J. Res. 228) providing that in all civil-service examinations for appointment to positions under the Federal Government or the District of Columbia honorably discharged soldiers, sailors, and marines shall have five points added, and all such soldiers, sailors, and marines who, because of disability, are entitled to pension under the pension laws or to compensation under the World War veterans' act, 1924, shall have 10 points added, and for other purposes; to the Committee on the Civil Service.

MEMORIALS

Under clause 3 of Rule XXII, memorials were presented and referred as follows:

Resolution of the House of Representatives of the General Assembly of the Commonwealth of Kentucky, memorializing the Congress of the United States to pass all bills authorizing the construction of a bridge over the Ohio River between Maysville, Ky., and Aberdeen, Ohio, now pending before it; to the Committee on Interstate and Foreign Commerce.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BACON: A bill (H. R. 11854) for the relief of John W. Leich, alias John Leach; to the Committee on Military Affairs.

Also, a bill (H. R. 11855) for the relief of James E. Fraser; to the Committee on Claims.

By Mr. BLOOM: A bill (H. R. 11856) granting a pension to Margaret Creamer; to the Committee on Invalid Pensions.

By Mr. CANFIELD: A bill (H. R. 11857) to correct the military record of Jacob Shuey; to the Committee on Military Affairs.

By Mr. COLLIER: A bill (H. R. 11858) for the relief of V. P. Johnson; to the Committee on Claims.

By Mr. DAVEY: A bill (H. R. 11859) for the relief of B. C. Miller; to the Committee on the Judiciary.

By Mr. EVANS of California: A bill (H. R. 11860) granting an increase of pension to Joanna Burnett; to the Committee on Invalid Pensions.

By Mr. W. T. FITZGERALD: A bill (H. R. 11861) granting a pension to Mary E. Landis; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11862) granting an increase of pension to Alfred Kirkpatrick; to the Committee on Pensions.

By Mr. FREE: A bill (H. R. 11863) granting a pension to Anna Dix; to the Committee on Invalid Pensions.

By Mr. GARDNER of Indiana: A bill (H. R. 11864) granting an increase of pension to Lucinda Jarboe; to the Committee on Invalid Pensions.

By Mr. GOLDSBOROUGH: A bill (H. R. 11865) for the relief of the Tilghman Canning Co.; to the Committee on Claims.

By Mr. GREENWOOD: A bill (H. R. 11866) granting a pension to Dwight A. Morford; to the Committee on Pensions.

By Mr. GUYER: A bill (H. R. 11867) for the relief of John E. Davidson; to the Committee on Naval Affairs.

By Mr. HOUSTON of Delaware: A bill (H. R. 11868) granting an increase of pension to Margaret Moore; to the Committee on Invalid Pensions.

By Mr. IGOE: A bill (H. R. 11869) for the relief of William L. Bruhn; to the Committee on Military Affairs.

By Mrs. KAHN: A bill (H. R. 11870) granting a pension to Bertha Becker; to the Committee on Pensions.

Also, a bill (H. R. 11871) to allow the distinguished-service cross for service in the World War to be awarded to First Lieut. Royal R. Baronides; to the Committee on Military Affairs.

By Mr. MOORE of Virginia: A bill (H. R. 11872) for the relief of C. N. Knight, administrator of John Ridout MacGregor; to the Committee on War Claims.

By Mr. MOREHEAD: A bill (H. R. 11873) granting an increase of pension to William Foster; to the Committee on Pensions.

By Mr. MORGAN: A bill (H. R. 11874) granting a pension to Charles C. Leiter; to the Committee on Invalid Pensions.

By Mr. MOORMAN: A bill (H. R. 11875) granting a pension to Laura Burke; to the Committee on Invalid Pensions.

By Mr. RAGON: A bill (H. R. 11876) granting a pension to Alice E. Howsley; to the Committee on Invalid Pensions.

By Mr. RAINEY: A bill (H. R. 11877) granting an increase of pension to Mary Hansmeier; to the Committee on Invalid Pensions.

By Mr. REECE: A bill (H. R. 11878) granting a pension to Hannah Poston; to the Committee on Invalid Pensions.

By Mr. REED of New York: A bill (H. R. 11879) for the relief of Irene Brand; to the Committee on Claims.

Also, a bill (H. R. 11880) granting an increase of pension to Mary T. Fitzgerald; to the Committee on Invalid Pensions.

By Mr. SWING: A bill (H. R. 11881) granting a pension to Kerrhn C. Weesner; to the Committee on the Civil Service.

By Mr. SWICK: A bill (H. R. 11882) granting an increase of pension to Margret Winkler; to the Committee on Invalid Pensions.

By Mr. WASON: A bill (H. R. 11883) granting a pension to Mary F. Leavitt; to the Committee on Invalid Pensions.

By Mr. WHITE of Colorado: A bill (H. R. 11884) granting a pension to Charles B. Slanker; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5036. Petition of Benevolent Protective Order of Elks, Atlantic City Lodge, No. 276, urging upon the Members of Congress a full compliance with the recommendations of Secretary of the Navy Curtis D. Wilbur for additions to the naval forces of the Nation; to the Committee on Naval Affairs.

5071. By Mr. MACGREGOR: Memorial of Lodge Regina Elena, Order Sons of Italy, approving joint resolution of Senator Copeland requesting President to proclaim October 12 as Columbus Day; to the Committee on the Judiciary.

5072. By Mr. MEAD: Petition of Gibson-Snow Co., of Buffalo, N. Y., in favor of the Capper-Kelly bill; to the Committee on Interstate and Foreign Commerce.

5073. By Mr. MILLER: Petition of citizens of Seattle, Wash., protesting passage of House bill 78; to the Committee on the District of Columbia.

5074. By Mr. MOORE of Virginia: Petition of I. N. Jones, E. P. Coleman, and other residents of the eighth district of the State of Virginia, protesting against the passage of House bill

78, the compulsory Sunday observance bill; to the Committee on the District of Columbia.

5075. Also, petition of R. T. Ballard and other residents of the eighth district of the State of Virginia, protesting against the passage of House bill 78, the compulsory Sunday observance bill; to the Committee on the District of Columbia.

5076. Also, petition of M. J. Riley and other residents of the eighth district of the State of Virginia, protesting against the passage of House bill 78, the compulsory Sunday observance bill; to the Committee on the District of Columbia.

5077. Also, petition of K. M. Kendrick and other residents of the eighth district of the State of Virginia, protesting against the passage of House bill 78, the compulsory Sunday observance bill; to the Committee on the District of Columbia.

5078. Also, petition of Mrs. C. E. Gheen, Alma D. Poole, and other residents of the eighth district of the State of Virginia, protesting against the passage of House bill 78, the compulsory Sunday observance bill; to the Committee on the District of Columbia.

5079. Also, petition of I. N. Rich, Mrs. I. N. Rich, Ruth Rich, Mrs. R. R. Rich, R. R. Rich, and M. E. Rich, residents of the eighth district of the State of Virginia, protesting against the passage of House bill 78, the compulsory Sunday observance bill; to the Committee on the District of Columbia.

5080. By Mr. MORIN: Petition of Masters, Mates, and Pilots Association of America, Local No. 25, of Pittsburgh, Pa., opposing favorable report on House bill 11137, on basis of resolution passed at regular meeting on March 6; to the Committee on the Merchant Marine and Fisheries.

5081. By Mr. O'CONNELL: Petition of the International Seamen's Union of America, favoring the Senate amendment to the appropriation for the Shipping Board providing that none of the appropriation shall be used to sustain the sea-service bureau; to the Committee on Appropriations.

5082. Also, petition of the joint legislative committee of the radio industry, Washington, D. C., favoring Federal Radio Commission be extended until March 15, 1929, that the appointment of members of the commission be for terms provided in the radio act of 1927; that the principle of equitable distribution of radio service established in the radio act of 1927 be maintained without adding the arbitrary requirement of a physical equality of distribution which would be without precedent in legislative history; to the Committee on the Merchant Marine and Fisheries.

5083. Also, petition of the New York Photo Engravers' Union, No. 1, New York City, favoring the passage of the Shipstead-LaGuardia bill (S. 1482) and the Cooper-Hawes bill (S. 1940 and H. R. 7729); to the Committee on Labor.

5084. By Mr. OLDFIELD: Petition of Louisa Hickman et al., Denmark, Ark., urging favorable action of proposed increase of pensions of veterans of Civil War and their widows; to the Committee on Invalid Pensions.

5085. By Mr. ROMJUE: Petition of E. S. Binger, W. A. Tweed, et al., in behalf of the Liberty Farm Club, of Williamstown, Mo., for a farm relief bill with an equalization fee; to the Committee on Agriculture.

5086. By Mr. SELVIG: Petition of Joe Rapacz and 19 farmers and residents of Polk County, Minn., protesting against the passage of House bill 6465, the purpose of which is to place Mexico and Canada on a quota basis; to the Committee on Immigration and Naturalization.

5087. Also, petition of Joseph A. Roesch and three farmers and residents of Ada, Minn., protesting against the passage of House bill 6465, the purpose of which is to place Mexico and Canada on a quota basis; to the Committee on Immigration and Naturalization.

5088. Also, petition of D. B. Smiley and 39 farmers and residents of Polk County, Minn., protesting against the passage of House bill 6465, the purpose of which is to place Mexico and Canada on a quota basis; to the Committee on Immigration and Naturalization.

5089. Also, petition of A. A. Dragseth and six farmers and residents of Eldred, Minn., protesting against the passage of House bill 6465, the purpose of which is to place Mexico and Canada on a quota basis; to the Committee on Immigration and Naturalization.

5090. Also, petition of Lewis E. Sande and eight farmers and residents of Alvarado, Minn., protesting against the passage of House bill 6465, the purpose of which is to place Mexico and Canada on a quota basis; to the Committee on Immigration and Naturalization.

5091. Also, petition of Dick Wibbels and 18 farmers and residents of Mahnomen County, Minn., protesting against the passage of House bill 6465, the purpose of which is to place Mexico and Canada on a quota basis; to the Committee on Immigration and Naturalization.

5092. By Mr. SINNOTT: Petition of 170 citizens of Pendleton, Oreg., protesting against enactment of House bill 78, the Lankford bill, or similar compulsory Sunday observance legislation; to the Committee on the District of Columbia.

5093. By Mr. STRONG of Pennsylvania: Petition of citizens of Hawthorn, Pa., and vicinity, in favor of increasing the rates of pension for Civil War veterans and their widows; to the Committee on Invalid Pensions.

5094. By Mr. SUMMERS of Washington: Petition signed by John F. Erickson and 122 others of Yakima, Wash., protesting against the enactment of compulsory Sunday observance legislation; to the Committee on the District of Columbia.

5095. Also, petition signed by Ven Harvey and seven others of Prescott, Wash., protesting against the enactment of compulsory Sunday observance legislation; to the Committee on the District of Columbia.

5096. By Mr. SWING: Petition of citizens of San Diego, Calif., protesting against compulsory Sunday observance laws; to the Committee on the District of Columbia.

5097. Also, petition of citizens of National City, Calif., urging passage of Civil War pension bill providing relief for needy and suffering veterans and widows; to the Committee on Invalid Pensions.

5098. Also, petition of citizens of Orange, Calif., urging passage of Civil War pension bill providing relief for needy and suffering veterans and widows; to the Committee on Invalid Pensions.

5099. Also, petition of residents of San Diego, Calif., urging immediate legislation increasing the pensions of Civil War veterans and the widows of such veterans; to the Committee on Invalid Pensions.

5100. By Mr. TAYLOR of Colorado: Petition from the women voters of Grand Junction, Colo., urging the passage of the alien deportation bill (H. R. 10078); to the Committee on Immigration and Naturalization.

5101. By Mr. WASON: Petition of 47 residents of Keene, N. H., protesting against the passage of House bill 78, known as the Sunday closing bill; to the Committee on the District of Columbia.

5102. By Mr. WELCH of California: Petition submitted by United States Employees Association, San Francisco, Calif., favoring the passage of the Welch bill (H. R. 6518), to reclassify and increase the salaries of the Federal employees; to the Committee on the Civil Service.

5103. By Mr. WHITE of Colorado: Petition of sundry citizens of Denver, Colo., protesting against the enactment of the Lankford Sunday observance bill; to the Committee on the District of Columbia.

5104. By Mr. WYANT: Petition of Department of Pennsylvania, Veterans of Foreign Wars of the United States, indorsing plan of President Coolidge for an adequate United States Navy; to the Committee on Naval Affairs.

5105. Also, petition of 550 members of First Presbyterian Church, Irwin, Pa., favoring passage of Lankford Sunday rest bill for the District of Columbia; to the Committee on the District of Columbia.

5106. Also, petition of Pennsylvania State Chamber of Commerce, by George E. Foss, general secretary, protesting against Sirovich bill (H. R. 6511); to the Committee on Labor.

SENATE

THURSDAY, *March 8, 1928*

(Legislative day of Tuesday, March 6, 1928)

The Senate reassembled at 12 o'clock meridian, on the expiration of the recess.

PETITIONS AND MEMORIALS

Mr. EDGE presented a communication from Mary P. Shelton, president of the Leonia Women's Republican Club, of Leonia, N. J., with accompanying resolutions unanimously adopted by that club, which were referred to the Committee on Naval Affairs and, on request of Mr. EDGE, ordered to be printed in the RECORD, as follows:

127 GLENWOOD AVENUE,
Leonia, N. J., March 3, 1928.

Hon. WALTER E. EDGE,
Washington, D. C.

DEAR SENATOR EDGE: I have the honor to present to you a set of resolutions passed by the Leonia Women's Republican Club.

It is a special pleasure to us to stay the hand of those in whom we have such confidence.

Most respectfully,

(Mrs. W. B. S.) MARY P. SHELTON,
President Leonia Women's Republican Club.

Resolution unanimously adopted by Leonia Women's Republican Club February 24, 1928

Whereas the members of the Leonia Women's Republican Club assembled at their regular meeting Friday, February 24, 1928, discussed the naval appropriation bill, approved by the President of the United States and by the Secretary of the Navy; and

Whereas an organized movement to prevent the passage of this measure has petitioned our representatives against this program of peace-time security which would bring our common defense up to the 5-5-3 ratio agreed upon at the Washington conference; and

Whereas we believe it to be the sworn duty of our Representatives to uphold our constitutional defense and protection against insurrection from within and invasion from without, from piracy upon the high seas; to protect our coasts and ports; to protect our nationals at home and abroad, and to insure the right of asylum to our nationals in other countries; and

Whereas it is the belief of the members of the Leonia Women's Republican Club that the program of pacifists to make us defenseless under the guise of some idealistic leadership is the direct mandate of enemies to constitutional government and a conspiracy to make us a defenseless nation against stronger nations, thereby weakening our independent position gained after 150 years of successful government under the plan laid down by Washington, Jefferson, Madison, and Jay; and

Whereas the members of the Leonia Women's Republican Club wish to indorse and support the obviously essential program approved by the administration for our peace needs as well as for war insurance: Be it

Resolved, That this organization send to the President of the United States and to the Secretary of the Navy, as well as to Senators WALTER E. EDGE, EDWARD I. EDWARDS, and Congressman RANDOLPH PERKINS our earnest supplication that they assure our security by supporting the naval appropriation bill; be it further

Resolved, That at this time we voice our earnest approval and appreciation of positions assumed by our Representatives in the past for our welfare and general protection in other measures; be it further

Resolved, That a copy of this resolution be incorporated in the reports and minutes of this organization and sent to the press.

Mr. METCALF presented a communication in the nature of a memorial from the Governors of the States of Connecticut, Rhode Island, Vermont, and New Hampshire, which was ordered to lie on the table and to be printed in the RECORD, as follows:

To the Congress of the United States:

As governors of some of the States of the United States which are to be affected by the passage by Congress of the Hawes bill now pending in the Senate and the Cooper bill now pending in the House of Representatives, we urge your earnest consideration of the advisability of enacting into law the principle contained in these measures.

We believe that the passage of this legislation may be the entering wedge to the adoption of such laws as will ultimately result in permitting a State to determine with what States it will carry on interstate business, a principle which should not be extended beyond the scope of the police power.

Further than this, we feel that every State would be obliged to pass statutes prohibiting the sale of the goods covered by such legislation for its own protection, thus completely destroying the market for such goods and bringing about a condition of unemployment in prisons and correctional institutions to the serious injury of the inmates thereof and a great increase in expense of maintenance of such institutions.

It is therefore our opinion that this legislation ought not to pass.

Respectfully submitted.

JOHN H. TRUMBULL,
Governor of Connecticut.
NORMAN S. CASE,
Governor of Rhode Island.
JOHN E. WEEKS,
Governor of Vermont.
H. N. SPAULDING,
Governor of New Hampshire.

Mr. FESS presented petitions of sundry citizens of Limaville, Downington, and Ada and vicinity, all in the State of Ohio, praying for the passage of legislation granting increased pensions to Civil War veterans and their widows, which were referred to the Committee on Pensions.

Mr. WALSH of Montana presented a petition of sundry citizens of Forsyth and Rosebud County, Mont., praying for the prompt passage of legislation granting increased pensions to Civil War veterans and their widows, which was referred to the Committee on Pensions.

Mr. DILL presented petitions of sundry citizens of Seattle and Everett, in the State of Washington, praying for the passage of legislation granting increased pensions to Civil War veterans and their widows, which were referred to the Committee on Pensions.

Mr. FRAZIER presented the petition of Ruth Young and 18 other citizens of Moffitt, N. Dak., praying for the passage of legislation granting increased pensions to Civil War veterans and their widows, which was referred to the Committee on Pensions.

Mr. BRUCE presented a petition of sundry citizens of Hagerstown, Md., praying for the passage of legislation granting increased pensions to Civil War veterans and their widows, which was referred to the Committee on Pensions.

Mr. WILLIS presented petitions of sundry citizens of Columbus, Downington, Willard, and Meigs County, all in the State of Ohio, praying for the passage of legislation granting increased pensions to Civil War veterans and their widows, which were referred to the Committee on Pensions.

Mr. CAPPER presented a petition of sundry citizens of Lincoln, Kans., praying for the passage of legislation granting increased pensions to Civil War veterans and their widows, which was referred to the Committee on Pensions.

Mr. DENEEN presented sundry petitions numerously signed by citizens of the State of Illinois, praying for the passage of legislation granting increased pensions to Civil War veterans and their widows, which were referred to the Committee on Pensions.

He also presented a memorial of members of the faculty and students of Mount Morris College, Mount Morris, Ill., remonstrating against adoption of the proposed naval building program, which was referred to the Committee on Naval Affairs.

He also presented memorials numerously signed by citizens of the State of Illinois, remonstrating against the passage of legislation providing for compulsory Sunday observance in the District of Columbia, which were referred to the Committee on the District of Columbia.

Mr. BLAINE presented a memorial of sundry citizens of Antigo, Wis., remonstrating against the passage of legislation providing for compulsory Sunday observance in the District of Columbia, which was referred to the Committee on the District of Columbia.

He also presented petitions of sundry citizens of the State of Wisconsin, praying for the passage of legislation granting increased pensions to Civil War veterans and their widows, which were referred to the Committee on Pensions.

Mr. COPELAND presented a letter, in the nature of a petition, from the Erie County (N. Y.) Committee, the American Legion, praying for the passage of legislation to establish a national institute of health, which was referred to the Committee on Commerce.

He also presented a letter, in the nature of a petition, from the Erie County (N. Y.) Committee, the American Legion, praying for the passage of the bill (S. 2370) to amend section 24 of the immigration act of 1917, which was referred to the Committee on Immigration.

He also presented petitions of sundry citizens of Woodstock and Horseheads, in the State of New York, praying for the passage of legislation granting increased pensions to Civil War veterans and their widows, which were referred to the Committee on Pensions.

He also presented a telegram from the King Manufacturing Co., of Buffalo, N. Y., favoring the "continuance of the Federal Radio Commission present allocation of stations geographically," which was referred to the Committee on Interstate Commerce.

He also presented a telegram from the Paulist Fathers, Radio Station WLWL, of New York, N. Y., protesting against the passage of pending radio legislation with amendment for equal allocation to each of the five zones, which was referred to the Committee on Interstate Commerce.

He also presented a telegram signed by Harold O. Quick, manager broadcasting station WSYR, of Syracuse, N. Y., stating "we believe highest power should be assigned to stations with best programs and powerful stations should be located where best talent, material, and educational features are easily available and where the tremendous financial outlay necessary may show some reasonable return," which was referred to the Committee on Interstate Commerce.

Mr. NORBECK presented petitions numerously signed by citizens of Watertown, S. Dak., praying for the passage of legislation establishing a national board to censor magazines and books, which were referred to the Committee on Interstate Commerce.

REPORTS OF COMMITTEES

Mr. McNARY, from the Committee on Agriculture and Forestry, to which was referred the bill (S. 3555) to establish a Federal Farm Board to aid in the orderly marketing and in the control and disposition of the surplus of agricultural commodities in interstate and foreign commerce, reported it without amendment and submitted a report (No. 500) thereon.

Mr. BRATTON, from the Committee on Indian Affairs, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

A bill (S. 3007) to authorize the Secretary of the Interior to issue a patent to the Bureau of Catholic Indian Missions for a certain tract of land on the Mescalero Reservation, N. Mex. (Rept. No. 501); and

A bill (H. R. 8824) to provide for the protection of the watershed within the Carson National Forest from which water is obtained for the Taos Pueblo, N. Mex. (Rept. No. 502).

Mr. ASHURST, from the Committee on Indian Affairs, to which was referred the bill (S. 3026) authorizing the construction of a fence along the east boundary of the Papago Indian Reservation, Ariz., reported it without amendment and submitted a report (No. 503) thereon.

Mr. METCALF, from the Committee on Interstate Commerce, to which was referred the joint resolution (S. J. Res. 99) to amend joint resolution directing the Interstate Commerce Commission to take action relative to adjustments in the rate structure of common carriers subject to the interstate commerce act, and the fixing of rates and charges, reported it without amendment and submitted a report (No. 504) thereon.

Mr. NORBECK, from the Committee on Public Lands and Surveys, to which was referred the bill (S. 2828) to amend the act of April 25, 1922, as amended, entitled "An act authorizing extensions of time for the payment of purchase money due under certain homestead entries and Government-land purchases within the former Cheyenne River and Standing Rock Indian Reservations, N. Dak. and S. Dak.," reported it with an amendment and submitted a report (No. 505) thereon.

ENROLLED BILLS PRESENTED

Mr. GREENE, from the Committee on Enrolled Bills, reported that on March 8, 1928, that committee presented to the President of the United States the following enrolled bills:

S. 700. An act authorizing the Secretary of the Interior to execute an agreement with the middle Rio Grande conservancy district providing for the conservation, irrigation, drainage, and flood control for the Pueblo Indian lands in the Rio Grande Valley, N. Mex., and for other purposes;

S. 771. An act providing for the gift of the U. S. S. *Dispatch* to the State of Florida;

S. 1705. An act authorizing the Court of Claims to render judgment in favor of the administrator of or collector for the estate of Peter P. Pitchlynn, deceased, instead of the heirs of Peter P. Pitchlynn, and for other purposes;

S. 2342. An act providing for a per capita payment of $25 to each enrolled member of the Chippewa Tribe of Minnesota from the funds standing to their credit in the Treasury of the United States; and

S. 2902. An act authorizing the States of Wisconsin and Michigan to construct, maintain, and operate a free highway bridge across the Menominee River at or near Marinette, Wis.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. McNARY:

A bill (S. 3556) to insure adequate supplies of timber and other forest products for the people of the United States, to promote the full use for timber growing and other purposes of forest lands in the United States, including farm wood lots and those abandoned areas not suitable for agricultural production, and to secure the correlation and the most economical conduct of forest research in the Department of Agriculture, through research in reforestation, timber growing, protection, utilization, forest economics, and related subjects, and for other purposes; to the Committee on Agriculture and Forestry.

By Mr. NEELY:

A bill (S. 3557) granting an increase of pension to Leslie Harding; to the Committee on Pensions.

A bill (S. 3558) authorizing Point Pleasant Henderson Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Kanawha River at or near Point Pleasant, W. Va.; to the Committee on Commerce.

By Mr. WATSON:

A bill (S. 3559) to create a special highway fund from the proceeds of the sale of surplus war material, highway equipment, and supplies to the Government of France; to the Committee on Post Offices and Post Roads.

By Mr. MAYFIELD:

A bill (S. 3560) authorizing the issuance of service medals to officers and enlisted men of the brigade of Texas Infantry organized under authority from the War Department during the World War, and authorizing an appropriation therefor; and further authorizing the wearing by such officers and enlisted men on occasions of ceremony of the uniform lawfully prescribed to be worn by them during their service; to the Committee on Military Affairs.

By Mr. WALSH of Massachusetts:

A bill (S. 3561) to require contractors and subcontractors engaged on public works of the United States to give certain preferences in the employment of labor; to the Committee on Education and Labor.

By Mr. WAGNER:

A bill (S. 3562) to establish a landing field for aircraft at Governors Island, N. Y., and for other purposes; to the Committee on Military Affairs.

By Mr. REED of Pennsylvania:

A bill (S. 3563) granting an increase of pension to Emily R. Albee (with accompanying papers); to the Committee on Pensions.

By Mr. STEPHENS:

A bill (S. 3564) for the relief of J. A. Teat, F. E. Leach, and J. L. McMillan; to the Committee on Claims.

By Mr. BLAINE:

A bill (S. 3565) to provide compensation for disability or death resulting from injury to employees in certain employments in the District of Columbia, and for other purposes; to the Committee on the District of Columbia.

By Mr. COPELAND:

A bill (S. 3566) conferring jurisdiction upon the United States Court for the Southern District of New York to hear and determine the claim of the owner of the French auxiliary bark *Quevilly* against the United States, and for other purposes;

A bill (S. 3567) conferring jurisdiction upon certain courts of the United States to hear and determine the claim by the owner of the steamship *San Tirso* against the United States, and for other purposes; and

A bill (S. 3568) conferring jurisdiction upon certain courts of the United States to hear and determine the claim by the owner of the steamship *W. I. Radcliffe* against the United States, and for other purposes; to the Committee on Claims.

By Mr. SHEPPARD:

A bill (S. 3569) to equalize the pay of certain classes of officers of the Regular Army; to the Committee on Military Affairs.

By Mr. CARAWAY:

A bill (S. 3570) for the relief of Claude L. Pyle; to the Committee on Claims.

By Mr. TYSON:

A bill (S. 3571) granting the consent of Congress to the county court of Roane County, Tenn., to construct a bridge across the Emory River at Suddaths Ferry, in Roane County, Tenn.; to the Committee on Commerce.

FLOOD CONTROL

Mr. JONES. Mr. President, I feel I should make a brief statement about the flood control bill reported to the Senate by the Commerce Committee. Telegrams are sent out and editorials written opposing the bill based upon something supposed to be in the bill, which is, in fact, expressly negatived by the terms of the bill. It is asserted that the bill provides for a commission to investigate the capacity of States, districts, and communities to contribute toward the cost of flood-control works and to determine the amount of such contributions. No commission is provided in the bill to do anything of this kind. On the contrary, section 2 of the bill expressly declares that by the expenditure of nearly $300,000,000 the communities embraced in the project adopted have largely complied with the principle of contribution. Practically all the contribution called for is the payment of one-third of the cost of bringing the main levees up to the 1914 standard and the furnishing of rights of way for levees along the main river where the same have not already been provided. This latter condition can be met at very slight expense. The Chief of Engineers estimates that one-third of the cost of bringing the main levees up to the 1914 standard is about $4,000,000 if the plan of the Chief of Engineers is adopted. If the plan of the Mississippi River Commission is adopted, covering a portion of the tributaries, this cost will be about $14,000,000. When the magnitude of the work is considered, such contributions are very small.

A board is provided in the bill, but that board is to consider only the engineering differences between the plan of the engineers and the plan of the Mississippi River Commission and has nothing whatever to do with the matter of contributions or the economic phases of the situation.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Haltigan, one of its clerks, announced that the House had passed

without amendment the bill (S. 1531) authorizing the Secretary of Agriculture to sell the Weather Bureau station known as Mount Weather, in the counties of Loudoun and Clarke, in the State of Virginia.

The message also announced that the House had passed the following bills and joint resolutions, in which it requested the concurrence of the Senate:

H. R. 53. An act to provide for the collection and publication of statistics of tobacco by the Department of Agriculture;

H. R. 7459. An act to authorize the appropriation for use by the Secretary of Agriculture of certain funds for wool standards, and for other purposes;

H. R. 9495. An act to provide for the further development of agricultural extension work between the agricultural colleges in the several States receiving the benefits of the act entitled "An act donating public lands to the several States and Territories which may provide colleges for the benefit of agriculture and the mechanic arts," approved July 2, 1862, and all acts supplementary thereto, and the United States Department of Agriculture;

H. R. 9830. An act authorizing the Great Falls Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Potomac River at or near the Great Falls;

H. R. 11026. An act to provide for the coordination of the public-health activities of the Government, and for other purposes;

H. R. 11579. An act relating to investigation of new uses of cotton;

H. J. Res. 140. Joint resolution to amend sections 1 and 2 of the act of March 3, 1891; and

H. J. Res. 215. Joint resolution to authorize the Secretary of Agriculture to accept a gift of certain lands in Clayton County, Iowa, for the purposes of the upper Mississippi River wild life and fish refuge act.

CALL OF THE ROLL

Mr. FLETCHER obtained the floor.

Mr. KING. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Ashurst	Ferris	La Follette	Sheppard
Barkley	Fess	McKellar	Shipstead
Bayard	Fletcher	McLean	Shortridge
Bingham	Frazier	McMaster	Simmons
Black	George	McNary	Smith
Blaine	Gerry	Mayfield	Smoot
Blease	Glass	Metcalf	Steck
Borah	Gooding	Neely	Steiwer
Bratton	Gould	Norbeck	Stephens
Brookhart	Greene	Norris	Swanson
Broussard	Hale	Nye	Thomas
Bruce	Harris	Oddie	Tydings
Capper	Harrison	Overman	Tyson
Caraway	Hayden	Phipps	Wagner
Copeland	Heflin	Pine	Walsh, Mass.
Couzens	Howell	Pittman	Walsh, Mont.
Curtis	Johnson	Ransdell	Warren
Cutting	Jones	Reed, Pa.	Waterman
Deneen	Kendrick	Robinson, Ark.	Watson
Dill	Keyes	Sackett	Wheeler
Edge	King	Schall	Willis

Mr. JONES. I desire to announce that the Senator from Vermont [Mr. DALE] is detained on official business.

The VICE PRESIDENT. Eighty-four Senators having answered to their names, a quorum is present. The Senator from Florida [Mr. FLETCHER] is entitled to the floor.

Mr. SMOOT. Will the Senator from Florida yield to me for a few moments?

Mr. FLETCHER. I yield to the Senator from Utah.

ALLEGED REFUND OF TAXES TO WILLIAM RANDOLPH HEARST

Mr. SMOOT. Mr. President, I desire to read a letter into the RECORD to correct a certain statement which was made by the Senator from Alabama [Mr. HEFLIN], and I want to call his attention to the letter. The letter is dated March 5, 1928, and addressed to myself, from the Secretary of the Treasury, Mr. Mellon:

TREASURY DEPARTMENT,
Washington, March 5, 1928.

Hon. REED SMOOT,
United States Senate.

MY DEAR SENATOR: Under date of January 11, 1928, Senator HEFLIN addressed a communication to me in which he inquired what amounts of taxes, if any, had been refunded to William Randolph Hearst since I had become Secretary of the Treasury.

On January 16, 1928, I addressed the following communication to Senator HEFLIN:

"In your letter of January 11 you inquire what amounts of taxes, if any, have been refunded to William Randolph Hearst since I became Secretary of the Treasury.

"You are advised that no refunds of taxes have been made to Mr. Heart during that period."

It appears appropriate to bring this to your attention in view of the remarks of Senator HEFLIN appearing on page 3348 of the CONGRESSIONAL RECORD of February 21, 1928, as follows:

"The corporations in the main seem to be the ones who are to get it. I notice a refund is provided to the Washington News of over $300,000, and this is a presidential year! There are other newspapers which have had refunds in this presidential year involving thousands and tens of thousands of dollars. I understand Mr. Hearst had a refund of $600,000 or $700,000 in the last two or three years, and that he and Mr. Mellon have become exceedingly warm friends."

It is perhaps of interest to you to know that the Washington Daily News, to which Senator HEFLIN probably refers, received no refund from the Treasury Department. It is probable that the Senator has been misinformed concerning the case. Certainly in view of the letter addressed to the Senator on January 16, there is no basis for the statements made on February 21 in respect of the alleged refund to Mr. Hearst.

It occurs to me that you may wish to correct any impression that the erroneous statements by Senator HEFLIN may have left in the minds of his colleagues and have the RECORD show the true facts.

Sincerely yours,

A. W. MELLON,
Secretary of the Treasury.

Mr. HEFLIN. Mr. President, the letter of the Secretary of the Treasury does not say that he has not refunded taxes to any newspaper or other interest connected with Mr. Hearst. I have heard it talked around the Capitol, and other Senators have, I take it, that a large refund had been made to the Hearst interests. It has been talked for a month that it was the cause of the warm friendship which sprang up between the Secretary of the Treasury and Mr. Hearst. Of course, personally, I do not know as to that, but the letter does not cover that situation.

Now as to the Washington News, the press dispatches at the time this refund was given out carried that item. I think I have it in my office. Some one has told me that the refund was to some other News and that it was a mistake on the part of the reporters here in naming it the Washington News. I based my information on that statement in the press and on the other statements which had gone the rounds here.

I shall address another letter to Mr. Mellon, in which I shall inquire more in detail as to certain tax refunds. He has refunded over a billion dollars in taxes since he has been Secretary of the Treasury, and the Senate has not obtained the names of any persons to whom taxes have been refunded, except the list for which I called, which was sent here in response to a resolution adopted by the Senate after he declined to send the names without action by the Senate. I am going to ask him for more detailed information. Then, if I can not get it, I am going to ask the Senate to adopt another resolution.

Mr. SMOOT. Mr. President, I take it that the Secretary of the Treasury objected more particularly because in his letter to the Senator from Alabama on January 16 he made the statement that there was no refund made to the Hearst interests. Then, after that, on February 21 the Senator from Alabama made the statement which the Secretary has quoted in his letter. I suppose that is the reason why the Secretary of the Treasury finds fault with the Senator from Alabama.

Mr. HEFLIN. Mr. President, with regard to that, I desire to say that I have never seen such a letter. I wish to say, however, that since I spoke in this Chamber on the 18th of January on the Hearst-Catholic-Mexican scandal I have received thousands of letters, and there are two or three thousand of them in my office which I have not yet had an opportunity to read. Those letters come from every State in the Union, indorsing my position and commending my course, and it may be that that letter is there. I am going through those letters just as fast as I can, but, with my other duties here, it has been impossible to read them all. There are probably 3,000 which I have not read; it may be that that letter is in my office, but I have never seen it.

Mr. SMOOT. The Secretary of the Treasury quotes from his letter of January 16, I will say to the Senator. Does the Senator say that he did not get that letter?

Mr. HEFLIN. I repeat, I have not seen the letter. It may be that the Secretary's letter is in my office, but my secretary has not called it to my attention. I have never seen it.

Mr. SMOOT. I have simply read the letter into the RECORD in order to have the situation clear so far as concerns the statement made by the Senator from Alabama.

Mr. HEFLIN. I am glad to have the Secretary of the Treasury state his side, I would not deny him that right; I want

him to do that. I am merely telling why I made the statement, and, I repeat, I am going to call on him for a more detailed statement about Mr. Hearst and his interests.

MUSCLE SHOALS

The Senate, as in Committee of the Whole, resumed the consideration of the joint resolution (S. J. Res. 46) providing for the completion of Dam No. 2 and the steam plant at nitrate plant No. 2 in the vicinity of Muscle Shoals for the manufacture and distribution of fertilizer, and for other purposes.

Mr. FLETCHER. Mr. President, I look upon the question of dealing with Muscle Shoals as one involving a very important problem. It seems to me that we ought to do something with the plants which we have erected there at very great expense to the people and ought to make that great resource useful to the country. Some 12 years ago we appropriated $20,000,000 to start the enterprise. We have been waiting now year after year to determine what to do with that property. After spending some $14,000,000 for the construction of nitrate plant No. 1, it has remained idle; and, after spending $67,000,000 for the construction of nitrate plant No. 2, that remains idle. We spent some $64,000,000 on the Wilson Dam—Dam No. 2 as it is now called—and we are utilizing that to some extent in producing electrical energy and are selling the current to the Alabama Power Co.

The people of the country, and especially the farmers of the country, are obliged to have fertilizer. It is not a question of buying fertilizer every 10 years or every 5 years or every 2 years; they are obliged to have fertilizer every year. That need grows and increases. The original purpose of the development of the enterprise at Muscle Shoals was to produce fixed nitrogen in time of war and to produce fertilizer in time of peace. That has been constantly in the mind of Congress, but nothing has been done about it. The plants at Muscle Shoals are rusting away; they are still idle and we are getting no return, practically, on the investment we have made there.

I am anxious that we should determine upon a definite, fixed policy with reference to this enterprise. I think we have waited long enough; that we have wasted time, just as we have wasted energy and wasted power at Muscle Shoals. We ought to determine the question without further delay. In general, I find myself in accord with the views expressed by the able Senators from Alabama.

I confess to very keen disappointment at the measure the Committee on Agriculture and Forestry has laid before us after its great study and labor in the solution of this problem. I digress here to pay tribute to the distinguished Senator from Nebraska [Mr. NORRIS] for whose honesty of purpose, for whose great ability, patriotism, and statesmanship I have the very highest estimate. The country is indebted to him for the public service which he has rendered and is rendering; but he brings in what he confessedly says is a "compromise" measure, which, in my judgment, does not get us anywhere toward the solution of this problem. It may be the best that the committee could, on account of difference of views, and so forth, bring out; but it seems to me it does not in its final analysis bring us very far, if anywhere, toward a solution of this question.

If I were in the place of the Government, with all its resources behind me, I would be disposed to take a broader and more comprehensive view of the whole Tennessee River situation than is attempted at this time. The possibilities for power development on that river are almost unlimited. The navigation of the river is a very important matter to be considered; and, of course, the production of fertilizer is of vast importance to our agricultural interests and, therefore, to the whole country.

If I had the power to do so and had the resources of the Government behind me, I would consider the whole Tennessee River, with its beautiful valleys and fertile lands and prosperous cities and growing communities everywhere from its source to where it empties into the Ohio River. It has its source up in the hills and mountains of Kentucky, Virginia, North Carolina, and eastern Tennessee. It flows in a southwesterly direction to Chattanooga and then turns southward until it gets close to Muscle Shoals; then it turns in a westerly direction and again in a northerly direction and empties into the Ohio River not a great distance from Cairo, Ill.

The Cumberland River likewise empties into the Ohio a few miles above where the Tennessee pours into that great river. There are possibilities of power development on the Cumberland yet untouched, unsurveyed, even unconsidered. But speaking with reference to the Tennessee, we find it is navigable with a 6-foot channel from the Ohio River to Wilson Dam. Dam No. 1 was built at a cost of some $10,000,000. It develops no power; it serves no useful purpose except for navigation. Dam No. 2, or the Wilson Dam, forms a pool of some 16 miles, and the river is navigable up to that point. Passing from there, there is no navigation possible on the river of any continuous or worth-while sort. Here and there are navigable stretches at certain seasons only and with very light-draft boats.

The next dam on the river above Dam No. 2 is Hales Bar Dam, which was built some years ago at a cost of about $11,000,000. In laying the foundations a subterranean stream was struck, and it became necessary to pour in trainload after trainload of cement in order to fill that up. I understand Mr. Brady's estate charged off something like $7,000,000, and that property now, including the steam plant auxiliary to the water power, is owned, I think, by the Tennessee Power Co. or some subsidiary of that company. Power is transmitted for hundreds of miles from there. Another great purpose served by that dam was to make the river navigable at all seasons of the year with a 9-foot channel from there to Chattanooga and beyond. Under what is known as the Madden-Willis bill it is proposed to build Dam No. 3 north of Dam No. 2. That dam, if built, would make the river navigable for some 80 miles farther, and in that respect it would be an important improvement of navigation on the river.

The Government has adopted a policy of improving the rivers and harbors of the country for a period now extending over a hundred years; and it is entirely in line with the policy of the Government to build Dam No. 3 for navigation purposes as well as for the development of power that would follow as a consequence. Eighty miles of navigable channel would be produced by the building of Dam No. 3. It is estimated that it will cost $32,500,000; perhaps it would cost more, but $32,500,000 is the present estimate of the cost. With the building of that dam and probably one other dam at Guntersville on the river—which some power company is bound to build; in fact, application for a permit has already been filed for a site at Guntersville—we will have continuous navigation from the Ohio River up to Chattanooga and beyond.

Permits are being asked of the Power Commission for some other dams beyond Chattanooga on some sites already applied for, and those dams will be built by power companies if not by the Government. I should have no objection at all to having them built by the Government in the interest of navigation.

At what is called Shermans Dam a site has been selected, also at Sail Creek Dam, White Creek Dam, Marble Bluff Dam, and then we get up to Coulter Shoals Dam and up to Knoxville.

There is not any question at all in my mind but that those dams eventually will be built. Power companies are after them; but in every instance navigation will be promoted, and we shall finally have the Tennessee navigable up to Knoxville from the Ohio River.

A definite proposition, however, has been made by responsible parties for the building of the dam at Cove Creek, on the Clinch River, north of Knoxville and somewhat west. That dam is to be 225 feet high, and, according to the latest estimate of the Army engineers, is to cost $37,000,000. A reservoir covering an area of some 75,000 acres will be provided for it. That dam, if built, and the reservoir created by it, would be an auxiliary power plant extending to Muscle Shoals. It would provide water that would create a navigable depth on the Tennessee River from that point on through all the locks and dams to Muscle Shoals. That auxiliary power would exist without any cost for coal or other appliances or labor. It would be a perpetual auxiliary power plant, useful for all the purposes of navigation and of power from that point to Muscle Shoals. Not only that, but it would make the Clinch River, a tributary of the Tennessee, navigable for some 80 miles, clear into the coal fields of east Tennessee.

So that by building Cove Creek dam and by building Dam No. 3 the Tennessee will be made navigable from the Ohio River to the coal fields of east Tennessee, and on by Knoxville. That would be a very great accomplishment. It would be a great achievement for the Government itself and for the public. To illustrate what it would mean, we are spending now on the Ohio River, in locks and dams which will be completed next year, over $100,000,000 purely for navigation. Not one dollar of that money will ever come back to the Treasury. On the other hand, there is fastened upon the Government the cost of maintenance of those locks and dams, running through the centuries, probably amounting to at least $100,000 every year. That is what we have done for the Ohio River for navigation alone. Here we propose to spend, to make the Tennessee navigable from the Ohio River to the east Tennessee coal fields and by Knoxville, on by Chattanooga and Muscle Shoals and the various towns and communities, $106,000,000, or about that sum; and we have before us in the Willis bill, and the House has before it in the shape of the Madden bill, a proposition of the Air Nitrates Co. and the American Cyanamid Co. whereby

they covenant and agree to pay interest at the rate of 4 per cent on the entire cost of these improvements to the Government for 50 years, annually, and they also covenant and agree to create a sinking fund which will pay back to the Government at the rate of 4 per cent per annum, extending through a period of 100 years, an amortization that will return to it every dollar it has spent on these dams.

Mr. SHEPPARD. Mr. President, is this the Cyanamid Co.'s offer which the Senator is now discussing?

Mr. FLETCHER. I am referring to that as compared to what we have done for the Ohio River, where we have spent equally as much, never to get back 1 cent of it, but have burdened ourselves for all the future for the cost of maintenance. Here, we propose to make great improvements of equal value to navigation, and get back the entire cost of the improvements in the course of time, and 4 per cent interest on the money which we put into it. I submit that that is worth considering.

Mr. KING. Mr. President——

The PRESIDING OFFICER (Mr. SACKETT in the chair). Does the Senator from Florida yield to the Senator from Utah?

Mr. FLETCHER. I yield to the Senator.

Mr. KING. I want to ask the Senator whether the proposition of the Cyanamid Co. calls for the construction of the Cove Creek Dam, up on Clinch River, as well as Dam No. 3, or whether their proposition may not be segregated; whether they would not make it in the alternative, that they would pay so much if Dam No. 3 were completed, or an additional amount if both dams were completed, so that the Government would have its choice of building two dams at the cost which the Senator has indicated, or only one at a cost of approximately thirty or thirty-two million dollars.

Mr. FLETCHER. I am inclined to think the Senator is correct about that; but I confess that I have not studied in detail and carefully either of these bills, because they are not actually now before us. I have looked at their general outlines and the major propositions contained in them.

First, they propose to lease the property from the Government for a period of 50 years. I am not opposed to that, especially if the people who are to be the lessees are responsible people, know their business, and are willing to pay a reasonable rental charge for the property; and I think it would be advantageous for us to have some one in position to utilize these plants and get to making fertilizer for the farmers of this country without waiting 10 years for experiments, or for that matter, without waiting another day for experiments.

Mr. SIMMONS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Florida yield to the Senator from North Carolina?

Mr. FLETCHER. I yield to the Senator, though I should like to proceed.

Mr. SIMMONS. I simply wanted to say that I am delighted to hear the Senator from Florida discuss this question, because in my judgment there is nobody in the Senate who has studied it more closely and understands it as thoroughly as does the Senator from Florida. I desire to ask the Senator from Florida, however, if in speaking about the proposition a few moments ago he referred to the Cyanamid Co.'s proposition which has been so vigorously supported by the two Senators from Alabama.

Mr. KING. And so bitterly assailed by the Senator from Nebraska.

Mr. FLETCHER. I was making reference to their proposal as embodied in the Madden bill and the Willis bill; but I propose to dwell a little more on that a little later.

Mr. SIMMONS. The reason why I ask the Senator is that I thought he spoke only about the amount that they proposed to pay the Government as rental but did not refer to any proposition to do anything for the production of fertilizer.

Mr. FLETCHER. I will get to that in a few minutes. The covenant is that they will produce at Muscle Shoals nitrate plant No. 2, first, 10,000 tons and on up, when they complete the necessary additions there, to 50,000 tons of fixed nitrogen every year. That would mean some 550,000 tons of ammo-phos or ammonium phosphate which would be utilized as fertilizer. Individual farmers can use this ammonium phosphate where they know how to mix it, perhaps here and there, with potash, and in other places, where they do not need the potash, with other filler; but the fertilizer factories are using it now, and of course the concern would be in position to make fertilizer at this plant to the amount of, as I say, some 550,000 tons annually.

That is one of their propositions. Coming back, however, to this situation on the Tennessee, the whole Tennessee River ought to be developed. Navigation ought to be considered; power ought to be considered; the manufacture of fertilizer ought to be considered; and I was giving a brief outline of conditions as they exist.

The river, now navigable from the Ohio River with a 6-foot channel to Wilson Dam, with the building of these dams will become navigable on up to Knoxville and clear into the coal fields of east Tennessee. With the investments already made there we have Dam No. 1, which has cost some $10,000,000; Dam. No. 2, which has cost some $64,000,000; nitrate plant No. 1, which has cost $14,000,000; nitrate plant No. 2, which has cost $67,000,000. Then add to that the cost of Dam No. 3, $35,000,000, and Cove Creek Dam, $37,000,000, and the problem of navigation and power development on the Tennessee will be solved, as well as the problem of manufacturing fertilizer.

All these plants are now idle. Plant No. 1 never has been used. It was built by White & Co. under the direction of the German Chemical Co., and is what they call a plant for producing nitrogen by the synthetic process. It never produced a pound of fixed nitrogen. Nitrate plant No. 2 never has been fully completed. It has a steam power-plant auxiliary, the whole costing some $67,000,000, as I have said, idle, useless, rusting, and wasting away. The maintenance and upkeep costs to the Government of the United States at Dam No. 2 during 1927 were $266,163.64. The maintenance and upkeep costs of the nitrate plant No. 1 from June 30, 1926, to June 30, 1927, were $14,647; and the costs of upkeep and maintenance at nitrate plant No. 2 from June 30, 1926, to June 30, 1927, were $58,177.

I do not know what it is costing to keep up our Waco quarry there, but probably three or four thousand dollars a year. But those are actual costs for caring for the property year by year.

Mr. SMITH. Does that $58,000 take care of the sinking of certain parts of the foundation of nitrate plant No. 2 that they thought perhaps needed some support?

Mr. FLETCHER. It comes under the head of maintenance and upkeep.

Mr. SMITH. It was brought out before the committee that some part of it was insecure and that a certain amount had to be expended.

Mr. FLETCHER. These figures do not include that item. The amount of power sold to the Alabama Power Co. in 1927 was 556,105,000 kilowatt-hours. The revenue received was $1,168,763.33. The total power that could have been developed there would have amounted to 1,051,000,000 kilowatt-hours, which, at the price received during the year, would have given a revenue of $2,165,000.

The only purchaser of that power now is the Alabama Power Co., because they have the only transmission lines connecting with that plant. They take what power they choose to take. They do not consume the capacity production of the plant at all, which ought to be at least 160,000 horsepower. They take about 80,000 horsepower, and the Government is at the mercy of this power company because they have the only transmission lines leading from the plant.

That is the situation. We are spending for upkeep, this property is depreciating, we are charging no interest on our investment, making no use of these expensive plants for nitrate production, for fertilizer production, or anything of the kind, and getting scarcely enough revenue to take care of the property, with no chance, apparently, of getting any more from the sale of the power, because we have no transmission lines. We have to sell what the Alabama Power Co. is willing to buy, and at a price which they are willing to pay. Therefore, we are getting half the capacity of that plant in use at Dam No. 2.

Mr. President, what is proposed? We have before us Joint Resolution 46. Nitrate plant No. 2 has a capacity of 50,000 tons of fixed nitrogen annually. It is idle. Nitrate plant No. 1 is idle, as I have stated.

The report, Report No. 228, states:

> The resolution here reported is a compromise, and has, for its principal object, the operation of Muscle Shoals upon the compromise plan set forth in the resolution for a sufficient length of time to demonstrate what is possible in the practical and economical method of cheapening fertilizer for the benefit of agriculture.

There we have stated frankly in this report the scope and purpose of Joint Resolution 46. It is almost amusing to read the title of this resolution. The joint resolution reads, "providing for the completion of Dam No. 2 and the steam plant at nitrate plant No. 2 in the vicinity of Muscle Shoals for the manufacture and distribution of fertilizer, and for other purposes," the very thing it does not do.

The provisions relate to the production and distribution of power. The nearest approach to the manufacture of fertilizer is work of an experimental character. It is said in the report, "for a sufficient length of time to demonstrate what is possible in the practical and economical method of cheapening fertilizer

for the benefit of agriculture." Suppose you call on the people of this country to stop eating until it can be demonstrated what is the best kind of food for them. Suppose you call on the farmers to stop growing crops next year until we can show them what kind of fertilizer is best for them to use. Suppose we discontinue building airplanes because improvements in engines and other parts are being constantly made. Suppose you insist that no more automobiles shall be made because a machine is about to be developed which will make gas or other fuel unnecessary and out of date. It is equally absurd to hold up the manufacture of fertilizers and materials for fertilizers because science is making progress and we expect modern methods will diminish their cost.

Do we need any demonstration that fertilizer is necessary and required by the agricultural interests of the country? Have we not been using fertilizer for years and years? Are not these people who propose now to lease this property actually manufacturing fertilizer? Why wait until we can experiment with some new process and await some new development?

The report says that we are to operate the Muscle Shoals plant on a compromise plan. What sort of a compromise plan? What do they mean by a compromise plan? In the meantime we ought to find a way to use what we have. If a responsible party will covenant to manufacture fertilizer there and furnish it to farmers at cost plus 8 per cent, and beginning right away, why would that not be a desirable thing? If such a lessee would spend $30,000,000 of his own money in adding to the equipment of plant No. 2, and proceed as soon as that could be completed to manufacture fertilizer, would not that be better than letting the plant rust and rot, with no benefit to anyone? If it is possible for such a lessee to manufacture fertilizer there at no cost to the Government and supply it at one-half what it is now costing the farmers, why should not the opportunity be given?

This plant No. 2 is not complete. It can not now make fertilizer. There must be additions to it, new machinery, new equipment, and other things, which will cost some thirty to thirty-five million dollars, it is estimated.

In this Willis-Madden bill, touching again the high spots of it, the lessees agree, themselves, at their own expense and cost, and without any expense to the Government whatever, to make those additions, and to put the plant in condition and fully equipped to manufacture fertilizer.

Mr. BLACK. Mr. President——

The PRESIDING OFFICER (Mr. BRATTON in the chair). Does the Senator from Florida yield to the Senator from Alabama?

Mr. FLETCHER. I yield.

Mr. BLACK. I just want to call the Senator's attention to the fact that the statement is correct that the plant as now equipped can not manufacture fertilizer, and that neither the Norris resolution nor any other resolution that has been offered provides for an appropriation to put up machinery necessary to manufacture phosphoric acid, without which fertilizer can not be manufactured. Senators may call the bills fertilizer bills all they desire; unless there is an appropriation of some twenty-five or thirty million dollars to put up the additional equipment, they can not possibly manufacture fertilizer, except in small experimental lots.

Mr. FLETCHER. That is quite true.

Mr. SMITH. Mr. President, may I ask the Senator from Alabama if the cyanamide plant which is already there is ready to go on manufacturing cyanamide in an economic way, as compared with the claim that their processes have been developed so as to go beyond what plant No. 2 would do?

Mr. BLACK. I do not care to take up the time of the Senator from Florida——

Mr. FLETCHER. I am glad to have the Senator answer the question.

Mr. BLACK. The whole thing is this, that cyanamide is not the fertilizer the farmer wants. He wants a combination of nitrogen and phosphate so that later on he can, if he desires, mix them.

Mr. SMITH. I just wanted to know if they can produce cyanamide as cheaply and as efficiently there as at their plant at Niagara?

Mr. BLACK. Undoubtedly, with a small amount of additional equipment, the exact amount of which I do not know. But cyanamide is not fertilizer.

Mr. SMITH. I was not talking about that. The base is nitrogen, and that is mixed with phosphoric acid.

Mr. BLACK. It is one of the absolutely necessary elements, and I was calling attention to the fact that none of the so-called fertilizer bills here now, not a single one, provides an appropriation sufficient to manufacture fertilizer. We would be limited to the manufacture of cyanamide.

Mr. FLETCHER. That is quite true, and that is why I referred to the proposition of the lessees under the Madden-Willis bill. They propose to put in those additions and equip that plant for the manufacturing of fertilizer.

Mr. BLACK. That is a fact. I agree with the Senator in that.

Mr. FLETCHER. Which, of course, is a necessary and desirable thing if we are to make fertilizer. We do not need it to make cyanamide alone.

On page 2 of the report it is stated:

> A nitrogen-fixation plant that would produce 40,000 tons of nitrogen a year, the same as that which could be produced by the operation of plant No. 2, would, under modern conditions and present scientific knowledge, cost about $10,000,000; whereas the construction of nitrate plant No. 2 cost $67,555,355.09.

The synthetic process is suggested here. We have two plants now. We can not make ammonium phosphate. Plant No. 1 is a synthetic-process plant. The fact is that material is now being made in the United States and can be used here. We export large quantities of this fertilizer material. There is a duty of $5 a ton on cyanamide. It is made extensively in Germany, where they lack water power and must use coal.

If you want to help the farmer, you might begin by repealing that duty, perhaps. So with ammonium phosphate. That we need. That is what we must produce for fertilizer purposes. The duty on that is $30 a ton. Germany is a large producer of that material and the duty keeps it out of the United States. Why not repeal the duty on ammonium phosphate if we propose to benefit agriculture?

The materials which I have been discussing are shown in the bottle which I hold in my hand at this time. The black material is cyanamide. It contains 28 per cent of ammonia or 23 per cent of nitrogen. At the bottom is Florida pebble phosphate, which contains from 68 to 70 per cent of bone phosphate of lime. At the top is ammo-phos, or ammonium phosphate, which contains 13 per cent of ammonia and 48 per cent of phosphoric acid. We can make cyanamide at Muscle Shoals just as they are making it at Niagara Falls. We can make ammonium phosphate at Muscle Shoals by making the necessary additions to nitrate plant No. 2, as mentioned. We have close by the pebble phosphate in Florida, an inexhaustible supply of it within close reach. We also have the hard-rock phosphate in Florida and in Tennessee.

Mr. KING. Mr. President, will the Senator yield?

Mr. FLETCHER. I yield.

Mr. KING. My understanding is that there is an abundance of phosphate within a very short distance of Muscle Shoals in Tennessee or in Alabama.

Mr. FLETCHER. That is true. It is a little different kind from the pebble phosphate and doubtless more difficult to crush and expensive to handle.

Mr. TYSON. That is true. It is phosphate rock.

Mr. FLETCHER. Yes; it contains phosphate. The combination of the phosphate and the cyanamide results from power being exerted and chemical action which finally results in what is really fertilizer or ammo-phos. That has in it no potash, but potash can easily be added, as can any other ingredients that might be required. Even the individual farmer could add those. In order to keep Muscle Shoals and manufacture the ammo-phos or ammonium phosphate there has to be some additional machinery and facilities which will cost, it has been estimated, from $30,000,000 to $35,000,000, and the proposed lessees say they are willing to put that in as a part of their contract.

Mr. SIMMONS. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Florida yield to the Senator from North Carolina?

Mr. FLETCHER. I yield.

Mr. SIMMONS. I would like to ask the Senator if there is anything in the theory which requires them to make the mixture at Muscle Shoals? May they not make the cyanamide at Muscle Shoals and make the mixture at some other point?

Mr. FLETCHER. Yes; they have to manufacture fertilizer, under that proposal, at Muscle Shoals.

Mr. SIMMONS. They have ultimately to manufacture fertilizer.

Mr. FLETCHER. Yes.

Mr. SIMMONS. But does it mean that they must manufacture all the ingredients of fertilizer at Muscle Shoals, or only one or two?

Mr. FLETCHER. They can make the cyanamide there, but they will have to bring in the phosphate to add to it in order to make the ammo-phos.

Mr. SIMMONS. I understood the Senator to say there is quite a duty upon ammonium phosphate?

Mr. FLETCHER. Yes.

Mr. SIMMONS. At the present time, as I understand, the Niagara Falls cyanamide plant is manufacturing cyanamide there and sending it over into New Jersey and there adding the phosphate.

Mr. FLETCHER. I think that is true. I think they make the cyanamide at Niagara and bring the phosphate up from Florida, and then they process it in New Jersey and combine the two and make the ammo-phos, three-quarters of which is sold in this country to fertilizer manufacturers and the rest shipped abroad. Some 52 foreign companies buy this material from them.

Mr. SIMMONS. They bring the cyanamide over from Niagara Falls and have to pay a duty on it?

Mr. SMOOT. No; cyanamide is on the free list.

Mr. FLETCHER. I think the Senator from Utah is wrong.

Mr. SMOOT. From what was the Senator reading?

Mr. FLETCHER. From the tariff act of 1922, paragraph 1583, which states that there are on the free list certain substances used chiefly for fertilizer, not specifically provided for, "Provided that no article specified by name in title 1 shall be free of duty." Turning to title 1, paragraph 7, we find ammonium, carbonate, bicarbonate, 1½ cents per pound, ammonium chloride 1¼ cents per pound, then we find ammonium phosphate 1½ cents per pound and ammonium sulphate one-fourth cent per pound.

Mr. SIMMONS. That means that the cyanamide imported from Niagara Falls pays a duty, does it not?

Mr. FLETCHER. If I am correct in my understanding of it. I am not so certain about the duty on cyanamide. I have been informed that it does pay a duty of $5 a ton, but I have read the law which specifies ammonium phosphate which must pay a duty of 1½ cents per pound.

Mr. SIMMONS. We have plenty of that material in this country, have we not?

Mr. FLETCHER. We have the phosphate rock, an inexhaustible supply of phosphate, hard rock, and pebble phosphate, but we have to make the cyanamide. That has to be manufactured.

Mr. SIMMONS. And that is not manufactured by any concern in this country?

Mr. FLETCHER. Oh, yes.

Mr. SIMMONS. Cyanamide?

Mr. FLETCHER. Yes.

Mr. SIMMONS. No; not by any concern in this country. It is manufactured only at Niagara Falls.

Mr. FLETCHER. Cyanamide, I think, is made by the du Ponts at Charleston and Hopewell. The Cyanamid Co.'s plant is at Niagara Falls.

Mr. SIMMONS. Not cyanamide by name. They are manufacturing synthetic nitrogen, but not cyanamide such as they are making at Niagara Falls.

Mr. FLETCHER. This contains 23 per cent of nitrogen or 28 per cent of ammonia.

Mr. SIMMONS. The point I was making was this: If the Cyanamid Co. now produces its cyanamide in Canada and sends it over into New Jersey and converts it into fertilizer, where they can get the ammonium phosphate free, why, under their contract, could not that same company, by securing Muscle Shoals, make the cyanamide in this country free of duty and then get their phosphate also free of duty?

Mr. FLETCHER. Undoubtedly they could. That is what they would do.

Mr. SIMMONS. And that is probably what they are seeking to do. That is probably what the farmers of the country would not object to having them do if they thought it would reduce the price of fertilizer to the farmer. The farmers would think that by that process they were getting the benefit of some of the tariff duties that tended to put them upon a parity with the manufacturers of the country with reference to the advantages of the tariff.

Mr. TYSON. Mr. President, I want to ask the Senator if he knows under the terms of the bill how much fertilizer the lessee guarantees to manufacture?

Mr. FLETCHER. Under the terms of the Madden-Willis bill?

Mr. TYSON. Yes.

Mr. FLETCHER. A maximum of 50,000 tons of fixed nitrogen a year.

Mr. TYSON. Is that in the bill?

Mr. FLETCHER. It is.

Mr. TYSON. I have not seen the bill and I have not seen the report on the bill, but I have the report on the bill which was introduced last year, and this is a résumé made by the committee:

> This company is obligated to install equipment sufficient to produce fertilizers with a fixed nitrogen content of 10,000 tons. Its obligation to install additional equipment rests upon its ability to sell at a profit the entire output of the first 10,000 tons. It is allowed to charge in the cost of fertilizer every item of cost connected with the construction and operation of the nitrate properties, including each year 10 per cent of its own investment in new plants. The nitrate operations are intended to be distinct from the power operations, and will be self-supporting and profitable, providing fertilizer can be produced cheaply enough to be sold.

In other words, if they did not produce it cheaply enough to be sold, they would not have to sell another pound or ounce of fertilizer, and they would have all that power at their command and the plant could apparently be kept idle without having to produce another pound of fertilizer.

Mr. FLETCHER. I do not think that is the situation under the present measure.

Mr. BLACK. Mr. President, I think I can explain what the provision is, if the Senator from Florida will permit me.

Mr. FLETCHER. Certainly.

Mr. BLACK. It is provided first that they shall have equipment for 10,000 tons of fixed nitrogen. It provides that if at the expiration of the three years they have created in this country, through the farmers' board which is provided, through the Government agency, a sufficient demand for concentrated fertilizer, they shall increase to 20,000 tons. It then provides a like increase every three years, which would, of course, have to be gradual. It also provides that they must have on hand at all times and never under any circumstances less than one-fourth of the 50,000 tons, which would mean, at the present price of that product, about $1,665,000 worth to be kept constantly on hand.

Mr. TYSON. What would happen if they could not sell it?

Mr. BLACK. They would have to hold it on hand and under their bill the amount that they made from the power which had been utilized in manufacturing nitrates would go to reduce the price of fertilizer and they would not get a dime of profit from it.

Mr. TYSON. What good would it do the farmer if we had 10,000 tons stored and he could not get it?

Mr. BLACK. I was explaining that. He would get that. The power which had been used in the manufacture of that fertilizer would then go to reduce the price of fertilizer, and the Cyanamid Co. would not get a dime of profit.

Mr. TYSON. That may be provided in the new measure, but it is not in the old one.

Mr. BLACK. It is in the Willis bill. I have read it with great care.

Mr. FLETCHER. The covenant in that bill is that they shall supply fertilizer to the farmers of the country at cost plus 8 per cent, so they are limited in that way.

If the charge that the proposed lessees are parts of a fertilizer trust, it is the first time in history that I ever heard of when a trust is willing to have its prices regulated and limited.

Mr. TYSON. Is that to be entirely independent of any money they get from power, or are they to use the money they get from power in reducing the cost of fertilizer? The last bill gave them all the money they could make out of the power, and then the fertilizer proposition was entirely an independent proposition and they were allowed to make 8 per cent on that, and if they could not make 8 per cent on it, all they had to do was to keep 10,000 tons on hand and never manufacture another ounce.

Mr. BLACK. They would have $1,665,000 worth of this material on hand all the time, and whenever it was not sold, of course, they would lose the profit on it. So far as the power is concerned, the power that they receive for use in the manufacture of phosphoric acid and cyanamide, there would be very little left over and above that to distribute to the public.

Mr. TYSON. I want to take issue with the Senator on that. It shows there are only 90,000 horsepower required if we make 48,000 tons of cyanamide. This plant, when perfected, will have 610,000 horsepower. That will leave at least 500,000 horsepower free that they can use or sell.

Mr. FLETCHER. Does the Senator mean by using Dam No. 3 and Cove Creek Dam?

Mr. TYSON. All the propositions the Senator has been speaking about.

Mr. BLACK. I can give that exactly, I think, if the Senator from Florida will permit.

Mr. FLETCHER. Certainly.

Mr. BLACK. So far as the manufacture of fixed nitrogen is concerned, the Senator is approximately correct in the amount

of power it will take, which will be from 90,000 to 100,000 horsepower.

Mr. KING. To produce 50,000 tons?

Mr. BLACK. Fifty thousand tons of fixed nitrogen, and then they have only begun. The main amount of power which is needed to manufacture fertilizer is not in the manufacture of nitrogen, as has seemed to be the impression here, but in the manufacture of phosphoric acid. Without phosphoric acid we can not make fertilizer. It will take 180,000 horsepower to manufacture sufficient phosphoric acid in order to obtain the benefit of that plant. The primary power at Dam No. 2 is 67,000 horsepower.

Mr. TYSON. That is the very lowest that it gets down to?

Mr. BLACK. That is primary horsepower there. There used to be a branch that ran down below the home in which I lived which frequently went dry in the winter and sometimes in the summer. I have seen it running after a big rain when 50,000 horsepower could be derived from it; but we can not count that kind of power. We can only count the kind of power that is continuous.

Mr. TYSON. What about the steam plant?

Mr. BLACK. I am going to refer to the steam plant. The secondary power derived from the steam plant is used, but it involves a considerable cost. About 4 mills an hour is what it is figured to cost. Then, if during 95 per cent of the time, for instance, there is not enough hydroelectric power it is supplemented with steam power, which is purely temporary.

Let me refer to my figures which I received from the Government engineers. I have the complete figures here. If Cove Creek and Dam No. 3 were completed it would double the capacity of Dam No. 2; that is unquestioned. That would make for Dam No. 2 134,000 horsepower after completion of Cove Creek and Dam No. 3. Then, from Dam No. 3 it is estimated by the engineers that there can be obtained 27,000 horsepower. That would make for Dam No. 2 134,000 horsepower and for Dam No. 3, if developed by Cove Creek, 54,000 horsepower; and from the steam plant, if enlarged, 120,000 horsepower, or a total of 308,000 primary horsepower, including in that the steam plant.

The total amount of power necessary to produce fertilizer—and the farmer is not interested in cyanamide if he does not get fertilizer—is 280,000 horsepower, which would leave 28,000 horsepower.

As the Senator stated, Dam No. 3 and Cove Creek Dam, constructed by the Government, would be amortized over a period of years. In addition to that, interest would be paid on the amount of the investment at the rate of 4 per cent. That is the situation. There is not now and never has been—and no one can find where any responsible engineer has ever said that there would ever be—600,000 primary horsepower produced from those dams.

What I have said is from the statement obtained from the engineers. Therefore, there would be 28,000 horsepower more than required to produce the fertilizer, if the horsepower required for such production was 280,000. As a result, there would be less than half enough horsepower to supply the one city of Memphis.

Mr. SMOOT. Mr. President, will the Senator from Florida yield to me at this point?

Mr. FLETCHER. I yield.

Mr. SMOOT. I wish to call attention to the fact that when the last tariff bill was passed in 1922 crude phosphates were put upon the free list, as were also cyanide combinations, compounds, and so forth; in fact, all cyanides were placed on the free list, including potassium cyanide, salts of cyanide, and sodium cyanide. We took particular pains that the products entering into the manufacture of fertilizer used by the farmers of the country should be on the free list.

Mr. FLETCHER. This product, ammonium phosphate, is certainly used by the farmers, and ammonium phosphate certainly is not on the free list.

Mr. SMOOT. The Senator knows that refined ammonium phosphate is used also in medicine in this country, and in a great many different other ways.

Mr. FLETCHER. I know that phosphate is on the free list; I realize that. Morocco is sending it over here now as ballast free of duty and selling it here cheaper than it is sold over there, thus taking our market away from us.

Mr. SMOOT. So far as I am personally concerned, if there is a sufficient quantity produced in the United States—and I think there is—to warrant a duty, I would not object at all to such a duty being imposed. But the commodities which I have mentioned, including cyanamides, were placed on the free list because they are used in the manufacture of fertilizer. That provision was adopted in the House of Representatives and was passed unanimously by the Senate, I think. The Senator from North Carolina will recall, I believe, that that was the case.

Mr. SIMMONS. Mr. President, if the Senator from Florida will pardon the interruption, I think we had quite a controversy in the Senate on that question. As I recall, there was a division of sentiment here, and it was a party division. I wish to look into it, however, for I am not quite sure.

Mr. FLETCHER. Mr. President, on this subject I wish to have inserted in the RECORD a letter dated September 8, 1926, addressed to Hon. LISTER HILL by W. P. Pickhardt, of New York. His company represents German concerns, I think. The letter bears on the subject we have discussed. It is evidently a public letter, and I have a right to use it, I take it, although I have not asked permission to use it.

Mr. SMOOT. What is the name of the writer?

Mr. FLETCHER. W. P. Pickhardt.

Mr. SMOOT. I know him very well.

The PRESIDING OFFICER (Mr. THOMAS in the chair). Without objection, the letter will be printed in the RECORD.

The letter is as follows:

KUTTROFF, PICKHARDT & CO. (INC.),
New York, September 8, 1926.

Hon. LISTER HILL,
Room 356, Office Building, House of Representatives,
Washington, D. C.

DEAR MR. HILL: Confirming telephone conversation of yesterday, I give you the prices for several of our synthetic nitrogen fertilizers. These prices are for carload lots, f. o. b. cars at port, duty, if any, included.

Urea: $160.50 per ton of 2,000 pounds, packed in single bags of 65 kos. gross for net. This price includes a duty of 35 per cent, making this product rather expensive for farm use, notwithstanding its excellent qualities.

Leunasalpeter: $70 per ton of 2,000 pounds, packed in bags of 220½ pounds gross; 1 per cent tare allowed on single bags. This material comes in duty free as a fertilizer material under paragraph 1583.

Calcium nitrate: $47.50 per ton of 2,000 pounds, packed in special bags of 220½ pounds gross for net. This also is a duty-free fertilizer material.

Our correspondents abroad also produce other fertilizers, as, for instance, ammonium phosphate, which is dutiable at $30 per ton under paragraph 7, and, of course, can not be imported under this handicap.

The prices quoted are for southern ports. There is a difference in favor of northern ports of about 60 to 75 cents a ton for ocean freights.

I should be glad to discuss the fertilizer situation with you at some convenient time when you are in New York, or later when you have returned to Washington.

Yours truly,

W. P. PICKHARDT.

Mr. KING. Mr. President, it seems to me that there is some misunderstanding among some of us at least with respect to this proposition. I have understood that the paramount ingredient in connection with fertilizer was nitrogen. The claim has been made that we have been subject for years to the Chilean nitrate trust, if it may be so denominated, and that we were one of the few countries of the world that did not have nitrogen. It was said during the war that we must emancipate ourselves from this servitude growing out of our failure to produce nitrogen, and, therefore, the Muscle Shoals plant was constructed, primarily, to obtain nitrogen for munitions and, secondarily, nitrogen for the purpose of making fertilizer for the farmer.

The cyanamide process does obtain nitrogen from the atmosphere. That is the source of supply under the cyanamide process, as it is under the synthetic process. It seems to me that when we can get a company that does produce nitrogen, which is the basis largely if not entirely of our fertilizers, we ought to look with some degree of favor upon it, at least for the purpose of determining whether we will enter into some contractual relation with it, providing that corporation will relieve the Government of the expense of maintaining the plants, and will furnish nitrogen sufficient for munitions purposes when the Government needs them, and nitrogen for farmers to aid them in the cultivation of their crops.

I can not understand this apparent opposition to cyanamide. If cyanamide gets us nitrogen, and nitrogen is what we need, why not use the cyanamide process or use the corporations that produce cyanamide, because they can give us the basis of fertilizer?

Mr. FLETCHER. I think the Senator is entirely correct, and I am much obliged to him for the statement he has made. Of course, nitrogen is one of the necessary elements of plant food; everybody knows that; nitrogen, potash, and phosphate are the three elements required in fertilizer. Here we have

the nitrogen and the phosphate, and we can get the potash. I hope eventually we will be independent of foreign countries in respect to potash. There are some soils which do not need potash.

I did not intend, Mr. President, to get into a discussion of the merits of the Madden-Willis bill. I realize there is probably a great difference of opinion about it, and I do not care to open that up. H. R. 8305 is the House bill and S. 2786 is the Senate bill. However, so long as Senators seem to be interested in the matter, and, of course, primarily and with respect to the main proposition we ought to be interested, I think, I am going to ask the clerk to read a letter which was written by Representative MADDEN to the President. There seems to be some misconception which this letter may clear up. I have not consulted Mr. MADDEN about it or, of course, the President, but the letter seems to be public property. I have several copies of it, and I take it I am not guilty of any impropriety in asking that the letter be read here. Now, I ask the clerk to read it. The tables may be printed in the RECORD without reading. The letter will set forth the merits of the Madden bill.

The PRESIDING OFFICER. Without objection, the clerk will read.

The Chief Clerk read as follows:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON APPROPRIATIONS,
Washington, D. C., February 13, 1928.

To the PRESIDENT,
Washington, D. C.

DEAR MR. PRESIDENT: In your reply to the official notification (August 14, 1924) of your nomination by the Republican National Convention, you made one statement that should never be forgotten:

"It is well for the country to have liberality in thought and progress in action, but its greatest asset is common sense. The people want a government of common sense."

I am writing you regarding my bill for the disposition of the Government's property at Muscle Shoals, because I believe that the taxpayers have a right to expect us to use this country's greatest asset of common sense in dealing with Muscle Shoals in order to save the assets of the Federal Treasury from incredible waste.

In my decisions about Muscle Shoals since the time I decided to address the House in favor of the acceptance of the Ford offer, February 3, 1923, I have earnestly tried to get at the facts, then follow the dictates of my conscience. I invite the most searching criticism of my bill now before the Committee on Military Affairs of the House, and shall never feel any acrimony toward those who fairly criticize it.

The only interest I have at Muscle Shoals is that of the Government, and in considering the Government's interest I shall try always to weigh the facts and fairly criticize all Muscle Shoals bills which in my judgment neglect the national defense, the welfare of agriculture, and Government economy.

In order, if possible, to correct some of the misunderstandings and misrepresentations of my bill by many who have not investigated the Muscle Shoals facts and by many others who persistently and purposely misrepresent these facts, I have undertaken to present the financial plan in my bill so clearly that it can not be misunderstood, even by those who do not wish to understand it. I send you three tables that speak for themselves.

Table No. 1 sets forth the financial plan in my bill on the same basis as the Panama Canal, 3 per cent bond issue. I have set forth in this table exactly how the Government stands each year for 50 years of the lease, and you will note that at the end of the fiftieth year there is a cash surplus of $20,900,000 remaining in the Federal Treasury after paying 3 per cent on all expenditures by the Government chargeable to water power, to navigation (including all expenditures made at the Wilson Dam during the war)—3 per cent on every dollar spent by the United States at the Wilson Dam, Dam No. 3, and Cove Creek Dam.

In addition to this, there is the sinking fund for the amortization of all of the expenditures of the Government at all three dams in 100 years, which fund at the end of 50 years would have a cash value of $10,800,000, which, added to the $20,900,000 surplus, would give us a total (above 3 per cent on all expenditures at the three dams) cash balance for the Treasury at the end of the lease of $31,700,000. At the end of the lease the Government would become the owner of all fertilizer plants built by the lessee under the lease. It has been estimated that these plants will cost as much as $40,000,000, but valuing them at the end of 50 years at so low a figure as $20,000,000, the value of these fertilizer plants, added to the cash balance of $31,700,000, would give the Government at the end of 50 years, in cash and property, $51,700,000.

If, however, the sinking fund is allowed to run, as it should, for 100 years, as provided in my bill, then at maturity the sinking fund alone would pay into the Federal Treasury every dollar spent at the Wilson Dam, Dam No. 3, and Cove Creek Dam, for national defense, for power, for navigation, and incidental flood control.

Table No. 2. In this table I have used a rate of interest of 3¼ per cent on the total expenditures of all kinds at Wilson Dam, Dam No. 3, and Cove Creek Dam, and at the end of 50 years there will be a surplus of interest earned over 3¼ per cent amounting to $7,830,000. Adding this to the value of the sinking fund at the end of 50 years, which is $10,800,000, there will be a total cash surplus of $18,630,000, and including the value of the fertilizer plants constructed by the lessee, estimated at $20,000,000 (as found above in the 3 per cent plan), which are to become the property of the Government at the end of the lease, there will be a total surplus in cash and property of $38,630,000.

Table No. 3. This table does not include any part of the cost of the dams chargeable to navigation, but shows, if bonds were issued (and of course I do not favor a bond issue), the surplus remaining after paying 3 per cent, 3¼ per cent, 3½ per cent, and 4 per cent on all expenditures at all three dams, except navigation charges—navigation being treated here as in all other river and harbor projects. Your especial attention is directed to the fact, that with a 4 per cent interest rate there will remain a surplus of $140,480.

We have two legislative plans before Congress for disposing of Muscle Shoals. The Madden-Willis plan, so called (Senator WILLIS, of Ohio, having introduced my bill in the Senate), and what is known as the Morin-Norris plan, found in H. R. 10028, introduced into the House by Mr. MORIN, of Pennsylvania, and S. J. Res. 46, introduced into the Senate by the Senator from Nebraska, Mr. NORRIS (Mr. LAGUARDIA, of New York, has introduced the Norris resolution into the House).

The Morin-Norris bills are both power bills open to serious objections that are, in many respects, the same. The Morin bill would authorize a "satisfactory lease" of the power properties in language so vague as to make it impossible to estimate what the returns to the Government would be. What does Mr. MORIN mean by "net return," and who is to decide what the "reasonable value of the properties so used" amounts to? The Morin-Norris plan proposed a water-power policy for the Government to generate and distribute power at Muscle Shoals among the States within transmission distance. The Morin-Norris bills do not, either of them, state or offer an estimate of what this proposed Government water-power policy, with extended transmission lines, will cost. However, in the hearings before the Senate Committee on Agriculture and Forestry in 1924, Mr. E. A. Yates, vice president of the Alabama Power Co., testified that the interconnected power systems of the Southeast would be able to absorb a large part of the Muscle Shoals power with the construction of several main transmission lines approximating in cost $10,000,000. But Mr. Yates explained that as the demands increase for power and transmission lines are extended the final investment in lines, equipment, and appliances would amount to a sum which Mr. Yates estimated at from three to five times the Government's investment in the Muscle Shoals project, and Mr. Yates made the significant statement that "this is quite necessary to bear in mind if a permanent market is to be found for this large volume of power."

The authors and supporters of the Morin-Norris plan are called upon to furnish for the information of Congress and yourself some approximate estimate of the cost of the Government water-power distribution policy they propose to establish at Muscle Shoals. The supporters of the Morin-Norris plan should furnish Congress a statement in the same detail that I am sending to you, showing what amount the Government will receive each year for power sold by the Secretary of War as authorized under the Morin-Norris bills and how the Government will stand in the end. Of course, in order to make such a statement—and Congress is entitled to it—the authors and supporters of the Morin-Norris plan will have to negotiate with the Alabama Power Co. They should negotiate just as carefully with Mr. Martin, president of the Alabama Power Co., to ascertain what he will be willing to pay the Government for power under the terms of the Morin-Norris bills, as the House Committee on Military Affairs has negotiated with Mr. Bell, president of the American Cyanamid Co., to find out definitely and exactly what that company will pay the Government under the terms of the Madden bill.

It was disclosed before a subcommittee of the House Committee on Appropriations at a late hearing that since the beginning of the Government's power operations at Muscle Shoals, on September 12, 1925, the Government has received from the Alabama Power Co. only about 2 mills per kilowatt-hour, and total payments have been received from the sale of power amounting to $2,123,644.49.

In a letter to the chairman of the House Committee on Military Affairs I called attention to the fact that if during the entire period of operation of the Wilson Dam power plant, two and two-tenths years, the Secretary of War had been required to earn 4 per cent on an investment chargeable to power of $27,500,000 (this allows $16,500,000 to be charged to navigation and war expenditures), the deficit would have been $1,830,798.61 on December 1, 1927. The statement of the United States engineers shows that our actual net annual earnings to date have amounted to a return on this $27,500,000 of only 1 per cent.

I can not speak for other Members of Congress, but I can never vote for any Muscle Shoals legislation which will cause the Federal Treasury to continue such losses as these, and under the Morin-Norris

plan only the Alabama Power Co. can tell us what our losses are going to be.

The Alabama Power Co., being the only available purchaser of power from the United States, should be requested to make an offer under the terms of the Morin-Norris bills for the power at the Wilson Dam. If there are any other possible purchasers, they should be invited to make proposals. With these power offers in hand, the Secretary of War can furnish us the cost of power at the Wilson Dam per kilowatt-hour, and then we can definitely state what profit the Government will make on this power.

The Alabama Power Co. will pay more for power at Muscle Shoals than the lessee in my bill proposes, for it is not the power company but the consumer who bears the added cost. The profits of the Alabama Power Co. are guaranteed by law. You will recall that the power companies proposed to pay the United States, in addition to other interest payments, $1,200,000 annually at the Wilson Dam on account of the benefits from the regulated flow of the river from the Cove Creek Dam. Though this offer of $1,200,000 a year was illegal and unenforceable, the Alabama Power Co. could make it legal, and then we could find out whether there is a majority of the Members of Congress in favor of using Muscle Shoals for the manufacture of fertilizer.

The fertilizer plan in the Morin-Norris bills is essentially the same, and provides for extensive scientific research and experimentation. Not only do these bills authorize a special appropriation of $2,000,000 for experimentation and manufacturing but they devote to this purpose the entire net revenue which the United States would receive from the sale of the Muscle Shoals power, amounting in the lease I recommend to an average of more than $3,550,000 per year.

Under the Madden-Willis bill the United States leases its properties to competent private operators, and is out of both the fertilizer business and the power business, and in the end receives in full both the principal and interest on its entire investment in the water-power properties in addition to a substantial surplus.

Under the Morin-Norris plan we go deeper and deeper into a hazardous commercial venture without even an estimate to guide us as to the financial demands that we must meet to pay for this far-flung and wholly unnecessary program of experiment and manufacturing. The authors of these bills should at least furnish a statement to Congress as to what the cost of these experimentations and plant operations will be.

The Government already has a costly research and experimental experience account. We have nitrate plant No. 1, a failure, costing $14,000,000. Our fixed-nitrogen research laboratory has cost us in expenditures from March 29, 1919, to December 31, 1927, $2,149,904.42, and yet, after spending a total in research and experimentation of $16,149,904.42, we are asked to authorize $2,000,000 in cash, and an average of $3,550,000 revenue (receivable annually for the power under my bill) to construct and operate experimental and production plants, and with no approximate statement of how much the Government will finally have to pay for this vast research and experimental venture. After spending $16,149,904.42 in research and experimentation, instead of continuing this waste the lessee in my bill agrees to establish laboratories for chemical research in fields of interest to agriculture, and will expend upon such research annually not exceeding $1 per ton on the fertilizer produced and sold by the lessee. This cost of chemical research will be charged to the farmers, who ought to pay it, and the lessee will expend perhaps $500,000 a year for research when the maximum production of fertilizers at Muscle Shoals is reached, and without any cost to the Government.

If we can not find out what is the best nitrogen process in 10 years, and after spending over $16,000,000 in research and experimentation, what will it cost us under the Morin-Norris plan to find out? Will it be common sense to continue our wasteful research and experimental policy or stop it and stop our guarding and maintenance of the nitrate plants which has already cost over $5,000,000, as my bill provides?

The power companies and fertilizer manufacturing interests will favor and support the Morin-Norris plan. The power companies last October indorsed the plan suggested by the Secretary of Agriculture and the director of the fixed-nitrogen research laboratory, and this plan is the plan of the Morin bill. The National Fertilizer Association has given its indorsement to the plan proposed by the United States Department of Agriculture. This plan is, in part, adopted in the Norris bill, and entirely in the Morin bill. If I were in favor of the power companies and did not stand for national defense and the production of fertilizers in time of peace at Muscle Shoals for the farmers, I would support the Morin-Norris plan, which allows the Alabama Power Co. to have Muscle Shoals and the Tennessee Electric Power Co. to have the Cove Creek storage dam.

I repeat to you what I said on the floor of the House on January 23, "I want to see whether the power companies of the United States have more power to pass legislation in the House than the House itself has."

Mr. President, in the interest of Government economy, in behalf of farm relief and national defense at Muscle Shoals, let us adopt a policy of business common sense.

Sincerely yours,

MARTIN B. MADDEN.

The tables accompanying the letter are as follows:

TABLE No. 1.—*Profit to Government from interest payments under Willis-Madden bill with 3 per cent financing*
(Same basis as Panama Canal 3 per cent bond issue)

End of lease year	United States investment in dams, locks, and hydroelectric plants		Interest charges on bonds at 3 per cent	Lessee's payments to United States under Madden bill		Deficit below bond interest		Surplus above bond interest		Remarks
	Item	Amount		Account	Amount	For the year	Cumulative	For the year	Cumulative	
0		$47,000,000	0		0	0	0	0	0	Approximate estimate at beginning of lease period.
First year	Wilson Dam	47,000,000		Wilson Dam	$200,000					One-half additional units in Wilson Dam ready at end of first year. Work begun on Dam No. 3 and on Cove Creek Dam. First year of deferred interest payments on Wilson Dam.
	One-half additional machinery in same.	3,500,000								
	Dam No. 3	1,000,000								
	Cove Creek Dam.	1,000,000								
Total		52,500,000	$1,575,000		200,000	$1,375,000	$1,375,000	0	0	
Second year	Previously invested.	52,500,000		Wilson Dam	200,000					First one-half of additional machinery in Wilson Dam has been available for a year and 4 per cent interest on same is payable. Remainder of this machinery is now ready. Work progressing on Dam No. 3 and Cove Creek Dam.
	Remainder of machinery.	3,500,000		Extra machinery	140,000					
	Dam No. 3	10,000,000								
	Cove Creek Dam.	9,000,000								
Total		75,000,000	2,250,000		340,000	1,910,000	3,285,000	0	0	
Third year	Previously invested.	75,000,000		Wilson Dam	200,000					4 per cent interest now payable on entire installation of additional machinery in Wilson Dam. Cove Creek Dam completed at end of third year of lease.
	Dam No. 3	10,000,000		Additional machinery.	280,000					
	Cove Creek Dam (completed).	10,000,000								
Total		95,000,000	2,850,000		480,000	2,370,000	5,655,000	0	0	
Fourth year	Previously invested.	95,000,000		Wilson Dam	200,000					4 per cent interest begins on full amount Cove Creek investment (assume no locks in Cove Creek storage dam). Dam 3 completed at end of fourth year of lease
	Dam No. 3 (completed).	11,500,000		Additional machinery.	280,000					
				Cove Creek Dam	800,000					
Total		106,500,000	3,195,000		1,280,000	1,915,000	7,570,000	0	0	

TABLE NO. 1.—*Profit to Government from interest payments under Willis-Madden bill with 3 per cent financing*—Continued

End of lease year	United States investment in dams, locks, and hydroelectric plants		Interest charges on bonds at 3 per cent	Lessee's payments to United States under Madden bill		Deficit below bond interest		Surplus above bond interest		Remarks
	Item	Amount		Account	Amount	For the year	Cumulative	For the year	Cumulative	
Fifth year	Previously invested (no further investment).			Wilson Dam	$200,000					First year of deferred interest payments on Dam No. 3.

Total			3,461,250		4,694,400	0	0	1,233,150	7,830,480	

Basis of computations

Present investment in Wilson Dam as of Feb. 1, 1928, including locks	$47,000,000
Estimated cost of additional generating machinery in Wilson Dam	7,000,000
Estimated cost of Dam No. 3 complete, with lock	32,500,000
Estimated cost of Cove Creek Dam (no locks required)	20,000,000

TABLE 3.—*Assuming a bond issue for financing the Madden-Willis bill, the following shows the surplus above bond interest*

(Considering navigation expenditures on same basis as other rivers, without any interest charges or sinking fund)

Interest payable to United States by lessee during lease period under Madden-Willis bill totals $177,740,480.

Average investment of United States during lease period (not including $10,000,000 chargeable to navigation at Wilson Dam, and $6,000,000 chargeable to navigation at Dam No. 3), is $88,800,000.

The surplus at various rates of bond interest is as follows:

	3 per cent	3¼ per cent	3½ per cent	4 per cent
Lessee's interest payments	$177,740,480	$177,740,480	$177,740,480	$177,740,480
Bond interest requirements	133,200,000	144,300,000	155,400,000	177,600,000
Surplus	44,540,480	33,400,480	22,340,480	140,480

Mr. FLETCHER. Now, let us get back to the report on this resolution. I was discussing that. Objection is made that nitrate plant No. 2 can not be economically utilized in the manufacture of fertilizer. The claim is made that it is out of date, and that there are modern methods now available that ought to be adopted.

I ask, why are not the so-called modern methods being employed somewhere? Who is making fertilizer material by the modern methods in the United States? The Du Pont people at Charleston, W. Va., are making nitrogen, but are not making fertilizer. The Hopewell people are making nitric acid, not fertilizer. If we can find a lessee who will contract to use these plants in the making of fertilizer, why not jump at the opportunity? The power is there, going to waste. Why not use it?

The Alabama Power Co. takes only what it chooses to take. More power can be easily added, and why not use it in making fertilizer?

This report speaks about selling power. Selling it where, to whom? We are dependent entirely on the Alabama Power Co. to distribute the power. If water power is not needed, why locate a plant at Muscle Shoals? The claim in the report is that gradually we are getting away from the use of water power in the making of fertilizer. If it is not needed, why locate a plant at Muscle Shoals? Why not go to the coal fields with the fertilizer plant? Yet this resolution compels the location of a plant at Muscle Shoals, and some other plants for experimental purposes in other parts of the country?

Who claims to-day that we do not need the power in the making of fertilizer? If anyone makes that assertion with any sort of faith in its soundness, then why locate a fertilizer plant where we can get water power at all? Why not take it into the coal fields, as I have said, where we can make nitrogen by the synthetic process?

The report further says:

> All this improvement in and cheapening of the process of getting nitrogen from the air has taken place since the war and since the construction of nitrate plant No. 2 at Muscle Shoals, which uses what is known as the cyanamide process. It seems clear, therefore, that it would be the height of folly and useless expenditure of public money to use the valuable power at Muscle Shoals—

for that purpose. The original act provided for the use of plants at Muscle Shoals for the cheapening of the manufacture

of fertilizer. The report says that. I wish to adhere to that original purpose. Why delay further about it?

This report further states:

It would be a useless waste of power that might be used for the benefit of all classes of people within transmission distance of Muscle Shoals.

Then why go on and complete Wilson Dam at an enormous expenditure? Why complete nitrate plant No. 2, as this resolution proposes? Why should the Government engage in producing power and selling power? Selling it where? What are the transmission lines going to cost; where are purchasers for the power to be found? What about rights of way for your lines? What about existing franchises in cities already owned by your competitors?

The report states:

The resolution provides for the construction of fertilizer plants, to be begun immediately.

What kind of plants? It is said that the cyanamide process or method is out of date and obsolete, that there are modern methods known to the scientific world. Where are they and what are they? Why not specify? This resolution does not do anything of the kind. Where are these plants located? The manufacture of fertilizer by what process? Why not use the power which we have already there now going to waste? Why talk about obsolete and out-of-date methods, when the evidence is conclusive that ammonium phosphate is being actually manufactured successfully in the United States?

I am told that the proposed lessees mentioned in that letter now manufacture 140,000 tons of ammonium phosphate a year, and sell about three-quarters of it to the fertilizer companies of the United States, and ship to some 52 foreign countries. That is all made by this obsolete process. Do you want any further evidence that the cyanamide process is practical, is feasible, and can be used in the manufacture of fertilizer, than the fact that they are doing it, and doing it successfully?

Mr. President, we should not continue longer importing at great expense large quantities of nitrate from Chile when we can make that material, when we have all the facilities and all the resources for doing it here.

We imported Chilean nitrate in 1831 to the value of $16,050; in 1851, to the value of $35,000; in 1871, to the value of $673,000; in 1891, to the value of $3,000,000; in 1911, to the value of $17,000,000; in 1921, to the value of $42,000,000; in 1918, to the value of $70,000,000; in 1926, we imported over 1,000,000 tons, of the value of $47,000,000.

Since 1831 we have imported from Chile more than 20,000,000 tons of Chilean nitrate, of the value of more than a billion dollars. The export duty to Chile has amounted to more than a quarter of a billion dollars, which we have paid. That has been added, of course, to the price of the nitrate. This nitrate contains about 15½ per cent of fixed nitrogen. The yield for 1,000,000 tons we annually import is about 150,000 tons of fixed nitrogen. About 660,000 tons of this 1,000,000 tons are used for fertilizer purposes, so the farmers get about 100,000 tons of pure nitrogen annually from Chile. The capacity of nitrate plant No. 2 is 50,000 tons of pure nitrate. Why should we not operate it?

If other processes are discovered to produce it cheaper, the American Cyanamid Co. will undoubtedly be the first to adopt them. One obstacle in the way of the Government actually operating the plant in order to produce fertilizer is shown by the contract with the Cyanamid Co., one of the proposed lessees under the Madden-Willis bill, which actually constructed plant No. 2 under a contract with the Government. It has never been completed fully, but whatever has been done there was done by that company, and under that contract it was provided that if the Government undertook to manufacture fertilizer at that plant it must pay the Cyanamid Co. $1,250,000 for the use of their patents. In other words, the Government is not in position to make fertilizer there until they have acquired the patent processes for making the fertilizer, and if they used the cyanamide process they undertook and agreed to pay $1,250,000 for the use of those patents.

See what the fertilizer bills have been mounting to. Using the 1920 census, North Carolina's bill for fertilizer is nearly $49,000,000 a year; South Carolina's bill, $52,000,000; Georgia's bill, nearly $46,000,000; Florida's bill, about $15,000,000. The consumption in Florida has increased from about 260,000 tons in 1920 to nearly 400,000 tons in 1926. The bill now is probably more than $15,000,000 a year.

Compare these bills with the total cost of Dam No. 2. Power is not so much needed in those States. What they really need is power in the form and shape of fertilizer. They need it sent down there, not by transmission wires, but in fertilizer bags. There are unlimited power possibilities in this region and there is no need for the Government going into the business of developing power and electric energy. The Aluminum Co., on the little Tennessee River, has already developed 100,000 horsepower and are doubling that now.

As far as Florida is concerned, we can get all the power there is any possible use for from the Chattahoochee River, 300 miles nearer than Muscle Shoals. We already have some water power developed in Florida on the Withlacoochee River, and power can be developed on the Suwannee, Santa Fe, and other rivers in Florida.

But, as a matter of fact, Mr. President, facing the truth as it exists, we can make power, especially in the ports of the State—at Jacksonville, at Miami, at Tampa, at St. Andrews Bay, and at Pensacola and at other ports—by the use of fuel oil, which comes to us by water, as cheap as it can be made at Muscle Shoals.

It is not a question of power we are concerned about; it is a question of meeting the needs of agriculture. That is the thing we must look after, and that is the thing we ought to devote ourselves to in connection with this proposition.

Now, Mr. President, I want to refer to the fact that many of us favored what is known as the Ford offer, and on that subject one of the most conscientious men that ever sat in this body took that view. He was one of the finest characters I ever knew, a patriot and a statesman; not only that, but a statesman who took a broad view, who kept in mind not the next election but the next generation. Not only was he a statesman but a scientist, a chemist, and he knew the difficulties of making fertilizer and the problems involved in it. I had very great admiration, as I think we all had, for former Senator Ladd, of North Dakota. Senator Ladd favored accepting the Ford offer. He wrote several articles—one on November 2, 1924, and another on November 29, 1924—for the Saturday Evening Post entitled "Why I am for Henry Ford's offer for Muscle Shoals." In the first-mentioned article he said:

As to the questions of chemistry involved in the solution of the Government's Muscle Shoals problem, however, I have some decided opinions of my own, based upon the history of air nitrogen developments and upon my own study and experience as a chemist; and with this viewpoint I approach the Government's problems at Muscle Shoals and present my views to the readers of the Saturday Evening Post.

Further on in the article he said:

At Muscle Shoals the Government has built two nitrate plants. Nitrate plant No. 1, with a capacity of only 30 tons of nitrogen in the form of ammonia a day, was an unsuccessful experimental plant costing $13,000,000. Nitrate plant No. 2, which cost $67,000,000, is the largest nitrate plant in the world employing the cyanamide process. Its capacity is 40,000 tons of pure nitrogen a year. This is equivalent to about 250,000 tons of Chilean nitrate, or about 70 per cent of the entire amount imported from Chile annually for use by American agriculture. Unfortunately there is ample evidence that this plant will have to be radically changed to produce the improved concentrated fertilizers that are admittedly possible, while the cost of such changes and additions, from estimates given by the Hon. MARTIN B. MADDEN, chairman of the House Committee on Appropriations, will be at least $25,000,000.

Then he considered the question, first, Shall power production and distribution or fertilizer manufacture be paramount? and he dwelt upon such question and insisted that the fertilizer manufacture should be paramount, and said:

Second. Germany, prior to the war, was importing about 600,000 tons of Chilean nitrate annually, while to-day she is independent of Chile through the operation of her war-built air nitrogen plants.

Third. Authorities are agreed that combined nitrogen in the form of ammonia, which costs the farmer from 20 to 25 cents a pound when purchased in the form of mixed fertilizers, can be manufactured at Muscle Shoals for 5 to 6 cents a pound by several well-known processes.

Further on in his article he said:

It was made clear during the extended hearings before our committee that if we would divorce the nitrogen industry from reliance upon water power we immediately must turn to coal; but the country knows only too well how a coal strike can paralyze transportation and industry. Shall we deprive our future fertilizer industry of water power and make agriculture itself dependent upon the good grace and tolerance of the coal operators and their miners?

The domestic price of by-product nitrogen fertilizer is fixed by our domestic monopoly—mostly coal operators—in accordance with the price of Chilean nitrate, and the latter is fixed by a world-wide monopoly called the Chilean Nitrate Producers' Association. Our farmers fare no better at the hands of the by-product coke monopoly than they do at the hands of the Chilean nitrate monopoly. It seems to me that if we want to get cheaper fertilizer for American farmers we must find some other road than by permitting the fertilizer industry to be exploited by

coal and coke operators who have already declined to sell American farmers cheaper fertilizers, regardless of any technical advantage in doing so.

My position as to the use of the Muscle Shoals power in the manufacture of fertilizers squares exactly with that of Dr. E. H. Hooker, president of the Manufacturing Chemists' Association and of the Hooker Electrochemical Co., who is one of the leaders in the application of electric power to chemistry in the United States. Doctor Hooker told our committee that if the full opportunities for fertilizer manufacture are to be realized at Muscle Shoals, then the amount of power that would be necessary to meet the growing demand for fertilizer "will probably increase rather than decrease, although it will be less per unit."

* * * * * * *

The proposal of Senator NORRIS that we divorce the power from the fertilizer and limit the amount of power to be used in the manufacture of fertilizer to not more than 25,000 horsepower of primary or dependable power and 75,000 horsepower of secondary or irregular power and engage in a cooperative business relation with the Alabama Power Co. and its associates in order to distribute the larger portion of the power, although a satisfactory arrangement to the associated power interests and to the fertilizer group, will never have my support. Public utilities have had absolute domination of our water powers in this country for a generation, but never yet have they accomplished anything of importance to the farmer, although they themselves say in the report of the committee on public policy, National Electric Light Association, at their convention in June, 1922:

"No nation such as ours is stronger than its agriculture. * * * Any movement, therefore, to build up the city at the expense of the farming community is shortsighted."

* * * * * * *

Senators may vote down the Ford offer, but when they do they should realize that the Ford proposal is the only one in which the responsibility of operating nitrate plant No. 2 to full capacity is guaranteed and the operation carried on at private and not at public expense. Mr. Ford's obligations are not limited to nitrogen alone, but include other commercial fertilizers, of which there are only two—phosphoric acid and potash. The capacity of nitrate plant No. 2 means sufficient nitrogen for 2,000,000 tons of 2–8–2 commercial fertilizer—worth about $60,000,000—annually, while the total consumption of commercial fertilizers in the United States in 1921 was 5,183,523 tons; so it is very evident that the minimum fertilizer production proposed by Mr. Ford is by no means the insignificant portion of the total American consumption which the opposition would lead the country to believe.

* * * * * * *

The comparative economic benefits of the Muscle Shoals power, when utilized in fertilizer manufacture as against public-utilities service through a superpower system, are evident when it is recognized that the farmers' expenditures for fertilizers in the 11 Southern States from Virginia to Arkansas, as shown in the following table and upon the map, were $207,000,000 in 1920, while the expenditures for electric lighting and power purchased from all public utilities as recently as 1922 in the same States amounted to only $109,000,000.

A saving of 50 per cent of the farmer's fertilizer bill in these 11 States would be a greater economic benefit to the people of that region than would result if every purchaser of public-utility light and power in those States were supplied at 10 cents on the dollar. Such a reduction would be absurd and manifestly impossible, while it is generally conceded that the cost of fertilizers can be reduced one-half at Muscle Shoals.

Comparing the proposal in the Madden-Willis bill with the Ford offer, I insist that the latter is more favorable to the Government and the public than was the Ford offer.

1. Henry Ford's proposal was an offer to make a lease. The Madden-Willis bill carries the lease in itself. That is to say, the precise terms, so there can be no question about what the contract will eventually be, are set forth in the body of the Willis bill. The covenant is nominated in the bond.

2. Ford proposed to purchase nitrate plants; Madden-Willis bill provides for their lease.

The Ford offer was a proposal to purchase the nitrate plants. The title to the property passed entirely out of the hands of the Government. The Madden-Willis bill being a lease, the title to the entire property remains in the United States.

3. Ford without chemical experience; American Cyanamid Co. successful fertilizer manufacturers.

Neither Mr. Ford nor his organization had manufacturing knowledge of the fertilizer business. American Cyanamid Co. for years has been successfully producing cyanamide and concentrated fertilizer—ammonium phosphate—and selling it on a large scale, and is as experienced in the fertilizer manufacturing business as Ford is in the automobile business.

4. Ford made no definite agreement to manufacture concentrated fertilizer; Madden-Willis bill requires the production of concentrated fertilizer in the form of ammonium phosphate.

The benefits of Muscle Shoals to agricultural regions at a distance depend upon the production of concentrated fertilizer containing high percentage plant food and therefore making cheaper transportation possible. Ford merely agreed to make nitrogenous fertilizers, without specifically naming any particular kind of nitrogenous fertilizer.

5. Fertilizer production in Ford offer has been increased 25 per cent in Madden-Willis bill.

Obligation as to fertilizers under the Ford offer was limited to fertilizers containing 40,000 tons of fixed nitrogen in a form not stated. The ultimate production under the Madden-Willis bill is 25 per cent greater and totals 50,000 tons of fixed nitrogen in a form which is definitely stated as ammonium phosphate. (Ammonium phosphate as now made carries 13 per cent ammonia and 48 per cent phosphoric acid, a total of 61 per cent plant food.)

6. Lease period under Ford offer 100 years instead of 50 years as proposed in Madden-Willis bill.

The lease period in the Ford offer was for 100 years, and in the Madden-Willis bill the lease period is for 50 years.

7. Lessee under Madden-Willis bill pays more interest to the Government on its Muscle Shoals investment than Ford proposed.

In the Ford offer the interest rate was 4 per cent, but there was a preliminary period during which only a fraction of 4 per cent was payable, creating a deficit below 4 per cent which was never made good. In the Madden-Willis bill this deferred interest is payable with interest thereon, and the Government receives the full 4 per cent.

8. Lessee under Madden-Willis bill pays royalty on Government's limestone; Ford proposed to purchase Waco Quarry.

In the Ford offer no royalty was payable on limestone removed from the Waco Quarry. Under the Madden-Willis bill a royalty of 5 cents per ton is payable on all limestone removed. With nitrate plant No. 2 running at capacity the royalty on limestone will amount to from $12,000 to $15,000 annually to be paid by the lessee to the Government.

9. Lessee under Madden-Willis bill pays Government more for maintaining mechanical equipment at Wilson Dam than Ford proposed to pay.

In the Ford offer the Government was responsible for maintaining the long series of gates and mechanical equipment across the top of the Wilson Dam. In the Madden-Willis bill the lessee maintains the gates, as well as the power houses and generating equipment.

10. Ford's offer to limit fertilizer profits to 8 per cent not as definite as lessee's agreement under Madden-Willis bill.

The Ford offer limited fertilizer profits to 8 per cent of cost but did not definitely specify the items to be included in cost; the Madden-Willis bill also limits fertilizer profits to 8 per cent of cost but avoids future controversy by definitely specifying the items to be included in cost.

11. Ford did not waive royalties on patents; lessee under Madden-Willis bill waives all royalties on fertilizer processes.

There was no provision for waiving of royalties in the Ford offer; the Madden-Willis bill provides that no charge shall be made for royalties on fertilizer processes now owned or which may be acquired by the company, nor any royalties upon inventions made through the program of research provided in the contract. In the contract between the United States and the American Cyanamid Co. for building nitrate plant No. 2 it was agreed that in case nitrate plant No. 2 was operated by the Government the American Cyanamid Co. should receive a royalty on cyanamide produced amounting to $30 per ton of fixed nitrogen. Running at a capacity production of 50,000 tons of fixed nitrogen annually, as provided in the Madden-Willis bill, the royalty would have been $1,500,000 per annum.

12. No distribution of power in Ford offer; surplus power to be disposed of under Madden-Willis bill.

The Ford offer made no provision whatever for the distribution of surplus power from Muscle Shoals; the Madden-Willis bill provides that such power shall be disposed of for the purpose of distribution, subject to State and Federal laws, for general domestic, industrial, and commercial uses.

13. Government nitrate plants and lessee's fertilizer plants become Government property at end of lease period in Madden-Willis bill; Ford would have continued to own the property.

Under the Ford offer the Government never regained title to or possession of its nitrate plants. The Madden-Willis bill not only provides that the Government shall regain possession of its nitrate plant properties at the end of the lease period (it never parts with the title to these properties at any time) but also confers upon the Government, without charge, the title to all fertilizer plants built by the lessee at his own expense on the leased premises. The value of these additional fertilizer

properties to be built by the lessee has been estimated at from thirty to forty million dollars.

Those who are favorable to the Ford offer have here clearly a much better proposition, more favorable to the manufacture of fertilizer, more favorable to the farmer and to the public in general than the Ford offer.

There appeared in the Dearborn Independent for January 3, 1927, an article or editorial entitled "Nitrates or battle cruisers," in the course of which this statement was made:

Whenever the right is granted by any executive of the Government, or by the power commission, or by Congress to any power company to build and own the Cove Creek Dam under the water power act, that will be a gift of $50,000,000 to the power combine.

I say let the Government build the Cove Creek Dam, own the reservoir and dam as auxiliary power for all the plants, and that means the securing of navigation on the Tennessee, not only navigation south but navigation 80 miles farther up to the coal fields of Tennessee. Let the Government build that dam and let the Government refuse to make this gift of $50,000,000 to the power company.

I want to submit for the RECORD a communication from the commissioner of agriculture of Florida, dated January 18, 1927, together with an article which he prepared and which is published in the Florida Review, entitled "Muscle Shoals, by Nathan Mayo, commissioner of agriculture." I ask that the letter and article may be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The letter and article are as follows:

THE STATE OF FLORIDA,
DEPARTMENT OF AGRICULTURE,
Tallahassee, January 18, 1927.

Hon. DUNCAN U. FLETCHER,
Washington, D. C.

DEAR SIR: I am inclosing a copy of Florida Review. In it you will find an article on Muscle Shoals, in which I have tried to express what I believe to be the views of the American farmer on this question.

I fully realize that you are awake to the situation as regards Muscle Shoals, and that you stand ready to vote for whatever bill offers the greatest benefit to farmers.

As commissioner of agriculture for Florida, I am deeply concerned with the early and correct disposition of this highly important matter. Agricultural leaders everywhere are agreed that there should be action, definite and positive, by the present Congress. Those who made possible the development of that wonderful plant at Muscle Shoals did so with the plan and purpose expressed in the national defense act of June, 1916, that this plant should be operated for the purpose of making fertilizer except in time of war.

Since the signing of the armistice, November 11, 1918, we have had eight years without war. And, so far as Muscle Shoals is concerned, we have had eight years without fertilizer. The plant at Muscle Shoals has made only about 5,000 tons of nitrates. Its power has been sold to private interests at a low price—a thing plainly contrary to the purpose for which the plant was built.

Meanwhile the farmers have been paying high for nitrogen. Their annual bill for fertilizers runs well over $200,000,000. Probably one-half of this sum represents the cost of nitrogen, the most expensive single element in fertilizer.

Conservative authorities place the saving we might hope for from the operation of Muscle Shoals as a nitrate plant at from $3 to $5 per ton for each ton of fertilizer used. As we use more than 7,000,000 tons of fertilizer per year in the United States, you can readily see that Muscle Shoals would effect a tremendous sum-total saving to the farmers of the land. In Florida alone we estimate that the proper operation of Muscle Shoals would mean a saving of over $1,000,000 per year on our fertilizer.

When you have read it I should be glad to have your comments on the article inclosed, and also your views on the Muscle Shoals legislation now pending in Congress.

Very truly yours,

NATHAN MAYO, *Commissioner.*

[From the Florida Review, Tallahassee, Fla., January 17, 1927]

MUSCLE SHOALS

By Nathan Mayo, commissioner of agriculture

With Congress again in session, the American public is once more manifesting interest in the disposition of the Muscle Shoals matter. This great piece of unfinished business has been before our National Legislature for years. The American farmers, and especially the farmers of the South, are particularly concerned with this subject. Perhaps never in history has Congress had before it a matter more fraught with economic importance to southern farmers than this question of utilizing the power of Muscle Shoals for the benefit of agriculture.

The potential value of the Tennessee River for industrial purposes has long been recognized. It is said that George Washington himself, as a young man, following his work as a surveyor and civil engineer, made a survey of the Tennessee River near Florence, Ala., and declared that it offered wonderful opportunities. From that time to now, down through the Nation's history, men have sought to harness nature's provision for power generation at this point.

During the World War, in June, 1916, Congress made an appropriation of $20,000,000 for beginning operations at Muscle Shoals for the production of nitrates, based on recovering nitrogen from the air in the form of fixed nitrates as a basis for ammunition.

Since then additional appropriations have been made by Congress until our Federal investment at Muscle Shoals has reached the enormous sum of almost $150,000,000.

Here we quote from a speech delivered by John W. Newman, former commissioner of agriculture of Kentucky, at a meeting of the Farmers Union, Lexington, Ky., January 1, 1927:

"It is not our purpose to pass upon the wisdom of Congress in making this huge appropriation at the time. The facts are, the money has been expended and the plant is there to show for itself. The question is, What shall be done with this plant now that the country has it? One can scarcely visualize what a million dollars can buy. Multiply this by a hundred and fifty and you will begin to get some conception of the enormity of the plant along the banks of the Tennessee River. The Wilson Dam itself is approximately a mile long, 125 feet high, and backs the waters of the river up for about 17 miles, forming the great Wilson Lake. The power generated by this dam alone is, in round numbers, under full-stream conditions, 200,000 horsepower. Now, picture approximately 6,000 acres of land, upon which are located a steam plant capable of generating 125,000 horsepower to supplement the power production of the dam; dozens of magnificent factory buildings, all filled with high-priced, highly developed machinery, the best the world affords; hundreds of residences; storehouses; its 500-acre limestone quarry, at least 80 feet in depth; 25 miles of railroad; steam engines; cars; rock-crushing machines, capable of turning out 1,200 tons of rock per day; switchboards; high-tension lines; storerooms filled to bursting with materials; power sufficient to keep hundreds of thousands of men at work, and you will have some idea of this immense Government plant. It was operated for five weeks and made approximately 5,000 tons of fixed nitrogen—enough for the nitrogen content of approximately 50,000 tons of ordinary fertilizer.

"The power is there. The machinery is there. It has been demonstrated that the most costly content of fertilizers, namely, nitrogen, can be made at a reasonable cost. Yet it remains idle, because the President of the United States can not lease it except by act of Congress, and the funds have not been provided by Congress for its operation in the interest of the American farmer. The sad part of it is that the farmer, in the meantime, is contributing unnecessary millions in profits to foreign nations and to the fertilizer companies operating in America. The annual importation into America of Chilean nitrates, as a prime basis for ordinary mixed fertilizers, amounts to millions of tons. The export duty for this Chilean nitrate is $12 per ton. The profits to the importers run into other millions, all of which our farmers pay."

Florida has a peculiarly good reason for wanting action on Muscle Shoals. Our State probably uses more high-nitrogen fertilizer per crop-acre than any southern State. We used last year approximately 400,000 tons, at an average price of $36 per ton; and around half of this $36 is represented by the nitrogen content of the ton. In other words, Florida spent more than $7,000,000 for her nitrogen in 1926.

If Muscle Shoals can manufacture nitrates cheaply enough to reduce this outlay of $7,000,000 to any appreciable extent, Florida farmers would like to have it done.

Muscle Shoals can be made into a national blessing or a national shame. It was the intent of the framers of our national defense act that American agriculture should benefit from Muscle Shoals. The national defense act, under which the initial appropriation was made, provides that the President of the United States can operate this plant for the production of ammunition bases in times of war and for fertilizer products in times of peace. It is now more than 10 years since this act was passed. We have had eight years of peace, during which the chief beneficiary of this gigantic power plant has not been the American farmer, but the private interests which have bought this power from the Government at a nominal sum.

Congress should adhere to the plan of those whose vision saw in Muscle Shoals a vast agency for the help of the American farmer. Muscle Shoals should be put in operation. Its giant power should not be bartered away to those who will amass millions and billions of dollars profit from it. In time of peace, it belongs to the American farmer, not to the American capitalist. And so long as we are at peace, its product should be nitrates, up to the full needs of agriculture. When these needs have been met, and not until then, should a single kilowatt of its power be sold to private interests, who will in turn use it for private gain.

The farmers of the Nation are buying more than 7,000,000 tons of fertilizer per year, at a total outlay of more than $200,000,000, which exceeds the total cost of Muscle Shoals by more than $50,000,000.

If we assume that the price of this fertilizer would be reduced to the amount of only $3 per ton by the operation of Muscle Shoals—and that is probably a low estimate—we have here a saving of $21,000,000 per year. Within 10 years, properly operated, this vast national asset could be made to pay back in savings to the farmers of the land every penny our Nation has put into it. Will Congress do its duty?

Mr. FLETCHER. Mr. President, I have already taken more time than I anticipated on this matter. It is a matter of very great importance. I hope we can arrive at some definite conclusion with respect to the policy to be adopted and with respect to the putting to use these properties and placing this great enterprise on a sound basis.

Mr. KING. Mr. President, will the Senator from Florida before he concludes permit an inquiry?

Mr. FLETCHER. Certainly.

Mr. KING. If I understand the Senator, I am rather disposed to accept the view which he has announced; that is, that he prefers to subordinate the power possibilities of the enterprise and project to the commercial manufacturing of fertilizer for the use of the farmer. We have the so-called Norris proposition before us, which emphasizes the power scheme; indeed, as I understand it, and as I interpret it, it means, if we accept it, that we shall have power and we shall not have fertilizer, because the Government has utterly failed thus far in its experimentation in producing fertilizer, whereas private individuals and corporations have succeeded and undoubtedly can succeed. If we reject the Norris proposition, does the Senator from Florida think that the so-called Madden bill or Willis bill—the latter being before the Senate and the former before the House of Representatives—would carry out the plan for which the Senator has been contending, would sufficiently protect agriculture, and would sufficiently prevent the Government from going into private business, for I am very much opposed to the Government going into private business; that is, in the field of private endeavor?

Mr. FLETCHER. I think undoubtedly, Mr. President, the proposed lease set out in the Madden-Willis bill would bind the lessee to operate the plant. The Government under that lease would retain title, of course, to all the property, to all the dams that it has already built or may build hereafter, to all the improvements, and the lessee would control and operate the plant for a period of 50 years. Then, of course, control of the property would all revert to the Government. The Government, however, would have nothing to do with the operation during the lease period. Among other things that I did not mention before, I think the contract provides that the lessee shall spend $35,000 a year in the maintenance of the Wilson Dam and shall also spend $25,000 a year in the maintenance of Dam No. 3, in addition to the other things I mentioned just a moment ago.

There may be some details about the bill that I would prefer to have changed; it may be that we should want to offer some amendments to it; but in a broad, general way it would place us on a definite foundation. We would lease the property for a period of years; we would secure the manufacture of fertilizer that we desire and that the country needs. Then also we would be free from cost, from care, and from responsibility in connection with the maintenance of the property. I think that would be very desirable. However, whether the details of the measure are exactly what we would all like, whether we would like to amend the measure in some respects is another matter; but generally speaking that is where I should like to get on this proposition.

I voted for the Ford offer and I favored that rather than have the Muscle Shoals property lie idle and go to waste. I think, in its broad sense, the offer under the Willis-Madden bill is better than was the Ford offer, as I have just stated.

Mr. SIMMONS. Mr. President, will the Senator kindly tell me to which offer he is referring—to the offer of the Cyanamid Co.?

Mr. FLETCHER. I am referring to the offer as mentioned in the Madden-Willis bill. The parties to whom I refer are the Air Nitrates Corporation and the American Cyanamid Co.

Mr. SIMMONS. Will the Senator permit me at this point to ask him a question?

Mr. FLETCHER. Yes.

Mr. SIMMONS. Does the Senator believe that cyanamide as a nitrate will ever prove satisfactory to the farmers of this country or will ever take the place of the nitrate of soda that we get from Chile?

Mr. FLETCHER. I understand that it has to be combined with phosphate before it becomes fertilizer material, in order that it may not do harm.

Mr. SIMMONS. It must be combined with a precision equal, I think, to that with which medicine is compounded in order to make it safe; but does the Senator believe that it will ever be used in sufficient quantities to supply the needs of the farmers of this country for nitrate of soda or that it will ever take the place upon the farms of this country that is now occupied by nitrate of soda which is imported from Chile?

Mr. FLETCHER. I think there is no doubt but that it will do so.

Mr. SIMMONS. Mr. President, I have very serious doubts about it, and I am trying right now to get some light upon that question. I have talked with some chemists about it, and they have expressed to me a very adverse opinion with reference to the use of cyanamide to any considerable extent as a source of nitrogen. The cost of fertilizer to-day is largely determined by the cost of the nitrogen that is in it. The potash cost has been greatly reduced, I think; the phosphate cost is probably not so very much in excess of what it was before the World War; but the nitrogen cost has not been reduced in the same proportion.

Mr. FLETCHER. Mr. President, may I say to the Senator from North Carolina that cyanamide contains 23 per cent of nitrogen. The nitrates from Chile contain only, I think, about 15 per cent. The nitrogen must be extracted, separated from the other elements, and then combined with phosphoric acid to make ammonium phosphate, which is the form ready for use as fertilizer material.

Mr. SIMMONS. That is not the question, Mr. President. The question is whether we can with safety use enough of the cyanamide to supply the demands of the soil for nitrogen. I think we can not, except upon certain special soils, and as applied to certain particular crops; but, taken as a general proposition, I think the consensus of opinion among farmers and chemists is that cyanamide can never take the place of nitrate of soda as we get it now from Chile, and that some other process must be invented to enable us to use safely a larger quantity than can be used by the present process. In other words, it is necessary to use a very large quantity of acid phosphate and a large quantity of potash and a large amount of filler, in order to use a small quantity of cyanamide with safety to plant life. If the margin of safety happens to be exceeded the crop is destroyed. I am very much troubled about that situation. I have been sending inquiries to some people who, I think, can throw some light on the subject. I am afraid that Senators are not sufficiently familiar with chemistry to throw the necessary light on it.

Mr. FLETCHER. I think the Senator is laboring under a misapprehension. Cyanamide is not used as a fertilizer; it is not sold to the farmers to be so used.

Mr. SIMMONS. I know that. Of course, it would kill every crop that it was used on, if that were done.

Mr. FLETCHER. It is merely an ingredient of fertilizer that has to be mixed with other ingredients before it is available for use on the farm.

Mr. SIMMONS. The point I make is that there can not safely be put on the land a sufficient quantity of that cyanamide mixed with phosphate and with potash to give the necessary quantity of nitrate of soda.

Mr. BLACK. Mr. President, may I make a suggestion to the Senator?

Mr. SIMMONS. Certainly.

Mr. BLACK. The Senator is absolutely correct, in my judgment, in his statement about cyanamide. The plan is not to use cyanamide in the mixture as cyanamide, but to extract from the cyanamide the nitrogen that is contained in it. It makes no difference whether that nitrogen comes from Chile or comes from the air; the nitrogen will be exactly the same. When that nitrogen is extracted from the cyanamide and it is mixed with phosphate, through a phosphoric-acid process, there is an absolute departure from cyanamide; it has ceased to be cyanamide by a chemical process.

Mr. SIMMONS. Then let me ask a question. As a farmer I know that there can be used almost an unlimited quantity of Chilean nitrate on the land without hurting it and without hurting the plant life. If cyanamide be taken and there be extracted from it ammonium, we will say, or nitrate of soda, can that be used in large quantities with safety to plant life? Can there be used as much of that as there can be of nitrate of soda in the Chilean form?

Mr. BLACK. I will explain that. There can not be so much of that used as there can be of nitrate of soda, because nitrate of soda in the Chilean form contains 15.5 per cent of nitrogen. The cyanamide contains, in addition to the nitrogen, lime, and the lime could and would be injurious under many circumstances.

Mr. SIMMONS. The lime can be extracted?

Mr. BLACK. Certainly; that is the only way fertilizer could be manufactured from it. The lime is separated from the nitrogen and then the remaining nitrogen under a chemical process is mixed with phosphate and with some other ingredient.

Mr. SIMMONS. With potash.

Mr. BLACK. Yes; with potash, if it is desired to use potash; and so there has been an absolute departure from the cyanamide, and the danger which the Senator anticipates from the use of cyanamide disappears.

Mr. SIMMONS. Does the Senator mean to say that the secondary product that is obtained from cyanamide by eliminating the lime is as harmless to plant life as is nitrate of soda?

Mr. BLACK. I mean to say that the nitrate that is obtained from cyanamide by proper extraction is exactly the same chemically, according to the formula, as the nitrate obtained from nitrate of soda; there is not a particle of difference on earth; it is all nitrate. One would injure no more than the other, because one has the same chemical properties as the other.

Mr. SIMMONS. Would it be possible to use the same quantity?

Mr. BLACK. It could be used in the same quantity and would have exactly the same effect, because both are nitrogen after the process of extraction has been completed.

Mr. SIMMONS. Now, I should like to ask the Senator. Has any of that secondary product been put on the market by the Cyanamid Co.?

Mr. BLACK. It has been put on the market by mixing the nitrogen with phosphate under the form of ammonium phosphate and sold under the trade name of "ammo-phos." There is no difficulty whatever in extracting the nitrogen.

Mr. SIMMONS. Has the Senator any information as to the amount of ammo-phos which was sold in the market of the United States in the last year?

Mr. BLACK. Ammo-phos as ammo-phos, according to my understanding, was not sold in the market of America.

Mr. FLETCHER. It is sold to fertilizer factories.

Mr. BLACK. Some of it is sold to fertilizer factories. I gave the figures a few days ago. Thousands of tons have been shipped to foreign countries that are sadly in need of fertilizer. It has been used both in foreign nations and in the United States through the intermediary of commercial fertilizer factories.

Mr. SIMMONS. Then the Senator means to say that ammo-phos was combined with phosphoric acid and potash, and fertilizer was thus made. Now, can the Senator give the number of tons of that product that were purchased by the manufacturers of fertilizer as compared to the number of tons of nitrogen that were purchased?

Mr. BLACK. I can not give the number of tons in comparison. It was not near so many, as I showed the other day in my statistics; but it was the entire output of the only cyanamide plant in North America. That is what was sold—the entire output.

The point I rose to attempt to explain was simply that I agree fully with the Senator in his statement that cyanamide as cyanamide would not be as useful as nitrate coming from Chile, for the reason that the nitrate coming from Chile is combined with a filler which is harmless to the soil, but the nitrate under the cyanamide process is combined with lime, which is frequently harmful and injurious to the soil.

Mr. KING. And to some soils beneficial.

Mr. BLACK. And to some soils beneficial, just as the Senator stated; but as a general fertilizer, for general use, cyanamide would not be satisfactory. If, however, you extract the nitrogen from the cyanamide and mix it with phosphate under the process which we hope will be installed at Muscle Shoals, although none of the bills provide for it as now pending, or the joint resolution of the Senator from Nebraska, or the substitute—it would take a tremendous expenditure to put up the necessary equipment to mix the phosphate with the nitrogen—if that plant is put up there, and Dam No. 3 is built, right up in Tennessee, in Giles County, there could be floated down the river on barges phosphate rocks, or they could come from Florida, thereby combining the two. When you extract the nitrogen from the cyanamide, leaving out the harmful element of lime, and combine it with phosphate, then you have nothing injurious to your crops, and you have absolutely gotten away from the danger which the Senator foresaw of the lime contained with the nitrogen in cyanamide.

Mr. SIMMONS. Now, will the Senator answer one more question? He says that product was sold to some extent in the American markets and used by the makers of fertilizer in combination with acid phosphate and potash. I want to ask the Senator whether this secondary product—for that is what it is—of cyanamide has, up to this time, been made so as to be sold in the market as cheaply as the Chilean product?

Mr. BLACK. Yes, sir; it has been made so as to sell, according to the figures which I give to the Senator, and is being sold at figures which would be related as 7.6 cents a pound to 15.5 cents a pound.

Mr. FLETCHER. Now, may I answer the Senator's question—I think I can to some extent, anyhow—about the quantity that has been put on the market by the Cyanamid Co., which manufactures ammo-phos? My information is—and I have been told that by gentlemen who, I think, are reliable in every way—that they are manufacturing now about 140,000 tons of this ammonium phosphate, and that they sell about three-fourths of that to fertilizer factories in the United States, and the remainder they ship abroad to some 52 countries.

Mr. BLACK. One hundred and forty thousand tons of ammo-phos, does the Senator mean?

Mr. FLETCHER. Yes; 140,000 tons of ammo-phos, this material here.

Mr. SIMMONS. And they sell about one-third of that to the American fertilizer producers?

Mr. FLETCHER. About three-fourths of it to the fertilizer manufacturers.

Mr. SIMMONS. Does the Senator know the price at which they sell it, as compared to the price of the other material?

Mr. FLETCHER. No; I do not know, but the price must be as the Senator from Alabama stated.

Mr. NORRIS. Mr. President, the reason why fertilizer is so cheap to-day is because the Cyanamid Co. are selling this stuff to the fertilizer trade. I suppose that accounts for the rejoicing that I have heard so many times, from sections of the country where they use fertilizer, that they are getting it so cheaply to-day. The Cyanamid Co. are in the business. They have been making fertilizer and selling it to the fertilizer people. Therefore you people from the South who use a great deal of fertilizer get it so cheaply; and that is the reason why it is desired to turn over this whole property to the Cyanamid Co., and invest $77,000,000 more of public money, because in their operations in the fertilizer world they have so cheapened the product that they have all the farmers in favor of them.

Mr. SIMMONS. I asked the question, Mr. President, because there is an outcry, or seems to be an outcry, coming from the farmer that the price of the farmer's fertilizer has not been reduced, but rather has been increased. I do not know whether that is true or not.

In certain years it seems to be a little cheaper than it does in other years. Last year we had reasonably cheap fertilizer. This year the price has been again advanced.

Mr. NORRIS. I do not know why the Cyanamid Co. have raised the price of fertilizer.

Mr. SIMMONS. It has been raised, however.

Mr. NORRIS. Evidently they think the farmers like to pay a good price and see them prosperous.

Mr. President, it has been stated here several times, and I take the figure as being correct—the Senator stated it just now, and stated it the other day——

Mr. BLACK. That was stated from memory. I put it in the RECORD the other day. That is my recollection of it.

Mr. NORRIS. I am going to refer to something else—the price of nitrogen by the cyanamide process. It has been stated as 7 and 8 cents a pound, as I remember; and I interrupted the Senator the other day when he gave that price and said that in my judgment, as I remembered the figures, nitrogen by the synthetic process—the most modern process—can be produced from the air for practically half the price at which the Senator himself says the cyanamide process produces it. He gives it again to-day at 7 cents; but, to be sure about it, I took it up with three eminent chemists. One of them is Doctor Cottrell, whom you all know. Another one is Doctor Howe, the editor of the leading chemical journal of the entire world. The third one is Doctor Parsons, who was one of President Wilson's committee that located the plant at Muscle Shoals, and a man whom President Wilson sent to Europe to study the fertilizer question.

As far as I know, none of these three eminent men have any interest—they all tell me they have none, and I believe every word they say—no financial or other kind of interest in any factory of any kind, or any system, or anything.

Since the Senator's speech the other day, when he gave the cost as 7 cents, and when I said I thought they were able to get nitrogen from the air by the synthetic process for 4 cents or less, I have taken it up with these men; and, according to

the consensus of opinion of these three chemists, I was too high in my figures. Nitrogen can be produced from the air to-day by the synthetic process for less than 4 cents.

Mr. FLETCHER. Why do they not do it?

Mr. NORRIS. The du Pont people are doing it right down here at Charleston now, so these people tell me.

Mr. FLETCHER. Not for fertilizer.

Mr. NORRIS. They have not made it in large enough quantities. They are not in the fertilizer business; and if they were in the fertilizer business and I produced their testimony here, at once some of these Senators would jump on me and say, "Why, here is the trust! Here are the interested people, and you are producing evidence from interested people!"

The du Pont people at their factory down here at Charleston, in West Virginia, are going ahead on a purely business basis, investing their money for profit. There is no secret about it. They have no interest in fertilizer. They do not make fertilizer. They have never made any fertilizer. They are making explosives, but they get nitrogen from the air to make them; and you could not give them cyanamide plant No. 2 for nothing if you would compel them to operate it.

The Senator from Virginia [Mr. GLASS] told us the other day what a large plant that will be—one of the largest in the world. I think it will be one of the largest in the world when it is completed. I refer to the plant at Hopewell, Va., where they are going into the fertilizer business as a matter of financial profit.

Mr. FLETCHER. I understand that they are making nitric acid.

Mr. NORRIS. They will make nitric acid, undoubtedly. If you get nitrogen from the air by the synthetic process, you get it in the form of ammonia. That is the way they get it, and they are building their plant now. I understand that the plant at Syracuse, one of the first that was built after the war, using the synthetic process, I think by the du Pont people—I am not sure——

Mr. KING. Was that the Cassell process, where the company failed?

Mr. NORRIS. As they have it now, they have utilized factories of the Cassell process and the Haber process. It is a modified form of it, and it is called by a general term the synthetic ammonia process.

Mr. KING. The Senator knows that the Cassell Co. failed.

Mr. NORRIS. It is a scientific fact, Senators—it is scientifically demonstrated, it seems to me—that you can get nitrogen from the air to-day for less than one-half what we could get it for when we commenced these experiments right after the war; and yet Senators cry out against experiments. If it were not for these experiments we would not have a synthetic-process plant in the United States, and during the war we did not have one. They have all been built since, and not a single cyanamide-process plant has been built during that time in the United States.

I can not find fault with a man who still wants to use the cyanamide process. That is all right. In the measure that I have here, while Senators have spoken differently about it, there are no strings on the Secretary of War. He can use the cyanamide process if he wants to. It is not stated in that measure what process he must use. The world is open to him. His hands are untied. He is free, and I want him to be that way, or whoever we designate to make fertilizer with the idea of cheapening it; and every plant that has been put up has cheapened the process.

I am not in touch with the Hopewell people; but I have talked with the junior Senator from Virginia [Mr. GLASS] and with several chemists about their plant. They all know about it. Some of them know about it in a great deal of detail; and they tell me, and I firmly believe it—it is the natural thing to expect—that when the Hopewell plant is completed they will get nitrogen from the air cheaper than the du Pont people get it down at Charleston. It is natural that they should. It will be a larger plant, on a larger scale; and I was told only within the last 10 days, from, I think, a reliable source, that the du Pont people expect to more than double the plant at Charleston, and they expect to cheapen the product even below the present figure.

Mr. SIMMONS. Let me ask the Senator a question: What process do they propose to use at Hopewell?

Mr. NORRIS. The synthetic ammonia process.

Mr. HEFLIN. Mr. President, if the du Pont people do complete their Hopewell plant and manufacture fertilizer, and the one at Charleston, and the Government directs that at least 40,000 tons of fixed nitrogen shall be made annually at Muscle Shoals, will not all of this fertilizer coming into the market help to cheapen it to the farmers? It will produce competitive buying.

Mr. NORRIS. I should think so; but I do not want to handicap my Government by directing that public funds, taken out of the Treasury of the United States, that have been contributed from the toil and the sweat of the masses of this country, shall be used to manufacture a product by a process that is out of date, when we know in advance that we will not be able to compete with these private plants that have been established on a business basis. Therefore I do not want to compel the Secretary of Agriculture to make fertilizer by the cyanamide process. If anything new happens, if any new development takes place, and that process is the cheapest, let him use it. I have no prejudice whatever against it. I want to have this done by the cheapest method. If I am going to vote to put my country into business here to experiment with the fertilizer proposition, I do not want to hamstring them and I do not want to tie them up by anything that will handicap them when they come up against a private party or a private corporation that is doing the same thing.

Mr. HEFLIN. The American Cyanamid Co. is doing business in competition with the synthetic processes of the world, and it is taking trade away from them. It is doing a flourishing business abroad, and it wants to come into the United States, and is willing to invest its money and compete with the companies doing business here.

Mr. NORRIS. It is here now. The world is open to the cyanamide people. They own the patents themselves, and there is no reason why they should not establish a plant in every State in the Union. Why have they not done it? They admit they have been making cyanamide, and there have been other uses for it. Out of it may come a fertilizer; nobody disputes that. They have been making cyanamide for years. Yet men are crying "Fertilizer Trust," when they have been pouring into the coffers of the manufacturers of fertilizers their product, all they have sold here. They are shipping it to Europe, it is said. I am not complaining of them for doing that. It is said, "They have a process, and let us compel the Government to utilize that process, and use it at the expense of the taxpayer," when nobody is doing it on a business basis.

Mr. HEFLIN. The point I am making now is that the Government has plant No. 2, and it is a cyanamide plant.

Mr. NORRIS. That is right.

Mr. HEFLIN. That they have invested millions in it, and that the people who use the cyanamide process can come in and use that and cheapen fertilizer to the farmer.

Mr. NORRIS. All right. Let me make a proposition now to the Senator. Senators say that fertilizer can be made in the cyanamide plant down there, and the product cheapened, and the Senators who are saying that say, "We do not want the Government to do it; we want a private party to do it."

Here are the owners of the patents, the very men who built plant No. 2 for the Government down at Muscle Shoals. If you believe that they are not misrepresenting anything to us, that they do not care about the power, why do you not accept my proposition, which I have signified my willingness to accept in the way of amending my resolution so as to provide that nitrate plant No. 2 shall be turned over to them for 50 years, if they want it, for nothing, without the payment of a cent of rental. Turn over the Waco Quarry, and let them pay only 5 cents a ton for limestone they take out, and then supply them with enough power from the Government of the United States to operate the plant at actual cost. If they are in earnest, if Senators believe what they are talking about, why do they not accept that proposition, and let them make fertilizer? I stand ready to do that now.

Mr. HEFLIN. We expect to have them use that plant to make fertilizer, but we do not want to tie the Government into it.

Mr. NORRIS. All right; let us lease it to the Cyanamid Co. The Senator says he does not want the Government tied into it, and I do not, either. Let us lease it to the Cyanamid Co. If you do not want to lease it to them, name the man you do want to lease it to. Lease it to the Farm Bureau, lease it to Chester Gray, who represents them, lease it to anybody you might name, if he will furnish a bond that he will run it to its capacity and make fertilizer.

Mr. HEFLIN. As soon as we get the Senator's resolution out of the way, we are going to lease it to somebody.

Mr. NORRIS. I am going to offer that as an amendment to my own resolution on the floor of the Senate when the time comes, and I will be delighted if they accept it.

It is said continually that this is the cheapest way to make fertilizer there is on earth. If that is true, there is your opportunity, there is an investment of between fifty and sixty million dollars of the Government of the United States that I am willing to turn over to them free of rent.

Mr. HEFLIN. Then how would the Senator provide for the handling of the surplus power?

Mr. NORRIS. There probably will not be any. Give them all the power they need to operate the plant.

Mr. HEFLIN. If there is surplus power, who will dispose of that?

Mr. NORRIS. Let that be disposed of according to the resolution. Let the little town of Athens, over in Alabama, that has wired here that it is ready to build a transmission line to Muscle Shoals if we will pass this resolution have it. Let all the other towns have it.

Mr. HEFLIN. Suppose they do not all build these lines; then who will dispose of the power?

Mr. NORRIS. Suppose they do not, then we will decide that. Give them an opportunity to do it, and let us see.

Mr. HEFLIN. But the Senator is going to have the Secretary of War dispose of it.

Mr. NORRIS. Yes; but I am not prejudiced about it. Provide for some other agency, say the Federal Power Commission. I will not object to that. We have to have somebody to handle it.

Mr. HEFLIN. We would be tying the Government into it even with that.

Mr. NORRIS. The Government is in it now.

Mr. HEFLIN. Why not lease it?

Mr. NORRIS. Does the Senator suppose somebody is going down there in the night and take possession and kick the Government employees out of all these houses? Will not the Government have to consent to do it?

Mr. HEFLIN. Certainly.

Mr. NORRIS. We have it now. Let us lease it to them, give it to them for 50 years free of rental, if they will make fertilizer. But let us disconnect their bid from the power proposition. You talk about this being only a fertilizer proposition and not a power proposition. There has never been a bid made yet but what has been made on the basis of the power.

Mr. CARAWAY. Mr. President, I want to ask the Senator from Nebraska this question. He has offered to turn over plant No. 2 rent free to anyone who would lease it to manufacture fertilizer. Does the Senator want to do that if it takes all the power generated at Muscle Shoals?

Mr. NORRIS. Yes.

Mr. CARAWAY. I was under the impression, from what the Senator said, that he thought the cyanamide process was not a practical process.

Mr. NORRIS. I do not think it is.

Mr. CARAWAY. Would the Senator want to give to somebody all of Muscle Shoals, to make use of it, if he knew it could not succeed, and that it would not be worth anything to agriculture?

Mr. NORRIS. If their theory is true, then I am wrong. If they accept it, then I am wrong; and I am giving them an opportunity to demonstrate that I am wrong.

Mr. CARAWAY. Is it just a bluff? Is that what the Senator means?

Mr. NORRIS. I do not think they will accept it.

Mr. CARAWAY. That is what I wanted to find out.

Mr. NORRIS. But if they do accept it, it will be because they believe they can do it; and if they can do it, they will get my blessing, just the same as they will the blessing of the Senator from Alabama.

Mr. CARAWAY. I am not trying to be critical of the Senator. I am trying to find out, if it is the belief of the Senator from Nebraska that the process is a failure, and necessarily must result in failure, whether he would want to make a contract to tie up the whole Muscle Shoals plant for 50 years to manufacture fertilizer by a process that he knows would be a failure.

Mr. NORRIS. If I were to answer that question categorically, I would, of course, say "no"; but I am going on this theory: That if these men who are claiming before us now that they are right, and that they can do this, really can do it, I am wrong; and if they can do it, I want to give them an opportunity to do it. If I am wrong, there is a chance to show it; and if they are right, then they can make the fertilizer cheaper.

Mr. CARAWAY. However, does the Senator want to tie up a great natural resource for 50 years, when he is satisfied that it is a mistake and that the process is a failure?

Mr. NORRIS. I am willing to tie it up for 50 years if somebody is willing to take it who will agree to use it exclusively for fertilizer.

Mr. CARAWAY. The Senator believes that fertilizer made by the cyanamide process can not be commercially successful, does he not?

Mr. NORRIS. Yes; I do.

Mr. CARAWAY. Then would the Senator want to tie up this great resource——

Mr. NORRIS. I understand the Senator, and he ought to be fair about this.

Mr. CARAWAY. I am trying to be.

Mr. NORRIS. I am saying that I may be wrong, and they may be right. If that is true, then they will accept the proposition, and I will subside. Then the farmer will be getting fertilizer, and that is all I want.

Mr. CARAWAY. Is the Senator willing to abdicate his right as a Senator and turn over a great natural resource to a corporation, or to an individual, that he knows can not make a use of it which would be beneficial to the public?

Mr. NORRIS. No, no, no!

Mr. CARAWAY. I am not trying to be critical of the Senator.

Mr. NORRIS. I am not willing to do that, but here comes a big corporation and says, "We can make fertilizer with this plant." I say, "If you can make fertilizer with this plant, I am willing you should have it." That is conceding that they may be right, and I may be wrong.

Mr. CARAWAY. Is the Senator willing to concede that anybody ought to have $50,000,000 worth of the Government's property turned over to him to exploit, without paying the Government a single cent for it?

Mr. NORRIS. But they will not be able to do that.

Mr. CARAWAY. Then the Senator is just proceeding upon the theory that he knows nobody can accept it.

Mr. NORRIS. No; not necessarily. If they can accept it, I would let them have it. But that is not the proposition. If these people take it and agree to make fertilizer with it, my proposition will provide that they must furnish a bond that they will comply with those conditions, they will pay maintenance and upkeep of the dam at 4 per cent interest to the Government on the power facilities that it furnishes, but the nitrate plant No. 2 will be given to them rent free, and they will not need to take the power from the Government if they do not want to. If they can get it somewhere else cheaper, let them get it elsewhere.

Mr. CARAWAY. I thought they were to be furnished power at cost.

Mr. NORRIS. That is cost. I figure that as cost.

Mr. CARAWAY. The Senator would furnish power at cost and give them $50,000,000 worth of property rent free for 50 years?

Mr. NORRIS. Yes; if they will make fertilizer. That is going about as far as anybody ought to be asked to go. Instead of being condemned as a man who is trying to prevent the farmer from getting fertilizer, there is an opportunity for these men, there is an opportunity for this farm bureau, if it has not been bluffing us, if it has not been trying to get this power in the guise of a promise to give fertilizer, there is an opportunity for them to accept it. I know some of those men, eminent fellows, I know these Senators here, and I have not any reason to doubt their word. They believe they can do it. If they can do it, then all of my information, and the scientific men who have advised me, are wrong; and that might be. But the result will be cheap fertilizer to the farmer, if they can do it.

Mr. CARAWAY. If the Senator will pardon me, if there was anybody criticizing the Senator from Nebraska, it was not I. I have for him the most profound respect, and I should resent anybody saying that he wants to be an aid to a Power Trust or to a Fertilizer Trust. That, of course, is so unthinkable to me that I do not think anybody is going to make any such charge. What I want to do is to find out exactly what ought to be done. What I was trying to find out was if the Senator was seriously willing to turn over to anyone for 50 years a plant which he says will require every kilowatt of power developed at Muscle Shoals to experiment with a process to make fertilizer which the Senator is sure is not a success, and can not be. I do not think we ought to jockey with the public's interest. I do not think we ought to bluff each other at the expense of agriculture. I just want to be certain that we all understand each other.

Mr. NORRIS. I think this bid of the Cyanamid Co. is a bluff. I think the bid of the power company was a bluff. I think there has not been a single bid ever made for Muscle Shoals where the bidder did not really want to get power, but they always tried to make Congress and the country believe that they were going to make cheap fertilizer. As Hanna and others testified before the committee when they were fighting the Ford offer, if anybody gets this plant and agrees to make fertilizer, he will have to be subsidized with power. My proposition would not subsidize anybody.

Mr. CARAWAY. Oh, yes; it is a $50,000,000 subsidy.

Mr. NORRIS. Under my proposition they get no power whatsoever except the power necessary to operate the plant, and they have to make fertilizer to the capacity of the plant, and make that exclusively.

Mr. CARAWAY. The Senator is offering a $50,000,000 subsidy to start in with.

Mr. NORRIS. I do not think it is.

Mr. CARAWAY. If they accept it.

Mr. NORRIS. The cyanamide plant cost more than $50,000,000; but I am not criticizing its construction. I think the Government was perfectly justified in building it. But it is one of the great war activities. It is out of date now. If we had a war to-morrow, we would probably start it up; but we would not run it six months. If we had a war to-morrow, we would commence to build synthetic plants at Muscle Shoals, perhaps, and at other places, because we could save money by doing that, and scrapping plant No. 2.

Mr. CARAWAY. That brings me down to just what I want to ask the Senator. I discussed this with the Senator in the committee, and I know, unless he has changed his position, what his position is; but I had hoped he would change his position. I am perfectly willing to accept the Senator's resolution with an amendment that they shall determine, by actually running the plant, whether or not nitrate can be made advantageously fixed by the cyanamide process. I am not at all opposed to the Senator having the power then to try the synthetic process. I am just hopeful, in view of the fact that for eight long years we have stood here and said over and over again to the American farmer that Muscle Shoals and the nitrate plants were dedicated to the national defense in time of war, and to agriculture for the purpose of making cheap fertilizer in time of peace, that we are going to keep faith with them, that we are not fooling with them. Let us try out both processes, and whichever one is the more advantageous, let us use it.

I am willing to go further even than the Senator. I am willing to say we shall dedicate every kilowatt of power that is generated at Muscle Shoals to the exclusive use of trying out these two processes. Let us put plant No. 2 in operation, and if the cyanamide process is obsolete or obsolescent and can not be used, that fact will be demonstrated. If the synthetic process is better and cheaper, then we will use it; but we will give to the American farmer a certificate that power has not anything to do with the measure that finally goes through Congress, but that every kilowatt shall be dedicated to giving him cheaper fertilizer. If the Senator will accept the amendment——

Mr. NORRIS. The Senator's amendment makes it compulsory, as I understand it, for the Secretary of Agriculture to operate plant No. 2.

Mr. CARAWAY. Until it be demonstrated whether the cyanamide process is obsolete.

Mr. NORRIS. I have never talked with the Secretary of Agriculture about it, but, in my opinion, when he consulted chemists and experts on the matter he would know just as well to begin with, before he turned a wheel, as he would know a year afterwards that it would not be a success. The cyanamide plants have been operated and every scientific chemist knows just what they can do. They are familiar with the work of every one of them wherever located. My proposition does not prevent him from doing that thing, but it unties his hands and says, "See what you can do with any process you want to use," and there has been no reason why he should not use the cyanamide process if he wanted to do so.

Mr. CARAWAY. If the Senator is so confident that no process except the synthetic is commercailly possible and profitable, then why does any plant anywhere use the cyanamide process?

Mr. NORRIS. The Cyanamid people make a whole lot of things besides fertilizers. I put in the RECORD a list of more than 52 things that the cyanamide people make. Why should we say to the Secretary of War, "You try this process and you try that process." If we want to have a fair test, why not say to him, "Try any or all or anything you want to." That is what I propose.

Mr. CARAWAY. We equipped plant No. 2 for this process. We dedicated it for this particular thing. I believe that it is not a bad thing to keep the faith with the people whose money we used to develop the process.

Mr. NORRIS. Let us see what it would cost.

Mr. CARAWAY. Just a minute, if the Senator will pardon me.

Mr. NORRIS. If we are going to demonstrate it, it would depend on how long we would run it.

Mr. CARAWAY. I would run it long enough that these very experts would know who was right and who was wrong.

Mr. NORRIS. Has the Senator any idea whether that would be a year or two years?

Mr. CARAWAY. I have not the remotest idea. If the Senator is willing to put the whole power in their hands, I should take for granted that he would be willing to trust them and let them say when they have demonstrated it satisfactorily.

Mr. NORRIS. I am willing; but I was trying to find out the Senator's idea as to how much of a test should be made.

Mr. CARAWAY. The Senator has asked me, and I want to tell him. If they can demonstrate in six months that the synthetic process is a wiser and cheaper process, then at the end of six months let us quit the cyanamide process. I would not want to have the Government spend one nickel in doing a thing that it could not do wisely. Whenever that process has been demonstrated to be a failure, then quit it. But as long as private capital is investing millions of dollars in doing that very thing, then I am hardly justified in accepting some other theory which some scientist has evolved that some other process is better. It strikes me that inasmuch as we have said over and over again in the Senate that we want Muscle Shoals to be dedicated to the manufacture of fertilizer in time of peace, we ought to keep the faith with the people.

I was in favor of accepting the Henry Ford offer. I believe if we had accepted the Henry Ford offer we would have been the only class of people on earth who ever got two dollars from Henry Ford where he got only one back. I think he made us a good offer, and further, I think the country would have been infinitely better off if we had accepted it; but those who did not agree with me were in the majority and outvoted me.

Mr. NORRIS. Again let me say to the Senator from Arkansas and to other Senators who are earnestly and honestly trying to do what is right about this matter, as I firmly believe, that I would hate to see an experiment which to my mind would seem useless and a waste of the public money. I want to say frankly to the Senator that if the Senate would like to do that, it would not meet with serious objections on my part, and it would not seriously interfere with my resolution, in my judgment. I think it would be a mistake, but if the Senate thinks that we ought to operate nitrate plant No. 2, or direct somebody to operate it for the purpose of ascertaining what the experiment will show, there will not be any serious objection from me.

Mr. CARAWAY. Then if there is not any serious objection, if the Senator will accept that amendment we will see that his resolution has votes enough to put it through. We can do that.

Mr. FLETCHER. The Senator from Nebraska has provided that the Secretary of Agriculture shall make the experiment. The Senator from Nebraska seems to think his mind is pretty well made up about it. Why not provide for a commission?

Mr. CARAWAY. I do not care about that. I am not committed very much to the Secretary of Agriculture, who has not done much for agriculture, in my opinion.

Mr. NORRIS. In the preparation of the resolution I did not consult with the Secretary of Agriculture himself.

Mr. CARAWAY. I am sure of that.

Mr. NORRIS. I went to the people whom I knew were going to handle the problem. I want to Doctor Cottrell, who is there permanently, and to a great extent it is his language and my resolution. I put in everything he thought we would need. If we direct the Secretary of Agriculture to perform an experiment like the Senator has suggested, there is no question on earth that Doctor Cottrell will have charge of it, and everybody who knows him knows that he would do it absolutely in good faith and give everybody a fair show regardless of what he may think personally.

Mr. CARAWAY. I have no objection to it at all. Whatever we do there, we will turn around and pass it on to the farmer at the actual cost of manufacture. We will give him cheap fertilizer if the cyanamide process can be successfully so used. If it can not be successfully used, I want to know it, just as the Senator from Nebraska does. If it can not be used and the synthetic process can be used, then I am going whole soul and heart with him on the synthetic proposition, and this amendment of mine does not quit his proposition at all.

Mr. LA FOLLETTE. Mr. President, when I came to the Senate Muscle Shoals was one of the first important questions to come up for consideration. At that time I made a very careful study of the subject and discussed it at some length on the floor of the Senate. A considerable part of the speech I made then was devoted to the fertilizer phase of the Muscle Shoals problem. I demonstrated, to my own satisfaction at least, that Muscle Shoals is not a fertilizer proposition; that it is primarily a power proposition. The Senator from Nebraska [Mr. NORRIS], in his extraordinarily thorough and able discussion of all the facts, has, it seems to me, completely demonstrated beyond all possible doubt that the fertilizer phase of the Muscle Shoals problem has been disposed of by the progress

of science. It is at this time, therefore, my purpose more especially to discuss Muscle Shoals in its relation to the problem of electric power.

ELECTRIC POWER A NECESSITY OF LIFE

Mr. President, this is an electric age. It is estimated that to-day one-half the homes in the land use electric lights and that two-thirds of the machines in American factories are run by power from central plants. Expansion in electric service during the last 20 years is amazing. Approximate estimates show that the total gross revenue from the sale of electricity in the year of 1907 was $169,614,691; in 1927 it was $1,783,700,000. It is fast becoming the industry upon which all other industries are dependent. It is demonstrated that electricity can be made the source of light, heat, and power in every home, on every farm, and in every industry at low cost. It is plain that human welfare, comfort, and progress are more and more conditioned on the production and distribution of electric current at reasonable rates.

Long-distance transmission is revolutionizing national life. It makes it possible to electrify the farm; it brings to agriculture its time-saving advantages and economy of labor. Even more significant is the tendency to move the factories away from the congested cities into the country where more wholesome living conditions are available—fresh air, open spaces, gardens, out-door recreation. At the same time, increased use of electricity for power, light, and heat may change the living conditions of the cities, doing away with smoke and grime, promoting health and beauty and cleanliness.

The gigantic force of electricity promises to become as indispensable to the maintenance of modern standards of living as the rays of the sun. And this mighty power created out of the forces of nature must be made to serve all the inhabitants of the earth as economically and as impartially as sunlight.

A PUBLIC UTILITY AND NATIONAL MONOPOLY

Electricity is a public utility. Like the railroads, the water supply, and other kinds of public service, the production and distribution of electricity is subject to Government regulation and to Government ownership. Because of its very nature electric service is a monopoly. For practical purposes electric power can not be stored. It must be used as generated or go to waste. It can be transmitted 300 miles, and power stations can be hooked up to cover a continent.

To insure economy and efficiency in the use of electric power there must be large areas of interchangeable supply. When generated from water power it is not State boundaries but nature's sources of supply that determine the advantageous location and use of large generating plants and transmission lines.

The inherent advantage and necessity of interchange of hydroelectric power is demonstrated in a situation described by the Senator from Nebraska [Mr. NORRIS] in an article which appeared in La Follette's Magazine last October.

In 1922 when, in the State of North Carolina, on account of unprecedented dry weather, some of its streams had ceased to flow and all of them were very much diminished in the volume of their flow, it was going to be necessary, unless some relief came, to close down some of the factories. Some of the cities and towns would have been left in darkness. Some of the street cars would have ceased to operate. Next to North Carolina, in the eastern part of Georgia, was a comparatively large system having many generating plants. They could not give North Carolina any current because they had none to spare. On the west of the territory covered by this plant was another system consisting of many plants hooked together. They, however, had no electricity to spare and could do nothing. West of this company was the Alabama Power Co., operating over a large portion of Alabama and having quite a large system, with many hydroelectric and several steam plants locked together. They had enough electricity for themselves, but they had none to spare. But just west of the Alabama Power Co. was the Government steam plant at Muscle Shoals, with a power capacity of 60,000 horsepower. Fires were started in these engines. Electricity was generated and given to the Alabama Power Co. The Alabama Power Co. spread this electricity through its system, and in turn was then able to grant to the power company in Georgia electricity equal to the amount it had received from Muscle Shoals. The company in turn gave power to the next company, and it gave to the North Carolina distribution system, and thus was relief brought by this relay system and North Carolina was supplied with all the electricity she needed. The effect of this was to transfer to North Carolina without loss enough electricity to save a catastrophe, although the distance between Muscle Shoals and North Carolina is about 800 miles.

Mr. President, in the beginning of electric service, when the current was generated by small plants unrelated to each other, State regulation was a simple matter. In present-day conditions when generating plants have grown to mammoth size, which of necessity are interlocked for efficient production and distribution over long distances, the control of electric service has become increasingly a national problem. In the great game of financiering characteristic of our times control of the electric industry with its complicated structure of holding companies, its countless subsidiaries, watered stock, and concealed profits, is now in the hands of a few power magnates of New York and Chicago.

THE MENACE OF PRIVATE MONOPOLY OF POWER

The menace of the Power Trust is, in my judgment, even greater than that of oil. It happens that right now we have an infamous example of the lengths to which organized wealth will go in its greed for more riches and power. The stealing of Teapot Dome and Elk Hills naval oil reserves by Doheny and Sinclair in collusion with Albert B. Fall, a member of the Cabinet, is a climax in the long record of unscrupulous exploitation of the common people by the oil monopoly.

The Supreme Court has declared the transaction to have been fraudulently made by collusion and conspiracy between the parties. The Supreme Court has said that the company organized overnight to raise the funds out of which Fall was paid $230,000 for his treachery to the United States Government was plainly created for an illegitimate purpose. It has recently been shown that at least $75,000 of these funds raised for an illegitimate purpose were donated by Sinclair to pay Republican campaign expenses in 1920 and $85,000 more was contributed by Sinclair, although at the moment the proof is lacking as to whether this latter batch of bonds came from the Continental Trading Co.

Mr. NORRIS. Mr. President, may I interrupt the Senator?

Mr. LA FOLLETTE. Certainly.

Mr. NORRIS. I did not understand fully the statement where the Senator referred to "the latter batch of bonds." What batch did he have in mind?

Mr. LA FOLLETTE. I was referring to the $85,000 in bonds as to which Mr. Hays testified that he did not know whether or not they were Continental Trading Co. bonds, but said they were Government bonds and came from Sinclair.

Mr. NORRIS. I have been told by a member of the Public Lands Committee that, as I recall, $25,000 of those bonds which Mr. Hays turned over to Upham were by Upham turned over to somebody else, whom he got to make a contribution of $25,000 to the fund and to whom he gave these bonds with which to make up his payment; that later on this owner of these same bonds that came from Hays turned the bonds over to some institution—I have for the moment forgotten the name of the institution—to which he had made a pledge to make a contribution; that that institution has the bonds now, and that they are all Continental Trading Co. bonds.

Mr. LA FOLLETTE. That makes $100,000 in bonds from Mr. Sinclair to the Republican campaign committee which are now known to have been Continental Trading Co. bonds. That information, I think, must have been brought out at the hearing this morning.

Mr. NORRIS. It came out to-day, as I have been informed.

Mr. LA FOLLETTE. I thank the Senator very much for his interruption.

And yet the parties to the transaction are challenging the right of the Senate and the courts to the knowledge of where the rest of the fraudulent fund was spent.

What the oil monopoly has done to demoralize and disgrace Government and business is only a foretaste of what the electric monopoly can and will do if allowed to proceed unchecked for another decade or so. We all know how the tremendous power wielded by the railroads has been abused. We know what the banking monopoly can do to credit and to the making of war in Nicaragua. But the power of oil and transportation and banking and all other great monopolies combined is not to be compared to the power which will be in the hands of electric magnates with their strangle hold on industry, on transportation, on the functioning of government, and on the private life of every citizen in the land.

Mr. President, Col. Frank Smith, of Illinois, has recently been denied a seat in the United States Senate. A Senate investigation of the Illinois primary disclosed that an enormous slush fund had been used to secure the Republican nomination to the Senate of Col. Frank Smith, chairman of the Illinois Commerce Commission, which has jurisdiction of public-utility regulation in Illinois.

Mr. Samuel Insull, head of a gigantic public-utility combination, was discovered contributing, in violation of express statute, great sums of money for political purposes. Nearly a million dollars was shown to have been used to control the Illinois primary. Col. Frank Smith was shown to be the chief beneficiary of the Insull slush fund. That, Mr. President, is an example of the kind of activity in which great public-utility magnates are engaged.

The Senator from Montana [Mr. WALSH], after an exhaustive study of public utilities, the results of which he set forth in a very able speech at the last session of Congress, introduced a resolution for their investigation. It brought to the Capitol the greatest lobby ever known in all the history of this country, and I do not except the lobby of the railroads in the days of the land-grant steals. The outcome of that phase of the power issue at this session of Congress is now a matter of history.

Representatives of the power monopoly arrogantly declared at the last session of Congress that no bill shall be passed by Congress authorizing the Government, in case the future may require it, to exercise an option for the protection of the people or the development of its resources. A spokesman for the power monopoly said: "I represent an investment of $7,000,000,000 and we do not propose to let the Government enter the power business."

The power monopoly makes the issue that Congress may legislate only as the power monopoly dictates. It raises the issue of whether the Government or the Power Trust is to determine the destiny of the people of the United States. It is another manifestation of the age-long struggle of whether the people shall govern or whether they shall be governed by an autocracy—in our time by an autocracy of organized wealth.

A JUST CRITICISM

Not all the able men connected with the administration of the electric power monopoly are satisfied with its methods and leadership. At least one has had the courage and independence to criticize the policy which is being pursued and to point out its danger.

Mr. Frank Putnam, of Milwaukee, who for the last dozen years has been associated with one of the largest groups of American utility companies, has published a pamphlet under date of February, 1928, on the subject of electrical house heating, in which he foresees a new era of electric service. Previous to his connection with the utility companies, Mr. Putnam was a newspaper writer who fought the earlier antisocial policies of the public utility companies. In this pamphlet he says, among other things:

The leading men of the industry—

Referring to the power industry—

I think, have blundered in permitting or encouraging its national organizations to lobby openly and arrogantly in Washington against Government flood control, irrigation, and water-supply undertakings for the avowed purpose of "keeping the Government out of business." * * * I am not alone among close students of the situation who think the utilities would find it more profitable to be at their next big real job than to be spending money and energy defeating Los Angeles' desire for more drinking water and electric energy from Boulder Canyon, or the Mississippi Valley's desire for flood control with public power development to help pay for it, or the Muscle Shoals region's desire for low-cost energy from the mighty hydroplant there at public expense.

Mr. Putnam says further:

The long-established public policy under which the States protect utilities in enjoyment of monopolies in their several areas requires that the utilities shall supply adequate good service at its fair cost and no more.

Again he says:

As in the case of steam railroads, State regulation will be found incompetent to control in the public interest an industry national in scope, an industry whose products and services will increasingly be sold across State boundaries. Federal regulation will begin and will gradually absorb the functions and powers which even now the State authorities find themselves in large part unable to administer effectively.

The experience of well-known cities, towns, and communities well distributed over the country in the public ownership, operation, and distribution of electric power, has demonstrated that the rates paid to the electric-power monopoly are far in excess of the standard set by Mr. Putnam—"adequate good service at its fair cost and no more."

LESSON TO BE LEARNED FROM ONTARIO'S EXPERIENCE

In 1926 consumers in the United States bought 56,984,000,000 kilowatt-hours of electricity. Industrial-power users and electric railways used 41,964,000,000 kilowatt-hours, paying $519,100,000, or an average of somewhat over 1.2 cents a kilowatt-hour. From the 15,000,000,000 kilowatt-hours supplied for domestic, commercial, and street lighting, the power companies drew a revenue of $1,018,200,000—an average of nearly 6.8 cents a kilowatt-hour. American consumers paid in 1926 a power bill of $1,537,300,000.

In this same year of 1926 consumers in Ontario, Canada, were paying to their publicly owned power system an average of a little over 2 cents a kilowatt-hour for domestic, commercial, and street lighting. For industrial and electric railway power they paid slightly less than 1.2 cents a kilowatt-hour.

Had American consumers of electric power been able to purchase electricity as cheaply as did the citizens of Ontario, they would have paid out, instead of $1,537,300,000, only $805,312,600. Had American consumers been able to buy at Ontario rates they would have saved $731,987,400—nearly half the amount which they did pay.

The difference can not be explained by alleging that Ontario power users had to pay an unjust share of electric bills. If American industrial power users had been able to purchase their power at Ontario rates instead of American rates, they would have paid nearly $29,000,000 less than they did pay in 1926.

Costs of electric-power production have now decreased far enough that domestic consumers need no longer subsidize industrial consumers.

The Ontario Hydroelectric Commission realizes this. Hence, while American domestic consumers still pay an average rate of 7.37 cents a kilowatt-hour, Ontario domestic consumers in 1926 purchased their electricity at an average of 1.81 cents. Of course the amount paid by specific consumers varied with the size of towns and consequent cost of distribution. Detailed figures for domestic consumers are as follows:

Average kilowatt-hour

	Cents
In 21 cities over 10,000 population	1.66
In 48 towns over 2,000 population	2.05
In 174 villages under 2,000 population	3.15

Even a consumer in a small village in Ontario is able to light his home and enjoy conveniences of electrical service at prices he could pay, instead of the 8, 12, or even more cents a kilowatt-hour which he would have paid in this country.

Niagara Falls is not responsible. It by no means furnishes all the power for the Ontario system, which includes several other and smaller hydro developments. Even these were able to supply power at 3 and 4 cents—in practically no case above 5 cents a kilowatt-hour.

This is in startling contrast with the situation at Birmingham, Ala., where the Alabama Power Co. supplies hydroelectric power at 7.45 cents. Meantime the Toronto consumer, also using hydro power, pays 1.7 cents, and the Winnipeg domestic consumer, using power from the local publicly owned hydro system, pays 1.05 cents.

The Ontario Hydroelectric Commission has no monopoly of successful public operation of electric power systems in Canada. Twenty years ago domestic consumers in Winnipeg paid 20 cents a kilowatt-hour to a private company. Consumers in Vancouver still pay 6 cents. In Montreal they are paying 6½ cents. The average rate in Winnipeg for domestic lighting in 1926 was 2.6 cents. Special rates are offered for domestic cooking, so that the average rate for all domestic consumption was 1.05 cents. Power rates, of course, were still lower, and the average for all energy sold was 0.788 of a cent a kilowatt-hour. Vancouver and Montreal have private companies; Winnipeg is supplied by its municipally operated plant.

PUBLIC OWNERSHIP IN THE UNITED STATES

The outstanding instances of public operation in the United States are to be found, to a large degree, in the great cities of the Pacific coast. The Seattle hydroelectric plant supplies 90,000 customers, provides liberally for depreciation, meets all interest and bond-retirement charges when due, accumulates a profit for municipal purposes, and yet charges rates ranging from 5½ cents to 1 mill per kilowatt-hour, depending upon quantity and purpose.

Both Seattle and Tacoma not only provide electric light at unusually low prices, but also supply power for cooking and heating at still lower rates—Tacoma at only one-half cent a kilowatt-hour. Appreciation of the benefits which Seattle and Tacoma have gotten from public operation is shown by the 50,000-horsepower municipal hydroelectric plant now being built by the city of Everett, Wash.

Though charging only 5½ cents a kilowatt-hour for domestic current and offering manufacturers power at rates as low as those anywhere else on the Pacific coast, the Los Angeles public-power system in 1926 made a profit of $2,796,452, after deducting all interest, sinking-fund, and depreciation charges. Ralph L. Criswell, former president of the Los Angeles City Council, estimates that the lower rates made possible by public operation of public utilities are saving Los Angeles consumers $10,000,000 a year.

The great opportunity inherent in public ownership of power plants is indicated by the existence of more than 2,500 municipally owned power systems in the United States. It is true that certain plants, equipped with antiquated machinery or unwisely financed, have been sold to larger power companies; but as many more cities, when confronted with the choice of selling out or of modernizing their plants themselves, have discovered it profitable to continue public operation, and new municipal power plants are being undertaken every month.

Successful public ownership is not a matter of water power. Steam-power plants offer no obstacles to satisfactory public operation. That has been the experience of Springfield, Ill. Its latest report contains a table making an instructive comparison between the rates of the municipally operated plant at Springfield and the rates of the privately operated plants in other Illinois cities of comparable size. The profitableness of public operation, not to a small group of common-stock owners, but to the large number of power consumers, is shown effectively.

City	150 K. W. H. domestic lighting	1,500 K. W. H. commercial lighting	4,000 K. W. H. 30 H. P. Act Conn load
Springfield	$5.28	$30.00	$68.00
Bloomington	15.00	100.50	166.00
Danville	11.25	84.00	142.00
Decatur	15.00	96.00	162.50
East St. Louis	7.43	64.97	101.89
Elgin	15.00	73.12	213.00
Jacksonville	16.25	116.25	192.50
Peoria	6.84	55.28	98.10
Quincy	9.75	58.50	118.00
Urbana	13.00	97.50	174.00

The Springfield plant charges 6 cents for the first 30 kilowatt-hours used for lighting, 3 cents for the next 70 kilowatt-hours, and 2¾ cents for everything over 100 kilowatt-hours. For cooking, the rate is only 1½ cents a kilowatt-hour. Industrial power is supplied at similarly low rates—1¼ cents a kilowatt-hour in addition to a small service charge per horsepower per month.

When public power plants can supply electricity at rates such as these, I am compelled to ask, Why should the Wisconsin Light & Power Co., supplying power to 200 Wisconsin communities, find it necessary to charge domestic consumers an average price of 9.4 cents a kilowatt-hour and industrial consumers an average of 2.7 cents a kilowatt-hour?

As Senator HOWELL has so well and ably demonstrated on this floor again and again, it is not necessary for the public to have a monopoly of electric power to insure reasonable rates. Public competition, or even fear of competition, is enough under certain conditions to bring down rates to a decent level for the consumer and a fair profit to the producer.

THE OPPORTUNITY OFFERED BY MUSCLE SHOALS

In view of the conditions that confront us, the duty of the Senate, in my judgment, is clear. Muscle Shoals is already a publicly owned power station. One hundred and fifty million dollars of the people's money has been invested in the development. It was appropriated under the authorization of the 1918 statute, which provided that the plant should be operated by the Government.

Section 124 of the national defense act of 1916 provides as follows:

> The plant or plants provided for under this act shall be constructed and operated solely by the Government and not in conjunction with any other industry or enterprise carried on by private capital.

It was under such a condition that the $150,000,000 which has been invested in Muscle Shoals was obtained. Unless that statute had contained that provision, no such appropriation could have been passed through the Congress. Muscle Shoals offers the opportunity for the Government to make a comparison in performance, operation, and service with a similar product made by private power. The plant has been developed with Government funds and is now in Government operation.

The significance of the opportunity is even greater when we consider the key position of Muscle Shoals. It is near the heart of future southern industrial development. The possibility for interconnection, thus regularizing the supply in other parts of the South, has already been demonstrated in this debate.

In volume the power at Muscle Shoals is an important ingredient of the southern supply. In 1926 when approximately 3,240,000,000 kilowatt-hours were generated in the States of Alabama, Georgia, Mississippi, and Tennessee, 436,308,735 kilowatt-hours of this amount were generated at Muscle Shoals. In 1927 this rose to 565,609,500 kilowatt-hours, even though the plant was only getting fairly well under way and its sole customer, the Alabama Power Co., was using as little power as possible from the Muscle Shoals plant. With the existing hydroelectric and steam power plant, engineers are certain that at least 700,000,000 kilowatt-hours can be supplied, as this resolution directs, and when proper water storage has been provided, the capacity of Wilson Dam will, it is estimated, rise to from 1,500,000,000 to 2,000,000,000 kilowatt-hours a year. The tremendous responsibility resting upon the Congress is clear.

Honest companies producing power, as in the light of present knowledge it can be produced, contenting themselves with reasonable charges for their labors and capital funds, and with a due regard for the present and future requirement of electrical service, need have no fear of any program which this Congress may adopt or which the American people will demand.

Honest companies can have no proper objection to the setting up of public electricity-producing authorities competing for the power markets with private producers, so long as confiscation is not involved. A public power plant at Muscle Shoals, once operated on a permanent basis, offers a chance to test the highest standards of electric engineering, and if combined with adequate transmission facilities, will provide a most desirable "yardstick" with which to compare the relative merits of public and private undertakings, concerning which Dr. Walter Durand said two years ago:

> Public operation is a test of public character just as private operation is a test of private character. We have had abundant opportunity to judge private character in the large-scale operation of utilities. The chance to try out public character on a similar scale is an imperative need to-day. Competition in method might eliminate the weaknesses and strengthen the strength of both public and private character. (W. R., May 26, 1926.)

Operation at Muscle Shoals by an efficiently organized public authority will assist materially in determining the question of the form of organization most expedient.

EXPERIENCE OF OTHER COUNTRIES

We should profit by the experience of other countries which, after considerable experimentation and investigation, have come to adopt a national power policy. And even though we may beg the question here to-day, and may beg it to-morrow, sooner or later Congress and the Government will have to adopt a national power policy. In Sweden, New Zealand, and South Africa publicly owned power stations have been put into operation in recent years to supply wide areas. The public authority confines itself to generation and transmission, leaving the work of distribution to private enterprise or municipalities. In none of these countries has the adoption of a national power policy meant revolutionary changes in industrial life. Existing private enterprises continue and expand, but they expand side by side and in cooperation and competition with the public undertakings.

The South African plan, adopted in 1922, provides for two authorities. It sets up an electricity control board as a regulatory body, with control over the licensing and regulation of private enterprises. At the same time an electric supply commission was established to purchase or to establish electrical supply undertakings and to coordinate these with the existing enterprises. It has set about its work efficiently and successfully, due without doubt to the fact that while control is retained in behalf of the public interest, the electric supply commission is free to operate like a private concern, without political interference. It has been described as a sort of public-utility corporation with government backing.

Germany, forced by the exigencies of postwar conditions to seek the very best plan of organizing its power resources, has made use of a similar scheme.

I desire to quote from "German power reorganization," by Mr. Quigley, which appears in Electrical Power and National Progress for 1925, page 102:

> The work of reorganization of power supply has covered and is covering three stages:
>
> 1. The whole country becomes split up into a limited number of superpower zones according to the scheme elaborated in 1919. Each zone is covered by a number of trunk lines interconnecting distribution centers and acting as main transmission lines at extra-high voltage.
>
> 2. To avoid the difficulties and the dangers of bureaucratic administration, the work of interconnection is intrusted to power supply companies worked on the lines of private enterprise, the capital of which is owned by the State.
>
> The last stage in the process lies in interconnection of the power zones with each other; the whole country becomes a network of transmission lines, working on a uniform voltage and uniform frequency.
>
> An elaborate regional power scheme was evolved soon after the conclusion of the war, but of this scheme little now remains. At the

present moment three superpower zones have been delimited, the central German, the Saxon, and the Bavarian, while a fourth one, covering Rhineland-Westphalia, would have been also surveyed if the occupation of the Ruhr had not delayed progress. In the central zone one state-controlled company, the Elektrowerke Co., has now been in operation for several years, and supplies Berlin with electricity. In Saxony a similar company was formed in 1923, the Sachsische Co., and has now linked up Dresden with Leipzig through one main trunk line operating at 100,000 volts. This system is connected in the north to the Lauta power station of the Elektrowerke Co. and in the south to the network controlled by the Walchensee Power Co., which acts in Bavaria in the same capacity as the Elektrowerke Co.

It is important to note that state control in the form of these companies begins and ends with generation and transmission; power is generated and supplied in bulk to certain distributing heads scattered over the transmission network, and from these heads authorized distributors carry out the work of distribution.

In that connection it is very similar in its organization to the Ontario system.

The price of power as supplied in bulk is only sufficient to cover the cost of generation and transmission without profits, and the price at which the authorized undertakers are allowed to sell power is controlled by the state, with a view to insuring a fair return on capital invested without unnecessary profiteering. * * * This system leads to pooling of power supplies, a better load factor, and lower average prices.

THE NATURE OF THE OPPOSITION TO PUBLIC OPERATION OF MUSCLE SHOALS

The character and inspiration of the bitter opposition to public operation of Muscle Shoals is by this time understood perfectly well by all of us. We all know, whether we are frank enough to admit it or not, that the opposition to the Norris resolution is only a single phase of a nation-wide campaign to checkmate every effort to preserve the public interest in the electric-power industry. If the power magnates have their way, the merits of the case will not be given consideration; private and special interests, though representing only a very small group of persons, will be protected at all costs. The joint committee of National Utility Associations, which is the superlobby of the National Electric Light Association, the American Electric Railways Association, and the American Gas Association, are extremely nervous. They fear that something may mar the continuance of the career of exploitation which they have so long been encouraged to expect. They have no scruples in using whatever means they can to block this measure. Misrepresentation and distortion of facts, as well as personal pressure, both direct and indirect, are being used and will be used against the Norris resolution just as they were employed to mangle the Walsh inquiry.

For seven years the dogged opposition of the power lobby has prevented a satisfactory utilization of the Muscle Shoals development. One of the worst slanders used by opponents of public operation has been that Congress, through its dilly-dallying, has shown itself incompetent to deal with problems of this kind. There has been shameful delay, but the responsibility must be justly fixed. It should rest, in the first place, upon the small group of men, who, to promote their own power interests, have been and are unwilling to tolerate any disposal of Muscle Shoals other than a gift to themselves. It should rest, in the second place, upon the power lobby, which has exercised its influence to prevent action.

As yet public operation for public advantage along really modern lines has been carried on in comparatively few places. The utilities are trying strenuously to prevent other experiments which would show the weaknesses of the traditional organization of the power industry. They hope to instill in the public mind the faith that because the industry has, for the most part, been organized in a certain way, the traditional way must necessarily be the most satisfactory way, no matter how much economic and technical conditions have changed. If they succeed, the small group of men who dominate the utilities financially can look forward to many years of happiness and comfort at the public expense.

They are not certain of victory. They are not certain of complete and permanent domination unhampered by effective safeguards of the public's interest in the industry.

WHY THE POWER MONOPOLY FEARS PUBLIC OPERATION

The gentlemen representing the joint committee of the National Utility Associations are afraid of a large-scale demonstration in the East of what the people of the Pacific coast and Ontario, Canada, already know—that power can be produced for service as well as for profit.

They are afraid that the people of the Southeast will discover that the rates of 7½ to 12 cents a kilowatt-hour, which they have been paying, are ridiculously high. They are afraid of new examples of efficient operation such as that of the municipal plant at Tacoma with its average rate of one and one-twentieth cents a kilowatt-hour. The public-utility magnates are afraid that domestic-power consumers will get the idea that they, as well as favored large industrial consumers and the fortunate holders of voting common stock, are entitled to a share in the advantages of increasingly economical power production.

The utility interests are afraid that power consumers, both domestic and industrial, will learn that costs are unnecessarily high when, instead of following the example of modern integrated industries, the power industry clings to the antiquated luxury of subdividing itself into a hierarchy of construction companies, technical advisory companies, finance companies, holding companies, superholding companies, and super-superholding companies, each with its separate organization to be maintained and its separate profit to be earned.

They are afraid that power consumers will learn that the 8 per cent return on capital funds for the establishment of power plants, which the utilities claim they require, is needlessly extravagant. They are afraid that it will become known that capital charges need not become annuities upon the industry; that merely because our grandfathers purchased stock in an industry, it does not follow that our great-grandchildren should receive a dole from the earnings of that industry. They are afraid, furthermore, that it may be discovered that huge expenditures for "legal expenses"—none of them for the benefit of the consumer—are unnecessary; that the economical production of electric power is not promoted by the ownership of newspapers, the financing of election campaigns, the subsidizing of literary talent, and the employment of expensive attorneys and "legislative counsel" to oppose every activity which might reduce or regulate private profit.

Some of these people, of course, may be afraid of themselves losing the large profits which they would receive if their companies could swallow up the Muscle Shoals plant. The opposition of the power lobby as a whole, however, is based upon the ground that the power industry can not withstand a demonstration of how cheaply power can be produced.

PUBLIC OPERATION PRESENTS ONLY ECONOMIC AND ENGINEERING PROBLEMS

Mr. President, sooner or later it will be generally understood that the generation of electric power is not a mysterious rite which can be performed only by individuals having the peculiar talents of the financial manipulator. The production and transmission of power certainly, even if this may not appear to be quite as definitely true of the final distribution of power, is merely a matter of specific engineering and economic facts. It is a field of activity in which the qualities which make good salesmen, good advertising experts, and good stock-market riggers are of relatively low value.

The stock promoter and the juggler of accounts are distinctly undesirable as participants in the electrical industry, which, once the broad policies have been laid down, requires only two types of intelligence—that of the engineer and that of the economist. It is the engineer, not the business man, who has been responsible for the amazing progress in the electrical industry. Money alone can not buy such men. Granted reasonable compensation, which an industrial undertaking such as Muscle Shoals can easily pay, men of this sort can be had if the opportunities for constructive work on a permanent basis are present.

Monopolistic patent rights held in private hands can control the output and sale of turbines, but there are no patent rights in restricted ownership to limit the supply of intelligence—at least not yet. The brilliant careers of General Goethals and of Sir Adam Beck are only two of many examples of this fact. Men of this kind are responsible for countless great engineering works both in other countries and in the United States, for the building of the Muscle Shoals plant itself. Men of this kind are going to be entrusted with the work of protecting the Mississippi Valley against future floods—an enterprise whose importance will easily bear comparison with the enterprises of any privately organized electrical company.

It is, of course, true that initiative must always be "private," in the sense that it must always come from individuals. Private initiative, however, is not controlled by the employment in which those individuals are engaged. The initiative responsible for electric power developments has usually been that of engineers. This was the case at Muscle Shoals, except that the engineers happened to be in public rather than in private employment.

PUBLIC OPERATION PRESENTS ONLY ECONOMIC AND ENGINEERING PROBLEMS

There is nothing mysterious about the series of decisions that must be made in the establishment of a great power plant, such as this one at Muscle Shoals. The problems are all problems to be settled by deciding that, in view of specific engineering and economic facts about which there can be little

dispute, action should or should not be taken. Congress, directly or through its appropriate agencies, has, in effect, already decided that power ought to be developed at Muscle Shoals; that such a development will fit in with later and more extensive superpower developments; that in time a market can be found for all electricity generated; and that it is expedient to develop the Muscle Shoals site immediately, bearing in mind, of course, that all such undertakings are likely to have difficulty in meeting their full fixed charges for a few years until the market has been developed.

All of this Congress has decided; there is no opportunity for further initiative, private or public. The plant has begun operation.

We are now faced with the necessity of making certain additional decisions of the same type as those to which I have referred. The testimony of engineers and others conversant with the situation in the South is that use can be made now, or very soon, not only of the power now generated but of all the power which the Muscle Shoals plant can generate, at a price which will meet amply the costs of construction and operation. The sensible thing, therefore, is a decision to complete the Muscle Shoals project as rapidly as possible, as provided in the pending resolution.

Beyond that the only matter within the province of the Congress, though it is one of very great importance, is the setting up of legislative requirements that the sale of power be at a price adequate to meet all costs involved, including charges for depreciation and the amortization of the original cost, and that stipulations be made in selling power to protect the right of consumers to a share in the advantages of cheap power production. After that the problems of power generation are technical problems, to be decided by competent engineers, requiring the interference of business men no more than that of legislators.

The resolution before us authorizes the Secretary of War to construct transmission lines, to place the Government upon a fair basis for making contracts for the sale of electric power. The necessity for this provision is obvious, in view of the monopoly in the purchase of power at present enjoyed by the Alabama Power Co. through its ownership of the only transmission line from Muscle Shoals. If we decide, as we should, that transmission lines are to be built, the planning and building of these lines again are matters of engineering.

They are matters which the Government engineers in charge of the plant are entirely competent to determine, having regard to the long-run development of a superpower system throughout the South and Southeast. In addition, it is entirely probable that the possibility of building other transmission lines from Muscle Shoals will induce the Alabama Power Co. to permit the joint use of its transmission lines, at reasonable compensation, by other power users not directly connected with Muscle Shoals at present.

In all of this a clear distinction must be kept in mind between the generation and transmission of power on the one hand and the local distribution of power on the other. The activities involved in the latter, responsible it is said for 70 per cent of the total cost to the consumer, are what opponents of this resolution enjoy dwelling upon when they wax eloquent over the dangers of bureaucracy.

Mr. President, the Norris resolution in no way proposes that the Muscle Shoals authorities shall engage in the retailing of power. That remains a matter for private companies or for municipalities, whichever the people of each locality may prefer. Some of the fears of the power lobby no doubt are due to the realization that given an adequate supply of cheap power, municipalities could and would compete effectively with private power distributors. Almost without exception, wherever municipal plants have proven unsuccessful it has been due to the small size of the plant and inability therefore to compete with larger and therefore more economical superpower chains. Public operation of Muscle Shoals would materially assist municipalities within its transmission area in economically distributing power themselves, if they so desire.

In all of this, can anyone show tangible cause why public operation could not be adequate and efficient, just as effective as private operation? It is absurd to assert that this proposal would put "the Government into business." The Norris plan would merely insure operation by one group of men working in the public interest rather than by another working in the interest of a handful of private individuals. All necessary initiative has been taken. The problem of financing has been handled more economically than it would have been by private enterprise. The remaining problems of construction and operation are matters not of business enterprise but of engineering technique. Opposition which continues in spite of these facts is dictated by apprehension on the part of the power combine that the Government operation of Muscle Shoals will be highly successful.

An excellent concise statement of the fundamental issue which confronts the Senate is given in another connection by Commissioner Joseph B. Eastman, of the Interstate Commerce Commission, when he said:

> The question of public ownership and operation is, therefore, not one of the theory respecting proper governmental functions but simply a question of practical expediency. Will better results be obtained if the State performs these governmental functions directly or if it farms them out for private enterprise to perform under public regulation?

PUBLIC OPERATION NEEDED TO PROTECT PUBLIC INTEREST

When, in spite of the existence of a regulatory system, holding companies are permitted to buy up power plants at boom prices in a frantic scramble to acquire the largest number of properties, with no regard whatever for their real value, and are then permitted to charge rates sufficient to earn a return upon these fictitious values, when these so-called values are further increased by all sorts of "intangible" factors, and when operating expenses are padded by large payments to advisory and financing companies, all controlled by the same holding corporation, we are confronted with the necessity of public competition to protect the public interest.

I have called attention to the course that is being followed in other countries which are eager to make the most that they can economically of their electric-power resources in South Africa, New Zealand, Germany, and Sweden. It seems astonishing that in this country opposition so bitter should meet an attempt to give to American industrial and domestic consumers the benefits of an improved organization of electrical supply. It is astounding that even in the Senate so much support should be found for an attitude unwilling even to test out fairly the possibilities of a method of electrical supply devoted to furthering the public interest, rather than to the feathering of financial nests.

The opponents of the Norris joint resolution place their case in a most unfortunate light through their unwillingness to bring forward a careful analysis of comparative costs in place of dogmatic assertions with which they content themselves.

EVIDENCE FURNISHED BY MUSCLE SHOALS ITSELF

This disinclination for specific evidence is, however, in my judgment, founded upon good reasons. The evidence most germane to this discussion is that supplied by the Muscle Shoals plant itself, and that evidence supports the position of those who insist upon continued public operation.

Statements have already been made that the operation of Muscle Shoals is creating a deficit. The existence of a deficit thus far is indisputable. Without an understanding of the actual situation at Muscle Shoals this fact, stated without explanation, is well calculated to give the impression which foes of public operation desire.

Two factors have affected the operation of Muscle Shoals thus far. The first is that all hydroelectric installation requires a period of time before coming to full operation. Machinery must be tested and readjusted, and operation at best is intermittent.

Sale of power from Muscle Shoals began September 12, 1925. From then until the end of the fiscal year, June 30, 1926—a period of great operating fluctuations—the total number of kilowatt-hours generated was 231,859,900, yielding a revenue of $416,818. In the subsequent fiscal year, 1926–27, however, a total of 511,262,400 kilowatt-hours were generated, with revenues of $1,070,321. The totals for the calendar year 1927 were 565,609,500 kilowatt-hours and revenues of $1,168,763, a sum covering not only operating expenses—amounting to $229,739 during the last fiscal year—and charges for depreciation and amortization, but making a contribution toward interest upon the funds invested as well.

It is evident that the difference between the financial results for the first two years were considerable, as anyone conversant with the establishment of new power plants would expect. Even if a deficit should occur from the operations of a number of years, this would only be in accordance with the financial history of virtually every other electric development in the country.

The second factor is one for which Congress is directly responsible. Its failure to provide for the completion of the Muscle Shoals plant has held down the output of electric power. Its failure to provide for the building of such transmission lines as might be necessary has thus far given a monopoly of the power generated to the Alabama Power Co., owning the only transmission lines connecting with Muscle Shoals. Its failure to provide for permanent operation has led to the making of a contract with the Alabama Power Co. under which the company

pays only 2.06 mills a kilowatt-hour for such power as it sees fit to take.

The Alabama Power Co. itself has only recently increased the capacity of its transmission line, though it still can not take all the power generated, even if it should wish to do so. Concerning the purchases of the Alabama Power Co., Major General Jadwin testified before the House Appropriations Committee last December:

They—

Referring to the Alabama Power Co.—

only take it where it is to their advantage to take it, excepting that our agreement with them is that they will take it in preference to the development of their steam power. They operate so as to get the fullest advantage of all their water-power plants, but we take preference over generating it by steam at the same price.

Mr. President, while power was thus being wasted, citizens of Muscle Shoals and other cities in northern Alabama applied vainly for the right to purchase power directly from the Muscle Shoals plant. Due to the character of its arrangements with the power company, the War Department declined to grant their request.

As long as this situation continues it is impossible that the financial yield of the Muscle Shoals plant can increase very rapidly. It will be otherwise if the Norris joint resolution shall be adopted. Completion of the plant, building of transmission lines to supply the available and potential markets for power, and the making of contracts for a reasonable period of years and at a fair and adequate price will enable the Muscle Shoals plant to operate as successfully, financially, as it has already been operating technically.

Had the Senate been unwise enough two years ago to accept the bid of the 13 allied power companies, the receipts from Muscle Shoals would have been $600,000, instead of the $1,168,763 received from "inefficient" Government operation at a price much lower than would have been necessary had Congress acted so as to permit the making of adequate contracts.

The unreasonable delay, founded upon blind prejudice, in passing legislation which will permit the proper utilization of Muscle Shoals ought to be ended by this session of Congress. Complete development of the Tennessee River, for both power and navigation, should be undertaken as rapidly as possible. We are confronted with a situation which requires immediate action. We have an organization that has been working effectively and which should continue to do so. We should realize that we have a going concern on our hands. If the structure of its organization can be improved, that should by all means be done.

It is more important, however, that provision be made for the completion of Muscle Shoals enterprise, and for the sale of the electrical energy now being produced there upon a fair basis.

THE FERTILIZER FALLACY

One of the misrepresentations to which the power lobby has succeeded in giving the widest currency is the notion that Muscle Shoals is in some peculiar manner especially suited to the production of fertilizers. The fallacy of this idea has been exposed repeatedly and again in the course of the present debate by the Senator from Nebraska [Mr. NORRIS].

I will content myself with quoting from a recent discussion of "Muscle Shoals, nitrogen, and farm fertilizers," by R. O. E. Davis, who is carrying on investigations in the use of fixed nitrogen for the Bureau of Chemistry and Soils of the Department of Agriculture, in the January, 1928, Annals of the American Academy of Political and Social Science. He says:

RELATION OF MUSCLE SHOALS PLANTS TO POWER

The association in the public mind of nitrogen fixation with power and with fertilizers has led to the belief that the Muscle Shoals plants can be economically operated for the production of fertilizers because of the power available there. Nitrate plant No. 2 at Muscle Shoals is a cyanamide plant, and this method for fixation of nitrogen is already being rapidly displaced throughout the world by the direct synthetic methods. The consumption of power by the cyanamide process is about four times that of the synthetic processes. Plant No. 1 at Sheffield, based on the direct synthetic method, was designed for only one-fifth the capacity of plant No. 2, and only a portion representing about one-fourth its capacity was ever completed sufficiently to make a test run. It was shown that this plant would have to be rebuilt to be operative. The cost of remodeling the plant would be considerable. In addition, the cost of power is not an important consideration in the operation of this process.

To operate plant No. 2 at Muscle Shoals would be to utilize the power in fixing nitrogen by the process that is being rapidly displaced in the competitive markets of the world. To use the power for the operation of the direct synthetic process, it would be necessary to construct a plant based on the latest developments in this field, developments that have shown hydroelectric power unnecessary in its operation. The use of this power for the commercial operation of either process would be inadvisable, since it would employ it either in an uneconomic or an unnecessary manner and would prevent its utilization in processes where it is essential or its distribution for industrial and domestic purposes. This is of real importance, for Muscle Shoals is so located that the demands upon its power, especially to the west and south, will undoubtedly increase.

Hydroelectric power is not necessary for nitrogen fixation by the direct synthesis method. This method employs the gases hydrogen and nitrogen and brings about their combination as ammonia under pressure at a temperature of around 500° C. in the presence of a catalyst. In the first and largest plants of this sort, constructed in Germany, the hydrogen and nitrogen mixtures were prepared by the reaction of air and steam on coke in gas producers and purified before use for combination as ammonia. The principal power requirement is in the compression of the gases to several hundred atmospheres before they enter the reaction chamber, and this power can be obtained just as readily from coal as from water.

Mr. President, I ask unanimous consent that the remainder of the article may be incorporated in the RECORD as a part of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

It is possible to obtain hydrogen from water by electrolysis and in this method electric power is necessary. However, the direct synthesis process when operated with electrolytic hydrogen requires about 20 per cent more power than the cyanamide instead of 75 per cent less when chemical means of producing the hydrogen are used. Hence the electrolytic hydrogen is used principally where it is obtained as a by-product from an electrochemical process as in the manufacture of chlorine. There are a number of places where waste hydrogen is being produced as a by-product and this hydrogen may be utilized in the direct synthesis process.

The possibilities in the production of ammonia make the situation somewhat uncertain, but show a definite drift toward the use of coal in producing hydrogen. This makes it unwise either to tie up for a long time any considerable amount of water power in a process that is being rapidly superseded, or in using it in a process in which power is of minor significance.

The fact that nitrogen fixation is more closely allied with coal than with hydroelectric power makes it more important for the economical development of the industry that the plants be close to coal-producing centers. Such locations also have the advantage of distributing the nitrogen-fixation plants and from the standpoint of fertilizer distribution would be an additional saving in freight rates over that due to the production of the more concentrated products already referred to.

THE SITUATION AT MUSCLE SHOALS

At Muscle Shoals there is a large water power available, developed for use in fixing nitrogen by a process that at the time was well understood and dependable. This process is now being rapidly displaced throughout the world by the direct synthetic methods, in which hydroelectric power is not necessary. The power not necessary for nitrogen fixation will find a market in the rapidly developing public utilities and industries of the region.

Of the two plants at Muscle Shoals, plant No. 1 is of small capacity and will require reconstruction to be put in operative condition on a process for direct synthesis of ammonia, and plant No. 2 is a complete cyanamide plant of 40,000 tons nitrogen capacity, built as a war-time necessity, but tendering toward obsolescense because of the rapid development of direct synthetic methods. The present-day development of nitrogen fixation does not require hydroelectric power. In fact the industry is more closely allied to the coal industry than to water power.

The commercial development of nitrogen fixation plants in this country is taking place rapidly as evidenced by the establishment of a number of direct synthetic plants, and the projection of plans for other plants by two of the largest chemical manufacturing concerns in the country. Large amounts of new types of fertilizers from the nitrogen fixation products will not be produced, however, until the market develops for these materials; and the market must be developed through a campaign of education regarding the properties and use of the new materials. It is inevitable that the use of fertilizers will increase and the area of use widen, also that, with the present sources limited, the concentrated chemical products will form the basis of the future fertilizer industry.

Plans for the utilization of Muscle Shoals have ranged from private lease and operation of the power and nitrogen fixation plants to Government ownership and operation of both; and from the separation of power and nitrate plants under private operation to the sale of power, and the operation of the plants by the Government for experimental and educational purposes in developing the new forms of fertilizers. Whatever the solution of the problem is, it should take

account of the ultimate demand for hydroelectric power in that region, the development of the nitrogen fixation industry in relation to power, and the development and introduction of the new fertilizer materials.

Mr. LA FOLLETTE. Mr. President, doubtless it will become possible to produce fertilizers much more cheaply than heretofore. The advantages of more economical production should, however, go to the farmer and not to private corporations. Funds for experimentation to the end that fertilizers may be produced more cheaply should be available. They are made available by the Norris joint resolution, which thus carries out the desire of those who wish Muscle Shoals dedicated to the advancement of agriculture.

The Norris joint resolution does not, however, permit a private corporation to make use of Muscle Shoals until it succeeds in developing a cheaper method of production which can then be carried on in other plants unlimited by the restrictions upon profits which would necessarily, and properly, form part of any lease of Muscle Shoals. Nor does the Norris joint resolution permit a corporation, ostensibly organized for the manufacture of fertilizers, to enter upon the wholesaling of power as soon as it has perfunctorily complied with the conditions of its lease. Surely none of the Members of the Senate are so guileless that they fancy that a limitation upon the profits of one corporation from the sale of power would prevent it from selling power at a "reasonable" price to another corporation, owned by the same stockholders, and entirely unchecked by the conditions binding the first corporation.

By tolerating the repeated representations of these so-called fertilizer companies, we have assisted them in deceiving an unfortunately large number of farmers. It is high time that hypocrisy be abandoned. If we intend to make a gift of the Muscle Shoals site to private power companies, let us do so frankly, without deluding either ourselves or the farmers, who are justly eager to secure fertilizers at a price better adjusted to their needs.

The farmer as a stalking-horse for predatory interests has again been given a rôle which he has, unfortunately, been required to occupy too often. It was in the name of the farmer that the timber and stone act was passed. It was in his name that the land-grant steals were put through Congress. His name is taken in vain in an effort to permit the seizing of Muscle Shoals. The Senator from Nebraska [Mr. NORRIS] has riddled the fertilizer scheme at Muscle Shoals. He has not left a leg for them to stand on.

The Norris joint resolution provides for the use of the profits from Muscle Shoals operation for the necessary experimentation in the fixation of nitrogen which the flux of the science demands. The passage of the joint resolution in its present form will do more to bring about the cheapening of fertilizer than any other act which Congress could pass.

THE DEMAGOGUERY OF BUSINESS

We have heard of the demagaguery of politics. There is a demagoguery of business which is far more harmful in its effects than any of the political demagoguery which this country has experienced. Representatives of the utilities call attention to the millions of shareholders in the industry. They neglect to point out that all but a few of these shareholders hold stocks the return upon which is fixed, and the owners of which have no control over the operations of the business which is called theirs. These people—I am speaking of those whose investments were made honestly—are interested only in safety for the interest upon the funds which they have invested. They are not the people who, under the guise of taking the Government out of business, are really engaged in putting business into politics, in making a business of political maneuvering and political corruption to the end that they may profit to the fullest extent.

One of the gravest evils of American politics has been the levying of compulsory assessments upon office holders in order to finance the machinations of political rings. Political officeholders have, however, occasionally been defended against this imposition. The fate of the power consumer thus far has been otherwise. The thousands and millions of dollars expended by the manipulators of the utilities have been derived from compulsory assessments, but from compulsory assessments levied upon the consumers of electric power. As yet, the American people have little understanding of the proportion of the amounts recorded by their electricity and gas bills which represent nothing more than so-called legal expenses to cover the expense of influencing the opinions of these very consumers and of carrying on lobbies both here and at the capital of every State in the Union.

We have heard a little of the campaign contributions made by power companies, and what we have heard is evidently only the beginning. Can anyone contend seriously that contributions of this sort constitute a proper cost of power production? It is with funds dishonestly collected and expended—when not dishonestly, then in the course of a campaign of misrepresentation—that the greater part of the opposition to this joint resolution is being financed.

The issue with which we are now dealing is only a single phase of one of the gravest problems confronting this Nation. It is necessary to determine whether the production of electrical power shall be a means of increasing national industrial effectiveness and the standard of living of every American citizen or whether it shall be a means of supplying profit, unconscionable profit, to a few individuals.

The responsibility of formulating a national power policy rests upon Congress. The deliberation and adoption of this policy must take place here and not in the city of New York at 420 Lexington Avenue.

I have called attention to the advantages which will result from continued and more effective public operation of Muscle Shoals. It should in the first instance serve the power consumers within its area. It should in the second instance aid us in evaluating the results of the organization of the electric-power industry as it has grown up in other parts of the country. Attempts are being made to divert our attention. We must keep the issue clear. We can easily dissipate another of our national heritages. It is our duty to devote the resources of Muscle Shoals to the welfare of the people of the Southeast and to the welfare of the entire United States.

Mr. President, to-day the issue involved in electric power is a dominant issue. To-morrow it will be paramount. This question of electric power and its distribution to the consumers of America will never be settled until it is settled rightly. It will present itself in phase after phase, in session after session of Congress. It will be fought out upon the floor of this Chamber and upon the floor at the other end of the Capitol.

Already at this session of Congress one phase of the power issue has been passed upon by the Senate of the United States. In that contest the power interests won a victory. They mangled and hamstrung the Walsh resolution for an investigation of that industry; but, Mr. President, I believe it was a temporary and a costly victory. In my humble opinion, more Senators will be retired to private life by angry constituencies upon the vote on the Walsh resolution than were defeated upon the vote when the seating of Newberry was an issue in the Senate. The power industry has made the issue, Mr. President. It is going to a higher court than this for final decision. It is going to be settled ultimately by the people of the United States.

For seven years—since 1921 the senior Senator from Nebraska [Mr. NORRIS], single-handed and alone, has conducted one of the most dramatic, one of the most courageous contests on behalf of the public interests ever waged in the Senate of the United States. By the sheer force of logic, backed by his courage and determination, he has beaten back, time after time, the power interests determined to take away from the people of the United States this prize at Muscle Shoals. They have been disguised in one uniform and then in another; but each time the senior Senator from Nebraska has stripped them of their false apparel and revealed them in their true and proper character here in the Senate of the United States.

It is rumored that there is a majority of 10 in this body to defeat the Norris joint resolution. I trust this is not so; but, if it should prove to be so, then the people of the United States will attend to the matter. They will retire to private life and elect in their stead enough Senators to reverse that majority, who are prepared to stand here and fight the power monopoly and to defend the interests of the public in this greatest of economic issues confronting us to-day for solution.

Mr. HEFLIN. Mr. President, I offer an amendment to the amendment of the Senator from Mississippi [Mr. HARRISON], which I ask to have read and have pending.

The PRESIDING OFFICER (Mr. BARKLEY in the chair). The Senator from Alabama offers an amendment to the pending amendment.

Mr. HEFLIN. I want to have it read and lie on the table.

The PRESIDING OFFICER. The amendment to the amendment will be read.

The Chief Clerk read as follows:

On page 3, following line 9, insert a new numbered section, to read as follows:

"SEC. —. All contracts for lease of the Muscle Shoals power properties or for the sale of the power therefrom shall provide that whenever, upon recommendation of the president of the American Farm Bureau Federation, the national master of the National Grange, and the president of the Farmers' Educational and Cooperative Union, the President of the United States shall decide that the Muscle Shoals

power is needed for the manufacture of commercial fertilizers, either through the use of nitrate plant No. 2 or otherwise, said power shall be subject to recall for the manufacture of such fertilizers, and any such contract for lease or sale executed by the Secretary of War shall be subject to cancellation by the President when, in his judgment, the needs of agriculture shall require it."

The PRESIDING OFFICER. The amendment will lie on the table and be printed.

Mr. BLACK. Mr. President, I ask unanimous consent to insert in the RECORD, at the request of a citizen of Sheffield, Ala., a letter which he has received from the counsel, I believe, of the Tacoma lighting plant with reference to rates at Tacoma as compared with rates in certain southern cities. I should like to state that these rates show a great amount more paid for power in these southern cities than in Tacoma.

I am inserting this communication at the request of a citizen of Sheffield, who has also sent me a telegram, and I believe has sent one to the Senator from Tennessee [Mr. MCKELLAR], supporting the Cyanamid bid. He desires, however, to have these comparative rates put in the RECORD.

I also ask unanimous consent to insert in the RECORD a report made by Chester H. Gray, Washington representative of the American Farm Bureau Federation, to the board of directors of the American Farm Bureau Federation touching his legislative work in Washington. I do this at his request, in view of the fact that the statement has been made, according to my recollection, that Mr. Gray has spent practically all his time on the Muscle Shoals project. This will show the complete work of his body and of his board during this year in legislative circles at Washington.

The PRESIDING OFFICER. Without objection, the matter referred to will be printed in the RECORD.

Mr. NORRIS. Mr. President, I want to make an inquiry. I hope the Senator from Alabama will excuse me. My attention was diverted. What was the article the Senator asked to have inserted in the RECORD?

Mr. BLACK. A report made by Chester Gray to the board of directors of the Farm Bureau with reference to his legislative work in Washington.

Mr. NORRIS. When was it made?

Mr. BLACK. I have the date. I think it shows the date on the face of it.

Mr. NORRIS. Was it recently?

Mr. BLACK. Yes.

Mr. NORRIS. One of the regular reports he makes?

Mr. BLACK. Yes; and the other report shows, according to the Senator's contention, that the rates at Tacoma, Wash., are cheaper in places where the people are supplied by public utilities.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Alabama?

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

The following is an analysis of a typical Tacoma light bill:

Nine-room home of Homer T. Bone. Consumption between November 15 and December 15, 1927. Total consumption, 686 kilowatt-hours on a combined residence lighting, refrigeration, and cooking circuit. Total charge for 686 kilowatt-hours was $8.75.

Chattanooga, Tenn., advertises itself as "Dynamo of Dixie." It is a city of approximately the same size as Tacoma. It is supplied by hydroelectric plants.

Rate "I" is the lowest domestic rate in Chattanooga, and is filed with the State regulatory body as the "metered residence light, refrigeration, and cooking or heating combined" schedule. This schedule is as follows:

Nine cents per kilowatt-hour for first 40 kilowatt-hours per month.

Three cents per kilowatt-hour for all current used in excess of first 40 kilowatt-hours per month.

Minimum charge, $3.15 per month.

Five per cent discount if paid within 10 days.

Compare this cheapest Chattanooga rate with the Tacoma rate. Based on a consumption of 686 kilowatt-hours, the Chattanooga charge will be as follows:

First 40 kilowatt-hours at 9 cents	$3.60
Next 646 kilowatt-hours at 3 cents	19.38
Total, 686 kilowatt-hours	22.98
Less 5 per cent	1.14
Total Chattanooga charge	21.84
Chattanooga charge	21.84
Tacoma charge	8.75
Difference	13.09

By comparison it will be observed that the Tacoma rate is 40 per cent of the rate charged in Chattanooga, or, in other words, the Chattanooga rate is 250 per cent of the Tacoma rate for exactly the same service.

During this period of time above mentioned, and on a separate metered circuit, this same home used 1,563 kilowatt-hours in electric heaters as an auxiliary to a hot-water heating system. The charge for this service was $7.80, or at the rate of one-half cent per kilowatt-hour.

Copies of these bills in the city of Tacoma can be supplied to you if you desire to use them for comparison.

From the foregoing one will readily understand why the Power Trust operating in your section objects to any form of public ownership. It also objects to cities owning their own distribution systems and buying power at 2 mills from the Government Muscle Shoals plant and distributing it over their own municipal systems, and putting the profit in their city treasuries or giving it back to the consumers in the form of cheap light rates. Two mills is one-fifth of a cent per kilowatt-hour, which means that if this power was available for distribution over municipal systems, the people in the country adjacent to Muscle Shoals might enjoy light and power rates as cheap as those enjoyed in Tacoma. The city of Tacoma has been in the light and power business for nearly 40 years and its plant has been eminently successful. It now owns two big hydroelectric plants and is preparing to build a third hydro plant of an additional 50,000 horsepower installation. There may be men in the city of Tacoma who would like to force the city to abandon its municipal plant, but if such men are here they lack the courage to publicly offer such advice. If Tacoma paid the rates charged in Chattanooga, it would probably add to the bills of light and power consumers an amount of money almost equal to the total tax budget of the city of Tacoma—in other words, it would add frightfully to our tax burden, and all that we would get in exchange for this concession would be a few thousand dollars in taxes, which would represent but a small fraction of the added cost.

H. T. BONE.

REPORT OF CHESTER H. GRAY, WASHINGTON REPRESENTATIVE, TO THE BOARD OF DIRECTORS, AMERICAN FARM BUREAU FEDERATION, FEBRUARY 17, 1928

Perhaps the most effective way of making a report to the members of the board of directors in the middle of a congressional session is to take the resolutions of the ninth annual meeting, American Farm Bureau Federation, and consider the legislative projects upon which our Washington offices are interested in connection with each resolution.

Since Resolution 1 is a reaffirmation of many prior resolutions, let us delay its consideration for the end of this report.

Resolution 2 is entitled "A national agricultural policy." In carrying forward the intent and substance of this resolution there was introduced early in the session of Congress S. 1176, by Senator MCNARY, and H. R. 7940, by Chairman HAUGEN. At the beginning of the session one might have doubted the ability of these measures to make any progress. Politics were more in evidence in regard to farm relief at that time than were economics. It was argued on the one side that such bills need not be considered by Congress, as they could not be passed, or, if passed, would be sure of a veto. On the other side it was maintained that success with such bills deserved continuing consideration on the part of Congress, and the question of veto was a matter which need not be a determining factor. In the Washington offices of the American Farm Bureau Federation it is realized that more than in the present instance our organization has found itself in opposition to presidential desires. This has been true on ship subsidy in former years, on certain phases of railroad legislation, on daylight saving, and on many other legislative projects which need not be mentioned. If our membership concludes that a project is necessary, it is the duty of those in the employ of the federation to carry out the membership mandates no matter where opposition might come from in so doing.

Hearings are still continuing on the House bill, and will continue under present indications for another week. On the Senate side the bill has been reported out exactly as it was introduced by Senator MCNARY early in the session, with no hearings whatever. In due time it is expected the House committee will report its bill with some changes no doubt. Whichever branch of Congress acts upon farm relief first is not likely to have its measure taken as a whole by the other House, as was the case in the Sixty-ninth Congress. We may reasonably expect farm relief to go to conference this session, which will give us an opportunity finally to refine the bill into that final form which may be necessary after it has been subjected to amendments on both floors.

There has been no weakening or equivocation in our continuing advocacy of the equalization plan. That plan seems stronger among farm groups to-day than it ever has been, with more such groups represented at Washington before the House committee, and with a congressional strength which justifies us in being not alarmed at the fate of the measure in final roll calls.

Resolution 3 is entitled "Muscle Shoals." The Madden bill, named in that resolution, is now H. R. 8305. It has a companion measure on the Senate side, introduced by Senator WILLIS, of Ohio, S. 2786. Only one public appearance has been made by the Washington offices on this project before committees, and that was before the

Senate Committee on Agriculture. As is usual, we found ourselves then face to face with those who advocate Government operation at the Shoals instead of private operation, as is our position. Through a mistaken statement as to the power available at the shoals, efforts are made to make the American Farm Bureau Federation appear to be more interested in power than in fertilizers. When it is stated that 1,200,000 horsepower are available at the shoals in spite of the well-known engineering facts that with the Wilson Dam, Dam No. 3, 17 miles up the river, Cove Creek Reservoir, 400 miles up the river, and the steam plant enlarged 50 per cent—all provided for in the Willis-Madden bill—there will be only a total of between 300,000 and 340,000 horsepower, it is seen how misleading statements may be relative to the shoals. It will take about 280,000 to 300,000 horsepower to carry out the fertilizer guaranties and obligations in the Willis-Madden bills, so that with the actual amount of dependable power which will be had at the shoals when all the developments above enumerated are finished, there will be mighty little power left in the classification ordinarily called primary power.

The question of obsolescence of the Muscle Shoals enterprise has been recurrent for some time, so that it was necessary to meet this question fearlessly. Accordingly, the Washington offices issued a map showing where the plants all over the world which are operating by the cyanamide process—that being the one installed at the shoals—are situated. This map has created a profound sensation, as the authenticity of it can not well be called in question, when references are displayed on the face of the map showing where all data are secured. By meeting the question of obsolescence, and by actually letting it be known what the power developments are at Muscle Shoals, we have placed ourselves in a good position to carry on our advocacy of the Willis-Madden bill for private operation of the shoals as opposed to Government operation.

The Senate committee has reported out the Government operation resolution of Senator NORRIS, which does not provide for the development of the Tennessee River; does not return to the Government any of the costs which have thus far been expended on that project; does not limit the profit to be made on fertilizers to 8 per cent; makes no provision for a farmer board of control; and absolutely separates the power from the making of fertilizers. All of these aspects of the situation are adequately provided for in the Willis-Madden bill, and the power is to be sold under the latter measure in fertilizer sacks rather than over the high lines.

The House Military Affairs Committee is now reading the Muscle Shoals bill section by section in executive session with Mr. Bell, president of the American Cyanamid Co., with a representative of the Attorney General's office present. It is thought we are on the last lap of the deliberations of this committee prior to its report of the Madden bill.

Resolution 4 deals with the subject of "Equalizing domestic and foreign costs of production." Many bills have been introduced this session, particularly on the House side, to increase the import duties on agricultural products. Congressmen DICKINSON, FISH, FRENCH, SELVIG, HUDSPETH, and MANLOVE, not to mention others, have bills all of which upon specific agricultural commodities seek higher duties. It is known that other bills of similar nature are in process of preparation. It is understood that these bills may not make much progress this session, but they surely indicate that when the tariff act is to be revised agriculture is going to be present with its data and facts at hand before the Ways and Means Committee of the House to see that its products are more adequately cared for than has been the case heretofore. It is gradually developing in the minds of those who study the question of equalizing domestic and foreign costs that our present equipment and machinery for raising duties under the flexible provision of the present tariff act are inadequate; first, because the 50 per cent minimum is oftentimes not enough, and second, because the terms of section 315 of the tariff act, which section contains the flexible provision, are so specific and stringent that the United States Tariff Commission can not work with that expedition which the commission and others desire. However, time has not been permitted our Washintgon offices to secure the introduction of a bill to make more flexible and usable the present so-called flexible provision. In fact, it may not be necessary to do this, as the rewriting of the tariff act is not far distant, and in that rewriting more flexible provisions may be put in than were thought necessary when the present act was drafted.

An interesting phase of the importation of commodities is at hand in connection with our Resolution 4 in a fight which we have made to secure the free importation of raw phosphate rock from Morocco. This rock may be slightly higher in phosphoric content than is our domestic rock, and seemingly it has been sold to our consumers cheaper than our own production. When, however, this rock was sought to be introduced to our markets the antidumping provisions were called into force and effect, and the Customs Bureau, after having had hearings and referring the question to Secretary Mellon, has issued an order that the importation of Moroccan phosphate constitutes dumping, and therefore is subject to the imposition of an antidumping fee. This decision is equivalent to putting a tariff on plant-food constituents, which our farmers desire to get at the cheapest possible dollar. In this case before the Customs Bureau we have been very active trying to carry out the mandate of our membership in Resolution 4.

Considerable interest has been aroused in relation to our resolution on equalizing domestic and foreign costs of production in the banana situation. Formerly we have considered tropical vegetable oils as being obnoxious to our butter and animal fat producers, and now we are realizing that bananas are directly competitive to practically every fruit which is home grown with us. The board may be informed that in a short while a bill will be introduced seeking an import duty on bananas.

The entire tariff situation is such that, as has been previously called to the attention of the board, to handle it properly at Washington would require the full-time attention of a technologist. The members of the board may recollect that at former times suggestions have been made that if Budget requirements could permit, we should have a tariff technologist, a taxation specialist, and a cooperative marketing specialist for the enlarging work at Washington.

Continuing our reference to tariff matters, it may be stated that last week on the onion case alone there were at Washington representatives from 15 of our States, coming from all sections of our Nation, which occupied practically the full time of a week for Mr. Ogg, who had in advance given much of his time for a month in preparation for the case. Data have been under process of assembling for this case for a year, and it is by general consensus of opinion of those present, Members of Congress as well as producers, that the American Farm Bureau Federation had the scientific data without which the producers' case before the Tariff Commission would have been sadly situated. And now we have before us the milk and cream case, which is up for hearings in the middle of the congressional session, when our duties are supposed to be on legislation specifically. Following the milk and cream case comes along several others upon which our membership in various parts of the Nation is keenly interested.

Resolution 5 deals with taxation. Before the Ways and Means Committee full-length presentations were made upon the general question of Federal taxation, and later upon the specific question of reduction of Federal estate taxes. Our main advocacy in matters of Federal taxation are as follows:

(a) A minimum reduction of the Federal debt $1,000,000 annually;
(b) Tax reduction is not the dominant issue, but debt reduction is;
(c) The basis of paying Federal taxes is ability to pay;
(d) Every citizen has an obligation to support the Federal Government in some manner relative to tax burdens; and
(e) Necessity to consume is no proper basis for levying Federal taxes.

Trends are in evidence that exemptions and reductions in Federal-tax brackets are politically attractive. It must be stated that although exemptions do not repeal the tax right of the Federal Government, if carried to an inordinate extent they practically nullify the provisions of a revenue act; so, in the American Farm Bureau Federation, we do not advocate granting more and more exemptions with greater and greater reductions where those exemptions and reductions are made applicable either to those of big income-earning capacity or to those of more modest incomes.

Our fight to retain the estate taxes is a remarkable example of the efficacy of having a position and standing for it with data to substantiate the position taken. Much praise should be given Chairman GREEN, of the Ways and Means Committee, for his staunchness in the matter of the Federal estate tax—not meaning to imply that other members of that committee are not as loyal to the proposal of retaining the Federal estate tax as is true of the chairman.

We have to face constantly, as in a sort of twilight zone, the sales-tax idea. There is a residue of sales taxes in the revenue act now expiring. For instance, the so-called nuisance and admission taxes, the excise tax on automobiles, and such like, are virtually sales taxes and are paid by those who have not the greatest ability to pay, and who have oftentimes the greatest necessity to consume. We desire to clear the revenue act of the last vestige of sales taxes, such as those above enumerated, so that the proponents of sales taxation methods, if ever they try to impose such a method of taxation upon us, will be required to begin at zero and work up.

The State federations are giving studious attention it is found to Resolution 28 of the eighth annual meeting, but if we had in our organization a taxation specialist he could so synchronize the work of our many federations on tax matters that after a term of years our State-tax structures would be quite different from those which exist at the present time, and so much more uniform in character.

In the Senate the tax matter is held up until the middle of March when the income of the Government as related to the expenditures now being provided for by Congress can be more definitely known. It seems probable that the tax matter will get into such a tangle that the farm bureau program of no tax reduction will be very nearly accomplished. As the tax bill now stands it provides for a reduction of approximately $300,000,000, which is really $225,000,000 more than is necessary in the way of reduced Federal taxation. Especially is this true when we note that the Federal debt is not being wiped out as rapidly as was the case for a few years immediately following the war. The tendency is to pay less on the debt and reduce taxes more. This is, it may be said, a political tendency. The thing to be economically desired is to eliminate the debt and then, if desirable, reduce taxes.

Resolution 7 on flood control is of special importance to many of our members. The Washington offices in November made arguments before the House Flood Control Committee, dealing with the general phase of flood-control matters. Later a written statement was supplied Chairman REID of that committee, with maps and data of different kinds supplied occasionally. During the past week a statement was given Senator JONES, chairman of the Senate Commerce Committee, upon the same subject, accenting the main thoughts contained in Resolution 7. The controversy over flood control largely revolves around whether or not the Federal Government shall pay the expenses. Upon that question our position in the American Farm Bureau Federation is definitely stated in our resolution. The Washington offices have maintained throughout all hearings and arguments that the communities and States subject to inundation, having gone in years past to great expense to protect themselves, can not any longer carry the burden. Furthermore, since the question of flood control is by general recognition stated to be a national affair, the National Government consequently should bear the expense at least on the large navigable rivers.

Another point of controversy, though less in importance than the one of whether or not the Federal Government should bear the expense, is concerning the creation of a special Federal bureau or commission to have charge of flood-control affairs. Since we in our organization have stated a reliance on the Corps of Army Engineers for the technical carrying out of our flood-control program, the Washington offices have maintained that a special flood-control commission is not necessary. Such a special commission would necessarily need to go to the Army engineers to secure its technological information and would really be an extra and superfluous body carrying out the engineering details recommended to it by the Army engineers.

It has been stated in our presentations that the expense of the complete flood-control plan on the Mississippi River will fall between $300,000,000 and $1,000,000,000, with the lesser amount being much more exactly the one to be paid. It also has been suggested that each Congress will not be burdened with the necessity for large appropriations, but that from $30,000,000 to $50,000,000 per Congress will be sufficient to carry the work on for a term of years until the job is done. A decade is specified in our statement as being the least time during which such a large program might be consummated, and it has been pointed out that a generation may go by before the entire project is finished. In other words, we are not advocating necessarily a quick control of floods, but are advocating an effective control whenever the policy has been first determined upon by Congress, and then constructively followed out by the Army engineers, being supplied with appropriations by subsequent Congresses.

Recently a great deal of turmoil has arisen because neither committee has made a report on this subject. The slowness with which the committees are arriving at their recommendations makes the demands of last year for an extra session of Congress to go into the flood-control matter posthaste look ludicrous. Properly considered, the committees of Congress should be commended for the carefulness with which they are approaching this question: First, on account of the money involved, and, second, on account of the engineering facts which must be ascertained prior to the carrying out of any policy. It is to be expected that the most important features of our flood-control program as above outlined in Resolution 7 will be incorporated in the bills which are to be reported from the proper committees.

Resolution 8 is upon the subject of transportation. The Jones bill, S. 744, has been reported from the Senate Committee on Commerce, and declares it to be the continuing policy of the United States Government to maintain by replacement, rebuilding, and otherwise, an American merchant marine of permanent character. This bill, although not actually a Government operation bill, is being so considered generally, and is being attacked as committing our Government to a permanent policy of the Federal Government remaining in the shipping business. It is contended against this bill that if the Shipping Board is permitted to rebuild and reequip the Government owned and operated lines, then some provision should be made so that private lines can also be reequipped and reconditioned as necessity arises. If this is not done, the opponents of the Jones bill contend eventually we will have nothing but Government operation of ships, as the private-owned lines must disappear under trade competitions, much of which competition might come from the Federal Government itself. Those who dislike the Jones bill are advocating other solutions—such a one being to grant special rates for the carrying of mail abroad, in a manner similar to that which is in vogue with railroads. It is also explained that the operators of merchant marine can be saved some expense by having some of the employees on the vessels commissioned as members of the American merchant-marine reserve, and paid for by the Federal Government, so that in case of future wars we may have an adequately trained and governmentally commissioned marine body ready for instant service.

The question of direct subsidy to an American merchant marine has not gained headway at Washington, as it seems no one has the courage to advocate an outright payment from the Federal Treasury for losses sustained by private operators of lines under American registry. Much interest has been attracted recently by the proposal of an American corporation to invest many millions of dollars in ships, providing the Government will loan such corporation perhaps 75 per cent of the capital costs of the vessels at low rates of interest and long-time amortization payments, with mail contracts and merchant marine reserves installed as above described.

Perhaps the Jones bill as reported from the Senate committee will not be the measure which is finally approved by Congress, but some compromise bill containing various of the features above enumerated may comprise our future merchant-marine policy.

Appropriations for the development of the large inland river system are making usual progress through Congress. An effort was made in the House to cut the appropriations below $56,000,000, which was the sum designated by the Army engineers and advocated by all groups in favor of inland river development. When this question came to a vote on the floor of the House, although the committee report did not retain the entire $56,000,000, that amount was reinstalled by floor action with an overwhelming majority. It is not expected that any change in this situation will develop on the Senate side. The controversy to a large extent relative to the last few million dollars was on the question of whether or not the Missouri River should come in for its share of development and barge-line transportation.

Singular as it may seem in connection with inland river matters, and with the rivers and harbors bill generally, we have heard nothing this session about lake levels. At former times that subject was highly controversial in connection with the so-called Chicago Drainage Canal and the Illinois River Channel. On account of the large precipitation of rain in the last year, the lake levels are coming up again, and it seems to be under process of demonstration in a natural way that the lake level is coming back to where it often times has been before; and will in some future years drop low again because that has been the record of the lake levels since the sixties of the last century.

Dealing with the question of transportation, but more specifically in our flood-control presentation, we have stressed upon every occasion the necessity of surveys of our main streams. Until we know more about the water which comes down our streams, its varying amount from year to year, and from month to month, we can not know whether to build our dams for storage, for navigation, for power purposes, nor can we fit storage of water for flood-control purposes in with storage of water for power purposes. Time was in years gone by that navigation dams were built low and frequently, thus developing slight, if any, power from the water flowing down the streams. By the survey of one stream in the United States, the Tennessee River, we have discovered that navigation dams should be built high and less frequently, making, so to speak, lakes above the dam which would wonderfully help transportation and also give enough head of water to develop power which eventually would pay for the entire navigation project.

Lately the question of flood control comes into this picture so that now more than ever we need surveys of our tributary streams, so that the location of reservoir sites may be pointed out by Army engineers, which sites may be made useful to keep back that peak of water which causes disaster in flood times, later to disgorge the water for secondary power uses during the dry months, and so be ready in the next freshet period to retain the next flood. This question of surveying our streams, then, is as much a question of transportation and power as of flood control. It is encouraging to know that adequate funds for such surveys are coming along with the usual river and harbor features.

A bill (H. R. 107) by Mr. BURTNESS has been introduced to provide that toll bridges on our national highways shall revert to the Government when tolls have amortized costs and interest. This bill has not made progress, but will have more force put behind it when other matters are not so pressing. In the meantime the chartering of toll bridges is going merrily along, with the result that in the future the citizens who have paid taxes to build hard-surfaced highways will find barriers of private ownership erected to profit from the public expenditure.

Resolution 9 of the ninth annual meeting deals with agricultural appropriations. In carrying out this resolution the following projects have been actively supported:

(a) The Capper-Ketcham extension bill (S. 1285, H. R. 6074). These measures have been reported out of the Appropriations Committees in slightly different form. We are daily expecting a vote on the floor of the Senate, and we would have had such vote last week except that Senator KING, having heard from some people in his State who thought all the money was going to home economics, asked for more time to study the measure.

(b) The Robinson-Aswell bill, proposing $500,000 for extension work in the flood areas, has been signed by the President.

(c) The appropriation for tuberculosis eradication is being carried along in the Department of Agriculture bill. Quarantine and control work for insect and plant pests and diseases are items in the agricultural bill which it is thought require special attention on our part.

(d) The effort to get more appropriations for fundamental research by the United States Department of Agriculture has resulted in the Budget Bureau providing a greater amount than heretofore for these purposes, but not to the extent we desired. Hearings have just been concluded before the House subcommittee on Agricultural Appropriations expressing the importance of this appropriation.

(e) The highway funds are not yet reported from the committees, but will be in due time, substantially the same amounts as last session, namely, $75,000,000 for Federal aid to highways and $7,500,000 for forest trails. Efforts are under way to get special items for highway and bridge reconstruction in the flooded areas.

(f) The United States Tariff Commission in its original estimates requested about $950,000. When this request was filed with the Bureau of the Budget there was pending a deficiency bill carrying $135,000, which under the conditions then existing would have been expected to pass. However, this deficiency bill was shaved to a bare $4,000 when it finally passed. The Bureau of the Budget reduced the estimates of the Tariff Commission to approximately $750,000, which is the approximate amount now being made available for the Tariff Commission. This amount is $68,000 more than last year, but as above noted, is about $200,000 less than the Tariff Commission desires. We are feeling our way toward having a special resolution introduced carrying more money for the Tariff Commission, as it seems useless to go before the Bureau of the Budget asking for a supplemental estimate for the commission. As above noted in this report dealing with Resolution 4, our work before the Tariff Commission is of tremendous interest to our membership, so that everything we can do to enable the commission to keep up with its work, especially the cases pending under the flexible provisions, would be very beneficial to us.

(g) An item for enforcement for the so-called Lenroot-Taber milk bill of the Sixty-ninth Congress is in the agricultural appropriation bill.

(h) It is useless and, in fact, nearly impossible to enumerate all of the items relative to appropriations which must be kept moving along in regard to agricultural affairs.

No effort, other than those above enumerated in this report, is made to follow all the bills on appropriation matters.

In carrying out the substance of Resolution 10, "European corn borer," the Washington offices have been participant in many conferences on the subject; and as a result of all the interest in corn-borer control matters we have by recent introduction H. R. 10377 by Congressman PURNELL, which carried an authorization for $10,000,000 for this work. Hearings on this measure will be had beginning about the 1st of March. The bill is very much like the one of last session, and provides, among other features, for expenditures for any necessary farm clean-up which is, in the judgment of the Secretary of Agriculture, in addition to the normal and usual farm operations.

Some excitement was caused in January by a delegation from Ohio which came to Washington expressing opposition to all corn-borer control work. It is not thought that this delegation made any permanent impression upon the congressional mind. However, it is recognized to be important that every possible farm agency be invoked for its assistance in getting the $10,000,000 appropriation provided for in the Purnell bill on account of other pending and much larger appropriations, and also on account of the uncertainty of the revenue measure which in a former portion of this report was alluded to. It will not be as easy to get the $10,000,000 this time as it was last session.

Resolution 11, "packer and stockyard act," has been started in its legislative career by the introduction of several bills dealing with packers and stockyards. The ones of most concern to us seem to be those introduced by Senator CAPPER, S. 2506, and a companion bill by Congressman HOPE. The Washington office has been unable to outline any policies in regard to these measures on account of the inability down to this time of getting the consensus of opinion expressed by our legislative committee and by similar committee of the National Livestock Producers' Association. It is suggested to the board of directors or to the legislative committee that this question should be decided soon, as hearings have once been announced for this measure on the Senate side, but were postponed; evidently because other people were not any more ready to decide the matter than are we.

The substance of the bills above referred to is contained in some definitions relative to what constitutes a "stockyard" and a "dealer" in livestock. A "stockyard" is defined substantially as any place, establishment, or facility conducted for profit and consisting of pens or other inclosures in which livestock is held for sale, slaughter, or shipment in sufficient volume as will affect the market value in commerce of such livestock. This definition will include not only the large livestock yards in such places as Buffalo, Chicago, and Kansas City, but also lesser concentration points out in more rural districts. The term "dealer" is defined as being any person, including any packer, engaged in the business of buying or selling livestock other than on a commission basis at a stockyard for slaughter or otherwise. With the enlarged definition of "stockyard" as above described, and with authority given the Secretary of Agriculture in other portions of the measure to grant certificates of public convenience and necessity, the thought is that all stockyards would be subject to regulation by governmental agencies, which heretofore has not been the case. The entire question of direct buying of livestock is tied up with this bill and is a highly controversial proposition.

Resolution 12, entitled "Immigration," has not yet taken up much of our time at Washington, but must be attended to forthwith after our return from this meeting of the board of directors. A long list of bills have been introduced, only a few of which need be attended to by us.

The Box bill—H. R. 6465—seeks to make the quota provisions applicable to Mexico, Cuba, Canada, and other continental American countries. A new measure, which is said to reflect the administration point of view, has been introduced by Senator WATSON—S. 3019—and contains in its final sections a provision permitting the temporary admission as non-Americans for periods of not more than six months not to exceed 10,000, otherwise admissible aliens from each foreign country to perform seasonal or emergency labor in the United States.

Hearings on the general question of immigration, particularly in regard to the Box bill, on the House side were scheduled to begin February 16 and run throughout next week. It is expected that no radical change will be made in the immigration law, but as above stated there are many desirous of modifying the act. Our resolution deals specifically upon one phase of the immigration question, in that we ask for a congressional investigation before any additional immigration restrictions are applied to nationals on the Western Hemisphere. This phraseology could be interpreted seemingly only one way in regard to the Box bill, namely, to oppose that measure or any similar one that seeks to evoke at this time such restrictions.

Farm-loan affairs have not been prominent at Washington this winter, legislatively, down to date. Their prominence has been altogether in the personal relation, reference being made to the fight relative to confirmation of the three recess appointees, which confirmation was reported favorably by the Senate Committee on Banking and Currency and later was approved on the floor of the Senate with 13 dissenting votes. As far as can be remembered, no national farm organization filed formal opposition before the committee in regard to this confirmation matter.

It was inexpedient to start a legislative program such as is contemplated by the report to the American Farm Bureau Federation by the special farm loan committee until the personal equation relative to the confirmation matter was out of the way. Several Senators have been seen—and a few Congressmen—in regard to the report of this special farm loan committee. Recently we have had a dinner conference with half a dozen of the Senators whose records are constructive on farm-loan affairs to make arrangements for writing into definite form the recommendations of the farm loan committee. This work is now well under way and in a few days we may expect the introduction of a bill which will carry substantially the list of recommendations submitted by the farm loan committee.

It will be gratifying to the members of the committee to learn that their work is received in the finest way by all those to whom it is brought and is recognized to be, as it was intended to be, wholly constructive. This does not mean to imply that every particular recommendation of the 18 recommendations contained in the report is approved by every Member of Congress with whom conferences have been had on the subject, but the general lines and the recommendations meet with the happiest approval from all.

It is understood among those with whom conferences have been had upon this subject that this project when introduced as a bill will not be known as a farm bureau project, even though the American Farm Bureau Federation is wholly responsible for the origin of the work. It is thought more strategic not to have it designated under the name of any specific farm organization.

In cataloguing the list of bills under resolution 14, "omnibus," on account of the many items contained in the resolution, a hurried view will suffice:

(a) Funds are carried in the agricultural appropriations bill for developing the use of electricity on the farm.

(b) The same is true in regard to farm fire prevention.

(c) S. 1418, by CAPPER, and H. R. 11, by KELLY, each seeking to establish retail price fixing, are dead so far as this session of Congress is concerned.

(d) The Swing-Johnson bill, as is usual, has taken the center of the stage relative to the Colorado River, or, more commonly called the Boulder Dam project. The Washington office has assumed a neutral attitude down to date and will continue so to do unless the board of directors or the legislative committee can interpret that portion of Resolution 4 dealing with the Colorado River project. Whatever may be said about the Boulder Dam project it can not be stated with proof that the project will bring under cultivation more acreage to compete with other acreage in the United States.

Indeed, it may bring in more acreage; but if it is not developed by national legislation, the water will be used on the Mexican side with Japanese and Mexican labor and the farm products will come into our country with cheaper costs of production and thereby be more competitive than if the same water had been used for production purposes on the American side. In this connection your attention to the joint letter which the American Farm Bureau Federation, the National Grange, and the Farmers' Educational and Cooperative Union sent to Congress recently upon the general question of whether or not more acreage should be brought into cultivation. In this joint letter, which is herewith reproduced in full, it will be noted that no specific projects relating to irrigation, reclamation, or southern community welfare

interests are mentioned. The wisdom of avoiding the mention of any particular project in this connection is perhaps demonstrated in the case of Boulder Dam, above mentioned, where the water is going to be used on one side or another of the border, and if we do not use it the Mexicans will. No argument is intended by this to induce the board to make a decision one way or the other, but merely to clear the situation in regard to whether or not the Boulder Dam project should be condemned on the score that it brings in more acreage.

THE NATIONAL GRANGE,
THE AMERICAN FARM BUREAU FEDERATION,
THE FARMERS' EDUCATIONAL AND COOPERATIVE UNION,
Washington, D. C. February 8, 1928.

To the Members of the Seventieth Congress:

Everyone agrees that one of our major national problems is the successful handling of our agricultural surpluses. During the last six years our area under cultivation has declined nearly 15,000,000 acres but our surplus is still our great national problem.

Several measures are now before Congress which look toward increasing the acreage under cultivation, which would be secured by different methods in various bills. During the recent years of agricultural depression the organizations which we represent have repeatedly gone on record as opposing any legislation which would look toward placing any further acreage under production or additional producers upon farms, until agriculture has been restored to economic parity with other forms of industry and commerce.

When such parity is restored, increased agricultural production from our present developed acreage will amply care for any increase in our population for many years to come.

Most respectfully yours,

FRED BRENCKMAN,
Washington Representative The National Grange.
CHESTER H. GRAY,
Washington Representative American Farm Bureau Federation.
CHARLES S. BARRETT,
President The Farmers Educational and Cooperative Union of America.

The little amendment to the packers and stockyards act necessary to classify live poultry as livestock will have no difficulty in its legislative course.

The Walsh resolution seeking a governmental inquiry into the growth and capitalization of public utility corporations has had a tempestuous career thus far, and has, at the dictation of this report, been referred to the Federal Trade Commission for action rather than to a special senatorial committee as provided for in the original resolution. It is alleged that the power lobby has been very potent in Washington relative to this resolution, such influence seeking to have the resolution handled by the Federal Trade Commission rather than by a special Senate committee.

Forestry has assumed a position of spot-light importance this winter at Washington. The original McNary-Clarke Act set a pace for forestry development. The present McNary-Woodruff bill is progressing nicely and provides continuing appropriations for forestry work authorized in the original act. Also the McNary-McSweeney bill, which outlines continuing policies on forestry affairs, establishes forestry stations for the study and promotion of an enlarged forestry policy, and carries appropriations therefor. Hearings on the McNary-Woodruff bill have been held with a favorable report and are soon to be held on the McNary-McSweeney bill. Seemingly, no opposition will materialize. Such measures as the two above mentioned, dove-tailing as they do into the McNary-Clarke Act, when correlated with tax easement by State laws so that woodlots will not be taxed to death before they come into productiveness, will go far in obtaining a national forestry program. It is not intended to slight other bills on forest affairs, but only the bills which are of prime significance to us are enumerated.

A measure which seeks to require truth in market reports being intended to apply specifically to cotton matters is H. R. 1508 by Congressman WILSON, of Mississippi. This bill has not made to date any appreciable progress.

No progress has been made in regard to the measure to effect a stabilized price level and secure stable purchasing power of money through additional instructions to the Federal Reserve Board. This measure by Congressman STRONG of Kansas has had voluminous hearings before the Sixty-ninth Congress, but not before the Seventieth Congress. It is a question which needs the most profound study, has many points of merit in it, and will in some form or other be written into the Federal laws when more adequately understood.

Attention of the board is invited to the resolutions by the home and community department, which recommends continuing the work of the so-called Sheppard-Towner or maternity and infancy act. Since this resolution was not referred to the Resolutions Committee, and was not called to the attention of our voting delegates at the last annual meeting, it will give the Washington office somewhat more definite authority to proceed if the board will express its opinion upon the matter.

In 1925 our organization adopted a resolution in favor of appropriations for vocational training, or, as it is commonly called, the Smith-Hughes work. The National Association of State Directors of Vocational Training has had introduced a bill which is based upon the Capper-Ketcham agricultural extension measure, and asks for similar appropriations for the vocational work. This bill has been heard before the House Committee on Education and the Senate Committee on Agriculture and Forestry, with no report from either committee thus far. It is not likely that the Director of the Budget will declare that the appropriations authorized in the bill are in keeping with the Budget requirements of the Nation, so that the progress of the measure will be handicapped if not stopped. The Washington offices have given attention to the measure and have stated frankly to the active proponents thereof that the bill is not likely to make progress this session, and will need more organizations behind it when it next starts through the legislative grist here. It is probable that the bill will be amended so that clearer lines of demarcation will be set out between the work of the Smith-Hughes forces, and that of the Smith-Lever employees.

Standard containers has been reported from the Senate Committee on Agriculture, and will be, under present indications, reported from the House Committee on Coinage, Weights, and Measures next Monday, February 20.

Truth in fabrics is promised consideration by the Senate Committee on Interstate Commerce as soon as one or two more major and troublesome questions are disposed of. On the House side the situation is not so favorable upon this project.

Postal affairs have been attended to by appearance before the House Committee on the Post Office and Post Roads, by advocating a director of the parcel post, a general protective policy for the Parcel Post System, in the making of rates, and that extra charges on any parcel-post packages should be removed. We also continue to advocate cheaper postage for library books, as well as the authority which will permit sending of insecticides, fungicides, and germicides through the mails.

The policy of the American Farm Bureau Federation on corn sugar legislation never has been of a positive nature. If we have any position on such legislation, it was stated in our resolution of 1926 in these words: "The American public is entitled to know where its food products are grown and the purity thereof * * *. We oppose the passage of any bill through Congress which would permit lowering the quality of our foods through adulteration." The last sentence, above quoted, it is recollected, was approved by the resolutions committee of the eighth annual meeting in 1926 as a general expression of our position on corn sugar legislation, which legislation was before the resolutions committee at that session for approval. The question uppermost in corn sugar legislation is whether or not such sugar should be sold without designating its nature and origin, or shall it be sold simply as sugar, the same as cane and beet products are merchandized. Since the chemical formation of the corn sugar is different from that of cane and beet sugars, it may be alleged, and is from many quarters so alleged, as being a breaking down of the pure food and drugs act to allow corn sugar to be sold simply as sugar.

Considerable confusion has resulted as to our position upon corn sugar legislation. Perhaps it would be well for the board of directors to give a positive statement, whereas our position down to date, as above noted, seems to be of a negative nature.

More than 40 individual projects are on our schedule at Washington, and each requires at times careful watching and pushing to keep it from falling by the wayside. If we should include individual appropriation items which are in fact legislative projects of themselves, it will make our project list at Washington well beyond 50.

In further consideration of resolution 1 a rapid enumeration of a few bills is made, inasmuch as such bills carry out policies which have been decided upon in a general way by our organization and reaffirmed in this resolution.

The wool standards bill, S. 1343, by ODDIE, H. R. 7459, by MORGAN, appropriates some money now lying in the Treasury for the development of the wool standards in our Nation. The bill has been reported from the House committee and is expected soon to be acted upon favorably in the Senate committee.

The agricultural attaché bill, S. 1178, by MCNARY, H. R. 9107, by KETCHAM, permits the Department of Agriculture to appoint and sustain agricultural representatives abroad.

The decennial census bill, H. R. 393, by FENN, has not yet been reported by the committee and needs to be amended by having the date of the census to be on or about December 1, so that the data collected will fit into the statistical year of the Department of Agriculture; and needs further amendment by having designated in the bill certain types of information to be secured by enumerators.

Several barge line bills have been introduced, all seeking to develop barge-line transportation on various of our rivers.

Free passports for farmers studying agriculture abroad, H. J. Res. 198, by MCSWAIN, will be supported by our organization, especially since the American Farm Bureau Federation is making arrangements to conduct the second Cooperative Farm Bureau pilgrimage abroad.

The radio bill, S. 2318, extending the life of the Radio Commission another year, until it can more adequately bring under regulation the

various factors in radio activity, is in keeping with our resolution of a year or two ago.

The trade-mark bill, H. R. 6683, by VESTAL, contains one section which will permit the name "farm bureau" to be trade-marked and prevents its miscellaneous use by those unauthorized to use it.

A national agricultural day, H. J. Res. 22, is of minor importance, but is in keeping with one of our resolutions of a year or two ago.

This opportunity is taken to thank the board of directors, the legislative committee, President Thompson, and the State federations for a loyalty to our legislative program which is remarkable, and which it is believed never yet has been surpassed in the American Farm Bureau Federation. Particular comment should be given to the fact that our State federation officials are extremely careful not to take positions by correspondence or in person contrary to the general position of the American Farm Bureau Federation.

The legislative program at Washington is indeed very heavy. Even in a report as extended as this one it is impossible to get the entire program into words which explain it. The Washington representative has in times past, when Congress was not in session, been very glad to participate in series of meetings in States under the direction of State federations, so that the entire program might be more adequately brought to the membership. It is felt that in the period following adjournment of this session of Congress more of such work among the county bureaus and the State federations can be profitably done. The Washington representative holds himself ready to serve in this field work and hopes to be of assistance in promoting the strength of the organization generally by doing so.

Respectfully submitted.

CHESTER H. GRAY,
Washington Representative.

SUPPLEMENT

STATUS OF VARIOUS BILLS—CORRECTED TO FEBRUARY 18, 1928

(Note: X means approved; XX means opposed; XXX means needs amending)

Farm relief

X. S. 1176, by MCNARY; ordered favorably reported February 15, without hearing.

X. H. R. 7940, by HAUGEN; hearing in progress.

Muscle Shoals

X. H. R. 8305, by MADDEN; hearings in progress.

X. S. 2786, by WILLIS.

XX. S. J. Res. 46, by NORRIS; reported to Senate February 13.

Taxation

X. H. R. 1, by GREEN; hearings held before House committee; reported December 7; passed House December 15 with amendments; held up by Senate committee awaiting tax returns.

Merchant marine

XXX. S. 744, by JONES; reported to Senate with amendments; passed Senate with amendments.

Capper-Ketcham extension service bill

X. S. 1285, by CAPPER; reported to Senate.

X. H. R. 10568, by KETCHAM; reported January 23.

Corn borer bill

X. H. R. 10377, by PURNELL.

Farm loan legislation

X. Way cleared for introduction of bill in Senate carrying out resolution of A. F. B. F.

Reforestation

X. H. R. 42, by FREE; authorizing $100,000 annually as Federal aid for purchase and distribution of forest tree seeds and plants for reforestation. No hearings yet.

X. S. 1344, by ODDIE; compansion bill to H. R. 42, by FREE.

(McNary-Woodruff bill)

X. S. 1181, by MCNARY; reported January 9; passed Senate with amendments February 6.

X. H. R. 357, by WOODRUFF.

(McNary-McSweeney bill)

X. S. 1183, by MCNARY.

X. H. R. 6091, by MCSWEENEY; hearings on March 1, 2, and 3.

Flood control

XXX. H. R. 8219, by REID of Illinois; reported by House Committee on Flood Control, and provides for all expenses to be paid by Federal Government.

Rivers and harbors bill

X. H. R. 11616, by DEMPSEY; containing appropriation of $50,000,000 which includes development of upper Missouri River. Bill became a law in the last Congress; appropriation for 1929 (fiscal year) being carried in War Department appropriation.

Standard container bill

X. H. R. 8907, by PERKINS; hearings will probably end February 20; early report expected in time for call of committee following Wednesday or week following.

X. S. 2148, by MCNARY; reported without hearing February 14.

Decennial census bill

XXX. H. R. 393, by FENN; hearings in progress.

Wool standards bill

X. S. 1343, by ODDIE; no hearing yet.

X. H. R. 7459, by MORGAN; reported January 20.

Reduction of postal rates

XXX. H. R. 9296, by GRIEST; changes postal rates; hearings in progress.

X. S. 808, by COPELAND.

Truth in fabric

X. S. 1621, by CAPPER.

X. H. R. 7907, by FRENCH.

Agricultural attaché bill

X. S. 1178, by MCNARY.

X. H. R., 9187, by KETCHAM.

Agricultural day resolution

X. H. J. Res. 28, by GARBER; no hearings.

Extension of barge lines

X. H. R. 10710, by DENISON.

X. H. R. 5686, by STRONG of Kansas.

X. H. R. 7362, by WILLIAM E. HULL.

X. S. 1760, by SHIPSTEAD.

Regulation of toll bridges

X. H. R. 107, by BURTNESS; being held up by House Interstate Commerce Committee.

Research on poultry diseases

X. S. 812, by COPELAND.

Federal aid to highways

X. H. R. 383, by DOWELL; hearings in progress ($75,000,000).

X. S. 2327, by PHIPPS.

Special Federal aid for roads and bridges in flood areas

X. H. R. 10864, by HALE; introduced February 13.

Packers and stockyards act

XXX. H. R. 490, by HAUGEN.

XXX. S. 2506, by CAPPER.

Immigration

XX. H. R. 6465, by BOX; making the quota provisions applicable to nationals of American countries.

Retail-price fixing

XX. S. 1418, by CAPPER.

XX. H. R. 11, by KELLY.

Classification of live poultry as livestock

X. S. J. Res. 42, by COPELAND; passed Senate by substituting H. J. Res. 112, February 2.

X. H. J. Res. 112, by LEA; passed House January 16. Approved by President.

Walsh resolution to investigate the Power Trust

X. S. Res. 83, by WALSH of Montana; reported by Committee on Interstate Commerce with amendments; amended to refer investigation to Federal Trade Commission, and passed in this form February 15.

Utilization of cotton

X. H. R. 10642, by BLANTON; introduced February 7; promoting utilization of low-grade cotton and putting embargo on all raw jute products.

X. H. R. 10763, by JONES; investigating new uses for cotton.

Free passports to American farmers traveling abroad

X. H. J. Res. 198, by MCSWAIN; permitting issuance of free passports to farmers traveling in Europe to study farming methods.

Extending Radio Commission

X. Watson radio bill.

Vocational training bill

XXX. S. 1731, by GEORGE; providing additional appropriations for Smith-Hughes work.

XXX. H. R. 9201, by MENGES; same as the above bill.

Corn sugar

XXX. S. 2806, by CAPPER; permits corn sugar to be used as substitute for cane and beet sugar.

XXX. H. R. 10022, by COLE of Iowa; same as above.

Trade-mark bill

X. H. R. 6683, by VESTAL; contains section allowing the name "farm bureau" to be trade-marked.

Boulder Dam

XXX. S. 728, by JOHNSON; provides for development of that project.

XXX. H. R. 5773, by SWING; same as the above bill.

Mr. HARRISON. Mr. President, I wish to inquire of the Senator from Nebraska if he will agree to a unanimous consent that a vote shall be taken upon the amendment now pending at a certain time to-morrow?

Mr. NORRIS. Mr. President, without consulting with anyone, I would hardly care to enter into an agreement.

Mr. SMITH. Mr. President, I would object to any unanimous-consent agreement until certain of us who have not had an opportunity of expressing ourselves specifically in reference to this legislation shall have such an opportunity.

Mr. NORRIS. I think there are some other Senators, besides the Senator from South Carolina, who feel that way.

Mr. HARRISON. I may say to the Senator from South Carolina that my reference was only to the amendment I have offered, which is pending.

Mr. SMITH. So far as I am concerned, I would not want to give my consent to any commitment on any one amendment until those of us who desire have had an opportunity to express ourselves with reference to the general legislation.

Mr. NORRIS. I agree with the Senator from South Carolina. While I would like to get a vote as soon as possible, I do not want to prevent anyone from speaking on the general subject. There are several Senators who want to talk on the subject generally, and I presume they would rather not do so after we had started voting. When that general debate shall be concluded, I myself will try to get an agreement to limit speeches, for instance, on the pending amendment, to 5 or 10 minutes, or some such time as that.

HOUSE BILLS AND JOINT RESOLUTIONS REFERRED

The following bills and joint resolutions were severally read twice by their titles and referred as indicated below:

H. R. 9830. An act authorizing the Great Falls Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Potomac River at or near the Great Falls; and

H. R. 11026. An act to provide for the coordination of the public-health activities of the Government, and for other purposes; to the Committee on Commerce.

H. R. 53. An act to provide for the collection and publication of statistics of tobacco by the Department of Agriculture;

H. R. 7459. An act to authorize the appropriation for use by the Secretary of Agriculture of certain funds for wool standards, and for other purposes;

H. R. 9495. An act to provide for the further development of agricultural extension work between the agricultural colleges in the several States receiving the benefits of the act entitled "An act donating public lands to the several States and Territories which may provide colleges for the benefit of agriculture and the mechanic arts," approved July 2, 1862, and all acts supplementary thereto, and the United States Department of Agriculture;

H. R. 11579. An act relating to investigation of new uses of cotton; and

H. J. Res. 215. Joint resolution to authorize the Secretary of Agriculture to accept a gift of certain lands in Clayton County, Iowa, for the purposes of the upper Mississippi River wild life and fish refuge act; to the Committee on Agriculture and Forestry.

H. J. Res. 140. Joint resolution to amend sections 1 and 2 of the act of March 3, 1891; ordered to be placed on the calendar.

COLUMBIA (S. C.) FEDERAL LAND AND INTERMEDIATE CREDIT BANK

Mr. BLEASE. Mr. President, a few days ago I introduced a resolution (S. Res. 159) asking that the condition of the Federal intermediate credit bank in my State be examined. I ask to have printed in the RECORD and referred to the Committee on Banking and Currency a few letters in reference to the condition of the intermediate credit bank. If the committee or somebody else does not soon do something the farmers down there will be robbed and then there will be no use of doing anything at all.

There being no objection, the letters were referred to the Committee on Banking and Currency and ordered to be printed in the RECORD, as follows:

[Letter from a prominent business man and farmer]

BEAUFORT, S. C., *February 25, 1928.*

Senator COLE L. BLEASE,
Senate Chamber, Washington, D. C.

DEAR SENATOR: I am glad to see by the newspaper to-day that you are going to have the intermediate credit bank investigated. The Government tried the local officers of the farmer's company that was connected with the intermediate credit bank, but it has not touched the men higher up in the intermediate credit bank. If the men higher up did not know what was going on down here, they should be removed for incompetency. But it is not reasonable to think they did not know. But whatever the facts are let us have them. Come down here with a committee and get at the bottom of it. Don't let them send another set of accountants just to get evidence for the Federal prosecuting officers. They have given us Beaufort people hell, and we are not the crooks they are making out.

An investigation will show what happened to the Beaufort bank that Arnold closed up. As a stockholder and a depositor, I would like to have some outside people come in here and have a real audit made of that bank. They can get a lot of information from Mr. Richardson, and he will give it. He can help in an investigation of the intermediate. They have him headed for Atlanta, but before they get him there I hope you can work it so that he can tell what he knows to some committee that is not trying to put him out of the way. Of course, it is the business of the State authorities and the Federal authorities, who have the prosecutions in hand, to convict him. But we need some one who is after the truth, no matter who it hits. Please help us to get this. Remember that one of those sentenced to jail is a young lady of Beaufort, who everyone knows would as soon cut off her hand as to steal a penny. She comes of an humble home, she worked for a small salary, and helped her home folks with that, and if she is being sent up to shield higher-ups that is something you will not stand for.

With regards,

Very sincerely,

——— ———.

[Letter from a prominent banker and farmer]

BEAUFORT, S. C., *February 25, 1928.*

Hon. COLE L. BLEASE,
Washington, D. C.

DEAR SIR: It gives me pleasure to thank you for introducing resolution in the Senate for investigation of the Federal Intermediate Credit Bank, Columbia, S. C., and, with Congressman HARE'S good work started in the House, I can not help from feeling, when the true facts and conditions that have existed since the failure of Beaufort bank on our farmers in our section are known, the farmers will be rewarded for their labor in the end. Assuring you if I can be of any service to you, I want you to feel at liberty to call on me at any time.

With kind personal regards, I am,

Very truly yours,

——— ———.

[Letter from a prominent farmer and former member of South Carolina House of Representatives]

COLUMBIA, S. C., *February 29, 1928.*

Senator COLE L. BLEASE,
United States Senate, Washington, D. C.

DEAR SENATOR: Have seen with much satisfaction your resolution to have the Federal land bank at Columbia and its agricultural credit department investigated.

I trust that you will be able to carry it to a successful conclusion; it sadly needs looking into, and the interest of the farmer demands it.

With best regards, I am,

Yours very truly,

——— ———.

[Letter from a prominent farmer]

LATTA, S. C., *February 27, 1928.*

Senator COLE L. BLEASE,
Washington, D. C.

DEAR SENATOR: I noticed in the paper where you had introduced a resolution to investigate the Federal Intermediate Credit Bank of Columbia, S. C., which I think is much needed, judging by the hardship that these Columbia banks are allowing our local credit associations to rob the farmer.

To begin with, the farmer can't get any money unless he agrees to buy fertilizer from the agricultural loan, which in most cases costs from two to eight dollars more per ton than he would have to pay elsewhere.

As a rule, what money a farmer gets from these people costs him anywhere from 14 to 25 per cent interest. Our local credit people use the farmer's paper to get the money with and the farmer has to take what he can get and at their own price.

I have papers in my attorney's office in Dillon showing where these people held the farmer's money and fertilizer and caused the farmer a big loss.

Yours truly,

[Letter from a prominent farmer]

NESMITH, WILLIAMSBURG COUNTY, S. C., *March 3, 1928.*

Hon. COLE L. BLEASE,
Washington, D. C.

MY DEAR SENATOR: As a 56-year-old private citizen and supporter in your political "ups and downs," I wish to state that I was glad to read your resolution as to investigation of the Federal banks in South Carolina.

Be sure to look into red-tape methods and manners used by the "financial (middleman) pirates" in dealing out Government money to the farmer. He is first "hog tied" in matter of securities, then "bled to death" before balance of his "borrow" is available. Applies to both Federal land loans and South Carolina agricultural loans.

With best wishes,

Yours truly,

[Letter from former speaker of the House of Representatives of South Carolina, former circuit judge, and a very prominent attorney]

CAMDEN, S. C., *March 2, 1928.*

Hon. COLE L. BLEASE,
United States Senate,
Washington, D. C.

MY DEAR COLE: You can not imagine with what pleasure I have read of your resolution to have the Federal intermediate credit bank in Columbia thoroughly examined by committee of the Senate. You will recall that one night in the Jefferson Hotel I told you that I wanted to see you a few days in Washington, and wish to say that this was the very matter that I had in view. The record as developed in the trial of the Beaufort bank cases certainly warrant a thorough investigation of this bank in all of its ramifications from Washington down, and it is needless for me to say that at any time I can be of any service to you in the matter do not hesitate to call on me.

With kindest personal regards, I am

Sincerely yours,

[Letter from a former citizen of Greenwood County]

CHATTANOOGA, TENN., *March 4, 1928.*

Hon. COLE L. BLEASE,
Washington, D. C.

DEAR SENATOR: I notice a meager account in Greenwood, S. C., paper of your resolution for an investigation of the Federal land-bank affairs. Will you be good enough to advise me the nature of your investigations or along what lines. I was never able to get any satisfaction in writing them in regard to my affairs with them and was not accorded the rights that were due me as an honest, struggling farmer.

I was thrown out of my birthplace wholly on the recommendation of a little cigarette-smoking dude who was more interested in a woman who happened to be promenading the lobby of a hotel than he was in my conference with him.

I don't want to take up your time, but I would like to know what you are doing. My home was at Verdery, Greenwood County.

Yours, etc.,

UNVEILING EXERCISES AT STONE MOUNTAIN, GA.

Mr. HARRIS. I ask unanimous consent for the consideration of Senate Concurrent Resolution 12, submitted by me on the 6th instant.

Mr. CURTIS. Does it carry an appropriation?

Mr. HARRIS. None whatever.

Mr. CURTIS. Does it authorize in any way an appropriation?

Mr. HARRIS. Not at all.

Mr. CURTIS. Then I have no objection to its consideration.

Mr. JONES. Let it be read.

The PRESIDING OFFICER. The concurrent resolution will be read.

The concurrent resolution (S. Con. Res. 12) was read and agreed to, as follows:

Resolved by the Senate (the House of Representatives concurring), That there is hereby created a committee of Congress consisting of five Senators, to be appointed by the President of the Senate, and 10 Members of the House of Representatives, to be appointed by the Speaker of the House, to attend, as representing the Congress of the United States, the exercises at Atlanta, Ga., April 9, 1928, incident to the unveiling of a portion of the Stone Mountain Monument by the Stone Mountain Confederate Monumental Association.

EXECUTIVE SESSION

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened.

RECESS

Mr. CURTIS. I move that the Senate take a recess until to-morrow at 12 o'clock.

The motion was agreed to; and (at 4 o'clock and 55 minutes p. m.) the Senate took a recess until to-morrow, Friday, March 9, 1928, at 12 o'clock meridian.

NOMINATIONS

Executive nominations received by the Senate March 8 (legislative day of March 6), 1928

ENVOY EXTRAORDINARY AND MINISTER PLENIPOTENTIARY

Franklin Mott Gunther, of Virginia, to be envoy extraordinary and minister plenipotentiary of the United States of America to Egypt.

PROMOTIONS IN THE REGULAR ARMY

To be colonel

Lieut. Col. George Edwards Goodrich, Infantry, from March 6, 1928.

To be lieutenant colonel

Maj. Pelham Davis Glassford, Field Artillery, from March 6, 1928.

To be majors

Capt. Charles Andrew Willoughby, Infantry, from March 6, 1928.

Capt. Fred McIvor Logan, Infantry, from March 6, 1928.

To be captains

First Lieut. Mark Andrew Devine, jr., Cavalry, from March 6, 1928.

First Lieut. Edwin Eugene Aldrin, Air Corps, from March 6, 1928.

To be first lieutenants

Second Lieut. Carl Douglass Silverthorne, Cavalry, from March 2, 1928.

Second Lieut. Louis William Haskell, Infantry, from March 6, 1928.

Second Lieut. David Myron Schlatter, Air Corps, from March 6, 1928.

Second Lieut. Charles Trovilla Myers, jr., Air Corps, from March 6, 1928.

MEDICAL CORPS

To be captain

First Lieut. Emery Ernest Alling, Medical Corps, from March 1, 1928.

CONFIRMATIONS

Executive nominations confirmed by the Senate March 8 (legislative day of March 6), 1928

POSTMASTERS

COLORADO

John Davis, Arriba.
Thomas B. Scott, Meeker.

ILLINOIS

Georgia W. Cooper, Congress Park.

INDIANA

Walter C. Belton, Acton.

IOWA

Lewis H. Roberts, Clinton.
Joseph D. Schaben, Earling.

NORTH CAROLINA

Richard J. Pace, East Flat Rock.

OHIO

Howard E. Foster, Chagrin Falls.
Frank H. Shaw, Germantown.

VIRGINIA

Robert L. Olinger, Blacksburg.

WASHINGTON

Lovilla R. H. Bratt, Richmond Beach.

HOUSE OF REPRESENTATIVES

THURSDAY, *March 8, 1928*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Our Father and our God, through Thy bountiful mercy every morning is made new and every day is a new beginning. We praise Thee that there was never a night without a day, or an evening without a morning. Thou who givest all things freely make this day radiant with faith, truth, loyalty, and courage. Teach us how to follow Thee and give us wisdom to guide us on. In all our intercourse with men may we be strong, pure, and noble. No permanent failures can ever be recorded in the annals of a truthful man. O, happy is he whose ambition is to be universally helpful and who enters into the fundamental conception of the very best life. Remember our homes, Heavenly Father, especially those who know the silent story, quivering through the heart of affliction. O life—life has many a tangled crossing, and even our finest pleasures have many a break of woe. Wherever the shadows are lowering let them hear the echo, "He that overcometh shall inherit all things." Through Jesus Christ our Lord. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message from the President of the United States, by Mr. Latta, one of his secretaries, announced that the President did on the following date approve and sign bills of the House of the following titles:

On March 7, 1928:

H. R. 81. An act to authorize the coinage of silver 50-cent pieces in commemoration of the one hundred and fiftieth anniversary of the discovery of the Hawaiian Islands by Capt. James Cook, and for the purpose of aiding in establishing a Capt. James Cook memorial collection in the archives of the Territory of Hawaii; and

H. R. 5818. An act authorizing J. H. Peacock, F. G. Bell, S. V. Taylor, E. C. Amann, and C. E. Ferris, their heirs, legal representatives, and assigns, to construct, maintain, and operate a bridge across the Mississippi River at or near the city of Prairie du Chien, Wis.;

BILLS PRESENTED TO THE PRESIDENT

Mr. CAMPBELL, from the Committee on Enrolled Bills, reported that this day they presented to the President of the United States, for his approval, bills of the following titles:

H. R. 437. An act authorizing the Maysville Bridge Co., its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Maysville, Ky.;

H. R. 472. An act authorizing the Dwight P. Robinson & Co. (Inc.), its successors and assigns, to construct, maintain, and operate a bridge across the Ohio River at or near Maysville, Ky.;

H. R. 2809. An act for the relief of the heirs of Jacob Thomas;

H. R. 5476. An act to authorize the Secretary of War to sell to the Pennsylvania Railroad Co. a tract of land situate in the city of Philadelphia and State of Pennsylvania;

H. R. 6491. An act to amend section 8 of the act entitled "An act to supplement existing laws against unlawful restraints and monopolies, and for other purposes," approved October 15, 1914, as amended;

H. R. 6579. An act for the relief of James W. Kingon;

H. R. 6684. An act to amend section 2455 of the Revised Statutes of the United States, as amended, relating to isolated tracts of public land;

H. R. 7008. An act to authorize appropriations for the completion of the transfer of the experimental and testing plant of the Air Corps to a permanent site at Wright Field, Dayton, Ohio, and for other purposes;

H. R. 7553. An act for the relief of James Neal;

H. R. 8293. An act to amend an act entitled "An act for the relief of Indians occupying railroad lands in Arizona, New Mexico, or California," approved March 4, 1913;

H. R. 8899. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River at or near Epes, Ala.;

H. R. 8900. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River near Gainesville on the Gainesville-Eutaw road between Sumter and Green Counties, Ala.;

H. R. 9019. An act granting the consent of Congress to the State Highway Commission of Arkansas to construct, maintain, and operate a bridge across the Ouachita River at or near Calion, Ark.;

H. R. 9063. An act to extend the times for commencing and completing the construction of a bridge across the Chattahoochee River at or near Alaga, Ala.;

H. R. 9202. An act to authorize construction at the United States Military Academy, West Point, N. Y.;

H. R. 9204. An act granting the consent of Congress to the Arkansas Highway Commission to construct, maintain, and operate a free highway bridge across the Current River at or near Success, Ark.;

H. R. 9339. An act granting the consent of Congress to the board of county commissioners of Trumbull County, Ohio, to construct, maintain, and operate a free highway bridge across the Mahoning River at or near Warren, Trumbull County, Ohio; and

H. R. 9484. An act granting the consent of Congress to the Highway Department of the State of Alabama to construct, maintain, and operate a free highway bridge across the Tombigbee River at or near Aliceville on the Gainesville-Aliceville road in Pickens County, Ala.

PERMISSION TO ADDRESS THE HOUSE

Mr. GARRETT of Tennessee. Mr. Speaker, I desire to make a brief statement preliminary to preferring a request for unanimous consent. Tuesday, March 27, is the anniversary of the battle or massacre, as it is sometimes called, of Goliad, which is now in the State of Texas. It is situated in the district which is so ably represented here by our greatly beloved colleague, Mr. MANSFIELD. I think the historic importance of that event will justify notice being taken of it here; and in order that that notice may be taken, I ask unanimous consent that upon Tuesday, March 27, after the reading of the Journal and disposition of business on the Speaker's table, the gentleman from Texas [Mr. MANSFIELD] may have the privilege of addressing the House for one hour.

The SPEAKER. The gentleman from Tennessee asks unanimous consent that on Tuesday, March 27, after the reading of the Journal and the disposition of business on the Speaker's table, the gentleman from Texas [Mr. MANSFIELD] may address the House for one hour. Is there objection?

There was no objection.

ORDER OF BUSINESS

Mr. SNELL. Mr. Speaker, I desire to prefer a unanimous-consent request. When I first presented the rule for the consideration of this constitutional amendment I explained to the House that we had provided for five hours of general debate. I also made the statement at that time that if there was apparent need for additional time we would try to arrange for it. I am informed by the gentleman in charge of the resolution that they have had requests for more time than they can grant, and up to the present time it has not been very evenly divided, although they have yielded time as requests have been made. On account of the importance of the whole proposition and the great interest of the Members of the House, I ask unanimous consent that general debate may be extended one hour, to be controlled as heretofore.

The SPEAKER. The gentleman from New York asks unanimous consent that general debate on the White resolution, fixed by the rule at five hours, be extended one hour. Is there objection?

Mr. GARNER of Texas. Mr. Speaker, reserving the right to object, may I ask whether it is expected to conclude the resolution to-day.

Mr. SNELL. I think that was the hope, but it is impossible to tell what will happen under the five-minute rule.

Mr. GARNER of Texas. I understand that, and I was merely asking at this time whether you expect to vote on this resolution to-day. As I understand it there remains 1 hour and 45 minutes of general debate, and if 1 hour is added to that, it will carry the general debate to about 15 minutes before 3 o'clock. Is it expected to read the resolution under the five-minute rule and vote on it this afternoon?

Mr. TILSON. A bill of this importance, I think, should not be unduly rushed through, and if more time is required to thoroughly consider it, the time ought to be taken. I think we should not attempt to put a limit on it now but go ahead with the discussion. If another hour is necessary, as seems to be the case, then take the hour and after that go on with the consideration of the resolution under the five-minute rule.

Mr. GARNER of Texas. I am not making any objection to it. I am merely trying to get into the RECORD some statement

as to how soon you expect to vote on this measure. Notice was given a week ago that you were going to take it up, realizing it was an important subject, and to put it over for another day, unless the House has some notice of it, I think, would not be exactly in line with the expectation of the Members of the House that the resolution would be voted on to-day.

Mr. SNELL. When I first gave notice that the resolution would be called up, I did not say when the vote would come.

Mr. BANKHEAD. Will the gentleman yield?

Mr. SNELL. Yes.

Mr. BANKHEAD. I dislike, of course, to inject any personal question into this matter, but I have given notice that I propose to offer an amendment which, I think, practically all of the Members of the House are very much interested in. I have made arrangements to leave the city to-morrow morning, and I am just inquiring, if it should become necessary, whether I could have some assurance that we could consider that amendment this afternoon before we adjourn?

Mr. SNELL. I do not see how I can give the gentleman that assurance, and I do not know how it is possible to give that assurance now. As far as I am concerned, I do not object to the gentleman offering his amendment at any time.

Mr. BANKHEAD. I will take my chances on it.

Mr. MOORE of Virginia. Will the gentleman allow me to make one suggestion?

Mr. SNELL. Yes.

Mr. MOORE of Virginia. Of course, I shall not object to his request, but it strikes me that instead of extending the general debate it would be more profitable to have an understanding that very liberal opportunity shall be given for discussion under the five-minute rule.

This would bring us down to a consideration of specific proposals covered by the resolution, and a discussion of that sort carried on under a liberal understanding would probably serve better to clarify the subject in reference to particular matters and assist Members in reaching a conclusion.

Mr. SNELL. I do not believe there has been any effort on the part of anyone to cut off liberal discussion on the individual amendments. This is a very important matter and should be discussed freely from all sides, and if it is necessary to take more time than to-day, we should take another day.

Mr. MOORE of Virginia. I think so; and I was merely having in mind the practical view I have just submitted, that we would do better probably in talking under the five-minute rule than in talking further in general debate.

Mr. SNELL. Gentlemen will have that opportunity also if we get the extra hour.

Mr. GIFFORD. Mr. Speaker, may I express the attitude of the committee which may obviate many questions. We have had more requests for time this morning than was anticipated yesterday. In fairness to the committee, I want to say we had but one request yesterday to speak in opposition to this resolution, although we wished such requests to come in if they desired and they ought to have come in on yesterday. Many came in this morning and wish to speak in opposition to the proposed amendment. We wished to hear the opposition yesterday, and as one member of the committee I would like to hear the opposition. We have consented to an extension of general debate for one hour. I wish to say in connection with the question which the gentleman from Virginia, Judge MOORE, has asked that we intend to be most liberal in giving plenty of time on important amendments. Then, again, it will make a great deal of difference whether or not certain amendments to be proposed will be held in order. If such amendments are held in order, it will take considerable time for the discussion of the amendments. Mr. Speaker, I hardly see under all the present contingencies how there is any great possibility that we can finish this matter to-day.

Mr. LAGUARDIA. If we do not finish it to-day——

Mr. GARNER of Texas. You expect to go on to-morrow if you do not finish to-day?

Mr. LAGUARDIA. That is exactly the question I had in mind.

Mr. SNELL. That is the understanding, that we will continue with the resolution until we finish its consideration.

Mr. JEFFERS. Mr. Speaker, in connection with the request, I have no objection to the additional hour of general debate. I have requests on this side for additional time both for and against the resolution. If we have the additional 1 hour and I have 30 minutes of the hour I will split the time evenly between those for and against; and if we do go on with general debate until 3 o'clock with the number of important amendments that will be offered on the proposition, it will be practically impossible to finish the consideration of the resolution this afternoon.

Mr. GARNER of Texas. Mr. Speaker, again reserving the right to object, let me get a little further information, if I can, from the gentleman from Connecticut, the majority leader. I am informed by the gentleman from Louisiana [Mr. SANDLIN] that it was understood or the statement was made that the radio bill would be taken up to-day. Does the gentleman expect to take up the radio bill immediately following the disposition of this resolution?

Mr. TILSON. It is my understanding that that bill will immediately follow this one.

Mr. GARNER of Texas. And if we get through with this resolution to-morrow at any reasonable time we will take up the radio bill and get through with it on Saturday?

Mr. TILSON. That is the understanding.

The SPEAKER. Is there objection to the request of the gentleman from New York [Mr. SNELL]?

There was no objection.

MR. JUSTICE HOLMES

Mr. McSWAIN. Mr. Speaker, I ask the indulgence of the Chair and the House to announce that Mr. Justice Oliver Wendell Holmes, of the Supreme Court of the United States, is 87 years old to-day. I take pride as a South Carolinian in paying a tribute to this distinguished citizen of Massachusetts. [Applause.]

The boyhood environment of Mr. Justice Holmes was almost ideal for the development of upright character. His education was the best that the times afforded. His early manhood was spent in the best school imaginable, to wit, in the Army. During the war, first as lieutenant and, finally, colonel, he was wounded three times. After the war, in 1865, he commenced the study of law and has continued to study that jealous mistress to this good day. Having occupied a conspicuous place at the bar and having been editor of the American Law Review and having published a number of leading articles and books dealing with legal topics, he was chosen to be a professor of law at Harvard College and was finally commissioned a member of the Supreme Judicial Court of Massachusetts, and on August 2, 1899, was made chief justice of that great court. On December 4, 1902, he was appointed Associate Justice of the Supreme Court of the United States, and now for 26 years has been devoting to the laborious and responsible duties of that office all the talents of his richly stored mind, of his highly trained intelligence, and of his thoroughly seasoned patriotic heart.

I rejoice to bear testimony as a South Carolinian to the magnificent public services of this distinguished son of Massachusetts. The example of Mr. Justice Holmes illustrates the obvious truth that you can not fix an arbitrary point in the life of the individual when his usefulness shall end. Both the Army and the Navy have an arbitrary age of 64 fixed by a statute for the retirement of their officers. Some men are younger at 64 than others are at 54, and yet some men are older at 64 than others are at 74. If a man has been temperate in his habits, if his emotions have not from time to time overwhelmed him, it is entirely reasonable to expect from him useful service after he passes the age of 64. For this reason I have advocated the repeal of the existing law requiring Army and naval officers to retire at 64, and have urged instead the enactment of a provision requiring all officers above 60 years of age to appear annually before a medical board for thorough and careful examination as to their physical and mental strength. If deterioration be found, then let the board recommend retirement. But if the officer be found vigorous and hale, physically and mentally, let him continue to serve the Government just so long as he is able to render full service. Surely wisdom and knowledge come with experience. Certainly calmness and understanding should accompany age. Surely both the Army and the Navy need a certain percentage of the officer personnel composed of men of well-balanced judgment, of seasoned understanding, and of ripened wisdom.

Futhermore, it will be better for the officer himself. If he loves his profession, he will be saddened by being separated from the service if he be still in sound health and sufficient strength. Too old to take up a new business or profession he must drag out a discontented existence of idleness. If Marshal Foch had been retired at 64 he never would have commanded 5,000,000 men on the western front. If Marshal Von Hindenburg had been retired at 64 he would never have driven the Russian armies into the Masurian Lakes, and he never would have held, in 1917 and until November 11, 1918, his western lines against the almost irresistible onrushing of allied soldiery.

But to return to Mr. Justice Holmes. I call attention to the fact that his case demonstrates that age and experience do not necessarily bring on a reactionary and ultraconservative

attitude of mind. His decisions show the greatest degree of mental hospitality. His mind is receptive to new ideas and to the impulses of progress. It is remarkable how often Mr. Justice Holmes concurs in some separate opinion by Mr. Justice Brandeis and how often Mr. Justice Brandeis adopts the opinion of Mr. Justice Holmes as his own. It will be recalled that when Mr. Justice Brandeis was nominated for the Supreme Court he was attacked by certain groups as so progressive as to be almost radical; he was regarded as so forward-looking that he never looked back. Since the Anglo-Saxon system of jurisprudence is based upon precedent, it is necessary that a judge should be looking backward most of the time. But it is well that any judge should look forward half the time at least. He must look backward to study the trend and tendency of decisions, to catch the current of opinion, and to discern the underlying philosophy of the law. But having done this much he should turn his eye to the future, and, following the course and direction set by the backward glance, should shape decisions and opinions to fit facts and conditions and circumstances as they are about us and as they certainly will be about us in the immediate future.

Mr. Speaker, at this point I produce some thoughts spoken by me in this connection two years ago relating to the matter of appointments of judges. The longer I live and the more I study the law, and especially our American constitutional system, the more I am convinced that the stability of our institutions depends more upon the character of the judges and the quality of their decisions than it does upon any legislation that Congress or the various State lawmaking bodies may enact. Statutes are but general abstractions to the individual citizen. But when the citizen meets the statute face to face in court and finds his individual property and liberty and life measured in terms of statutes and of common law he finds them measured from the lips of an individual judge—his fellow American, his fellow mortal, and his fellow citizen.

It is a terrific responsibility for one American citizen to be lifted to the position of judge over and above and among his fellow American citizens. If the judge by his language and his conduct shows that he is conscious of his responsibility, that he feels his moral unworthiness to sit in judgment upon the property and liberty and life of his fellow citizen, but that he discharges his duty not as a personal prerogative, but as a solemn official function, then the individual citizen before him and all witnesses to the solemn ceremony will turn away with a feeling of resignation and submission to the law.

But if the judge is petulant and arrogant, if he assumes a personal superiority, and acts as though the person before him had committed lese majesty, as though exercising power by divine right, then the individual whose conduct is measured by the legal standard and the witnesses turn away with resentment and with rebellion in their hearts. If this feeling was sufficiently widespread, the security of the Government might be imperiled. For this reason I contend that the selection of judges for all grades of Federal courts is the highest responsibility that rests upon the President. I congratulate President Coolidge that in two very recent nominations he has ignored party politics in order to vest judicial responsibility in men whose character and abilities would insure its rightful and wise exercise.

Furthermore, Mr. Speaker, at this point I trust it may not be out of place to say that the Supreme Court of the United States now enjoys such confidence from the masses of the American citizens as it perhaps never enjoyed before throughout our entire history. Two decisions rendered within the last year relating to the cancellation of the leases upon the naval oil reserve lands, whereby the court unanimously found from the facts and the law that the leases were and are utterly null and void, firmly convinced the masses of the American people that the court can be depended upon to discern the truth of disputed facts as well as of confused law, and to declare that truth with courage and in language plain and unmistakable. Now, all American citizens know that the Supreme Court is a bulwark of justice and is the refuge of those that might otherwise be persecuted and oppressed.

[Extract from CONGRESSIONAL RECORD, March 8, 1926, p. 5222, vol. 67, p. 5, 1st sess. 69th Cong.]

WHERE TO FIND RECRUITS FOR SUPREME COURT

Since the Supreme Court justices have great powers of "judicial legislation" and are called upon to exercise "judicial statesmanship," the selection of such justices is manifestly a delicate and difficult responsibility. But Mr. Justice Holmes came to the service of the highest Federal court with the clearest demonstration of his existing fitness for that sacred office. As teacher of law and as author of legal commentaries, he had exhibited a thorough comprehension of the whole field of common law, which is the matrix from which grow all other forms of legal development. For 20 years he had been a member of the Supreme Judicial Court of Massachusetts. Therefore the elevation in 1902 was no experiment. His talents and aptitude for judicial service had already been tried, tested, and demonstrated. To appoint a lawyer without judicial experiences, however great may be his abilities as a counselor or his success as an advocate, is apt to be an experiment in the sense that he is untried. However high in political counsels one may be, however great his learning or powerful his intellect, yet these are no guaranty of that judicial balance of temperament, that mental and spiritual fairness and toleration, that intellectual humility and sense of justice so desirable, yea, so essential, to the delicate responsibilities of the Supreme Court. And here is an example and thought for him who nominates and for those who confirm.

There are 161 United States circuit and district judges and 277 justices of supreme courts. All these have been tried and found either fit or wanting. They have either manifested some of the ideal judicial qualifications or they are simply holding a mediocre average. Would it not be an inspiration for all these judges to feel their work, their careers, their conduct, are constantly under the observation of those having the power to say "come up higher." If the justices and judges of the courts above named realized that the vacancies upon the Supreme Court of the United States would be filled by the promotion of those already exercising judicial office, it certainly would stimulate their energies, and the effect would be not only to find the fitted material for the Federal Supreme Court, but would attract and hold better material to the lower courts.

Talented lawyers would thus be encouraged to accept the humbler judicial stations as stepping-stones to the great goal of any honorable lawyer's ambition. Judges would be fired by a praiseworthy ambition so to serve as to deserve promotion. Then our great judicial keystone that completes the arch of our constitutional structure would always be composed exclusively of tested material. Then there would be no disappointments and misfits. There would be higher proficiency and greater efficiency all along the line. Confidence in the court would undoubtedly increase. Complaints should certainly cease. This suggestion is put forth with great humility and respect.

JUSTICE TO EMERGENCY OFFICERS

Mr. McSWAIN. Mr. Speaker, I ask unanimous consent to explain in my own words a certain bill I have introduced, H. R. 11756, with reference to promotion in the Army of the United States.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. McSWAIN. Mr. Speaker, the bill I have introduced to increase the efficiency of the Military Establishment, and for other purposes, is designed to remedy a situation at present existing with regard to the commissioned personnel of the Army which has seriously impaired the morale and the efficiency of the officers of the Army.

Section 1 of the bill designates those officers of the Regular Army and Philippine Scouts who shall be considered promotion-list officers and subject to the provisions of the bill with reference to such officers.

Section 2 changes the present arrangement of the promotion list with respect only to captains and lieutenants who came into the service since the beginning of the World War; that is to say, April 6, 1917. The present promotion-list arrangement of these officers is based on a War Department interpretation of the Army reorganization act of June 4, 1920, which ignores completely, with reference to such officers, the grade for which these officers qualified on examination and to which they were appointed. This section arranges officers who were appointed captains from civil life under the bill with captains of the Regular Army, first lieutenants with first lieutenants, and second lieutenants with second lieutenants. In each grade the officers are arranged among themselves according to the time-honored War Department principle of length of service, provided that where length of service is equal the arrangement shall be made according to age. No officer will lose his present rank in the Army on account of the proposed change in the law. The general effect of the section will be to put older, more experienced officers ahead on the promotion list of younger, less experienced officers. The bill does not disturb the present relative position on the promotion list of West Point classes and gives all members of such classes the benefit in the arrangement of the age of the oldest member of the class. The length of service considered for the purpose of such arrangement is service rendered between April 6, 1917, and November 11, 1918, which are the same dates specified for this purpose in the Army reorganization act of June 4, 1920.

Section 3 of the bill provides to a limited extent for promotion of all promotion-list officers according to length of service; from second lieutenant to first lieutenant in 3 years, to captain in 10 years, major in 17 years, to lieutenant colonel in 23 years, and to colonel in 28 years. This promotion, how-

ever, is limited by certain maximum percentages prescribed for certain grades. This portion of the bill is substantially the same as the Wadsworth bill which passed the Senate at its last session.

Section 4 of the bill is likewise substantially the same as a similar provision of the Wadsworth bill. It provides for voluntary separation from the service of promotion-list officers, such separation to be made on the application of the officer and subject to approval at the discretion of the President. This section will have the tendency toward eliminating from the Army the so-called "hump" which the War Department has found to be detrimental to the best interests of the service. Preference is given to the application of a group of officers, 4,599 in number, who were on July 1, 1926, between the ages of 31 and 37, inclusive. This group of officers will constitute the real "hump" about 27 years from now unless some such provision as contained in this bill is enacted into law. These officers will at that time fill all the higher grades of the Army from general down to and including major, and they will all go out of the service in a period of six or seven years, thereby causing a sudden elevation to the higher grades of officers whose previous experience has been in the company grades only. This section also abolishes an indefensible distinction which is at present made between the limited and unlimited retired lists of the Army.

Section 5 of the bill provides for compensation to those officers who leave the service under the provisions of section 4. It provides for retired pay for such officers at the rate of 2½ per cent per year in case of officers of less than 20 years' service and 3 per cent for those of more than 20 years' service, with suitable protection for officers who entered the service at an age greater than 45 and with the proviso that any officer who retires by reason of having reached the age of 64 will receive retired pay of 75 per cent of his active pay. This provision is in order to correct a palpable injustice in present law as to this class of officers. It is provided that retired pay, under the section, will not be less than 50 per cent nor more than 75 per cent. The only lump payment provided for in the bill is a provision for the payment of a lump sum equivalent to one year's pay, inserted in order to encourage officers in the "hump" to take advantage of the provisions of the bill within the next two years in leaving the service, and for six months' pay for those leaving the service after the expiration of two years.

Section 6 protects any officer from losing his present commission through operation of the bill.

Section 7 abolishes the restriction placed upon employment of retired officers. The present law imposes unjust restrictions on the employment of retired officers and is unnecessary from the point of view of protecting the interests of the Government, the laws as to fraud being ample for this purpose. Separations provided for in section 4 must be had in the interests of the Government. This section provides for fair treatment of officers so separated.

Section 8 is the usual repealing clause as to other inconsistent legislation.

In my humble judgment a very serious mistake was made by those having in charge the interpretation and administration of the provisions of the Army reorganization act in 1920, in that an arrangement was made whereby captains and lieutenants were so scrambled that men with previous military service in the National Guard and with much actual combat service during the World War and of mature years, some of them above 40 years of age and appointed as captains, find that officers who were then first and second lieutenants have been promoted and actually have passed them, and some of those who were then lieutenants are now majors, though 20 years younger in age and therefore having 20 years less of experience and knowledge of life and of men.

I respectfully submit that this was an outrageous discrimination against those patriotic citizens that served without compensation in the National Guard preparing themselves for war, and who when war came, rendered highly valuable service, which was as valuable as any rendered by Regular Army officers of the same rank. These emergency officers were educated at their own expense, or at the expense of their families, or of their States and their State institutions. Furthermore, most of these emergency officers acquired valuable professional and business experience. All this they bring into the service of the Regular Army and it is no small contribution. I respectfully submit that there is nothing mysterious about the military art. It is not necessary that a man should be picked quite young and trained in a military institution and kept in the Army all of his life in order to make a good officer. In fact, the education which is exclusively military, and the experience which is confined exclusively to the Army, is partial and narrow and limited. On the other hand, the Army has need of men of affairs. It has need of men that understand the civilian point of view.

These emergency officers had been trained in the school of actual experience and of actual war. To discriminate against them by denying them promotion as they advance in age and Regular Army experience and to promote over them young men, most of them educated at the expense of the United States Government at West Point Military Academy and averaging in age 20 years younger, is an injustice, and if this injustice were brought squarely and fairly to the attention of the individual Members of Congress I feel quite sure that legislation would be promptly enacted correcting such injustice.

Education in a particular school can not confer brains or character. These are the individual equation. Many men possess brains and character and yet never went to any college. The most important qualification for an Army officer is leadership, and the rough-and-ready school of life develops leadership as no other school can.

The result of the injustice that has been done to the emergency officers appointed to the Regular Army in the reorganization in 1920 will be glaringly manifest upon realizing that many of them will be retired on account of age while still holding the rank of captain, while other officers about 20 years younger will be holding the ranks of lieutenant colonel and colonel and will themselves before retirement become brigadier generals and major generals. Now it can not be successfully contended that these emergency officers which were commissioned in the Regular Army in 1920 are not as good men in the point of moral character, in the point of intellectual equipment, and in the point of actual military experience as men 20 years younger.

The only basis for such discrimination and unfairness is the excuse that the reward in promotion to higher rank and higher pay should come as the result of long service in the Army, that such is the reward of entering the Army when young and of staying in the Army. This is unsound, because when these officers now described generally as emergency officers were about 21 years of age there was no need for their services in the Regular Army. The Regular Army was then relatively small. They had no opportunity to become commissioned. But when the Army was expanded and the call was made in 1920 for those officers who had been trained, many of them in military schools, and who had served many years in the National Guard, and who had served on the border in 1916, and who had served about two years during the World War, they responded and applied for and accepted commissions in the Regular Army on the assumption that the law would be so construed that they would be arranged on the promotion list with captains of the Regular Army. They had a right to assume that all the captains in the Regular Army—including themselves—would advance at the same rate, and that all lieutenants in the Regular Army would advance at the same rate and behind all captains. They had no right to assume that there would be discrimination in the arrangement of the promotion list.

When, however, they find that officers about 20 years younger in many instances, and who held ranks junior to them at the time the emergency officers were commissioned in 1920, are now being promoted around them and to rank above them, then it is sufficient to make them indignant; and whether they are indignant or not, I as one of their friends and as a friend of justice and as a friend of a sound and fair basis and proper morale in the Army, and as a friend of a wise and sound policy of national defense, am indignant and I believe that the Members of this House would all be indignant if they realized the discrimination that has been made. Promotion in rank and in pay should be the reward for age, experience, ability, and service in the cause of national defense, whether that service was all in the Regular Army or was partly in the National Guard in peace time and partly in the service of the United States during the World War and partly in the Regular Army itself. The question is this: Has the officer got the ability and the experience, and has he served the Nation?

I am also appealing to the fair-minded officers of the Regular Army and especially to those as members of the General Staff that constitute the close advisers to the War Department, to say that an injustice was done and cooperate in its correction. The sooner the War Department shows this attitude, the sooner will it find the response of cooperation on the part of Congress. The Members of Congress do not look at technical refinements and arbitrary classifications such as prevail in the Regular Army. The Members of Congress look at substance rather than shadow. They look at the real situations and not artificial distinctions. They look at facts as they are and not as special interests would have them.

Therefore, Members of Congress realize that service to the Nation, whether in the Regular Army or in the National Guard, or in war time, is the real fact that should count in giving the reward of promotion in rank and pay.

CERTAIN AMENDMENTS TO THE CONSTITUTION

Mr. WHITE of Kansas. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the joint resolution (S. J. Res. 47) proposing an amendment to the Constitution of the United States fixing the commencement of the terms of President and Vice President and Members of Congress and fixing the time of the assembling of Congress.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the joint resolution (S. J. Res. 47), with Mr. LEHLBACH in the chair.

The Clerk read the title of the joint resolution.

Mr. WHITE of Kansas. Mr. Chairman, I yield five minutes to the gentleman from Illinois [Mr. WILLIAM E. HULL].

Mr. WILLIAM E. HULL. Mr. Chairman, I am opposed to the amendment to the Constitution, because I can see nothing in it that would make any improvement.

Changing the date from the first week in December until January 4 in order to eliminate what is termed "lame duck," seems to me to be a weak point in the argument, because it stands to reason that a Congressman, who has been here one, two, or three terms and then retires either by defeat or of his own accord, is just as loyal to the United States Government as any new Congressman would be that came in and it would be his ambition to vote for bills for the best interests of the country, and so the fact that he has to retire would not, in my opinion, cause him to vote for vicious legislation. On the other hand, I would rather think he would be more careful at retirement than when he first came in, because he would want his record to be clear and there can be no denial of the fact that this man who retires, and is called the "lame duck," from his experience would be more sound in voting than the new man that knew nothing about it whatever. So, from that standpoint I can see no argument or advantage in eliminating the "lame duck."

Mr. GARRETT of Tennessee. Will the gentleman yield?

Mr. WILLIAM E. HULL. Yes.

Mr. GARRETT of Tennessee. The attitude of some of us who sympathize with the proposed change is not leveled at the Representative who may be defeated or retire. I agree that he would be just as patriotic as the new Representative, but it is to the change of Government policy indicated by a change in party control.

Mr. WILLIAM E. HULL. That does not change my idea of this proposed amendment.

And there is another point that I want to make that might not be considered pertinent but, on the other hand, every man that comes to Congress is not so well off that he can just throw away three or four months' time. Probably 60 per cent of the Members of this Congress are dependent to some extent upon the salary. They have their families to keep and their children to educate. They must come here in September to put their children in school, if they want to bring their families here. Does it not stand to reason that no one would want to come here in September and remain until January 4 before Congress commenced? My judgment is that you would be better off if you could start the session earlier than December instead of putting it off until January 4.

Another thing that I am opposed to is bringing men here on January 4 and holding them until January 24 with nothing to do. It is true, you can organize the House, but you would not, in my judgment, get 50 per cent of the Congressmen to come here until close to January 24.

I am going to make one point here: We will say that we have an upheaval in politics and the Congress is changed by 60 or 70 per cent and you are forcing all of these new men into Congress with a new President. That makes the whole administration green people and legislation is put before them. Some of it may be vicious legislation. No one is particularly posted—all new men—there is no telling what kind of legislation might accrue.

Does that answer the question of the gentleman from Tennessee?

Mr. GARRETT of Tennessee. That expresses the gentleman's opinion of what may happen.

Mr. LOZIER. The position of the gentleman is that the old Congress is to act as a wet nurse for the new Congress?

Mr. WILLIAM E. HULL. That does not require any answer.

The time-honored custom of holding the inaugural parade and the delivery of the inaugural address from the veranda of the Capitol on March 4 necessarily would be discontinued on account of the weather on January 24. This is more than a holiday to the Nation. The children of the schools, the people from all over the world, look forward to inauguration day. To discontinue the opportunity for this great celebration would be an unwelcome custom to the people of this Nation.

Mr. CELLER. The gentleman knows that not one Constitution that was copied from ours after the treaty of Versailles has the provision for the assembling of the Congress 13 months after election?

Mr. WILLIAM E. HULL. That does not change my idea of this amendment.

Under the present system, the President has an opportunity to select his Cabinet at his leisure, form his official family circle, and become thoroughly conversant with Federal affairs before he is called upon to write his message to Congress. He understands thoroughly the condition of the Federal Government, and is thereby capable of giving the Congress a statement of the true conditions of the affairs of the Union. [Applause.]

Mr. WHITE of Kansas. Mr. Chairman, I yield five minutes to the gentleman from Wisconsin [Mr. BROWNE].

Mr. BROWNE. Mr. Chairman and gentlemen of the committee, this resolution which we are considering is in the nature of a referendum, and before it is effective it is to go to 48 States, and gives them an opportunity to pass upon it, and they therefore take the most of the responsibility. Unless 36 States ratify the amendment, of course, it is not a part of the Constitution. I am for this resolution, and believe the States should have the right to vote upon the question and say whether they want it or not.

Now, the tenure of office of a Member of the House of Representatives is very brief—two years—and to say that a Representative shall not take office until 13 months of his two-year term has expired is an inconsistency which no private business would ever tolerate for a minute. There is not a municipality, there is not a State, that would tolerate for a moment an elective officer not taking his office until 13 months after he was elected.

Another inconsistency and glaring defect in our Constitution is in our congressional elections. After making a campaign on great issues between the political parties, the majority party oftentimes is defeated; and yet the political party the people have voted for has no opportunity to express itself in legislation for 13 months after the election. And for three months of that time the party which has been repudiated is permitted to legislate and control the policies of the Government.

Mr. LEAVITT. Will the gentleman yield?

Mr. BROWNE. I have only a short time.

Mr. LEAVITT. The gentleman has made a statement that the newly elected Member does not take his office for 13 months. He begins on the 4th of March.

Mr. BROWNE. Yes; but he can not take his seat unless some extraordinary thing happens and the President calls a special session, and that does not happen in many years.

Another defect in the present system is when no candidate for President receives a majority of the votes in the electoral college and the election of President is thrown in the House of Representatives under the twelfth amendment to the Constitution, and the Senate is given the power to elect a Vice President if no candidate for President has received a majority in the House of Representatives, and the result is if the Senate elects the Vice President the Vice President acts as President for four years.

A still greater contingency might arise when there would be a deadlock in both the House of Representatives and the Senate when no one would be elected as President and no one elected as Vice President. Under the Constitution there would be no way of electing a President or Vice President, and it might result in a great crisis which would threaten the very life of this Government.

It might easily happen that a whole administration is defeated. The defeated President would not, of course, call a special session of Congress and the repudiated administration would have three months' control of all branches of the Government with the express mandate of the people opposed to their policies. This is certainly not according to the spirit of our form of government. The proposed amendment gives the House of Representatives the right to elect a President in any contingency that can happen. In case of death of the President elect or Vice President elect before they take their oath of office which is a serious omission in our Constitution.

Under the proposed amendment, if the House was not able to elect a President and the Senate elected a Vice President, the Vice President would only hold office until the House could elect a President. It might not be in that session, it might be in the next session; but at any time that the House of Representatives selected a President he would become President, and the Vice President selected by the Senate would retire as President. So it gives the House of Representatives, the people's body, the full power of electing a President in such a contingency which the framers of the Constitution desired it to have. [Applause.]

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. WHITE of Kansas. Mr. Chairman, I yield five minutes to the gentleman from Massachusetts [Mr. UNDERHILL].

Mr. UNDERHILL. Mr. Chairman, I shall address myself entirely to the lame-duck argument, because, in spite of all that may be said, if it were not for the fact that some newspapers have exaggerated this feature you would never have had this resolution before the Congress. I call this to the attention of the Members of this House because most of them were intimately acquainted and associated with some of the gentlemen whom I propose to name who served with distinction in the House during the short term of Congress after their successors were elected. In the House at the last session of Congress there were Mr. BARKLEY, of Kentucky; Mr. HAYDEN, of Arizona; Mr. THOMAS, of Oklahoma; Mr. TYDINGS, of Maryland; Mr. Lineberger, of California; Mr. Hill, of Maryland, all of whom ran for the Senate. After they were elected or defeated they took their seats for the short session and voted in the House on matters of legislation intelligently, honestly, and were efficient Representatives. Who would say that Senator Pepper, of Pennsylvania, or Senator Lenroot, of Wisconsin, senatorial lame ducks of the last session, were not the peer of their successors? I call the attention of some of the older Members of the House to the fact that Mr. Mondell, at one time majority floor leader of the House, and my colleague Mr. DALLINGER, and Mr. ARENTZ, who are now Members of the House, were at one time lame ducks, or could be put into that group or category. Yet they served during the short session with honor to themselves and credit to their districts. If there is any man in this House who believes that under the lash of defeat he is not just as capable and just as honest and just as efficient as he would be if he had been reelected to this House, then that man should vote for this resolution; but if, on the other hand, he believes that he can be honest, efficient, capable, and well qualified, even though he should be defeated, he ought to vote against the resolution.

Mr. STEVENSON. Before the gentleman leaves that feature of his remarks, will he not please name Uncle Joe Cannon, who was twice a lame duck?

Mr. UNDERHILL. I am going to name him. In this House there are WEB WILSON, of Mississippi; TOM CONNALLY, of Texas; TOM BLANTON, of Texas; all running for another office. Will any one of them change his attitude or be less efficient provided he is not put immediately to work, if he should be fortunate or unfortunate enough to be elected to another body?

We have two present Members appointed to the bench, BOWLING of Alabama and GREEN of Iowa. Are they less efficient to-day, are they less honest, or less capable than they would be if they had not that office before them?

Let me name a few lame ducks of the past. Bascom Slemp, of Virginia, and Everett Sanders, of Indiana, Secretaries to the President, were both ex-Congressmen when appointed. There was Phil Campbell, of Kansas, who was defeated because he bought a house over in Virginia; Sam Winslow, who voluntarily retired; Uncle Joe Cannon, though twice defeated in the same class, because the last time he voluntarily retired; John Weeks, who after he was a lame duck was made Secretary of War, and no better Secretary of War ever served; and Harry New, the present Postmaster General, who was a lame duck. Speaker Champ Clark and President William McKinley were lame ducks. At the last session of Congress Mr. Coyle, of Pennsylvania, and Mr. Carter, of Oklahoma, whose defeat was a tragedy rather than anything else, and whose constituents would have sent him back a month later if they had had the chance to reflect, were lame ducks. Then there was Mr. Funk, of Illinois; Mr. Upshaw, of Georgia; Mr. Tincher, of Kansas; Ogden Mills, of New York. You gentlemen who were their colleagues at that time know how well qualified they were, how effectively they worked, how honestly they worked, how efficiently they worked during the short session when they were lame ducks. If it were not for the newspapers and the propaganda and the silly talk about lame ducks, you never would have heard of this resolution.

Mr. GARRETT of Tennessee rose.

Mr. UNDERHILL. One more thing, and then I shall be glad to answer any question the gentleman from Tennessee has to ask. Will anyone here whose service is longer than mine tell me of any legislation of evil purport that passed during a lame-duck session? Will anyone tell me of any urgent legislation of great good that failed of passage during a lame-duck session?

Mr. CELLER. Mr. Chairman, will the gentleman yield?

Mr. UNDERHILL. First, I yield to the gentleman from Tennessee. Will he tell me of any legislation that has been determined by the votes or influence of the lame ducks? I ask this question of my friend from Tennessee, who has had so much longer service than I.

Mr. GARRETT of Tennessee. I want to say this, that the individual factor, the personal equation, does not enter into the consideration of this matter in my mind at all. The gentleman is falling into the same error that the gentleman from Illinois [Mr. WILLIAM E. HULL] fell into.

Mr. UNDERHILL. The gentleman will agree with me that if it were not for the lame-duck agitation you would never have heard of this resolution?

Mr. GARRETT of Tennessee. Oh, no.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. JEFFERS. Mr. Chairman, I yield 10 minutes to the gentleman from Missouri [Mr. DICKINSON].

Mr. DICKINSON of Missouri. I am friendly to and purpose to support the pending joint resolution which reads as follows, as it relates to Congress, and to which I alone shall address my remarks:

ARTICLE —

SECTION 1. The terms of the President and Vice President shall end at noon on the 24th day of January, and the terms of Senators and Representatives at noon on the 4th day of January, of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

SEC. 2. The Congress shall assemble at least once in every year. In each odd-numbered year such meeting shall be on the 4th day of January unless they shall by law appoint a different day. In each even-numbered year such meeting shall be on the 4th day of January, and the session shall not continue after noon on the 4th day of May.

In December, 1925, I introduced in the House a joint resolution similar to the Norris resolution in so far as it relates to changing the time when Congress shall assemble, which reads as follows:

House Joint Resolution 10, Sixty-ninth Congress, first session

IN THE HOUSE OF REPRESENTATIVES,

December 7, 1925.

Mr. DICKINSON of Missouri introduced the following joint resolution; which was referred to the Committee on Election of President, Vice President, and Representatives in Congress and ordered to be printed:

Joint resolution proposing an amendment to the Constitution of the United States fixing the commencement of the terms of Members of Congress.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concuring therein), That the following amendment to the Constitution be, and hereby is, proposed to the States, to become valid as a part of the Constitution when ratified by the legislatures of the several States as provided by the Constitution:

"SECTION 1. That the terms of Senators and Representatives shall commence on the first Monday in January following their election.

"SEC. 2. That the Congress shall assemble at least once in every year, and such meeting shall be on the first Monday in January, unless they shall by law appoint another day.

"SEC. 3. That the terms of Senators and Representatives who may be in office at the time of the adoption of this amendment shall end at noon of the first Monday in January of the year in which such terms would otherwise have ended on the 4th of March."

I would have been glad to have voted for the Norris resolution as it came from the Senate. I will be glad to vote for the White resolution as reported to the House from the committee. I want to congratulate the governing power in this House, the dominant party in control, which has at last permitted this joint resolution to come before the House for consideration. Three times the Norris resolution passed the Senate by large majorities and came to the House for action. There has been no reasonable excuse for delayed consideration by the House. The time has come when the Members of this House shall determine whether they are willing to submit a constitutional amendment by which Members of Congress elected in November can come here in January, two months after election, and commence the discharge of their duties. Under present conditions

Members elected in the fall do not take their seats for 13 months, unless called in special session after March 4 by the President of the United States. That should be remedied and, in my judgment, is the most important part in this joint resolution.

It has been suggested that the resolution as presented should be amended in certain proposals. Much can and will be said both for and against the pending resolution and much may be said in favor of some of the amendments that have been suggested. The provision in section 2 by which Congress in its second session or in even-numbered years shall not continue in session after noon on the 4th of May would be a great improvement on existing law. That has seemed to me to be a wise provision. Both sessions commencing on the 4th of January—the first session not limited—the second session limited to four months and that session the election year. Under existing law the life of the second session is three months with generally an adjournment of about two weeks covering the Christmas and New Year holidays. Under the proposed resolution it would run for four consecutive months and adjourn in May in the election year.

The suggestion has been made that it would permit a filibuster. No; not a successful filibuster. If any attempt or effort be made to prevent the passage of a bill, the President can immediately call Congress into session. Congress would live and the bills would live and the legislation would be perpetuated, and the inducement to filibuster would not be present, because it could not be done so readily as now. Under the Constitution now, the short term is at the end of the term and ends with the 4th of March, and then Congress dies and all bills die and a successful filibuster kills legislation. So a short session for four months at the beginning of the second year is far better for legislative purposes than an interrupted three-months' session at the end of the second year.

Mr. BYRNS. Mr. Chairman, will the gentleman yield?

Mr. DICKINSON of Missouri. Yes.

Mr. BYRNS. I will not take up much of the gentleman's time; but the chief reason that has inclined me to vote for the Norris resolution is the very fact that it would do away with the short session and the opportunity for one or more Members of the Congress to hold up the entire proceedings by a filibuster. The gentleman refers to the White resolution, which limits the session. That is one reason why I am opposed to the White amendment. Those filibusters usually occur in connection with an appropriation bill, and the Norris amendment would prevent any Member from holding up an appropriation bill and forcing an extra session. I do not see how the White amendment relieves the situation.

Mr. DICKINSON of Missouri. As I stated, the filibuster comes now at the conclusion of a Congress and Congress dies on the 4th of March. But when Members know in either body that at the end of four months Congress still lives, and that bills will not die until the next January, and that the President can call Congress into session, there will be no danger, so far as the appropriation bills are concerned, and he would not hesitate to call Congress into extra session in order to pass the supply bills if necessary. However, supply or appropriation bills are usually easily disposed of in three months.

Mr. CELLER. Mr. Chairman, will the gentleman yield?

Mr. DICKINSON of Missouri. Yes.

Mr. CELLER. Under the conditions that now prevail you would have your filibuster always just prior to the 4th of March, not in the election year. Now, in the amendment offered by the committee in this House you simply postpone the filibuster to May 4. Under the Norris bill, as it came from the Senate, if you have a filibuster, Congress can remedy that.

Mr. DICKINSON of Missouri. I prefer and will vote for the Norris bill, if the opportunity occurs; and I will vote for the White bill as it is, or if changed by proper and not hurtful amendment. I do not object to striking out the four-months provision, but Congress usually adjourns in long sessions about June 1, and the four months for the short session is a great improvement on the existing law.

I have not lost faith in popular government. I believe that the people have the right to be heard on all questions, and particularly on questions that are fought over in Congress, which they would have after a four-month term when Congress would adjourn, and then the issues would be discussed before the people prior to the election. I am heartily in favor of the pending resolution to the end that the issues when fought out before the people should be taken up by Congress and not laid aside for new issues that may be suggested by dominant influences. Believing as I do that the people are not only interested in legislation, but are interested in having fought out and determined and written into law the things that they have discussed at home, I favor men coming here not 13 months, but 2 months, after the election, so that the chosen agents and Representatives selected at the polls shall legislate for the people on the issues discussed in their districts. I have no patience with the suggestions of a cooling-off period and a forgetting of the discussions had and the promises made before the people who are responsible for our presence here. I have known many men to be retired from public service because of a failure to respond to the majority thought of their constituents. I appreciate the force of the suggestion that the power of Congress to legislate should not be curbed by limiting the session of Congress and I am not unfriendly to that idea. In all probability Congress in its second year, the election year, would probably adjourn in abundant time, and for that reason the Norris resolution may be better in which no limit is put on any session, nor was there any limit in the resolution proposed by myself in the last Congress, and which I did not reintroduce because of the pending Norris and White resolutions.

The proposed or Bankhead amendment for a four-year term I feel would be helpful as far as the Congress is concerned and make it a stronger and more capable body, yet such amendment might help to defeat the amendment when sought to be ratified on the idea that it would be a surrender of power by the people. Too much power has already been lost, and those who framed the Constitution felt it well to let their Representatives, as well as State and county officers, go back to the people for approval or disapproval of the record after short terms. The Congress is more nearly responsive to the wishes of the people. The trend has been in later years to surrender power to the executive branch of the Government, continually encroaching on the rights of the people. The legislative branch of the Government grows weaker as the years run by continual surrender of power to the Executive, which is becoming all powerful and grows stronger with years as it absorbs power that should be retained by Congress, which more nearly represents the expressed will of the people, unless thwarted by Executive or other strong influences. Congress would be strengthened and the expressed wishes of the people better regarded by the passage of this resolution. I call attention to the utterance of the Democratic Party in its last national platform under the head of "Popular elections," which reads as follows:

> We pledge the Democratic Party to a policy which will prevent Members of either House who fail of reelection from participating in the subsequent sessions of Congress. This can be accomplished by fixing the days for convening the Congress immediately after the biennial national election; and to this end we favor granting the right to the people of the several States to vote proposed constitutional amendments on the subject.

Most State legislatures meet in January after election in November for short sessions. Why should not Congress meet within two months after election? Why set aside the will of the people by longer delaying the service of those elected to represent in Congress their wishes and permitting those defeated in elections in November to make in short sessions the laws that do not express the will of the people recently declared?

Thirteen months is too long to keep a newly elected Member from taking his seat in Congress. Besides, the defeated Member, conscious of his retirement by the majority votes of his people, will look to the Executive for place and favor and appointment; and he would be more apt to yield to strong influences desiring special legislation, helpful to special interests. Let us end this condition by passing this joint resolution, with or without amendment, pass the White or Norris resolution and end this inexcusable condition. Strengthen Congress and thereby aid the people whose representatives we are, to have their will effectively written in the laws of the land.

I hereby insert the original Senate joint resolution for which the White amendment, as amended, was a substitute, and follow it with the White amendment, as amended in Committee of the Whole House:

Senate Joint Resolution 47, Seventieth Congress, first session

IN THE HOUSE OF REPRESENTATIVES,

March 9, 1928.

(The House considered and amended the Senate joint resolution by striking out all after the resolving clause and inserting the so-called White amendment as a substitute, which latter as amended in the Committee of the Whole House on the state of the Union was reported to the House and agreed to. Upon the question on agreeing to the Senate joint resolution as amended by the White substitute it was decided in the negative, two-thirds not voting in favor thereof.)

The following is the text of the original Senate joint resolution for which the White amendment, as amended, was a substitute:

Joint resolution proposing an amendment to the Constitution of the United States fixing the commencement of the terms of President and Vice President and Members of Congress and fixing the time of the assembling of Congress.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following amendment of the Constitution be, and hereby is, proposed to the States, to become valid as a part of said Constitution when ratified by the legislatures of the several States, as provided by the Constitution:

"ARTICLE —

"SECTION 1. The terms of the President and Vice President shall end at noon on the 15th day of January, and the terms of Senators and Representatives at noon on the 2d day of January, of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

"SEC. 2. The Congress shall assemble at least once in every year, and such meeting shall begin at noon on the 2d of January, unless they shall by law appoint a different day.

"SEC. 3. If the House of Representatives has not chosen a President, whenever the right of choice devolves upon them, before the time fixed for the beginning of his term, then the Vice President shall act as President, as in the case of the death or other constitutional disability of the President. The Congress shall by law provide for the case of the failure to choose the Vice President before the time fixed for the beginning of his term, declaring what officer shall then act as President, and such officer shall act accordingly until the House of Representatives chooses a President or until the Senate chooses a Vice President.

"SEC. 4. This amendment shall take effect on the 15th day of October after its ratification."

The following is the text of the White amendment as amended in Committee of the Whole House on the state of the Union and in the House, but which was rejected on the final vote:

"That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States:

"ARTICLE —

"SECTION 1. The terms of the President and Vice President shall end at noon on the 24th day of January, and the terms of Senators and Representatives at noon on the 4th day of January, of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

"SEC. 2. The Congress shall assemble at least once in every year, and such meeting shall be on the 4th day of January, unless they shall by law appoint a different day.

"SEC. 3. If the President elect dies, then the Vice President elect shall become President. If a President is not chosen before the time fixed for the beginning of his term, or if the President elect fails to qualify, then the Vice President elect shall act as President until a President has qualified; and the Congress may by law provide for the case where neither a President elect nor a Vice President elect has qualified, declaring who shall then act as President or the manner in which a qualified person shall be selected, and such person shall act accordingly until a President or Vice President has qualified.

"SEC. 4. The Congress may by law provide for the case of the death of any of the persons from whom the House of Representatives may choose a President whenever the right of choice devolves upon them, and for the case of the death of any of the persons from whom the Senate may choose a Vice President whenever the right of choice devolves upon them.

"SEC. 5. Sections 1 and 2 shall take effect on the 30th day of November of the year following the year in which this article is ratified.

"SEC. 6. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the States within seven years from the date of the submission hereof to the States by the Congress, and the act of ratification shall be by legislatures, the entire membership of at least one branch of which shall have been elected subsequent to such date of submission."

March 9, 1928.

Attest:

WM. TYLER PAGE, *Clerk*.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. JEFFERS. Mr. Chairman, I yield five minutes to the gentleman from Texas [Mr. JOHNSON].

The CHAIRMAN. The gentleman from Texas is recognized for five minutes.

Mr. JOHNSON of Texas. Mr. Chairman, amendments to the Federal Constitution, like the holy bonds of matrimony, should not be lightly entered into. For such changes, when once made, are not easily put asunder.

Statutory law may endure for a day or a decade, but in the light of our past history constitutional provisions abide through the centuries.

The organic law of the land should not be changed unless a necessity or a changed condition has arisen that demands it, unless the general welfare and the public weal can not be conserved without it.

Measured by this test, in my judgment the conditions are such as to not only warrant but demand the submission and, I trust, the adoption of the proposed amendment.

I shall take pleasure, therefore, in voting for this resolution and thereby submit the proposed amendment to the 48 States for ratification or rejection.

Constitutional amendments could be proposed the wisdom or expediency of which might be questionable in the minds of the National Legislator, and yet, out of deference to the demands of the people and to terminate long continued agitation favoring its consideration, he might be willing to vote to submit it so that the States could act upon it, since without the initiation by Congress such opportunity would not be afforded them. But such is not my attitude with reference to this amendment.

I have a deep and abiding conviction that the chief purpose sought to be accomplished thereby in our organic law is needed and that the change should be made. Furthermore, I am convinced that the American people favor it, and I doubt not but what every State in the American Union will promptly and with unanimity ratify this amendment if it is submitted to them.

The form of the resolution as reported to the House by the committee, especially section 2 thereof, is not altogether to my liking. This section has to do with the time of meeting and adjournment of the sessions of Congress. I can see no reason, and have heard none offered by the committee, why the session in the even numbered year should not, as provided with reference to the odd numbered year, reserve to Congress the right by law to appoint a different day of meeting other than January 4. In each odd numbered year—

such meeting shall be held on the 4th day of January, unless they shall by law appoint a different day.

The present provision of the Constitution, in fixing the date of meeting, reserves the right to Congress to fix another day, other than that named in the Constitution, and I think it well that the right should still be reserved to Congress and that reservation should apply to sessions held in both years, rather than as to only one, as provided in the committee's report. Congress may never see proper to exercise the right, by statutory law, to change the date of meeting, but nevertheless it is a wise provision that such right shall be reserved, so that if occasion should arise it could be so exercised.

I am opposed to that portion of section 2 which directs that the sessions of Congress, in the even numbered years, shall end on the 4th day of May. The only reason I have heard advanced in favor of this provision is that in election years this early adjournment of Congress would give the Representatives and Senators opportunity to engage in their campaigns for reelection. This convenience of the Members does not, in my judgment, outweigh the argument that the public welfare should be first considered, and that an arbitrary date of adjournment will be conducive to filibusters and prevent, on some occasions, the completion of the legislative program and problems demanding solution at that time. We have had many instances where in the present short session of Congress a single willful Senator has obstructed the proceedings and caused the defeat of legislation that was needed, many times involving appropriation bills for the support of the Government.

Instead of the fixed calendar date of January 4 for the convening of Congress, it occurs to me it would be preferable to substitute the "first Monday in January" for the beginning of the session. The present constitutional provision names "the first Monday in December" as the beginning date, and it would be in keeping with that precedent to name the day of the week rather than the day of the month. Otherwise many of the sessions, at least one out of seven, would convene on Sunday.

To meet the objections pointed out, in lieu of section 2 as now written, I would suggest that the entire section be rewritten so as to read as follows:

SEC. 2. The Congress shall assemble at least once in every year, and such meeting shall be on the first Monday in January, unless they shall by law appoint a different day.

This language would be identical with that of the present Constitution on this subject, except that the word "January" would be substituted for the word "December."

While I shall vote for amendments making the changes suggested, and hope for their adoption, I am not prepared to say

that if these amendments should be defeated that I would then vote against the resolution. The resolution in its present form would greatly improve and be infinitely preferable to the existing conditions. Even the short session would be one month longer than we now have. And furthermore, the two chief objects sought to be accomplished—that is, the elimination of the long period of time after Congress is elected before it functions, and the abolishment of what is popularly known as the lame-duck session of Congress—would be accomplished, both of which are achievements devoutly to be desired.

There is no justification, under present conditions, for existing law whereby a newly elected Congress—unless called in special session by the President—does not function until 13 months after its election. Members of Congress are the only officials of the Federal Government, and I dare say the only officials of any State or municipal government of the United States, or of any government in the world, who must wait and mark time 13 months after their election before they enter upon the chief duties to which they have been elected.

We boast in America of our efficiency and alacrity in doing things, and yet ours is the only government in the world that has this long period of marking time before its legislative body begins its work.

In England the Parliament usually convenes in two or three weeks after election. In Canada there is no definite time fixed by law, but the time has generally been short, in analogy to conditions prevailing in England. In France the Chamber of Deputies, in case of prorogation and a new election, must convene within 10 days following the close of the elections.

The German constitution of August, 1919, provides that the Reichstag shall assemble for the first meeting not later than 30 days after the election.

In Hungary the date of assembling is within six weeks; in Australia 30 days after the day fixed for the return of the writs of elections; in Brazil the elections are held on the first Sunday in February, except that when they occur in the same year with elections for President and Vice President, they are to be held on the 1st of March, and the Congress must assemble May 1. In the first case there is an interval of three months and in the second two months. In Argentina the elections take place on the first Sunday in March, and the constitution requires the Congress to meet on May 1, an interval of two months. In the Netherlands the States-General must assemble within three months. The Polish Parliament must convene on the third Tuesday after election.

You will observe that the other leading governments of the world have only from 30 to 90 days after the election before their legislative body convenes. It is unthinkable that in the great Republic of the United States, where we boast of our representative government and our ability to achieve and accomplish things in much shorter time than any other nation on earth, there should be an enforced intermission of 13 months after the National Congress is elected before it is permitted to begin its labors.

Such a delay was possibly justified and necessary over 138 years ago, when our Constitution was adopted. Transportation and means of communication then were undeveloped and it took months to negotiate distances that can now be covered in a few days, or possibly in hours. Railroads, electricity, trolley lines, automobiles, telegraphs, telephones, and radio were not then dreamed of. Robert Fulton had not then invented the steamboat and the steam engine was unknown. It required months for the entire Nation to know the result of a national election, and it required additional months thereafter for the Congressmen, by means of horses, stage coaches, and ox carts, to reach the National Capital.

One reason assigned for choosing Washington for the site of the National Capital was its location on the Potomac River, making it more accessible by means of water transportation, and also thereby facilitating communication of happenings in the National Capital. In this age of steam, electricity, radio, and airplanes you might as well require the Members of Congress to travel in ox carts to the National Capital as to require them to wait 13 months after their election before beginning their legislative duties.

The only excuse given by the opponents of the proposed constitutional amendment for continuing this antiquated, useless, and unreasonable delay of 13 months is that it affords "cooling time" after the heat of the campaign before the legislative program is begun. This is an impeachment of our capacity for self-government. I fear that what the advocates of "cooling time" really want is time within which to forget party pledges and campaign promises.

When the people speak in their national elections their will should, without undue delay, be crystallized into law. "Cooling time" is to give opportunity for forgetting pledges made and to break with impunity platform obligations. Political parties and candidates who in good faith make pledges will redeem them, and those making them in bad faith should be made to do so. The doctrine of strict accountability should obtain.

Champ Clark once said of a certain political party to which he did not belong that "It was long on promises and short on performances." If the redeeming of party pledges is required to begin within two months after election, rather than within 13 months thereafter, the American people will discover what parties and what candidates are profligate in promises and "punk" on performances.

What is popularly called the "lame-duck" session of Congress is the short session that convenes after the November election. It convenes on the first Monday in December and adjourns on March 4. The entire session is begun and held after the election, and its membership is there not by virtue of the last preceding election but the election held two years prior thereto.

Those of the Members who were defeated in the preceding session are known as "lame ducks," hence the name is applied to the session.

Eloquent speeches have been made on this floor, citing individual instances of Members who had served in the short session, after their defeat, with credit to themselves and for the country's good. But this is not the question. There is far more involved than the personality of the membership. When the Nation has chosen the membership of the House or the Senate only those so chosen should thereafter be permitted to legislate.

This is sound in principle and is essentially right in a representative government. Frequently the results of elections are revolutionary in overturning the administration and its policies, and it is manifestly unfair that the party or the Members who are not in harmony with the will of the people, as expressed in their last election, should continue to exercise the power of making laws.

When the people select a new Congress, whether they have acted wisely or foolishly in their selection, those chosen are their representatives, and thereafter only these should make the laws of the Nation.

The essence of representative government is involved in this declaration. Whether justified or not, "lame-duck" Members have been frequently pointed out as making fair weather with the administration in the hope of securing some appointment, and there are numerous instances where such Members have received at the hands of the President lucrative offices. Not only the temptation but the ground for suspicion should be removed by eliminating entirely the "lame-duck" session.

The entire purpose of this amendment is to so change the Constitution that the people's will, as expressed in the national election, shall be sooner carried into effect, and that after an election is held only those chosen shall legislate. If we believe in democracy and a representative form of government, surely we should welcome such a change. [Applause.]

Mr. WHITE of Kansas. Mr. Chairman, I yield five minutes to the gentleman from Pennsylvania [Mr. WELSH].

Mr. WELSH of Pennsylvania. Mr. Chairman and members of the committee, in opposing this resolution I do so not because I have undue reverence for any human document, but when I took my oath of office and raised my hand to support and defend the Constitution of the United States that imposed upon me the obligation of defending it against deformation by any proposed amendment when the proposition appealed to me as being unsound and unsafe. It appears to me that this proposition, as put before the House to-day, is an unwise proposition and one which I hope will not be adopted.

All day Tuesday those of us who were opposed to the resolution listened to the remarks of those gentlemen who favored it and, without minimizing the statements of any gentlemen who took the floor on Tuesday, I have not heard one good, sound, or safe reason advanced as to why we should make this change in the fundamental law of our Republic. Not one gentleman pointed to a single instance in our whole national career to show that we had suffered by reason of this cooling period, so called, provided for in the Constitution of the United States.

We have heard a great deal of talk about improved methods of locomotion and improved methods of communication and transportation. It seems to me the world must be going crazy over the question of speed. I am not so much afraid of delay as I am of speed. We have motorized the United States but do not let us motorize the United States Congress. You can change the methods of transportation by your inventions but you can not change the working of the human mind. The human mind, in solving these great political questions, works the same to-day as it did in 1787. We ought to remember that when the forefathers, the men who drafted this Constitution, wrote it they provided for a possible 13 months' period between the time of

a Member's election and his functioning as a Representative in Congress in order that he might think things over and in order that he might hear from his constituents as to what they really think.

To-day we are apt to be misguided by noise and mistake noise for formulated public opinion. That is the danger which is going to confront this country in the future. There is too much haste along every line. We find it in business and in industry, but do not let us drag undue haste into the halls of legislation. If there is one place in the world where our people can afford to be conservative and where they can afford to think things over with due deliberation it is right here on this floor. [Applause.] Do not let us be misguided by this tremendous rush and hurry of the day in ordinary business matters. We are legislating to-day for 100,000,000 people, and in 50 years from now we will be legislating for probably 200,000,000. Everything is becoming more and more complicated each day, and therefore let us take the time to think these things over and be sure that we really understand what the real, sincere desire of our people as a whole is in major legislative matters before we act.

Now, one other practical suggestion, which I want to throw out for your consideration, is this: If the President of the United States is elected on the 5th of November in any one year and on the 24th of January he takes office, what time has he in the political heat and turmoil of modern politics, when he is selecting his Cabinet, when he is receiving his congratulations, and under this influence and that influence, to consider and set forth before this Congress a chart or plan for its guidance? I ask you to consider that.

One other thought, in the few minutes at my disposal, is this: We think we are independent, and we probably think we are fearless, but let us remember that we are only average men in our independence and in our fearlessness. We all, like other men, have a tendency to look toward the rising sun and the source of political power, and when an administration comes into office and the House of Representatives is composed of men inexperienced in legislation, the tendency is for them to obey the dictates of that power rather than to act upon their own well-formed opinions. It is the invisible government—the government outside of the Halls of Congress that I am afraid of—and you are not going to have the courage to resist that influence, especially if the terms of Representatives expire right at the height of administrative power and control.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. WHITE of Kansas. Mr. Chairman, I yield five minutes to the gentleman from New York [Mr. LAGUARDIA].

Mr. LAGUARDIA. Mr. Chairman, this proposition, boiled down, is nothing else than seeking to continue a system necessary in the day of the pony express and stagecoach in a day of radio and airplane.

The gentleman from Pennsylvania [Mr. WELSH] who just addressed you stated that a Member requires 13 months to formulate ideas and to make up his mind on legislation. I will say to the gentleman that any man who runs for Congress who requires 13 months to get an idea in his head will not get an original idea in 13 years.

So much has been said about the cooling process. In the first place, it is not a cooling process, because a man who takes his office in December and is confronted with a primary in April is not undergoing a cooling process by any means. At this very moment there are several Members of the House in their districts engaged in a primary fight. I will say more about that in a moment.

Another gentleman says that it would be most inconvenient for the children of Members in their schooling. The convenience of the Members should not be considered here at all.

Then, finally, the gentleman from Pennsylvania comes out with the brilliant idea that the President of the United States, from January 4 to 24, will be too busy receiving congratulatory messages, that he would not have the time to prepare his message and approve the budgetary recommendations. Such arguments need no answer.

Mr. WILLIAM E. HULL. Will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. WILLIAM E. HULL. Why should not the Congressmen have some consideration in this matter?

Mr. LAGUARDIA. He should have no consideration, because we are public servants. We must subordinate the convenience of Congress to the good of the country. Judging by the way we all break our necks to be elected, it seems to me there is sufficient glory and honor in the position, so that we should set everything aside for the convenience of the public.

Mr. WILLIAM E. HULL. Is it not true that the gentlemen from New York go home about three days a week and the rest of us have to stay here all the time?

Mr. LAGUARDIA. The gentleman has not seen the present speaker at home two or three days every week.

Mr. WILLIAM E. HULL. No; but I will leave it to the gentleman if a great number of the other Members in the East here do that as well as a number of the Members from New York.

Mr. LAGUARDIA. I can not answer for all my colleagues from New York. I have been trying to reform New York for 20 years, and Tammany Hall will not let me. [Laughter and applause.]

Mr. WELLER. Will the gentleman yield?

Mr. LAGUARDIA. Yes.

Mr. WELLER. How about the gentlemen who live in Pennsylvania and New Jersey?

Mr. LAGUARDIA. Well, we will not talk about that. Another speaker——

Mr. SIROVICH. Will the gentleman yield?

Mr. LAGUARDIA. No. Another speaker suggested that the press was urging this; that this is all propaganda. Now, why should not the press urge a matter of this kind? It is refreshing to see that the people do get their propaganda across once in a while. I see nothing wrong about that. The idea of taking office 13 months after election is so antequated that it is natural for the people to want a change, and their only means of expression is through the press. I see nothing wrong about that.

Now, when you select individual cases and say, "So-and-so was a lame duck; did he do well?" that is not meeting the question involved. The question involved is that the Congress itself, not one or two individuals, sits here after the people have expressed their choice on certain issues, and this brings me up to the amendment suggested by the gentleman from Alabama [Mr. BANKHEAD].

Now, again, we must not consult our convenience or our personal desires in the matter of our terms. You can not make the term of the Representatives in the lower House four years without destroying one of the very fundamentals of our form of government in making the term two years, so that in the midst of the presidential term the people may have the opportunity of expressing approval or disapproval of the administration. I will concede that it is inconvenient, burdensome, and expensive to run for Congress and to go through a political campaign every other year. I will admit that it is not only inconvenient to the Members but costly to the State and inconvenient to the people to have a congressional election every two years. Nevertheless, it can not be changed. That is part of our representative form of government. The cost, the trouble, the expense is the price of democracy. The matter of term of the President received a great deal of consideration at the Constitutional Convention. The matter of how long the President should remain in office—the four-year term—was by no means the result of snap judgment or hasty conclusion. It represented the best thought of the Constitutional Convention. It was the result of a great deal of thought, study, and consideration. There were at that convention, among the framers of the Constitution, a great many believers in representative government, men who wanted to make sure that the Revolutionary War had not been fought in vain and that this country would always have a government by the consent of the governed. These men thought that the four-year term for President was too long.

The four-year term was agreed to only after it was provided that the people would retain a check and control over the President by having the opportunity to elect their Representatives in the lower House in the middle of his term, or every other year. The House of Representatives, holding the purse strings of the Government, could always check and control the Executive. The framers of the Constitution would not and did not intend to elect an administration—that is, a President and a Congress—and have the people lose entire control for four years. That is what the proposed amendment suggested by the gentleman from Alabama would do, and that is why I am against it and shall vote against it in the event that the Chair should rule that the amendment is germane. Just imagine a President taking office who all of a sudden develops war proclivities. Imagine, if you will, a President getting a mania for war, and the people of the country being entirely against his policies and his program. They would only have to endure it under the present system for two years if the President had control of Congress, but at the end of that time the people could protect themselves, send an adverse House to Washington, and thereby check any policy that did not meet with their

approval. Why, the two-year election of Members of the House of Representatives with a four-year term for President is one of the very basic principles of our form of government. And again I say that all inconveniences and all burdens of Members must be entirely disregarded in the discussion of this resolution, and the needs of the age in which we are living, the wishes of the American people, are and should be the only controlling factors.

There is a tendency in this country at this very moment, perhaps in keeping with the tendency in other parts of the world, to get away from representative Government, to get away from the fundamentals of democracy, and such a spirit is displayed by those who oppose the resolution and those who would support the Bankhead amendment. We must guard the fundamental principles of self-government; we can not be too vigilant. The resolution advancing the date of convening Congress carries out the idea the framers had in mind.

There is no use of repeating here the purpose of the present constitutional provision. But just to reflect back for a moment to the condition of the country at the time this provision was drafted and adopted as a part of the Constitution answers itself. With the exception of Members of Congress and their families, and instructors in civics and constitutional lawyers, I do not believe there are 2 per cent of the American people who know that a Member of Congress is elected one year and does not take his office until 13 months afterwards. People just do not realize that condition still continues. When I came here in 1917 it may have been necessary then to allow 30 days' time for a meeting of Congress after election. To-day even that condition is changed. It would be possible to call Congress to-day with existing means of communication and transportation, and get every Member from every part of the United States here with the exception, of course, of the Philippines in three days.

By the use of radio communication and aerial transportation, you could get every Member of Congress here in that time That is an extreme illustration, of course. That represents ideal conditions all the way through, in contrast to conditions that existed when the present provision of the Constitution under which we are now operating was adopted. The element of time in getting the returns of the elections here and getting the notice back and getting Members to the Capital is a thing of the past.

The big thing about having a new Congress immediately after election is that it is elected on certain issues, yet the old Congress comes in and may by its appropriations alone defeat the very things on which the new Congress has been elected. So I say you can not argue for something when there is really no sound argument against it. I could never find out just what the opposition to this change is. I am sure it could not be the shortening of one term of Congress by a few months. You know, Mr. Chairman, and we all know that there has been resistance to consideration of your resolution on the floor of the House.

I do not see how any Member can stand up and say that for sentimental reasons he does not want to change the Constitution, because that is really the only reason that can be given, the sentimental reason that the Constitution has so provided and he just wants to keep the Constitution intact. He certainly can not advance any sound, logical reason for opposing it.

To stop amending the Constitution is simply to stop progress in every field of human activity. Gentlemen, the framers of the Constitution were men of great vision. They had in mind a certain type of government, and they took everything into consideration that they could at that time humanly contemplate. Yet when that remarkable instrument was drafted and adopted steam had not yet been developed in everyday use. They did not contemplate that this great continent would be spanned by railroads; the propeller and the steamboat had not been developed; the telegraph had not been invented; the only means of communication at that time were post roads, and so they took pains to provide for post roads in the Constitution, and placed supervision over post roads in the Federal Government. They did not have the living conditions brought about by the present industrial and economic conditions we have to contend with to-day. Chemistry had not developed. They never imagined that it would be possible to go out and garner all the crops and all the foodstuffs of the harvest and hold them back in storage—cold storage and dry storage and refrigerating plants—and just release it a little at a time so as to control prices. They could not imagine any such thing, and therefore a great many conditions which were brought about by the development of chemistry and electricity, mechanics and science, had not been covered by the provisions of the Constitution. We will have to amend the Constitution from time to time to fit the time and the age we live in. They never had the taxing problems that we have to-day, otherwise they never would have put in the provisions which required later the adoption of the sixteenth amendment to the Constitution. So from that argument there is nothing to fear.

On the argument, that of the cooling-down process, the answer is that exactly the reverse happens. Instead of cooling down in 13 months a new Congress convenes on the eve of congressional primaries, which creates a decided heating process. It is far better to have a representative legislature reflecting the wishes of the people at home and the people of the country after election than to have a Congress convening immediately preceding a primary and election, such as now happens.

The adoption of the resolution and the changing of the date of Congress from 13 months after election to about 3 months after election will have a tendency to make Congress more responsive to the will of the people and more keen to the pending issues of the day. I invite a fair examination of every argument that has been presented against this resolution. It will be seen that none of them are on sound, basic grounds, but rather for selfish, personal, and petty reasons.

It can not be said that this proposed constitutional amendment comes suddenly upon the House, because it has been before us from the very first day of this Congress, and it has been before every Congress for the past 15 years. Let the Seventieth Congress do the right thing at this time. In voting for this resolution I know that I am carrying out the wishes of the great majority of the American people.

The CHAIRMAN. The time of the gentleman has expired.

Mr. WHITE of Kansas. Mr. Chairman, I yield 10 minutes to the gentleman from Illinois [Mr. MADDEN]. [Applause.]

Mr. MADDEN. Mr. Chairman and gentlemen, in talking with a friend of mine a day or two ago about this proposed amendment he ventured the suggestion, "The more I think about it, the less I think about it." [Laughter and applause.]

This is the way I feel. A good deal of stress has been laid on the charge that we do not get into action until 13 months after we are elected. Well, this is sometimes true, but the policy of the Government, I assume, is represented by the President, and the President has the power, if there is any policy that ought to be inaugurated in connection with which an emergency exists, to call us together very shortly after the 4th of March.

This is only three months, about, after we are elected, and you can stay here all summer under that call or you may sit into the following winter, and you will learn then for the first time that being a Member of Congress is no sinecure.

I think, inasmuch as the President has the power to issue such a call, every emergency is provided for.

Under the proposed amendment you are to come in on the 4th of January. The President is to come in on the 24th of January if he can get in. Congress has to be organized in the meantime, and if the Speaker and the other elements that enter into the organization of the House should not be elected before the 24th of January, what is going to happen to the President on the 24th of January? There is nothing in the resolution that provides for that situation. I take it the President can not come in unless Congress is organized.

Then you propose in this amendment of the Constitution to have two sessions of unlimited periods, in the course of which there is no restriction on what you can do. Unless you have a limit somewhere on one of these sessions, what is to prevent appropriations beyond reason?

If all the bills that are pending, when there is no short session of Congress, should be taken up for consideration and passed, it would cost the country billions.

Mr. CELLER. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. CELLER. This bill provides for a short session ending May 4.

Mr. MADDEN. I know it, but there is a proposition to cut that out. Unless there is a short session there is no limit to extravagant waste in appropriations and no limit to the tax that would be imposed upon the backs of the American people. Instead of a short session as it now exists being a menace to the country it is one of the greatest safety valves we have. It fixes a time when we must get out, when you can no longer continue to heap a load on the tax-burdened backs of the people.

Mr. BROWNE. Will the gentleman yield?

Mr. MADDEN. The gentleman would not yield to me.

Mr. BROWNE. I did not have so much time.

Mr. MADDEN. I yield.

Mr. BROWNE. Does the gentleman favor two short sessions?

Mr. MADDEN. If there is to be an amendment to the Constitution, I favor limiting the second session of Congress; but I am unalterably opposed to any change in the Constitution at this time. [Applause.]

Mr. CELLER. Will the gentleman yield?

Mr. MADDEN. Yes.
